SECOND INAUGURATION OF PRESIDENT WOODROW WILSON

Chief Justice White Is in the Act of Administering the Oath of Office to the President Before a Vast Audience

RUSSIA IN REVOLUTION

Abdication of Czar and Rise of a Republic in the Stronghold of Autocracy

RUSSIA experienced during the four days of March 8-11, 1917, the most dramatic and effective political upheaval in recorded history. The Romanoff dynasty, which had ruled the nation for more than 300 years, was completely overthrown, as in the twinkling of an eye. The most absolute autocracy in the civilized world crumbled and fell almost without a struggle, and was replaced by a modern democratic Government without serious loss of life. The new régime set up by the people is pledged to extremely advanced ideas of liberalism and democracy, including universal suffrage.

The news of the revolution came upon the world outside of Russia with startling suddenness on Friday, March 16. There were intimations two days earlier that some political crisis was at hand, but they were so meagre and fragmentary that they gave no clue to the stupendous nature of the change in progress. It was on March 16 that the Provisional Government issued its Appeal to the People, and this act may be accepted as the beginning of the established career of the new régime.

For weeks all the news from Russia had indicated a state of unrest, dissatisfaction and imminent crisis. There were evidences of gross mismanagement in the distribution of supplies, the transport system was faulty, the munitions supply irregular, the hospital service subject to constant criticism. Finally food in the cities became so short that prices rapidly mounted to prohibitive figures, and the poorer classes were on the verge of starvation. Previous to these conditions there was a general feeling, which gained strength every day, that a certain clique or camarilla of the nobility and ruling classes was traitorous and pro-German, intriguing to have Russia desert the Allies and effect a separate peace. In November, 1916, Professor

Paul N. Milukoff, the present Minister of Foreign Affairs, and one of the leaders of the revolution, delivered a speech in the Duma in which he denounced the Prime Minister, Stürmer, as a pro-German and a traitor to Russia, and intimating that the Premier had betrayed his country for German gold. This speech, though its publication was forbidden in Russia, leaked out and produced a profound sensation. The Treppoff-Prottopoff Ministry, which succeeded, was at first supposed to be liberal, but it soon became even more reactionary than its predecessor, and hints were freely circulated that it was corrupted by Germany and intended to betray the country. In fact, charges were openly made in the Duma early in March that the failure of the army administration was intended to impede the progress of the war, and that the shortage of food in the great cities was a deliberate plot of the Government to inflame the masses so that they would demand a separate peace.

This was the critical situation of affairs on March 8, when a group of workmen in Petrograd decided on a general strike and began manifestations of discontent against the shortage of food.

For weeks there had been protests and threats of a general strike, but it was the opinion of the liberal leaders in the Duma that, despite the wretched state of affairs, an open revolution was impossible, as the country realized that a revolution would seriously interrupt the work of the war and would be playing into the hands of those who had this very end in view.

Open letters were printed in the Petrograd newspapers from popular Duma leaders, and proclamations were posted in the streets, urgently begging the population not to create demonstrations or cause disorders which might lead to interruption of the manufacture of muni-

tions or paralyze the industrial activity of the city.

People at Last Convinced

Manifestations already arranged for March 6, including a general strike and the marching to the Duma of a deputation of workmen, were in this way averted. But the moment was only postponed. The people, who were convinced that they were being exploited by a hostile clique, received what they regarded as the last proof of the inefficiency and corruption of their own Government when they were apprised that the already insufficient supply of food had become still more meagre and that for some days it would be necessary to go without bread altogether.

Patient and long suffering by nature, this was too much for the population of Petrograd, who knew that the interior of Russia was stored with immense quantities of grain and all kinds of provisions, and, without other motive at first than to voice a demand for bread, the people paraded the streets, and this demonstration was the spark that started the conflagration.

The unrest at first expressed itself in an unusually mild manner, without excitement and with no indication of revolutionary intent, but merely as an insistent demand for a vigorous solution of the food problem.

The Duma meanwhile was actively debating the question, and the majority received with ill-concealed irritation the statements and explanations of the Minister of Agriculture.

On the 10th General Chavaloff, commander of the Petrograd district, issued a proclamation forbidding all assemblies in the streets and warning citizens that the troops had been authorized to use their arms or any means to preserve order in the capital. On the 11th the Czar put the match to the powder train by issuing two ukases suspending the sittings of the Russian Duma and Council of the Empire. This was the final stroke, and the revolution soon came full grown into being.

Michael V. Rodzianko, President of the Duma, a man of strong force and firm conviction, realized that a serious blun-

der had been committed, and telegraphed the Czar that the hour had struck. The Duma unanimously decided that it would not dissolve. The Imperial Council, realizing the gravity of the situation, added its appeal that the Emperor should hearken to the demands of the people. The Emperor, who was absent from Petrograd, hastily started back to the capital, but it was too late.

How the Flood Broke

The story of the upheaval as related by accredited correspondents is as follows:

The most phenomenal feature of the revolution was the swift and orderly transition whereby the control of the city passed from the régime of the old Government into the hands of its opponents.

The visible signs of revolution began on Thursday, March 8. Strikes were declared in several big munitions factories as a protest against the shortage of bread. Men and women gathered and marched through the streets, most of them in an orderly fashion. A few bread shops were broken into in that section of the city beyond the Neva, and several minor clashes between strikers and police occurred.

Squads of mounted troops appeared, but during Thursday and Friday the utmost friendliness seemed to exist between the troops and the people.

This early period of the uprising bore the character of a mock revolution, staged for an immense audience. Cosacks, charging down the street, did so in a half-hearted fashion, plainly without malice or intent to harm the crowds, which they playfully dispersed. The troops exchanged good-natured raillery with the working men and women, and as they rode were cheered by the populace.

Long lines of soldiers stationed in dramatic attitudes across the Nevsky Prospect, with their guns pointed at an imaginary foe, appeared to be taking part in a realistic tableau. Machine guns, firing rounds of blank cartridges, seemed only to add another realistic touch to a tremendous theatric production which was using the whole city as a stage.

On Saturday, however, apparently without provocation, the troops were ordered to fire on people marching in Nevsky Prospect. The troops refused to fire, and the police, replacing them, fired rifles and machine guns.

Then came a clash between troops and police, which continued in desultory fashion throughout Saturday night and Sunday. The Nevsky Prospect was cleared of traffic by the police and notices were posted by the commander of the Petrograd military district warning the people that any attempt to congregate would be met by force.

Troops Join the Revolt

Until Sunday evening, however, there was no intimation that the affair would grow to the proportions of a revolution. The first serious outbreak came at 1 o'clock, when the men of the Volynski Regiment shot their officers and revolted when they received an order to fire upon striking workmen in one of the factory districts.

Another regiment detailed against the mutineers also joined the revolt. The news spread rapidly to the other barracks and four more regiments went over. Some of the revolting troops marched to the St. Peter and St. Paul Fortress on the left bank of the Neva, and after a brief skirmish with the garrison took possession of it.

Dissension spread among the troops, who did not understand why they should be compelled to take violent measures against fellow-citizens whose chief offense was that they were hungry and were asking the Government to supply bread. Several regiments deserted. A pitched battle began between the troops who stood with the Government and those who, refusing to obey orders, had mutinied, and even slain their officers.

A long night fight took place between the mutinous regiments and the police at the end of St. Catherine Canal, immediately in front of the historic church built over the spot where Alexander II. was killed by a bomb. The police finally fled to the rooftops all over the city and were seen no more in the streets during the entire term of the fighting.

Turning Point in Revolution

Monday morning, March 12, the Government troops appeared to control all the principal squares of the city. Then came a period when it was impossible to distinguish one side from the other. There was no definite line between the factions. The turning point appeared to come about 3 o'clock in the afternoon. For two hours the opposing regiments passively confronted each other along the wide Liteiny Prospect in almost complete silence.

From time to time emissaries from the revolutionary side rode to the opposing ranks and exhorted them to join the side of the people. For a while the result seemed to hang in the balance. The troops appeared irresolute, awaiting the commands of their officers, who themselves were in doubt as to what they should do.

Desultory firing continued along the side streets between groups of Government troops and revolutionists. But the regiments upon whose decision the outcome rested still confronted each other, with machine guns and rifles in readiness.

Suddenly a few volleys were exchanged; there was another period of silent suspense, and the Government regiments finally marched over to join the revolutionists. A few hours after the first clash this section of Petrograd, in which were located the Duma building, artillery headquarters, and the chief military barracks, passed into the hands of the revolutionary forces, and the warfare swept like a tornado to other parts of the city, where the scene was duplicated.

At first it seemed a miracle that the revolutionists, without prearranged plan, without leadership or organization, could in such a short time, with comparative ease, achieve a complete victory over the Government. But the explanation lay in the reluctance of the troops to take sides against the people and their prompt desertion to the ranks of those who opposed the Government.

The scenes in the streets were by this time remarkable. The wide streets, where the troops were stationed, were completely deserted by civilians, except

for a few daring individuals, who, creeping along walls and ducking into courtyards, sped from one side to the other. But the side streets were choked with people.

Groups of students, easily distinguished by their blue caps and dark uniforms, fell into step with rough units of rebel soldiers, and were joined by other heterogeneous elements, united for the time being by a cause greater than partisan differences.

Unkempt workingmen, with ragged sheepskin coats covering the conventional peasants' costume of dark blouse and top boots, strode side by side with well-groomed city clerks and shopkeepers.

An Impromptu Army

This strange army of people, mustered on the street corners, shouldered their newly acquired rifles and marched out to join the ranks of the deserting regiments.

The economic and industrial life of the city came to a complete standstill. Street car service was suspended from the beginning of the disorders and stores were closed. The two leading hotels which housed officers were wrecked. Others restricted their service to regular patrons. In response to an appeal by the revolutionist committees, citizens distributed food to the soldiers.

The scene at the Duma before the revolution was in full flame was extraordinary. The members stood about the broad corridors talking calmly, the serious priest members in long black gowns, with flowing hair, and members from the provinces in top boots and blouses mingling with well-groomed and frock-coated representatives.

At the front gates the troops began to assemble. They were without arms. They were the revolting regiments. One body in marching order entered the side gate and halted before the entrance. A Duma member spoke from the steps, explaining the attitude of that body and assuring the regiments that the Duma was with them.

Auto trucks packed with men, soldiers, and civilians, with and without arms,

rolled up to the circular drive and stopped before the door, while some occupant delivered a lurid oration, and then went on, cheered by the crowds.

Then came a small army of citizen soldiers, factory workers, clerks, students armed with rifles taken from the captured arsenals, their pale faces and black Winter clothing forming a strange picture against the snow piled high in the Duma garden.

For an hour they stood in more or less military formation before the building, and at dusk marched away toward the centre of the city, followed by the revolting soldiers. The crowd was extremely orderly. A group of a dozen soldiers pushed into the corridor of the building and demanded to be allowed to address the members. A mild-mannered young civilian of the student type took them in hand with little difficulty and led them into the open. A delegation asked for food. Immediately waiters from the Duma restaurant were sent out with trays of tea and food until the place was cleaned out.

Last Stand of the Old Regime

At nightfall on March 12 only one small district of the city, containing the War Office, the Admiralty Building, St. Isaac's Cathedral, and the Military Hotel, still resisted the onslaught of the revolutionary forces, and the battle for the possession of Petrograd came to a dramatic conclusion. In the Admiralty Building the Council of Ministers secretly gathered for a conference, and the last regiments loyal to the old Government were drawn up as a guard.

While the Council sat in the last meeting which they were destined to hold, the building was surrounded and the besiegers poured rifle and machine gun fire upon the defenders.

For a few hours the fiercest battle of the day continued; the streets were swept by a steady fusillade and the crowds scattered for the nearest shelter, some of the people being compelled to spend the night in courtyards or corridors of office buildings or wherever they first found refuge.

Toward morning there was a sudden

lull, broken by exultant shouts, which deepened into a roar, and were succeeded by the Russian revolutionary "Marseillaise." The regiments defending the Admiralty had surrendered and gone over to the side of the revolutionists.

The Ministers in the Admiralty Building were then arrested and the Russian national colors were replaced by the red flag of the revolutionists.

Rodzianko's Telegrams

During the day revolutionary publications appeared in the streets, with the simple caption "News." These contained a résumé of developments, and they were eagerly read by all classes. Rodzianko's telegrams to the Emperor and others to the commanders of the troops at the front were reproduced. The first message to the Emperor read:

The situation is grave. Anarchy reigns in the capital. The Government is paralyzed. The transport of provisions and fuel is completely disorganized. General dissatisfaction is growing. Irregular rifle firing is occurring in the streets. It is necessary to charge immediately some person trusted by the people to form a new Government. It is impossible to linger, since delay means death. Praying God that the responsibility in this hour will not fall upon a crowned head.

Later President Rodzianko sent the following to the Emperor:

The position is becoming more serious. It is imperative that immediate measures be taken, because tomorrow will be too late. The last hour has come when the fate of the fatherland and the dynasty are being decided.

Similar telegrams were sent to all the commanders at the front with an appeal for their support before the Emperor of the Duma's action. General Alexis Brusiloff, Commander in Chief of the armies of the southwestern front, and General Nicholas Ruzsky, Commander of the northern armies, replied promptly. General Brusiloff sent this message:

"Have fulfilled duty before fatherland and Emperor."

General Ruzsky's reply read:

"Commission accomplished."

The revolt seemed to overspread all Russia simultaneously. Kronstadt, the great fortress and seaport at the head of the Gulf of Finland, joined the revolutionary movement without firing a gun.

Moscow joined in with enthusiasm, as did Odessa. Within twenty-four hours news came from all parts of Russia that city after city, fortress after fortress, provinces, towns, and villages were aflame with enthusiasm, and that the revolutionists were in control, with the soldiers and workmen in fullest accord.

One of the most impressive scenes of the revolution at Petrograd was the arrival of the Preobrajensky Guards with their Colonel and officers at the Tauris Palace. The men, all of giant stature, were drawn up in ranks four deep the whole length of the enormous Catherine Hall. The President of the Duma came out to greet them. On the appearance of M. Rodzianko the Colonel's voice rang out, "Preobrajensky, attention!" and the whole regiment stood at salute. M. Rodzianko saluted them as follows:

"Soldiers of the true faith, let me as an old soldier greet you according to our custom. I wish you good health."

"We wish good health to your Excellency," came the thunderous response.

The President continued:

"I want to thank you for coming here to help the members of the Imperial Duma to establish order and to safeguard the honor and glory of our country. Your comrades are fighting in the trenches for the might and majesty of Russia, and I am proud that my son has been serving since the beginning of the war in your ranks. But in order that you should be able to advance the cause and interests which have been undertaken by the Duma you must remain a disciplined force. You know as well as I do that soldiers are helpless without their officers. I ask you to remain faithful to your officers and to have confidence in them, just as we have confidence in them. Return quietly to your barracks and come here at the first call when you may be required."

"We are ready," answered the Preobrajensky Guards. "Show us the way."

"The old authority is incapable of leading Russia the right way," was the answer. "Our first task is to establish a new authority in which we could all believe and trust, and which would be

able to save and magnify our mother Russia."

The soldiers marched out, shouting, "Hurrah!"

M. Rodzianko greeted in the same manner the officers and men of the Grenadier Guards and the officers and troopers of the Ninth Cavalry Regiment.

After the President's speech to the troopers their Colonel, addressing them, said:

"Men, I intend to carry out all orders given to me by the President of the Imperial Duma. I remain with you on condition that you obey my orders. Hurrah for the President of the Imperial Duma!"

The troopers cheered loudly.

The Provisional Government

The members of the new National Cabinet are as follows:

Premier, President of the Council, and Minister of the Interior—Prince Georges E. Lvoff.

Foreign Minister—Professor Paul N. Milukoff.

Minister of Public Instruction—Professor Manuiloff of Moscow University.

Minister of War and Navy, ad Interim—A. J. Guchkoff, formerly President of the Duma.

Minister of Agriculture—M. Ichingareff, Deputy from Petrograd.

Minister of Finance—M. Tereschtenko, Deputy from Kiev.

Minister of Justice—Deputy Kerenski of Saratoff.

Minister of Communications—N. V. Nekrasoff, Vice President of the Duma.

Controller of State—M. Godneff, Deputy from Kazan.

Minister of Trade and Commerce—A. I. Konovaloff.

Procurator General of the Holy Synod—M. Lvoff.

The new Premier is the most popular man in Russia, head and chief of the combined Urban and Rural Zemstvo Committees, organizer and feeder in chief of the Russian armies in the field, the man whom all students of Russian affairs have expected to see made head of any new Government established. He is a Russian, a Slav in fact as well as in name, and has the entire confidence of the Russian people.

The new Foreign Minister, Professor Milukoff, has been for years the courageous leader of the Russian liberals. He was banished from Russia for political

views expressed while a member of the Faculty of the University of Moscow. He came to Chicago and became Professor of Russian History at the University of Chicago, a post which he relinquished later to return to Russia.

* In 1898 Milukoff, then a Professor at Moscow, was snatched from his classroom one day, subjected to a summary Russian trial, and exiled to Siberia. He was guilty of liberal tendencies. He was in exile for two years, the result of which was his "History of Russian Culture," a justification of revolution on historic grounds.

On his return to Russia he was rearrested and led across the frontier into Bulgaria. A warrant of expatriation, issued from Petrograd, excluded him from the Czar's domain for two years. Milukoff's answer was an immediate return to Petrograd, where he was again arrested and held in jail for five months without trial. When he was released he again came to Chicago.

At the University of Chicago Professor Milukoff was looked upon as one of the most brilliant members of the Faculty. He is an eminent scholar in several lines, though he confined himself here to lecturing on Russian social conditions. In addition to his lectures here he has lectured at various times before the Lowell Institute in Boston. In all he spent four years in Chicago.

Milukoff's influence upon European opinion outside of Russia has been great. On his third visit to America, in 1908, he told interviewers that his speeches in the Duma frequently were interrupted by some one shouting, "American," or "American citizen." In proof of his imperturbability, he added: "So now I almost invariably begin my speeches by quoting something 'American.'"

Late in January a plot to assassinate Professor Milukoff was exposed. The assassination was planned by the organization known as the Black Hundred, the reactionary body which has for years been an instrument of political crimes in Russia. The man chosen, however, confessed the part he was to play before the crime was committed.

Labor Leader as Minister

The Minister of Justice, Deputy Kerenski, is the leader of the workingmen and a conspicuous Russian journalist. His selection and acceptance of a post in the new Government welded together the labor leaders and Moderate Democrats and prevented what at first threatened to prove a serious split in the revolutionary ranks. The first act of the new Government, M. Kerenski stated, was the immediate publication of a decree of full amnesty. Continuing, the Minister said:

"Our comrades of the Second and Fourth Dumas, who were banished illegally to the tundras of Siberia, will be released forthwith. In my jurisdiction are all the Premiers and Ministers of the old régime. They will answer before the law for all crimes against the people."

"Show them no mercy," many voices in the crowd exclaimed.

"Comrades," M. Kerenski replied, "regenerated Russia will not have recourse to the shameful methods utilized by the old régime. Without trial none will be condemned. All prisoners will be tried in open court."

"Comrades, soldiers, citizens, all measures taken by the new Government will be published. Soldiers, I ask you to cooperate. Free Russia is now born, and none will succeed in wresting liberty from the hands of the people. Do not listen to the promptings of the agents of the old régime. Listen to your officers. Long live free Russia!"

The speech was greeted by a storm of cheering.

The labor leader, Chkueidse, addressing the officers and soldiers, paid a glowing tribute to the soldiers and workingmen who had participated in accomplishing the revolution. He recounted the recent provocative efforts by the secret police in publishing proclamations regarding the murders of officers by soldiers. He exhorted the soldiers to regard their officers as citizens who had helped raise the revolutionary flag and as brothers in the great cause of Russian liberty.

Subsequently officers, soldiers, and workingmen carried M. Chkueidse on

their shoulders through a cheering throng of soldiers and civilians.

Kerenski won a victory in a speech that will be historic. Appearing in a stormy labor assembly, mounting a table, with flashing eyes and passionate utterance, he announced that he had accepted the post of Minister of Justice. The announcement turned the tide, and amid cheering Kerenski continued:

"Comrades, in entering the Provisional Government I remain a republican. In my work I must lean for help on the will of the people. I must have in the people my powerful support. May I trust you as I trust myself? [Tremendous cheers and cries of "We believe you, comrade!"] I cannot live without the people, and if ever you begin to doubt me, kill me! I declare to the Provisional Government that I am a representative of democracy, and that the Government must especially take into account the views I shall uphold as a representative of the people, by whose efforts the old Government was overthrown. Comrades, time does not wait. I call you to organization and discipline. I ask you to support us, your representatives, who are prepared to die for the people and have given the people their whole life."

Appeal to the People

The first act of the new Government was the issuance of the following appeal, dated March 18, 1917:

Citizens: The Executive Committee of the Duma, with the aid and support of the garrison of the capital and its inhabitants, has succeeded in triumphing over the obnoxious forces of the old régime in such a manner that we are able to proceed to a more stable organization of the executive power, with men whose past political activity assures them the country's confidence.

[The names of the members of the new Government are then given and the appeal continues:]

The new Cabinet will base its policy on the following principles:

First—An immediate general amnesty for all political and religious offenses, including terrorist acts and military and agrarian offenses.

Second—Liberty of speech and of the press; freedom for alliances, unions, and strikes, with the extension of these liberties to military officials within the limits admitted by military requirements.

Third—Abolition of all social, religious, and national restrictions.

Fourth—To proceed forthwith to the preparation and convocation of a constitutional Assembly, based on universal suffrage, which will establish a governmental régime.

Fifth—The substitution of the police by a national militia, with chiefs to be elected and responsible to the Government.

Sixth—Communal elections to be based on universal suffrage.

Seventh—The troops which participated in the revolutionary movement will not be disarmed, but will remain in Petrograd.

Eighth—While maintaining strict military discipline for troops on active service, it is desirable to abrogate for soldiers all restrictions in the enjoyment of social rights accorded other citizens.

The Provisional Government desires to add that it has no intention to profit by the circumstances of the war to delay the realization of the measures of reform above mentioned.

Abdication of the Czar

Czar Nicholas's abdication was announced on March 16. The document was signed at the town of Pskoff, where the train on which he was traveling toward Petrograd was halted early in the week. From Pskoff, according to accounts now available, the Emperor communicated with members of the Executive Committee of the Duma, who informed him that they were sending emissaries to meet him there. Accordingly, a member of the Duma committee and one of the Ministers of the new Cabinet proceeded to Pskoff and had an interview with the Emperor in the presence of General Nicholas V. Russky, a member of the Council of the Empire and of the Supreme Military Council; Baron W. Fedorovich, Minister of the Court; Count Narishkin, and others.

After relating to the Emperor the latest developments in the revolution, the emissaries advised him not to send any troops from the front to Petrograd, since all the troops were going over to the revolutionists as fast as they arrived.

"What is desired that I should do?" the Emperor inquired.

"Abdicate the throne," was the reply.

After devoting some time to deliberation Emperor Nicholas said:

"It would be very hard to be separated from my son. Therefore I will

abdicate in favor of my brother, in behalf of myself and my son."

The document, which had been prepared in advance, was handed to the Emperor, and he signed it at once.

The text of the abdication is as follows:

We, Nicholas II., by the Grace of God Emperor of all the Russias, Czar of Poland, and Grand Duke of Finland, &c., make known to all our faithful subjects:

In the day of the great struggle against a foreign foe, who has been striving for three years to enslave our country, God has wished to send to Russia a new and painful trial. Interior troubles threaten to have a fatal repercussion on the final outcome of the war. The destinies of Russia and the honor of our heroic army, the happiness of the people, and all the future of our dear fatherland require that the war be prosecuted at all cost to a victorious end. The cruel enemy is making his last effort, and the moment is near when our valiant army, in concert with those of our glorious allies, will definitely chastise the foe.

In these decisive days in the life of Russia we believe our people should have the closest union and organization of all their forces for the realization of speedy victory. For this reason, in accord with the Duma of the empire, we have considered it desirable to abdicate the throne of Russia and lay aside our supreme power.

Not wishing to be separated from our loved son, we leave our heritage to our brother the Grand Duke Michael Alexandrovitch, blessing his advent to the throne of Russia. We hand over the Government to our brother in full union with the representatives of the nation who are seated in the legislative chambers, taking this step with an inviolable oath in the name of our well-beloved country.

We call on all faithful sons of the fatherland to fulfill their sacred patriotic duty in this painful moment of national trial and to aid our brother and the representatives of the nation in bringing Russia into the path of prosperity and glory.

May God aid Russia.

Fortunes of the Romanoffs

On March 19 it was reported from Petrograd that the former Czar, to be known as Nicholas Romanoff, had left with his staff for his personal estate at Livadia, on the south coast of the Crimea. It was at first believed that his twelve-year-old son and heir, Grand Duke Alexis, who renounced the throne when the father abdicated, had been killed, but later news was to the effect that the Czarina was with her children and that all save

Grand Duchess Marie were very ill with measles. In the case of the little Prince the attack was complicated by the breaking out of the old wound in his foot, dating from the alleged attempt on his life about four years ago. The Grand Duke was attended by his mother and the old sailor, Berevenke, who has been his constant companion. Grand Duchess Tatiana was in a serious condition, and oxygen had been administered.

News of the disaffection of the troops reached the Empress on Feb. 27. The palace guard was mobilized for defense, the riflemen remaining within the palace with machine guns, while outside were armored motors. When the Tsarskoe-Selo garrison revolted a collision with the palace guards appeared inevitable. The Empress went to the commander of the guard and said:

"My desire is that you do not fire."

This was taken as an order to surrender, which he did. Soon revolutionary troops entered the palace, and officers went to the apartment of the imperial family. To these the Empress said:

"Let there be no violence. I am now only a Sister of Charity at the bedside of my afflicted children."

Grand Duke Michael Declines

The Czar in abdicating transferred the supreme power to his younger brother, Grand Duke Michael, but the latter declined to accept the responsibility unless he should be declared the choice of the people by vote. The refusal was signed at his private residence, whither he went with a large part of the Duma committee, headed by Prince Lvoff, Professor Milukoff, and President Rodzianko.

The Grand Duke addressed the committee and declared that the responsibility devolving upon him found him undecided because of the existing differences of opinion. He added that since the happiness of Russia was the only consideration, he believed this would be assured by his abdication, and therefore surrendered his authority. The text of his declaration, dated March 16, is as follows:

This heavy responsibility has come to me at the voluntary request of my brother, who has transferred the imperial throne to me during

a period of warfare which is accompanied with unprecedented popular disturbances.

Moved by the thought, which is in the minds of the entire people, that the good of the country is paramount, I have adopted the firm resolution to accept the supreme power only if this be the will of our great people, who, by a plebiscite organized by their representatives in a constituent assembly, shall establish a form of government and new fundamental laws for the Russian State.

Consequently, invoking the benediction of our Lord, I urge all citizens of Russia to submit to the Provisional Government, established upon the initiative of the Duma and invested with full plenary powers, until such time, which will follow with as little delay as possible, as the constituent assembly, on a basis of universal, direct, equal, and secret suffrage, shall, by its decision as to the new form of government, express the will of the people.

Siberian Exiles Freed

The first act of the Provisional Government was one of amnesty for all political offenders, including Terrorists. The series of agreements opens up astonishing possibilities. A main feature of the program is that the form of government, whether republican or otherwise, is to be decided by a constituent assembly, to be elected after the war.

The famous prison of St. Peter and St. Paul at Petrograd, which has immured countless political prisoners, was thrown open, as was the Kremlin at Moscow, and exiles in all parts of the world were invited to return. The fleet and the naval commanders accepted the revolution with enthusiastic unanimity. Grand Duke Cyril, commanding the sailors of the guard, came in person with his officers and announced that this historic corps would place itself under the orders of Rodzianko. News from the army of 6,000,000 on the various Russian fronts was entirely favorable.

One of the most important gains in the revolution was its acceptance by the Holy Synod. The final meeting of the Synod since the revolution was held at Petrograd March 18 under the Presidency of the Metropolitan of Kiev. The new Procurator General of the Holy Synod, M. Lvoff, in opening the sitting, said he rejoiced at the advent of freedom of the Orthodox Church. He ordered the removal of the imperial chair from the conference room, symbolizing

termination of interference by the Emperor in the affairs of the Church. The Metropolitan and other members of the Synod said a new era for the Orthodox Church had come.

Public subscriptions for released political prisoners and for the families of men killed in the street fighting were opened. The Russo-Asiatic Bank has subscribed \$250,000 for the released political prisoners.

Everywhere in Petrograd, Moscow, and other large cities the imperial insignia of the House of Romanoff were removed from all public buildings.

Foreign Minister's Notice

Professor Milukoff received the diplomatic representatives of the Allies on Sunday, March 18, and at the same time gave official notice of the revolution to the world in the following address, which was transmitted by cable to all Russian diplomats abroad:

"The news transmitted by the Petrograd Telegraphic Agency (the semi-official Russian news bureau) already has acquainted you with the events of the last few days and the fall of the old political régime in Russia, which collapsed lamentably in the face of popular indignation provoked by its carelessness, its abuses, and its criminal lack of foresight. The unanimity of resentment which the order of things now at an end had aroused among all healthy elements of the nation has considerably facilitated the crisis. All these elements having rallied with enthusiasm to the noble flag of revolution, and the army having lent them its speedy and effective support, the national movement obtained decisive victory within eight days.

"This rapidity of realization happily made it possible to reduce the number of victims to a figure unprecedentedly small in the annals of upheavals of such extent and importance.

"By an act dated from Pskoff March 15, Emperor Nicholas renounced the throne for himself and the hereditary Grand Duke Alexis Nikolaievitch in favor of Grand Duke Michael Alexandrovitch. In reply to a notification which was made to him of this act, Grand

Duke Michael Alexandrovitch, by an act dated Petrograd, March 16, in his turn renounced assumption of supreme power until the time when a constituent assembly, created on the basis of universal suffrage, should have established a form of government and new fundamental laws of Russia. By this same act Alexandrovitch invited the citizens of Russia, pending a definite manifestation of the national will, to submit to the authority of the Provisional Government constituted on the initiative of the State, which holds full power. The composition of the Provisional Government and its political program have been published and transmitted to foreign countries.

Responsibility Fully Realized

"This Government, which assumes power at the moment of the greatest external and internal crisis which Russia has known in the course of her history, is fully conscious of the immense responsibility it incurs. It will apply itself first to repairing the overwhelming errors bequeathed to it by the past, to insuring order and tranquillity in the country, and, finally, to preparing the conditions necessary in order that the sovereign will of the nation may be freely pronounced as to its future lot.

"In the domain of foreign policy the Cabinet, in which I am charged with the portfolio of the Ministry of Foreign Affairs, will remain mindful of the international engagements entered into by the fallen régime, and will honor Russia's word. We shall carefully cultivate relations which unite us to other friendly and allied nations, and we are confident that these relations will become even more intimate, more solid, under the new régime established in Russia, which is resolved to be guided by the democratic principles of respect due to the small and great nations, to the liberty of their development, and to good understanding among nations.

"But the Government cannot forget for a single instant the grave external circumstances in which it assumes power. Russia did not will the war which has

been drenching the world with blood for nearly three years. But, victim of premeditated aggression prepared long ago, she will continue, as in the past, to struggle against the spirit of conquest of a predatory race which has aimed at establishing an intolerable hegemony over its neighbors and subjecting Europe of the twentieth century to the shame of domination by Prussian militarism. Faithful to the pact which unites her indissolubly to her glorious allies, Russia is resolved, like them, to assure the world at all costs an era of peace among the nations, on the basis of stable national organization guaranteeing respect for right and justice. She will fight by their side against the common enemy until the end, without cessation and without faltering.

"The Government of which I form a part will devote all its energy to preparation of victory and will apply itself to the task of repairing as quickly as possible the errors of the past, which hitherto have paralyzed the aspirations and the self-sacrifice of the Russian people. I am firmly convinced that the marvelous enthusiasm which today animates the whole nation will multiply its strength in time and hasten the hour of the final triumph of a regenerated Russia and her valiant allies.

"I beg you to communicate to the Minister of Foreign Affairs [of the country to which the diplomat addressed is accredited] the contents of the present telegram."

Tons of Food Discovered

In vindication of the justice of the cause of the revolutionists after the emeute, thousands of tons of grain and other food were found hidden in remote places in Petrograd, apparently proving that the shortage was part of a treasonable design of the then existing Government.

On March 18 assurances had been received from all the armies in the field that the new Government was enthusiastically accepted. M. Kerenski had rescinded the order of banishment against Grand Duke Dmitri and Prince

Yousoupoff, the slayers of Gregory Rasputin, the monk who exercised great influence over the imperial family, and the two men were returning to Petrograd. Members of the former Cabinet had been placed under arrest and would be cited for trial later. It is believed, however, that there will be no prosecution of the nobility, and that amnesty and moderation will be the watchwords of the new Government.

As to the Czar and his family, it is believed they will not be further molested; there seems to be no vindictiveness felt against him, as he was regarded as but a weak instrument in the hands of unscrupulous plotters. The explanation of the Camarilla's desire to have Russia meet disaster in the war, so as to force a separate peace, was the fear among the nobility that success with republican France and democratic England over autocratic Russia and Austria would spell the downfall of autocracy and the triumph of the Russian liberals.

Anti-German Sentiment

The strongest anti-German feeling animates the population. They are systematically hunting down all highly placed personages suspected of German proclivities or bearing German names or titles. The aged Minister of the imperial household, Count Fredericks, whose home was wrecked, was discovered in hiding and was taken as a prisoner to the Duma. Soldiers and a crowd of people long hunted for Countess Kleinmichael on suspicion of her being German. She was discovered hiding in the Chinese Legation, whence the soldiers removed her under arrest.

Baron Stackelberg fired on the soldiers from his window. He was dragged out of his home, taken to the quay side, and there summarily executed.

All the factories resumed operations on March 19, paying full wages for time lost during the revolution. Former members of the police force at Petrograd, numbering many thousands, were sent to the front. The Metropolitans of Petrograd, Moscow, Pitrin, and Mulary were sent into compulsory retirement. Pro-

vincial Governors were replaced by Presidents of Zemstvos or Mayors of cities in management of food supplies.

All censorship, except on military affairs, was abolished, and the department itself was discontinued. A committee headed by Maxim Gorky was appointed to safeguard palaces and artistic property. Home rule will be given to Finland. The former Governor, Zein, who was an oppressor and reactionary, was sent to prison, and it is understood that Baron Roditscheff, who has been a staunch advocate of free Finland, will be appointed Zein's successor.

Manifesto to the Nation

On March 20 the Russian Provisional Government issued the following manifesto to the nation:

"Citizens: The great work has been accomplished. By a powerful stroke the Russian people have overthrown the old régime. A new Russia is born. This coup d'état has set the keystone upon long years of struggle.

"Under pressure of awakened national forces, the act of Oct. 30, 1905, promised Russia constitutional liberties, which were never put into execution. The First Duma, the mouthpiece of the national wishes, was dissolved. The Second Duma met the same fate, and the Government, being powerless to crush the national will, decided by the act of June 16, 1907, to deprive the people of part of the legislative rights promised them.

"During the ensuing ten years the Government successively withdrew from the people all the rights they had won. The country was again thrown into the abyss of absolute ruin and administrative arbitrariness. All attempts to make the voice of reason heard were vain, and the great world struggle into which the country was plunged found it face to face with moral decadence and power not united with the people—power indifferent to the country's destinies and steeped in vices and infamy.

"The heroic efforts of the army, crushed under the cruel weight of internal disorganization, the appeals of the national representatives, who were

united in view of the national danger, were powerless to lead the Emperor and his Government into the path of union with the people. Thus when Russia, by the illegal and disastrous acts of her Governors, was faced with the greatest disasters, the people had to take the power into their own hands.

"With unanimous revolutionary spirit, the people, fully realizing the seriousness of the moment and the firm will of the Duma, established a Provisional Government, which considers that it is its sacred duty to realize the national desires and lead the country into the bright path of free civil organization. The Government believes that the lofty spirit of patriotism which the people have shown in the struggle against the old régime will also animate our gallant soldiers on the battlefields.

"On its side the Government will do its utmost to provide the army with everything necessary to bring the war to a victorious conclusion. The Government will faithfully observe all alliances uniting us to other powers and all agreements made in the past.

"While taking measures indispensable for the defense of the country against a foreign enemy, the Government will consider it its first duty to grant to the people every facility to express its will concerning the political administration, and will convoke as soon as possible a constituent assembly on the basis of universal suffrage, at the same time assuring the gallant defenders of the country their share in the Parliamentary elections.

"The constituent assembly will issue fundamental laws, guaranteeing the country the immutable rights of equality and liberty.

"Conscious of the burden of the political oppression weighing on the country and hindering the free creative forces of the people during years of painful hardships, the Provisional Government deems it necessary, before the constituent assembly, to announce to the country its principles, assuring political liberty and equality to all citizens, making free use of the spiritual forces in creative work

for the benefit of the country. The Government will also take care to elaborate the principles assuring all citizens participation in communal elections, which will be carried out on a basis of universal suffrage.

"At the moment of national emancipation the whole country recalls with pious gratitude those who, in the struggle for their political and religious ideas, fell victims of the vengeance of the old power, and the Provisional Government will joyfully bring back from exile and prison all those who thus suffered for the good of their country.

"In realizing these problems the Provisional Government believes it is executing the national will and that the

whole people will support it in its efforts to insure the happiness of Russia."

The news from all parts of the country on March 20 indicated that the revolution had been successfully accomplished everywhere without serious bloodshed, and the people, the army, and the navy were acclaiming the new order with enthusiasm. It was decided, in order to avoid all complications, not to give any commanding position to a member of the Romonoff house; hence the proposal was abandoned to name Grand Duke Nicholas as Generalissimo and Grand Duke Michael as Regent. The full sovereign powers rest with the Provisional Government until the National Assembly convenes.

Scientific Discoveries Due to the War

Paul Painlevé, a member of the French Institute and recent Minister of Inventions, has cited the following facts by way of reply to Thomas A. Edison's remark that science is playing a rather small part in the war:

The processes of wireless communication and for the registering of sounds at distances, that is, by the ordinary wireless currents and by ground induction, have been marvelously perfected through the requirements of the war. All the armies are rivaling each other in skillful methods for tapping the enemy's lines of telephonic communication from a considerable distance; not tapping as it is generally understood, but by the use of a marvelous instrument that enables the sentinel in his advanced listening post out beyond the front line of trenches to hear the enemy communications by telephone going over wires that are several hundred yards away.

I would mention also a system that we perfected and put into use for locating the enemy's batteries by sound. The principle was known before the war, but it was regarded as impracticable. It has, since the war, been brought to the highest state of perfection and efficiency and for months has been in use over the entire front. It has proved so effective that our adversaries, who captured a motor car with one of the outfits, have equipped themselves with similar appliances but lacking the delicacy and the precision of our instruments. It was France that had the entire initiative of this brilliant application.

Inventions for following the enemy's sapping and mining operations by sound that were, in all armies, very crude and insufficient before the war, have made the most remarkable progress, and will reflect honor upon French science later on.

Aviation in every respect has been remarkably perfected by the efforts of science and technicians since the war began. Today a pilot goes up in all kinds of weather without fear of being upset by sudden squalls, so well have been perfected the measures for the stability of flying machines. Great progress also has been made in the improvement of motors, particularly in the reduction of their weight in proportion to their effective power, so that they speed up to 150 miles an hour. Finally, in spite of the difficulties, wireless telegraphy has been marvelously adapted to aviation.

The Kaiser Today

This intimate, first-hand study of the Kaiser, duly authenticated, is written by a prominent American correspondent in Berlin. It is the first exclusive pen picture of the Kaiser since the war began.

IN the half lights of dawn there emerged from the shadows down the road a column of poplar trees; motionless and erect, it seemed they were on sentry duty, too. The gray-green of their uniforms almost invisible against the fields, soldiers in twos crossed and recrossed the road, ghostly they in the quickening spectrum of day, helmeted shadows of the Kaiser's Guard. Further down the road a light gleamed. That was the château; there Wilhelm II., "by God's grace, King of Prussia and German Emperor," slept.

In a nearby field horses whinnied and neighed; men moved, talking in harsh early morning voices. Two squadrons of the Dragoon Guards were encamped there—should the Kaiser call. There, too, one glimpsed a thin, lean glimmer of steel; and, as the sky changed from gray to pink, there came out of the vagueness, taking sinister shape, guns of the horse artillery—should the Kaiser call.

Guarding him as he slept, files of the gray-green men paced through the château park. An outer circle who tramped along the spiked iron fence of the grounds, another circle stalking through the trees, another, another, until, after circle upon circle of sentries, one came to a double guard at the narrow, prim entrance to the château. Even there the guards over the Kaiser did not end. Upstairs sentries stole through the high-ceilinged halls. In the rooms just above, just below, and on either side of the Kaiser chamber Secret Service men spent a sleepless night, watching, listening, the

eternal vigil over the imperial body. For the German Emperor is never so guarded as he is at the front. Twenty miles from the firing line, this château. Guarded against what?

All through the night there had come down to the soldiers in the park the faint purring and clattering of the guards above, airplanes circling high above the

imperial head, two eyes of the army peering through the high places, lest an enemy flyer swoop near. And on the gravel drive below, carefully posted motor trucks, platforms on wheels, mounting long-ranged anti-aircraft guns, others with monstrous glazy eyes that twinkled now in the dawn—the searchlights, that had been ready to sweep the night with light, had the enemy fliers come. And in the château room, under which

KAISER WILHELM II.

slept their Emperor, more of the gray-green men watched the yellowing sky and yawned and felt hungry. Since midnight they had held the watch there, their machine guns tilted skyward; all about them the layers of sandbags to swallow the explosion of an enemy bomb. Nets, an arbor of wires over their heads, every precaution to nullify the effect of a bomb that might be cast down upon the château where the Kaiser slept.

The sun came up again, ruthlessly lighting the scarred face of France. Weird seemed the land in the faint light of day. Houses to the east, through which the golden glow gleams, framed on their gray stone walls by the cavernous holes of the shells. There a church with tumbled rafters, its cross shot

away; here what had been a field of plenty, ugly now with the pockmarks of the shells. For over this land whereon the Kaiser slept his legions had rushed of a day in August two years before, and their imprint lay still upon the earth.

Six o'clock. A commotion at the door. The guard stiffened into statues, trans-fixed in the imperial salute. A man dressed in gray-green like theirs, a gray military cape, lined with red, hanging from his square shoulders, the short baton of a Field Marshal protruding from his left hand, appeared in the doorway. With a quick gesture his right hand returned their salutes: "Good morning, soldiers!" Another day for the Kaiser has begun.

Under the trees purred the imperial motor; behind it a second, gay with the gold and black of the imperial standard. The Dragoons cantered up from the field near by, slashing the air into twinkling shreds as their sabres swished to the salute. "Good morning, soldiers!" cried the Kaiser, the silver-knobbed baton flashing a salute in return. "Good morning, your Majesty!" roared five hundred horsemen.

The Kaiser stepped into the car. His tall Pomeranian grenadier footman *rug* around the imperial legs. The Dragoons divided, half riding out in front of the car, half galloping behind. "To General Bülow's headquarters," ordered the Kaiser, and, to a trumpeting of motor honrs, the imperial cavalcade slipped through the park, and, leaving the château behind, moved toward the front.

So began one day for the Kaiser; so has begun many a day for him during this war. For the German Emperor is more often at the front than he is at the castle in Berlin.

The Kaiser Takes Risks

For, whatever else may be said of the Kaiser, he is a man, and, considering this war a man's job, he is ever on the job. No occasional trips to the front for Wilhelm II. No remaining quite comfortable in a palace and every so often, at intervals of months, going on a royal sort of Cook's tour to visit his army. Rather

the Kaiser ever holds his hand on the war pulse. One hears of him in France, then in Russia, then in Serbia.

At one time during the early fighting against Russia he barely retreated with a division across the River Niemen in time to escape capture by a Cossack patrol—an event, this, little known in Germany. Again, riding in an automobile with von Hindenburg in front of the fortress of Kovno, the Kaiser's car was picked up by Russian artillery observers, and there was a race for life against the shells. Again with his staff, and against their wishes, the Kaiser ventured upon a hilltop opposite Soissons in France and brought the crash of shrapnel down about his ears.

Yes, the Kaiser has seen this war. He has seen it at the front. He has seen regiments surge into action for him and die. Under his eyes—he deeming that his presence would stir the men to greater efforts—the Germans charged again and again to break the British lines at Ypres. And the Kaiser saw the flower of his army, the Prussian Guards, blasted away. And later he saw the funeral pyres of their dead lighting one of those Ypres nights made greenish with the rocket flares, one of those nights when mad colors seethe up from No Man's Land and the trenches slowly turn to great long graves. The Kaiser has seen these horrors by night, those unearthly nights by the Ypres Canal that always seem to come out of the pages of a Maeterlinck play.

Yes, war has made its imprint on the Kaiser's mind. One can see it today. The rebellious lock of hair over the temple is more gray. A deep furrow between the brows where there was none before, a shadowing in his gray-blue eyes that used always to be clear. At times on the imperial face the gambler's expression is discernible, the Monte Carlo face intensified illimitably. The Kaiser seems then like a man who has thrown everything on the wheel—people, country, dynasty—and the uncertainty, the stress of waiting and waiting for a result is portrayed there. Correspondingly the Kaiser's reactions of expression are violent today. After the victory at War-

saw in 1915 he looked extravagantly joyous. It was as if one had been trying to tell one's self that everything was coming out all right—although subconsciously one often feared not—and that then something happened, a victory! And for a moment the tension of doubt was broken. These changes of emotion show on the Kaiser today. But generally his face is grave. As he whirls from one point to another on the front, indeed, as he rushes from one of his far-flung battle fronts to another, the Kaiser's expression is always the same, gravity.

The war lord on parade, the Kaiser of the manoeuvre fields of peace times, the Kaiser who would order a cavalry charge of huge proportions, and who, as his horsemen thundered by, would turn to his military guests with a look of supreme pride and confidence—that Kaiser is no more. Instead one sees a harassed expression that shows the mind behind to be thinking: "Will the terms of peace satisfy my people for the sacrifices they have made? Will my people hold loyal and true to the end? I believe we are in God's hands, and he will not desert us."

His Religion Appallingly Sincere

For the religion of the Kaiser has been his cornerstone or his poison in this war. Calling upon the Almighty for aid in everything he undertakes, the Kaiser has come to approach the fanatically religious sovereigns of centuries gone by. In religion and his belief that God is on his side the Kaiser is appallingly sincere. Better were it a pose; he would have made peace long ago.

What of the Kaiser today? Always dignified, the war has grown about him a grave, almost reverential mood, lightened only by the smiles of victory. That the war weighs heavily upon his heart every American who has talked with him affirms. That he feels deeply at the sight of the dead and wounded is also true. Conceptions of the human character always differ. It has been written that Joan of Arc was a saint; that she was a madwoman; Molière scoffed at her. It has been written that Catherine of Russia was a great Empress; that she was a mere sexual pervert; that Edward

VII. of England was a peacemaker, that he was a Janus-faced diplomat, who bred war. Conceptions of the Kaiser have been written, presenting him as an arch-hypocrite, the greatest actor in the world, and as a madman. The conception I have is neither of these. He is dangerously sincere. He believes in himself and in the destiny of the German people. He believes strongly in Nietzschean "will to power"—in his speeches to his soldiers during this war he has called it the "will to victory."

Always religious, the war has made him more so, until it approaches almost mysticism. His constant calling upon God is sincere. His belief that God is on his side is sincere. Whenever he goes to the front the imperial banner, orange, black embroidered with a cross, and bearing the legend "God with us," goes with him. He has caused that motto of his to be inscribed on the buckles of his soldiers. He has caused every soldier in the army to receive a little pocket Bible. He is accompanied by a Chaplain wherever he goes—accompanied by a surgeon, too.

The Kaiser's Health Uncertain

For during this war the imperial health has more than once been the cause of great worry to the German Nation. In December of 1914 a throat affection, the curse of the Hohenzollerns, which laid low his father and his grandfather, confined the Kaiser to the Schloss in Berlin. No one knew exactly what was the matter with him; only those at the top knew. An operation was performed, the Kaiser lived. For a year the malady left him alone, and he rushed from battlefield to battlefield, then in December of 1916 it overtook him again. The aged Franz Josef, Emperor of Austria, died. The Kaiser's physicians permitted him to attend a mass for his ally, but refused to let him go to the funeral. Now, the absence of the Kaiser from Franz Josef's funeral was a most conspicuous thing, and it is certain that in no circumstances would he have tolerated it had not the danger to his health been great.

Will the Kaiser survive the war? No one can tell. Wilhelm I. was a tall, pow-

erful man. One day he was taken down to a resort on the Riviera. The curse of the Hohenzollerns had caught him, and there he died quickly. The Kaiser has had a battle with himself from the day he was born. His left arm crippled, his figure drooping and sickly, as a boy Prince he worked against fate until he developed himself into a broad, muscular man. But he was not able to strengthen his throat, he was not able to ward off that disease, be it cancer or what, which took off his Hohenzollern ancestors.

Active at the Front

Physically strong the Kaiser is today. At the front he does not pamper himself. He has gone without meals. He has scorned the course luncheons of château headquarters for plates of stew at field kitchens. He has been in the saddle for hours at a time, always leaving the imperial motor when the zone of military fire, with its alert enemy observers, drew near. At Lille he stood in the rain for hours and watched the Bavarians, who were to drive on Arras, go marching by. Day after day, during the height of the Verdun offensive, he went to bed after midnight, and was up at daybreak, consulting with his Generals throughout the night.

Visiting points on the front by day, ever haranguing the soldiers with speeches, it is not an uncommon thing for the Kaiser to make twelve speeches a day at the front. It has been said of him that he believes his presence is worth more in a battle than two army corps. Let a column of infantry be overtaken by the imperial motor. "Halt!" cries the Kaiser—to the distant drumming of the guns he almost seems to beat time with the little Field Marshal's baton generally to be found clasped in the imperial hand. "Soldiers, you have given the Fatherland many glorious victories, you will continue to win victories until, with God's help, peace comes." Such is the pith of the typical Kaiser speech at the front—acknowledgment, instilling of will, reminder of God. It is his inevitable construction.

That the army loves him there can be no doubt. The Kaiser's attitude is as if

Germany were the father; as if all the soldiers were children; as if he were the representative of the father, Germany, looking after them. He does look after his soldiers, too, as much as circumstances will allow—obviously impossible for the Kaiser to know his millions of soldiers personally. A visit to the groaning hospital cot, a word of kindness, a clasp of a day laborer's hand, a decoration bestowed, an unexpected visit to a company at meal time, a dish of stew with them from out of the field kitchen; an unheralded coming to the quarters where his soldiers rest behind the firing line, an imperial call-down for the officer because the men are not comfortable enough—such things the Kaiser is ever doing, and the stories of them are spread like wildfire throughout the army; and the men come to feel that he is an Emperor who is fighting with them, not lounging back in a palace, getting the reports.

Now, obviously it is good business for the Kaiser to create such sentiment among the soldiers; but to give that as a reason for the Kaiser being at the front is unfair and untrue; for the Kaiser is a man, and while he approaches war in the mood of utmost gravity and religiously inspired, still he loves the thrill of it all.

In a room of the General Staff in Berlin where the officers whose duty is railroad transportation keep track day and night of the movements of all passenger and military trains throughout the empire, there come nights when every man is unusually alert. Those are "Kaiser nights." In the great headquarters of Charleville, Brussels, and in Lille, three staffs whose sole work is railroads sit.

The Imperial Special

The Kaiser decides to leave the western battlefront for the east. His headquarters, during July, was a château behind Sedan. From Sedan the word is flashed to Lille that the Kaiser is coming. Lille flashes it on to Brussels. Brussels to the great railroad room in Berlin. From that building of yellowish brick on the Königsplatz, railroad chiefs at every point, from Aachen on the Belgian frontier to Alexandrovo on the Po-

lish frontier, are notified that the Kaiser's train is leaving Lille bound for Warsaw, over Brussels, Berlin. There is a separate staff for the administration of the roads in Poland, to which headquarters in Warsaw comes the same message from Berlin, and it in turn notifies the yard chiefs in Poland, at Lodz and Skiernewice, of the coming of the imperial train. All is ready. The yards know just how many military and passenger trains are scheduled to pass through them in the next twenty-four hours. The "Kaiser's schedule" is put in operation. Tracks are cleared for the imperial special.

Drawn by one of the powerful engines of the Heckle works, it pulls into Sedan, a drawing-room car for the Kaiser and his personal aids, a combination dining and study car, the imperial sleeper, and three sleepers for the rest of the staff. As the big locomotive waits, there sounds above its panting the clatter of airplanes, and overhead, in V formation, flying like crows, a big Fokker at the apex, the Kaiser's aerial guard, to keep off any possible enemy flier until the German frontier is reached, circles and circles on high.

The night after the Kaiser has stepped into his special train at Sedan, he is detrainning at Warsaw and driving at midnight down the Jeruselamer Allee into the Nowy Swiat and down to the palace of the old Polish Kings, where he will spend the night. A few days getting the Polish sentiment, possibly sounding out the temper of the people, to see if shoulder to shoulder they will fight with the Germans against Russia, and the Kaiser moves on. From Warsaw he radiates north to watch the hammering at Riga; east, beyond Brest-Litovsk, where Reincke holds the line of Barnovitch against the Russian drive; or the imperial train goes hammering southwest over Ivangorod toward Kovel, where Litchowsky and his Cossacks drill the Austrian wall.

Wherever the situation seems to be critical, there goes the Kaiser—to inspire his troops. Wherever a great victory has been won, there goes the Kaiser—to thank his troops. Whenever a new

country has been captured, Serbia, Rumania, there goes the Kaiser to strike awe into the hearts of the captive populace, awe and respect for the Prussian eagle. Wherever an ally is becoming a little uneasy, there goes the Kaiser—to stiffen weak backs and bolster causes that seem lost.

Methods of the War Lord

One of the Kaiser's prerogatives is that he holds the supreme command of the German Army and the German Navy. Incidentally, the German military title for the office is "Kriegs Herrn," a regular military title which caused the Kaiser to be known to the world as the War Lord, for *Kriegs Herrn* literally translates into that. Holding this supreme command, the Kaiser uses it. Our President is Commander in Chief of the American Army and Navy, but as a rule our Presidents rarely direct the campaign of our army and navy in time of war. Unlike our Presidents, the Kaiser has studied military and naval science his whole life, and he believes he knows something concerning it—a point, by the way, upon which writers on military science differ.

Now the Kaiser's method with his army is direct. He appoints the man whom he believes to be best fitted for the work to the office of Chief of the General Staff. This man is surrounded by hundreds of the most efficient and highly specialized officers in the German Army. This General Staff, quartered in the field at Charleville, France, works out department by department every phase of the big military campaigns. These campaigns, decided upon by the Chiefs of Staff, are then put up to the Kaiser.

After the success of the operations in Serbia in the Autumn of 1915, Falkenhayn formed a plan of campaign that called for a spending of Germany's offensive resources at that time against France. Hindenburg, then in supreme command of the German armies of the East, (Falkenhayn not having jurisdiction over him in any way,) violently opposed this plan against France. Hindenburg and his great strategist, Ludendorff, told the Emperor that no of-

fensive movement should be made against France, but that a decision should be first reached in the East. The Kaiser had the two propositions in front of him. Falkenhayn flatly promised the Kaiser Verdun. He had it all figured out convincingly. Hindenburg came out against Falkenhayn's plan. The Kaiser told Hindenburg he was wrong; but half a year later Falkenhayn's head went into the basket, next to Moltke's. He had joined the lists of the Kaiser's Chiefs of Staff who failed.

Now that is the Kaiser's position in relation to the army. He is the supreme arbiter. His Chief of Staff and his Generals conceive the military moves. He studies their plans, suggests changes here, and likes his Generals when they openly disagree with him—that is, if it turns out that they are right. If their opposition is shown to be wrong, they get on the imperial black list. The Kaiser decides. That sums up his position with the army.

His Control of Submarines

Similar is his relation to the navy. That, too, has its General Staff. They sit in a most modern building in Berlin, a palace compared with the headquarters of the army; and conceive their problems of naval strategy. In that white stone building on the shores of one of Berlin's canals was born the idea of submarine frightfulness. For two years they worked on the campaign which was announced to the world on Jan. 31, 1917. For two years they increased the building facilities of the German shipyards, biding their time, as week by week the number of "sea snakes" grew. Then, when they had a certain number ready—one does not pretend to know how many; credible information says that Germany can now build six submarines a week—when they had raised the number of submarines so it would satisfy their plans, the German Admiralty Staff laid them again before the Kaiser, and he made his momentous decision. Will it make him or break him?

Likewise with his Foreign Office does the Kaiser decide. In that musty old building, Wilhelmstrasse 76, there are

departments for every nation in the world. One official, with his subordinates, is in charge of the United States department, another of the English, and so on. It is the duty of these department chiefs to be ready at the Kaiser's call to lay before him any diplomatic information which he desires in relation to that particular country. As executive head of the Foreign Office—Secretary for Foreign Affairs—von Jagow, with a mild, suave, tolerant, cosmopolitan type of mind, was quite all right for the rubber stamp work that a German Foreign Minister under Wilhelm II. has to do. Quite all right, until the brew of submarine frightfulness began boiling, and out went the mild Jagow for the vigorous Zimmermann. He is responsible to the Chancellor for the efficiency of the Foreign Office, and the Chancellor is responsible to the Kaiser.

As the army and navy chiefs bring up their plans for a decision, so does Dr. Theobald von Bethmann Hollweg. If the Kaiser likes the Chancellor's plan, he adopts it. If he doesn't, the imperial frown is put upon it. One colossal blunder, and, like Moltke, Falkenhayn, and Tirpitz, off will go Bethmann Hollweg's head into the imperial basket; for the Kaiser's chieftains publicly assume the responsibility for the moves of Imperial Germany. If the moves fail, they and they alone are to blame, for, despite the fact that none of these moves can be made without the Kaiser's indorsement of them, Wilhelm II., being the Kaiser, "can do no wrong."

We find today the German Emperor at the pinnacle of his power, lusty in health, save for the shadow of that disease which has cursed his family, and which at any time may insidiously creep over him.

The Kaiser has the vitality to keep continually active during this war. Grave, bearing his responsibilities heavily, rarely brightening except at the news of a victory, he sternly and grimly goes through the daily routine, knowing exactly what is going on in every department of the German war machine. Intensely religious, calling upon God in his hour of trial more even than he called upon Him in peace, the Kaiser is relig-

ious today almost to the point of fanaticism. One might almost say that his whole life is held together by his belief that God is on the side of Germany in this war. Without that deep and sincere religious conviction—it is almost insanity, what Bergson called a “mental complex”—it seems incredible that the Kaiser could have stood up against the strain, so deeply has he plunged himself into the war, as long as he has.

In considering the Kaiser today too much stress cannot be laid upon this religious side of his character. If he were acting, if his ranting about God were mummery, the task of the world would be easier. For a hypocrite analyzes and compromises quickly. Not a fanatic. And the Kaiser's belief that he is a being put on this earth by God and anointed by God to rule the German Nation, and to lead it to its destiny—which destiny the writers of Germany have often assured us has no small limits—this belief of the Kaiser's that God is the protector of German Kultur, this makes him in this war the strongest ruler in the world.

For he will not compromise. Believing as he does that God is with him, he will go on fighting on and on, putting all the life and treasure of Germany into what he believes to be the arm of the Almighty. He will fight on, and he will be able to, because his people love him, despite the appalling sacrifices he has

called upon them to make. Impelled by this religious hysteria, he will continue the war until he meets an end like that of the old German gods, and the whole fabric of his empire is rent asunder. Either that or the world fighting him will be as Christ and try to end humanity's anguish by overcoming the thought of “punishment” with one of charity. But if the world should be merciful the Kaiser would believe that “our old German God”—privately tagging the Almighty as he so often does—had brought him victory. And on the Linden the imperial fanfares would sound, and from the gray stone balcony of the schloss one of those “with God” speeches would stir the Berlin soul. * * * Yet—yet there would be peace.

A Colossus today is the Kaiser. A conqueror, lusty and hale. But tomorrow, what of that?

Before the war a German, Franz von Beyerlin, wrote a novel speculating on the fate of the German Army, asking the question as to what the future held, and taking that question as his novel's title, “Jena or Sedan?” * * * defeat or victory?

One can imagine a novel now, around the Kaiser—“Tilsit or Versailles?” * * * humbled or glorified, what will he be? * * *

Perhaps the graves of Europe's dead know, but cannot tell.

The Women of the War

By ETHELWYN DITHRIDGE

Afar amid war's darkness, they suffer and grow strong,
For courage is their garment, and hope their evensong;
They hide the pain of parting with “till we meet again,”
Or greet with tender welcome their bruised and broken men.
They give their *all* ungrudging, nor think it much to give;
They see their lives in ruin, then face the years, and *live*.

O heart of selfish sorrows and unavailing fears!
One day of their devotion were worth my idle years.
With uncomplaining patience their sacrifice is made—
So, tho' in lesser service, my debt of love were paid.
Take *thou*, beloved country, the little all I give,
Who am not born to greatness, and yet would greatly live.

Hunger Stalks Through Europe

Food Shortage and Stern Measures to Meet It

ALL information during late February and March indicated definitely that all the nations of Europe were suffering severely from food shortage. The crisis began to be acute in February, and until the crops of 1917 begin to mature, a period of about three and a half months, all Europe will continue to confront the most serious lack of food that has yet arisen. No portion of the entire Continent is free from privation, though the shortage seems more acute in Germany and Austria than elsewhere.

Oscar King Davis, who spent several weeks in Germany before the severance of relations, and who accompanied Ambassador Gerard on his journey home, cabled to THE NEW YORK TIMES from Havana on March 11 a comprehensive review of the food situation in Germany.

Mr. Davis wrote that Mr. Gerard regarded the condition of Germany as desperate, especially where the supply of food and general economic conditions, including finance, are concerned, and that he knew the frame of mind of responsible German officials to be quite in keeping with their recognition of the desperate situation of their country.

He wrote that one who has lived even for a brief period in the restaurants and hotels of Germany stands aghast in France, as he does in Switzerland, at the prodigal and extraordinary waste of food. If you have had a meal in a public eating place in Berlin, with the lively and significant clink of forks and spoons on plates and dishes, scraping up the last drop of sauce or gravy, and then come into a public eating place in Berne or Paris, to find not only sauce and gravy abandoned in unthinkable quantities, but bread, meat, potatoes, and every kind of thing good to eat sent away from the table untouched or hardly more than nibbled at, you are simply overwhelmed by the contrast.

"It is under such circumstances," continues Mr. Davis, "that you come to a

keener realization of how the organization and control of her food supplies in their production, collection, and distribution is evidence, not that Germany is starving today, but that she is likely by these very means to win through to the bitter end without starvation. Hardship, privation, underfeeding, and for some of her people insufficient nourishment, Germany unquestionably endures today, with three or four severe months yet to sustain before she finds relief from new crops. But if those new crops respond in fair measure to the efforts Germany is making on them, her food problem will be postponed, in great measure, for yet another year.

"The German officials have not been eager to place exact scientific data in the hands of foreign observers and investigators, but there have been a few American scientific men who have made noteworthy studies, especially on food and sanitary conditions. Mr. Gerard has had the advantage of their work and knows their information. The results of their observations and their scientific conclusions will undoubtedly be included in what Mr. Gerard has to tell the President in the next few days. It will be a report tinged with malnutrition, undernourishment, anemia, low blood count, and similar scientific terms meaning that those to whom they are applied have not had food in sufficient quantities or of proper quality. It will be applied especially to certain classes of Germans, such as seamstresses, servants, persons working for small wages, children, the aged and infirm, and that sort."

A trusted observer of food conditions in Germany reported to the State Department at Washington on March 14 that 20,000,000 people directly connected with the German Army or Government, 20,000,000 in the rural population, and about 8,000,000 wealthy people were well fed, but that the rest, about 20,000,000, were in a serious plight.

Charles H. Grasty, an executive of

The New York Times Company, who joined Ambassador Gerard's party in Spain and sailed from Corunna to America with him, after eleven days in intimate intercourse with the party of diplomats, Military Attachés, doctors, merchants, and travelers, who had had unsurpassed opportunities for knowing the real state of affairs in Germany, wrote on March 11:

"After discussing the German situation for eleven days, my conclusion is that the food shortage in the Fatherland is more serious than has been believed outside. The present condition is not one of actual starvation, but there is much suffering in spots, and Germany faces a crisis between now and harvest. Unless the submarine war prospers Germany can hardly escape an upheaval.

"One doctor aboard the ship tells me, that, even with his unusual facilities, he was much reduced by the lack of fats, and when he reached Zurich he was so ravenous that he made himself ill, devouring everything greasy. Lack of fats caused an incessant gnawing and nothing would 'stick to his ribs.' His stomach had no food reserve and intestinal digestion was suspended.

"The misery resulting from the food conditions is observable in every face. The Government took all possible precautions, but while 60 per cent. turnips could make bulk, it couldn't make nutriment. A thick soup of cabbage and turnips, a bit of meat, and a trace of grease could be bought at the community kitchens in the cities for 6 cents, (30 pfennigs,) and bread at 1 cent a slice, but thirty minutes after eating, one was hungry again.

"The diet gave no power of resistance to the cold. The Americans who serve as prison inspectors say that even with huge furs they almost froze this Winter.

"Mothers and babies are without milk, and the suffering is great. While the effect of the food conditions on the public morale is temporarily offset by hysterical loyalty, physical causes must prevail over psychological in the end.

Unhealthy Social Conditions

"Throughout the trying times the Ger-

man women have been showing a splendid nerve. They are taking men's places at manual labor. Many assure me if the women are called they will respond in tremendous numbers, game to perform many trench tasks, if not actually do full military duty.

"The moral and social conditions are entirely unlike old Germany. In high society spying and intrigue prevail. Nobody trusts anybody, and the conversation is all insincerity and deception. While the unwritten law still holds among the nobility, the laws regulating divorce are a dead letter.

"Soldiers at the front and wives at home are freed from marital restraints. Illegitimate births now reach 25 per cent. in Berlin, and even more in Bavaria, and the percentage is increasing.

"Popular taste on the stage calls for a murder in every act, and the big theatrical successes reek with morbid details.

"The tendencies in Germany to rule womankind with a rod of iron have been emphasized by the war. Men use women roughly and punish them physically for trifling faults. Women are treated as recognized inferiors, and they don't resent it.

"Such are some of the effects of baffled militarism upon the Germans. They went into this war expecting a three months' picnic. The resistance, followed by threatened defeat, has produced a perversity that breaks out as described.

"This is not to say that Germany is all bad. I have heard stories of splendid self-sacrifice in all circles. Some of the aristocracy voluntarily adopt short commons, and potato rations are passed to the guests by liveried servants."

Greater Berlin is now issuing weekly 3,600,000 bread cards, and 66,500,000 coupons representing daily rations find their way back to the Bread Commission, where they are checked off. Soldiers returning from the front are met at the railway station and receive bread tickets good for their furlough.

One recent achievement of the German chemists has been the utilizing of tar oil, extracted from burned coal, for making soap. The new process includes the treatment of crude coal oil with potash,

the finished product yielding excellent soft, hard, and powdered soaps.

Life in Hamburg

The German newspaper press reveals in advertisements some facts regarding the situation. The following is given as an example of a war dinner which may be obtained in Hamburg (Hackepeter Restaurant, Reeperbahn 103):

Herring with French beans, 1.40 marks.

Haddock (boiled) with mustard sauce and sauerkraut, 1.50 marks.

Haddock (fried) with green cabbage, 2 marks.

Hare ragout, with cabbage stewed in wine, (free from meat card,) 2.20 marks.

Roast venison with red cabbage, (one-half meat card section,) 2.80 marks.

Rum grog, 60 pfennigs; red wine grog, 40 pfennigs.

Sea mussel meal prepared from living fresh mussels mixed with meat is apparently a popular dish in the sense that it is freely advertised, and there are many advertisements of salted fish and even fresh fish. This, however, is very dear; five tons of plaice, for instance, is offered at 260 marks a ton, and eighteen tons of whiting and haddock at 280 marks a ton. The price of geese is so high that it cannot be reckoned as a food for the nation at large. Thus goose breast costs 11.50 marks per pound, and goose legs 9 marks per pound. Goose fat must be a great luxury, for it is sold at 17 marks a pound. Large crammed fowls can, however, be had for 4.50 marks a pound, and ducks at 4.95 marks per pound. Hens for roasting are advertised at about \$1.25 apiece. Foods of a kind that are not as a rule eaten are freely advertised, such as salt seal meat and whale meat.

Soap is very scarce, and toilet soap costs 63 cents a piece, and cannot easily be got. Soap substitutes made of calcium carbonate are common. Fatless grease wash extracts for soap are freely advertised. Many firms find a difficulty in feeding their workers, and advertise for supplies. Very common is the advertisement, "We buy food of all kinds for workers in large quantities." One firm announces that it will buy any quantity of preserves, jams, and meat wares.

The strangest materials are being

used to produce covering for the poorer classes of Germany. Nettle wastage and raw nettles are advertised as well as woven paper for making men's clothes. Cheap costumes are made from artificial silk, and moiré material and lining are used for dresses. There are many offers in the clothing trade journals to buy waste paper, from which paper yarn is made. A textile firm advertises for horse hair of all kinds, ox-tail hair, goat hair, pigs' bristles and hair, which are to be used in its factory. The lack of raw material has caused many textile mills to close down. Waste of every kind is eagerly bought, such as metal, rags, bones, rubber, iron, paper, newspapers and books, and empty sacks, packing cases, and bottles. There are numerous advertisements due to the war which point to the use of all available resources.

Organ Pipes for Munitions

Prussian churches are being stripped of their organ pipes. Thus we find the following proclamation from the Police President in Berlin:

The proclamation of the Ober-Kommando in Brandenburg respecting the sequestration, census, and expropriation of organ "prospekt" pipes made of tin, and voluntary delivery of other tin pipes, sound-conductors, &c., belonging to organs and other musical instruments, comes into force on Jan. 10. * * *

The Police President, Berlin.

An advertisement in the Berliner Tageblatt gives instructions as to how these orders are to be carried out. In it the "prospekt" pipes are described as all those visible on the outside of an organ. The price fixed for these tin organ pipes is 6.30 marks per kilo, in addition to a payment of 35 marks by way of compensation for every organ damaged.

There is a great search after gold and jewelry, a committee having been formed for this purpose with the Crown Princess of Prussia as its patroness, and backed by the signatories of Bethmann Hollweg, Wermuth, Oberbürgermeister of Berlin, and Dr. Haverstein, President of the directorate of the Reichsbank.

It is stated that the offices of the committee are open every weekday from 10 A. M. to 2 P. M. in various parts of Berlin. The price of the objects bought

is fixed by valuator. Deliverers of gold trinkets receive a written certificate, and those who offer gold chains get an iron chain at the cost of 2.50 marks, to celebrate their patriotism, or a medal. All those who offer gold objects worth at least 5 marks receive a similar medal.

In analyzing any list of advertisements it is necessary to remember that most of the necessities of life cannot be bought without the production of official vouchers. Thus edible fat, eggs, and sugar can only be bought on production of a food book which entitles the buyers to certain quantities as per ration. This applies, of course, to all articles of food on the food ticket. Poultry, however, and game are freely sold without cards, which means that the well-to-do can still get plenty to eat. A new order forbids under heavy fine the bringing of dogs into rooms where food is kept for sale.

Cultivating Town Lots

Many advertisements appear in the agricultural papers urging the farmers to cultivate vegetables in large quantities, for a shortage of vegetables, on which the poor in the absence of meat so much depend, is feared. Building grounds in towns are being parceled out for cultivation. Thus we get the following announcement in the *Münchener Neueste Nachrichten*:

In order to hold out more easily we are making available for the cultivation of fruit and vegetables the Maxhof estate within the town boundary of Munich, situated between Forstenried, Neuried, &c. Thirty-five minutes distant from Waldfriedhof and Solin. Since work must soon be begun it lies in the interests of the buyer to choose quickly. Owing to the bad weather during the recent holidays we retain the old price of 7½ pfennigs per square foot for Saturday and Sunday, when the ground can be viewed, &c. One-quarter plot (tagwerk) equals 850 square meters, cost 750 marks, &c.

Forstenried Garden City Co., Ltd.

Shortage of labor is a great difficulty in getting the land cultivated, and even men with artificial limbs are being used in farm work. Belgian labor is offered as if it were slave labor, if one may judge from the following advertisement in the *Magdeburgische Zeitung*:

"Thirty Belgian civilian workers are

to be disposed of during the frosty weather."

The high prices in Germany naturally encourage smuggling from Holland. The Dutch paper, *Vaderland*, declares that the smuggling trade has grown such a lucrative one in the Coevorden district that many workmen are leaving their employment to take this trade in hand. The *Algemeen Handelsblad* is informed from Zevenaar that at Didam, Bergh, Wehl, and Zevenaar more than 5,000 kilos of fat and soap have been seized from smugglers. A number of the smugglers have been caught and warrants have been issued against 200, including some Amsterdam people. The Dutch require these articles for themselves, since prices are very high in Holland.

Picture of Berlin Life

The *Frankfurter Zeitung* publishes an account of the extraordinary change in the appearance and life of Berlin. It is only lately that Berlin has really altered its character—since the shops shut at 7, the houses at 9, the theatres at 10, and the restaurants and cafés at 11:30, while practically all the street cars stop at midnight, and the population, adapting itself to circumstances, really goes to bed early. The *Frankfurter Zeitung* gives the following picture:

"Without any exaggeration, Berlin has become a different city. For every town the new restrictions mean much, but for Berlin they mean everything. In other places people were active, but in Berlin they were creative. Here was the new Germany, the new Europe. The manifold activities, the vitality have gone, and all that remains is war, victory, and peace. Although the individual artist, merchant, or professor may still have his ideas and pursue them in secret, Berlin as a whole is waiting, breathless, silent, tame, but burning for the moment when she can again pursue her innumerable purposes with the old eagerness and a new impulse. That is the characteristic of intellectual and scientific Berlin—waiting for the new moment, the new time. * * * The streets are now quieter by day and empty in the evening. Life is a provisorium. One sees few

taxicabs, and notices more and more the scarcity of vehicles generally and in many cases of personnel. The women are beginning to dominate the sphere of work, doing everything on their own responsibility. * * * We have our own army of occupation, since whole rows of houses are taken up by the new War Bureaus and the countless subordinate departments which are carrying out the national organization. What was called 'shopping' has stopped. Since everything is rationed, shopping due to fancy, luxury, or boredom—in other words, women's shopping—has ceased."

The article goes on to say that the theatres are full, but that, except in the lowest class of revues, the plays have little to do with the war. People have become quiet and introspective, and hostesses are acquiring the habit of reciting poetry to their guests.

The Berliner Tageblatt on March 7 announced that the suspension of all beer brewing in Northern Germany was imminent. This action was due to the desire to save Indian corn for bread and malt to take the place of coffee.

At a conference in Vienna March 3, attended by Cabinet Ministers, Governors of Provinces, Burgomasters, and several Parliamentary Deputies, Premier Count Clam-Martinic announced that the Minister of Finance was about to put into operation measures to provide food-stuffs for the poorer classes at considerably reduced prices.

Bread Cards in France

Announcement that bread cards would be instituted in France to prevent waste was made March 1, 1917, in an official communication issued by Edouard Herriot, Minister of Provisions. The announcement says:

"To avoid wastage, the Minister of Provisions has decided to regulate the consumption of bread by instituting cards. Instructions will be given to the Prefects of the different departments to put the new regulation into effect."

It developed in a debate in Paris that the wheat acreage of France was reduced about 800,000 by the invasion, out of a total of 16,250,000, while the deficiency for 1917 is estimated at 5,500,-

000 acres, of which 500,000, at least, is expected to be made up by Spring seeding of Manitoba wheat, which, it is now conceded, will grow successfully in French soil.

To increase the wheat acreage it is necessary to raise the maximum selling price from an equivalent of \$1.85 to \$2.25 per bushel, and also to intensify the use of modern motor implements and a greater number of prisoners of war, of whom only 35,000 have been employed on farms.

Russia also is suffering serious privation, aggravated by a serious breakdown in its transportation and distributing systems. News dispatches before the recent revolution told of food riots in Moscow and Petrograd, but the censorship was so strict that no details were allowed to filter through. Food riots in Petrograd, indeed, were a direct cause of the downfall of the Czar's Government. Those who know most concerning the internal situation in Russia declare that starvation still faces large numbers of the poor throughout that country.

Scarcity in Great Britain

There is a great scarcity of potatoes in Great Britain, and it is stated that the available stock will be entirely exhausted by May 1, unless there is a material reduction in consumption. The measures taken to increase the British food supply by restricting the importation of non-essentials are given in detail elsewhere. Among the new regulations in London is the establishing of one meatless day at all clubs. The prices of bacon, butter, cheese, and lard are regulated. A reliable observer says under date of March 8:

"All over the United Kingdom men and women are, in advance of mandatory legislation, limiting their food consumption, reducing the use of meat, of sugar, of all the things that are supplied by seaborne freights. Britain is getting ready to stand siege; millions of British subjects recognize that the cost of victory in the great struggle may be scarcity at home such as has not been known in modern times in England.

"In the restaurants and hotels only

two courses are served for luncheon and three for dinner. And nothing is more impressive than the fashion in which people are submitting to that sort of regulation.

"The time has not come when there is an actual and visible shortage of food-stuffs in England. There is no starvation and there is no evidence of that very general underfeeding which all witnesses agree is so unmistakable in Germany. Britain is not yet hungry, but Britons are taking every step to avoid possible famine hereafter by making meagre now."

Deprivations of Neutrals

The war years have doubled prices of many necessities in all lands, and the suffering in the neutral countries of Europe is almost as acute as that in the belligerent nations. Reports from the Scandinavian countries and Holland tell of serious want owing to the submarine blockade. Sweden has not enough grain to last until the next harvest, and Norway has still less than Sweden.

Holland suffered a severe blow in the torpedoing of six Government grain ships by German submarines, followed by a virtual paralysis of all overseas traffic. There has been some modification of the sea lanes open to Holland, but the food

shortage continues acute. The Dutch Government found itself compelled, owing to this situation, to prohibit the exportation of bread to Belgium after March 10, 1917.

Switzerland has two meatless days a week, and must limit its egg consumption, according to a measure promulgated by the Bundesrat at Berne on Feb. 23. In order to conserve the milk supply the sale of whipped cream is forbidden in all public places. The same provision forbids the giving of more than 15 grams of sugar with a tea or coffee order and limits the quantity of sugar which may be used for frostings. Butter may be served only at breakfast or at meals at which no meat or egg dishes are supplied and may no longer be used with cheese. The use of eggs in making pastry is prohibited.

The United States has not escaped its share of the war's effects. In New York City late in February there were riots in the congested districts over the high prices of food and considerable excitement prevailed for some days. Many tons of food were purchased at distant points by municipal committees and sold in New York at cost. After a week of excitement the food supply increased, prices dropped and the flurry subsided.

WAR SEEN FROM TWO ANGLES

[AMERICAN VIEW]

Germans and Turks in Retreat

Period from February 15 to March 17, 1917

By J. B. W. Gardiner

Formerly Lieutenant Eleventh United States Cavalry

DURING the past month only two theatres of war have been at all active—the front in France and the Near East. The others have remained in the grip of an unusually long Winter, which, while it has permitted sporadic outbursts of short duration, has effectually prevented any sustained movements. But in these two theatres the Allies have achieved the greatest successes of the last two years.

On the French front the ground has not hardened after the melting of the Winter snows, but the British have maintained a consistent pressure which the Germans have not seemed able to hold back. Continuing their success at Grandcourt, which they took last month, the British were pushing slowly up along the railroad that runs from Albert to Achiet le Grand and thence to Arras. The Germans gave ground stubbornly for a while, and then an unexpected thing happened. The entire southern side of the German salient began to retreat, slowly and in good order, with apparently small loss. The German official reports failed to mention this retreat for days, and the British reports were none too definite in regard to it. For sometime the whole affair remained clouded in mystery.

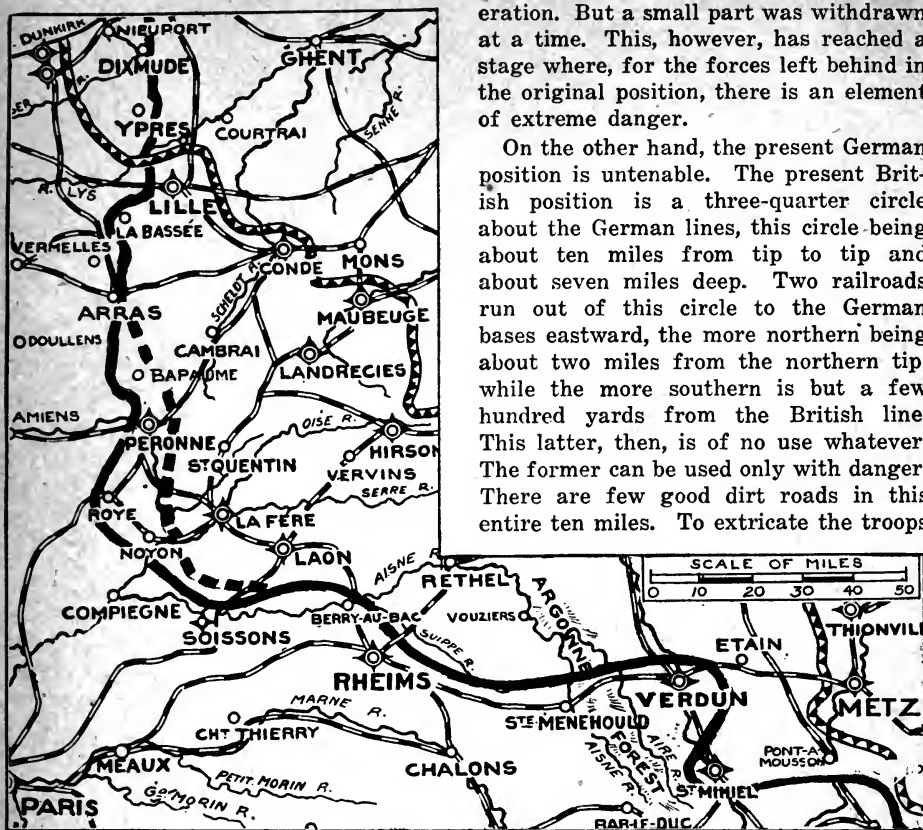

Apparently the British were taken by surprise, and were afraid of some sort of trap. Their advance, therefore, was slow, as if they were feeling their way forward. The Germans were equally wary in their retreat. They left behind them, as the main forces retired, strong posts armed with machine guns lest the retreat be turned into a rout. A number of strong positions were given up. Even the railroad junction at Achiet le Grand

was permitted to come directly under fire of the British artillery through the occupation by the British of Achiet le Petit. As many of the roads over which the retreat had to be made were covered by the British artillery the German loss must have been considerable; but, notwithstanding some press reports of a rout, there was not the slightest indication that the withdrawal was otherwise than orderly and in complete control.

The retreat carried the British lines up to the outskirts of Bapaume, the first of the objectives for which the battle of the Somme was begun. Here the Germans made a stand. But the British immediately shifted the point of pressure and attacked along the Bapaume-Péronne road against the Woods of St. Pierre Vaast near Sailly-Saillisel. They captured these woods, and, pushing their lines well forward both to the north and south, went well to the east of the Bapaume position, outflanking it and accentuating the danger of an attack from the south. On the morning of March 17 Bapaume was captured by the British, while the French took Roye and Lassigny.

Abandoning the Whole Salient

This German retreat is evidently the beginning of a retirement from the whole of what might be termed the Ancre salient. That it has not progressed more rapidly is evidence of the extreme care which must be exercised in a retrograde movement when enemy pressure is constant and where contact is never for a moment lost. The Germans have, of course, vast stores of ammunition in their endless series of dugouts, and this must be moved. Not a little of it has fallen into British hands. This was un-

THE HEAVY BLACK LINE SHOWS THE OLD FRONT. THE DOTTED LINE FROM ARRAS TO SOISSONS THE NEW POSITION GAINED BY THE ALLIES UP TO MARCH 20, 1917

avoidable, and will be the case whenever such a movement takes place, but, relatively, the amount is small. This necessity of removing ammunition is going to be a source of much trouble to the Germans as they retire, as it must and will subject them to much greater punishment than would otherwise be the case. The fewer the roads, too, over which this can be moved, the greater is going to be the danger of disaster, at least as far as ammunition is concerned. And this difficulty is present now even to a greater degree than before.

The Germans did not and could not retire from the entire salient position at one operation. The line here, with its sinuosities, was about fifteen miles long. Had a retirement on any such front been attempted British pressure would have ruined the movement as a tactical op-

eration. But a small part was withdrawn at a time. This, however, has reached a stage where, for the forces left behind in the original position, there is an element of extreme danger.

On the other hand, the present German position is untenable. The present British position is a three-quarter circle about the German lines, this circle being about ten miles from tip to tip and about seven miles deep. Two railroads run out of this circle to the German bases eastward, the more northern being about two miles from the northern tip, while the more southern is but a few hundred yards from the British line. This latter, then, is of no use whatever. The former can be used only with danger. There are few good dirt roads in this entire ten miles. To extricate the troops

which still hold the northwestern corner of the old salient position can only be accomplished at a considerable sacrifice of material and great loss of men. And yet this must be given up. There is scarcely a foot of all this territory which is not under fire of the British guns from practically all directions. As trenches cannot at the same time face more than one way, it is impossible that they can furnish adequate protection. The Germans are therefore in trouble, no matter what their choice may be.

Causes of Retirement

The movements of the past month are in themselves a sufficient answer to the assertion that to get the Germans out of France it will be necessary to drive them out foot by foot for the whole distance. Clever strategy can frequently,

even in trench warfare, put an enemy in a position where a retirement is his only salvation, even though infantry may never have to go into action to effect it. This is what the British have done on the Somme.

As to the reasons for the German retirement, the Germans have been very silent except to state that it was a strategic retreat. This is, of course, meaningless, as every retreat is properly so characterized. The British have in like manner had but little to say of it. One thing we may be certain of: It was dictated by necessity, not through choice. This necessity may have been either of two things. As I have said, the British pressure was becoming more and more severe, and the trap was slowly being drawn tighter and tighter about the German lines. If these forces did not retire soon there was a possibility that they would not be able to retire at all, but must surrender. Another question was the shortage of men. There can be no doubt that this question is causing not a little embarrassment. The Central Powers are outnumbered on all fronts two to one, and are outgunned and outgeneraled on the western front. As it is possible to increase the number of men per mile of line only by shortening the line, this must be done. The eastern line cannot, from its very nature, be shortened without grave sacrifice of territory. Therefore this operation must take place in the west. In either case it bespeaks a German emergency.

Just how far the German retirement will extend no one, of course, can say. Since the rain broke up the battle of the Somme last Fall the Germans have had plenty of time to prepare in rear of their present lines a strong line of defense, just as strong, in fact, as was their original line when the storm on the Somme broke. It is equally certain that they have taken advantage of the opportunity. It is to this line that they are retiring, and they will halt when it is reached, not before.

The remainder of the western front has shown an uneasiness, reflecting possibly the action north of the Somme. This has shown itself on both sides of the

Oise north of the Aisne and in the Champagne district. Both of these sections of the line are of importance in the possibilities they present. The former threatens the Noyons salient as well as the entire Aisne line by flanking it, the latter the same line from the other end by threatening the railroad communications. A successful operation against the road between Challerange and Bazancourt would place the German line in an unenviable position as far as supplies are concerned.

The Turkish Reverses

In the Near East events have been much more determinative, and at this time it is not too much to say that Turkey is in grave danger of being forced into a separate peace. The British, operating along the Tigris River from the head of the Persian Gulf, have conducted one of the most brilliant individual moves of the war. Here the fighting has been wide open, trench warfare has not appeared, and, because of the mobility of the forces engaged, strategy has borne a much more prominent part than in the western fighting. It is not a question in this territory only or even principally of the mechanics of war. It is a question of the brilliancy of the individual commander.

The British here have made the most expert use of their cavalry through a series of well-planned and skillfully executed movements against the Turkish line of communications along the river. As fast as the Turks would halt and endeavor to make a stand, the British cavalry, operating on the western bank of the Tigris, where the ground is high and excellently adapted to cavalry work, would strike behind them and force a retreat. As the Tigris is the only line of communications the Turks possessed in this country of few roads, a retreat was in every case inevitable.

Position after position was turned in this way, until, after a most rapid advance, Bagdad fell into British hands. At this writing the British have pushed fifty miles beyond the City of the Caliphs, and the Turks are still in retreat. In addition the British are striking out

along the road from Bagdad to Teheran, along which the Russians are advancing rapidly. The Turks are therefore in a trap, which, if they do not move quickly, they will not be able to escape. The Turkish Army before the British is in a state of almost complete demoralization. It has lost the greater part of its artillery and ammunition, has suffered heavily in prisoners, and many of the men have thrown their arms into the Tigris as they fled. Indeed, the rate of the British advance, which was unbelievably rapid, tells its own story of the condition of the Turkish Army.

Further east, in Persia, the Russians are having a similar experience. The Turkish Army in Persia, alarmed at the possibility of having its line of retreat cut off by the advancing British, has offered but feeble resistance to the Russians, who have definitely broken the enemy's line and are hurrying westward toward the Turko-Persian frontier. Their rate of advance is as great as that of the British. The Turkish force is in vital danger. The British are squarely across their main line of retreat, and to get away at all they will have to break over the mountains and pass through the gap between the Russian and the British Army—which gap is steadily narrowing.

Less than 150 miles now separates these two forces, so that the danger to the Turks of capture or destruction is ap-

parent. There seems no possibility of the Turks offering any organized resistance to either force until Mosul is reached. At Bagdad they had in their rear the Bagdad railway, and also naturally had stored up in Bagdad a large quantity of materials of war of all kinds. It was indeed the main base from which they were working. If with all these advantages they were unable to halt the British advance for more than two days, it is evident that their power of resistance has been broken.

Aside from the military situation created by these successes, the political situation will be even more prolific of danger to the Turk. Syria and Arabia are waiting only for the opportunity to break loose from the Sultan's dominion and set up independent States. The initial steps have already been taken by Arabia, so that it may be truly said that the disruption of the empire has begun.

Further to the west we have also seen during the month an incident of no little importance. That is the British advance along the coast of the Holy Land to the Dead Sea. This is the beginning of a threat against Adana and Aleppo. There are along this line considerable German forces which will probably make the going harder than it is further east. But the significance of the general pressure against the Turks on every front is not to be lost.

[GERMAN VIEW]

Politico-Military Events of the Month

By H. H. von Mellenthin

Foreign Editor New-Yorker Staats-Zeitung

[See Maps on Pages 28 and 45]

THE development of the war situation during the month ending about the middle of March has been confined chiefly to politico-military events. While upon the main theatres of war on the European Continent subdued thunder continues to herald the approach of a new storm, and while the purely military interest centres upon the new mobility

of warfare in the Near East, the entire political situation of the world has become mobile. The subjoined discussion is to deal with the two principal political events of the period just past: the American declaration of a state of armed neutrality and the Russian revolution.

As regards the declaration of "armed neutrality" on the part of the United

New Austro-Hungarian Ambassador, Whose Recognition
Has Been Delayed by the Submarine Issue

States, directed against Germany, it must be made clear from the outset that neutrality, as far as its correct definition is concerned, knows no limitation. Neutrality constitutes the relationship between two States "*qui neutrarum sunt*," that is, which participate on no side. Strictly speaking, it is, therefore, paradoxical for any neutral to incline benevolently toward one party while toward the other party it takes up an expectantly aggressive position, as, for instance, by arming. In either case neutrality, strictly speaking, has ceased.

The development of the law of nations has, however, modified the conception of neutrality. Thus we hear today of "absolute" or "strict" neutrality, and of "partial" neutrality. The latter includes, in the first place, the inclination toward one of two belligerent parties by any sort of assistance. That is "benevolent" (*bienveillante*) neutrality. Second, there is the conception of "armed neutrality," which takes effect as soon as a neutral State announces that, in order to safeguard its position as a neutral, or to protect its interests from the acts of a belligerent, it will itself resort to the force of arms.

A Historic Instance

The conception of "armed neutrality" found its most pregnant and practical demonstration during the American war of independence. On Jan. 1, 1780, Russia, Prussia, Denmark, Sweden, and Portugal concluded a treaty of armed neutrality for the protection and defense of peaceful commercial intercourse.

The fact that this neutrality treaty was directed primarily against England's arbitrary acts at sea shows that England even then disregarded the rights of neutrals and violated their interests. This treaty led to Spain's declaration of war against England and to England's declaration of war on Holland.

Prussia at that time maintained a policy of benevolent neutrality toward the Colonies in their war of independence. Frederick the Great forbade the march through Prussian territory of Hessian auxiliary troops hired by the English, thus delaying the arrival of

these troops in America and resulting in great benefit to the fighters for liberty.

Neither benevolent neutrality nor armed neutrality is regarded nowadays as a discontinuance of peace. Both constitute an attitude, not an act of participation in the war.

The next step after a declaration of such a neutrality, if circumstances bring the two nations toward actual hostilities, is the declaration of a "state of war." Even that does not necessarily lead to war itself. At any rate, however, armed neutrality is a ticklish proposition, for the declaration of such a state shows a high degree of tension between the neutral and the belligerent in question.

The crisis between the United States and Germany has been caused by the declaration and enforcement of the German unrestricted U-boat warfare in the barred zones.

The German submarine blockade has a dual purpose. England is to be forced into a mood receptive for peace by the interception of her supplies, and the great offensive movements of the Allies predicted for Spring are to be deprived, by the blockade of the sea routes, of the means for their execution, that is, men and munitions.

Sir Edward Carson, First Lord of the British Admiralty, on Feb. 21, and Premier Lloyd George two days later, admitted that the U-boat menace had assumed ominous proportions and created a serious situation. For the first time the gravity of the U-boat's economic menace to England was thus admitted by English statesmen.

From the military point of view, the second purpose of the German submarine war, that of cutting the Allies off from further overseas supply of death-dealing weapons and war material, is the more important one. In the second phase of the U-boat war, which is to be devoted to the materialization of this aim, it will be seen whether the submarine is to prove an effective means of war.

Through the declaration of armed neutrality on the part of the United States, which presupposes the eventuality of a state of war, the entire U-boat question has been taken out of its coherence with

the European war and placed under the wider perspective of world politics. For a war between the United States and Germany would be bound to develop into a struggle between Anglo-Saxons and Teutons.

Events in Mesopotamia

To the world-political considerations belong also the events on the Mesopotamian theatre of war, where on Sunday, March 11, the Anglo-Indian army under General Maude occupied the ancient city of Bagdad.

The name of Bagdad constitutes a political conception. This conception was shattered a year ago by the British catastrophe at Kut-el-Amara. The political conception of Bagdad forms one of the principal aims of the Central Powers, for the City of the Caliphs is to be the bulwark and the centre of economic expansion in the Near East.

In December of last year the British under General Maude reopened the Mesopotamian campaign. Stubborn battles for the possession of Kut-el-Amara followed. On Feb. 28, 1917, Kut was occupied by the British. The Turks retreated to the north. On March 5 Lajij fell, and the next day the victors passed the town of Ctesiphon, evacuated by the Turks. On March 7 the battles on the Diala River began, eight miles from Bagdad. On March 11 the Anglo-Indian troops entered Bagdad. They have since reached a point eighteen miles north of the city.

After the capitulation of Kut-el-Amara by General Townshend, the then British Commander, it was said in allied quarters that now the Russians would enter Mesopotamia and cut off the Turkish retreat. The Russians had taken Erzerum and Trebizond and had advanced in Persia. Isfahan, Persia's second capital, had been conquered by them and the Turks had been driven from Kasri-Shirin to Chanykin, on the Mesopotamian frontier, 150 kilometers from Bagdad.

But after the victorious conclusion of the Turkish campaign against the British, strong Turkish forces were released. These turned on the Russians and drove them as far as Hamadan.

Now the Russians have reopened the

Persian campaign. On March 13 Kermanshah was occupied by the Muscovites, and on the following day the Turks were driven from fortified positions on the summit of Narlehtian, west of Kermanshah.

The Turkish War Minister, Enver Pasha, returning from the theatre of operations in Mesopotamia, informed the Turkish Parliament that the retreats on the Mesopotamian and Persian fronts were dictated by "military considerations." This can only mean that the retiring movements are made in accordance with a previously arranged fixed plan and for the realization of certain strategic aims.

Nevertheless, it would be playing the part of the ostrich were one to shut his eyes to the actual significance of the fall of Bagdad. From the military standpoint the conception "prestige" is a completely illusory thing. The fact that the British through the surrender of General Townshend's army and Kut-el-Amara in April of last year lost prestige in Egypt and India did not prevent their occupation in March of this year of the city of Harun-al-Rashid. That the Turks have lost prestige by the fall of Bagdad by no means precludes the possibility of a recapture of the city.

At Bagdad, so say pro-ally sympathizers, a dream to which Germany has devoted twenty years, has been shattered. The fact that the "terminus of the Bagdad Railway" has fallen into British hands, it is added, bars the German road to the East. And in the ears of the Orient sounds the deathknell of German ambitions. Because an open and completely undefended city has fallen, therefore this gigantic work of civilization is to collapse! Can a handful of Indian divisions stem the logical tide of world history?

Whether the Turks recapture Bagdad or no, Mesopotamia remains an incidental theatre of war. The final fate of the Bagdad Railway, and with it that of the two-river-land, is to be decided upon the main theatres of war on the European Continent.

Preparations for that decision are still

in full swing. The calm before the storm begins to become uncanny. It is as if again and again the new armor is tested before the swords are once more drawn, this time for the final decision.

Retirement in France

The retirement of the German troops in the Ancre and Somme regions on the west front had begun in the beginning of February with the evacuation of Grandcourt, south of the Ancre. Through the events of March 16, 17, and 18 not only the Gommecourt-Transloy front but also the lines north and south of the Somme were pushed ahead by the British for a considerable distance.

In a British advance on a width of sixty-seven kilometers from north to south, Bapaume and Péronne were taken and north and south of the Ancre more than sixty villages were occupied. During the twenty-four hours preceding this writing the British pushed their extreme southern front forward an additional fifteen kilometers by occupying the triangle Péronne-Chaulnes-Nesle.

Simultaneously, a German retirement has set in on the line Roye-Noyon, which adjoins the Somme front. The French advanced on a front of thirty kilometers between the Avre and the Oise, and have occupied both Roye and Noyon as well as the roads connecting these two points. North of the Ancre front the Germans are withdrawing as far north as Arras.

Along the whole front of retirement only German rearguards were in fighting contact with the Franco-British forces. Berlin reports that these troops inflicted heavy losses upon the advancing foe.

Even the English military experts describe the German withdrawal as a long-prepared strategic chess move. It is to be expected that the Germans will fall back upon the line Soissons-Lille. The entire systematically executed movement points to the strong probability that the Germans will remain on the defensive in the west.

The Mystery at Petrograd

The military outlook on the east front, where the great decision also is expected

to be fought for, is veiled by the historic event of the Russian revolution.

Who was it that in the night of March 11 to 12 gave orders to the garrison of Petrograd to fraternize with the revolutionists? What happened in the great Russian Army Headquarters during the absence of Czar Nicholas immediately after the outbreak of the revolution?

These two questions comprise the military considerations. They cast significant light upon the question as to what influence the upheaval in Russia will have upon the development of the war situation. Efforts are made today to make the world believe that the soldiery, out of softness of heart, sympathized with the starving populace. The streets of Petrograd have seen many curious things, but such sympathy—from that quarter—never.

Who led the garrison on the side of the rebels? In addition to the political revolution against Czardom there must have been a military conspiracy against the person of the Czar, and this conspiracy must have decisive influence upon the outcome of the war.

The Czar was at the front, about to consult with his Generals at army headquarters. There, at headquarters, and not in the streets of Petrograd, was the die cast, and the only question is whether the military conspiracy included the army in the field. If this is the case, then the future outlook as viewed in connection with the garrisons at home offers the following main points:

1. The war party takes over full control of the conduct of military operations.
2. It is forced to appeal once more to the fortunes of arms.
3. In this event a new great offensive on the east front is to be expected in the near future.

The military revolution must bring victory, and the political revolution must still the hunger of the masses. The development of the situation at home and at the front will depend upon the question whether the new power will be able to sharpen the weapons and satisfy the stomachs.

Progress of the War

Recording Campaigns on All Fronts and Collateral Events
From February 18, Up to and Including March 18, 1917

GERMAN-AMERICAN RELATIONS

Germany released the Yarrowdale prisoners and five American Consuls that were detained after Ambassador Gerard left the country.

A note from the German Foreign Secretary, Dr. Zimmermann, to the German Minister in Mexico, dated Jan. 19, contained a proposal for an alliance between Germany, Mexico, and Japan to make war on the United States if the United States should not remain neutral. The Governments of Japan and Mexico formally denied ever having received the note. Its authenticity was admitted by Dr. Zimmermann.

President Wilson addressed Congress on Feb. 26, and asked for authority to supply armament to American merchant ships and to employ any other instrumentality that might be needed to protect American ships and people in their legitimate pursuit on the sea. He also asked for a sufficient credit to enable him to provide adequate means of protection. The armed neutrality bill was introduced at once. It was passed by the House, but the Senate, through the filibustering of eleven Senators, failed to reach a vote before the Congress expired March 4. President Wilson on March 9 announced his decision to arm American ships, and called Congress in extra session for April 16.

Several American lives were lost during the month as a result of Germany's submarine campaign. Robert Allen Haden, a Presbyterian missionary, was drowned when the French steamer Athos, used as a troopship, was sunk. Two Americans were reported lost on the British bark Galgorm Castle. The Cunard liner Laconia was sunk Feb. 25, and two American women, Mrs. Mary Hoy and her daughter, perished in an open boat. On March 14 the American steamship Algonquin with Americans in her crew was attacked and sunk without warning. All on board escaped in lifeboats. The sinking of three American ships, the City of Memphis, the Illinois, and the Vigilancia, was reported on March 18. Fifteen men perished.

SUBMARINE BLOCKADE

The British Government announced that summaries of shipping losses from submarines would be published weekly instead of daily. The report of the Board of Trade issued March 14 announced that from Feb. 1 to March 11 three American ships, fifty-one vessels belonging to other neutral nations, and 156 British ships had been sunk. The losses of other belligerent

nations were reported as "indefinite." This list included the French troopship Athos, Belgian relief ships Storstad and Lars Fostenes, and the Cunard liner Laconia. The American ship Algonquin was sunk March 14 and three other American ships were reported sunk March 18.

Holland's indignation at the sinking of seven Dutch food ships that had sailed under partial guarantee of safety led Germany to offer to replace them with German freighters on condition that Holland purchase the German vessels at the close of the war. Later Germany withdrew this offer, fearing that England would seize the ships.

The Allies presented a memorandum to the Chinese Government expressing sympathy with the attitude that China had taken in regard to Germany's blockade and promising favorable consideration of the question of suspension during the war of Boxer indemnity payments and the revision of the tariff in the event of China's effectively severing relations with Germany and Austria. On March 4 the Chinese Cabinet voted to break relations, but President Li Yuan-Hung refused to approve the action, saying that the sole power rested with him, and Premier Chi-Jui and several members of the Cabinet resigned. On March 7 the President asked the Premier to return and offered to ratify the Cabinet's proposal. The Senate, on March 12, approved the severance of relations, and on March 14 the break was announced, the German Ambassador and Consuls were handed their passports, and German-owned ships in the Harbor of Shanghai were seized.

CAMPAIGN IN EASTERN EUROPE

Feb. 20—Russians check German raid in the region of Slaventine, northwest of Podgastse.

Feb. 27—Germans make gas attacks on the Russians in the Smorgon region.

March 3—Germans penetrate Russian lines west of Lutsk on a wide front.

March 12—Russians repel gas attacks south-west of Lakparotch in the Zanarotch-Stahootsy sector and in the region of Velitzk, southeast of Kovel.

BALKAN CAMPAIGN

Feb. 22—Allies establish contact between French and Italian troops and clear the enemy forces from the road between Goritz in Southern Albania and Leskovie; postal communication between Athens and the Central Powers cut; Teutons on the

Rumanian front repulsed near Dorna Watra.

March 2—Germans recapture hill near Rekoza north of the River Zaval.

March 13—Vienna War Office reports skirmishes northeast of Berat in Albania, revealing the presence there of Italian troops.

March 17—British occupy the railroad station at Poroy east of Doiran Lake.

CAMPAIGN IN WESTERN EUROPE

Feb. 19—Artillery active on both banks of the Meuse; patrol encounters in Alsace.

Feb. 20—British fail in attack on German lines near Messines, Belgium; Germans capture British point of support near Le Transloy.

Feb. 21—British penetrate German front near Ypres and Armentières and do great damage.

Feb. 23—British capture German trench north of Guedecourt and advance near Petit Miraumont.

Feb. 24—British enter Petit Miraumont and gain on a mile and a half front north of the river.

Feb. 25—British occupy Serre, Miraumont, Petit Miraumont, and Pys.

Feb. 26—British continue advance along the Ancre on a front of eleven miles; Germans abandon Warlencourt-Eaucourt and the Butte de Warlencourt.

Feb. 27—British occupy Ligny and capture the village of Le Barque.

Feb. 28—British occupy Gommecourt and capture Thillois and Pulsieux-au-Mont.

March 1—British advance 600 yards north of Miraumont on a front of a mile and a half.

March 2—Germans make a stand on a new line from Essarts through Achiet-le-Petit to about 1,000 yards southeast of Bapaume; British report further progress north of Warlencourt-Eaucourt and northwest of Puisieux.

March 3—British advance on five-mile front northwest of Bapaume; General Haig takes over French line as far south as the Avre River.

March 4—British again advance west of Bapaume and capture German front and support lines east of Bouchavesnes.

March 5—Germans launch big attack at Verdun, gaining at some points.

March 6—French hold recaptured trenches north of Caurières Wood and Douaumont in the face of strong German attacks.

March 7—French in Champagne capture salient between Butte de Mesnil and Maison de Champagne.

March 10—British advance more than three miles in the Ancre region and capture Irles; French repulse violent German assaults in the Champagne.

March 12—French in Champagne recapture all trenches of Hill 185 west of Maison de Champagne Farm; British gain slightly north of Bouchavesnes.

March 13—Germans abandon their main defensive system west of Bapaume on a front of three and a half miles; British occupy Grevillers and Loupart Wood.

March 14—British advance on the Ancre and reach the defenses before Bapaume; French capture Romainville Farm, close to St. Mihiel.

March 15—British capture two and a half miles of German trenches between Bapaume and Péronne; French gain near Roye; Germans capture a position south of Cumières.

March 16—British occupy almost all of St. Pierre Vaast Wood; French advance on both sides of the Avre from Andechy to south of Lassigny.

March 17—British take Bapaume; French capture Roye and Lassigny and advance five miles, occupying fortified line between the Avre and the Oise Rivers.

March 18—Germans retire on 85-mile line in France, abandoning Péronne, Chaulnes, Nesle, and Noyon; line of Allies' advance extends from Arras to Soissons, to a depth of twelve miles; sixty villages recaptured; Germans on the Meuse fail in attack on Chambrettes Farm.

ITALIAN CAMPAIGN

Feb. 27—Italians enter Austrian trenches on the northern slopes of San Marco.

March 5—Italians successfully storm Austrian positions in the upper part of the Spellegrino Valley in the Avisio district.

March 12—Italians repulse Austrian attacks northeast of Lenzumo in the Trentino and against the southern slopes of Cima di Bocche in the Travignolo Valley.

ASIA MINOR

Feb. 23—British in the Tigris region capture two lines of trenches near Sannaiyat.

Feb. 25—British cross the Tigris at the Shumran bend in the rear of Kut-el-Amara.

Feb. 26—British take Kut-el-Amara.

Feb. 28—British engage Turks on three sides at a point on the left bank of the Tigris over thirty miles northwest of Kut.

March 3—Russians recapture Hamadan in Persia and advance toward Bagdad as British approach the city from the south.

March 4—Russians advance in the Bijar region in Persia and occupy Khanikali.

March 7—Advance guards of the British Army approach Jerusalem; Russians in Persia seize Asadabad summit.

March 8—British advance to within eight miles of Bagdad, find Ctesiphon evacuated; Russians in Persia occupy Kangaver.

March 9—Two Bedouin tribes join the British, who reach the outskirts of Bagdad; Russians reach Sakkiz, twenty-five miles from the Mesopotamian border.

March 10—British troops engage the Turks on the Diala River line, six miles below Bagdad; Russians capture the town of Senne in Western Persia.

March 11—British occupy Bagdad; Russians

take Sahna in Northwestern Persia and pursue Turks toward Bisitun.

March 13—British occupy Kazimain, five miles above Bagdad.

March 14—British advance thirty miles beyond Bagdad; Russians capture Kermanshah.

March 16—British occupy part of the town of Bakubah; Russians dislodge Turks from fortified positions on the summit of Narleshkian.

March 18—Russians capture Van, and sweep on in Persia over a wide front, occupying Baneh.

AERIAL RECORD

German aviators bombarded a Serbian hospital at Vertekop, causing heavy loss of life. Two English nurses were among those killed.

Air duels have been frequent on the western front, as many as eleven and thirteen machines being brought down on some days.

Broadstairs was bombarded by a German airplane and one woman killed.

Zeppelins raided the southeastern counties of England on the night of March 16. One machine was brought down by the French near Compiègne on its return flight, and the crew of thirty were killed.

NAVAL RECORD

German destroyers bombarded Broadstairs and Margate on the British coast Feb. 26. The Russian cruiser Rurik was damaged by a mine in the Gulf of Finland.

On Feb. 28 the French torpedo boat destroyer Cassini was destroyed by a submarine in the Mediterranean.

RUSSIA

As a result of a popular revolution the Romanoff dynasty was overthrown. On March 8 strikes were declared in several

munitions factories and riots occurred in the streets of Petrograd because of a shortage of food. These disturbances were quelled, but only temporarily. On March 12 the Czar issued imperial ukases suspending the sittings of the Duma and the Council of the Empire. The Duma opposed the order and continued its sittings. A three days' revolt followed, which resulted in the abdication of the Czar on March 15 and the establishment of a Liberal Ministry headed by Prince Lvoff. The Czar's younger brother, the Grand Duke Michael Alexandrovitch, was named as regent. He also abdicated, and plans have been made for the convocation of a constituent assembly and full political amnesty. The new Foreign Minister, Paul Milukoff, in a message to Russian diplomats abroad, announced that Russia would fight with the Allies until the end of the war.

MISCELLANEOUS

The United States Government received from Austria-Hungary a reply to a note inquiring concerning Austria's attitude toward the renewal of ruthless submarine warfare. Austria defended the barred zone and said that safety could not be guaranteed to neutrals in enemy vessels. Austria also sent a message to the United States denying that the schooner Lyman M. Law was torpedoed by an Austrian submarine.

The entire Briand Ministry resigned in France, following the resignation of General Lyautey as Minister of War after a stormy debate in the Chamber of Deputies on the desirability of discussing the aviation service. President Poincaré asked M. Ribot to form a new Cabinet, after M. Deschanel had refused to undertake the task.

CURRENT HISTORY CHRONICLED

THE PRESIDENT'S INAUGURATION

PRESIDENT WOODROW WILSON took the oath of office for his second term at the National Capitol at noon March 5, 1917, in the presence of 50,000 people. He had previously gone through the formality of taking the oath at noon on Sunday, March 4. The parade was not as long as usual, consisting of about 20,000 soldiers and sailors. There was no inauguration ball, and a general air of solemnity marked the whole occasion on account of the critical international situation. The President was very care-

fully guarded, but no untoward incident marred the occasion. The inaugural address was short and referred chiefly to international affairs. Striking portions of the address follow:

We stand firm in armed neutrality; since it seems that in no other way we can demonstrate what it is we insist upon and cannot forego. We may even be drawn on, by circumstances, not by our own purpose or desire, to a more active assertion of our rights as we see them and a more immediate association with the great struggle itself. * * *

We are provincials no longer. The tragic events of the thirty months of vital turmoil through which we have just passed

have made us citizens of the world. There can be no turning back. Our own fortunes as a nation are involved, whether we would have it so or not.

And yet we are not the less Americans on that account. We shall be the more American if we but remain true to the principles in which we have been bred. They are not the principles of a province or of a single continent. We have known and boasted all along that they were the principles of a liberated mankind. These, therefore, are the things we shall stand for, whether in war or in peace:

That all nations are equally interested in the peace of the world and in the political stability of free peoples, and equally responsible for their maintenance.

That the essential principle of peace is the actual equality of nations in all matters of right or privilege.

That peace cannot securely or justly rest upon an armed balance of power.

That Governments derive all their just powers from the consent of the governed and that no other powers should be supported by the common thought, purpose, or power of the family of nations.

That the seas should be equally free and safe for the use of all peoples, under rules set up by common agreement and consent, and that, so far as practicable, they should be accessible to all upon equal terms.

That national armaments should be limited to the necessities of national order and domestic safety.

That the community of interest and of power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other States should be sternly and effectually suppressed and prevented.

* * *

CHINA BREAKS WITH GERMANY

ON March 14 Paul Reinsch, American Minister at Peking, reported to the State Department at Washington that China had severed diplomatic relations with Germany and that the German envoy had been handed his passports. Chinese feeling against Germany dates from 1897, when, because of the murder of two German missionaries, Germany seized the east coast of the province of Shan-tung, an area of about 200 square miles; this animosity was greatly increased by the conduct of German troops during the Boxer expedition of 1900. Immediately on breaking off diplomatic relations with Germany, China seized six

German ships in Chinese ports, following the precedent of Portugal.

The history of the break is as follows: On March 4 the Chinese Cabinet definitely voted to sever relations, but President Li Yuan-Hung refused to act, on the ground that the power to break relations was his alone. The Cabinet resigned and withdrew to Tien-tsin, returning only when the President yielded. On March 10 the President and his Cabinet appeared before the House of Parliament and asked approval of a severance of relations, which was granted by a vote of 431 to 87. The Chinese Senate later concurred. Definite invitations to China to join the Entente have been made but have not yet been acted on.

The immediate effect of China's severance of relations will probably be a greatly increased output of munitions for Russia. China is Japan's source of iron and has provided most of the raw material for Russian munitions made in Japan. China has further sent over 100,000 workmen to Russia and France, to work in munition factories, and the torpedoing of liners carrying these is the immediate cause of the break.

* * *

BETHMANN'S LIBERAL SPEECH

AN episode full of profound significance occurred in the Prussian Diet on March 14, when the German Chancellor, von Bethmann Hollweg, announced in the course of debate his firm adherence to a progressive political faith and his firm faith in a broader democracy after the war. His words were as follows:

After the war we shall be confronted with the most gigantic tasks that ever confronted a nation. They will be so gigantic that the entire people will have to work to solve them. A strong foreign policy will be necessary, for we shall be surrounded by enemies whom we shall not meet with loud words, but with the internal strength of the nation. We can only pursue such a policy if the patriotism which during the war has developed to such a marvelous reality is maintained and strengthened.

Woe to the statesman who does not recognize the signs of the times and who, after this catastrophe, the like of which the world has never seen, believes that he can take up

his work at the same point at which it was interrupted.

He used the phrase "Equal rights and participation for all in the work of the State." This is construed to foreshadow a complete reformation in the German electoral system, and equal suffrage. It has been hinted that the speech was a result of the great events that were occurring in Russia and in anticipation of a possible Social Democratic uprising in Germany. The German Socialist organ commented on the speech with some skepticism and warned the Chancellor that he must keep faith.

* * *

NEW CABINET IN FRANCE

THE Briand Cabinet resigned March 17 on account of criticisms in the Chamber, Minister of War Lyautey having previously resigned because he was heckled while addressing the Chamber. Alexandre Ribot, the former Finance Minister, formed the new Cabinet, of which he becomes Premier and Foreign Minister; Rene Viviani, former Premier, Minister of Justice; Paul Painlevé, former Minister of Public Instruction, is the new Minister of War; Albert Thomas remains Minister of Munitions; Admiral Lacaze, Minister of Marine; Joseph Thierry is Minister of Finance; Etienne Clementhal, former Minister of Agriculture, is Minister of Commerce. This is the fourth Cabinet since the outbreak of the war.

* * *

THE BRITISH IN BAGDAD

BAGDAD the great is fallen," captured by the advance guard of General Maude on March 11; the British power is now dominant up the whole of the hot Mesopotamian Valley from the Persian Gulf, and General Townshend's disastrous surrender at Kut-el-Amara on April 13, 1916, after a siege lasting from Dec. 5, 1915, is wiped out by victory.

Bagdad dates back far beyond the days of Nebuchadnezzar and the captivity of the Jews; as the capital of the Caliphs, it was the most splendid city in the world, giving to universal literature one of the greatest books that ever came

out of the purple East—"The Arabian Nights: The Stories of a Thousand Nights and a Night." This great period of Bagdad's history began in the year 762, before Charlemagne was crowned, and about the time of Alfred the Great of England, when the Western world was just emerging from barbarism. General Maude's campaign has been extraordinarily rapid, evidencing admirable preparation. On Feb. 26, 1917, he captured Kut-el-Amara, with many thousand Turkish prisoners, and within two weeks his patrols pushed forward a hundred miles, to within a few miles of Bagdad. The great city, which lies in an open, sun-burnt plain, was apparently almost undefended, and on March 11 the British and Indian forces were within the walls.

This striking victory gives to Great Britain a practically continuous territory, beginning on the east at the frontier of Siam, including Burma and India, Baluchistan and Southern Persia, which has been recognized as under British influence since the Anglo-Russian pact of 1907, and now the whole of the southern section of Asiatic Turkey, with a protectorate over the new kingdom of Arabia, behind Aden, thus bringing the effective influence of England to Egypt and as far as the border of Italian Tripoli. All Southern Asia is thus dominated by Britain.

* * *

PRACTICAL FAILURE OF THE SUBMARINE

BY the first week in March it was evident that there was a marked falling off in the amount of tonnage sunk by submarines operating in the "forbidden" zones about the British Isles and in the Mediterranean, and a probable explanation of this was furnished by reports from England that large numbers of German submarines had been captured or sunk. It was said that of 100 U-boats which began the campaign of ruthlessness on Feb. 1 no less than 48 had been sunk or taken by Feb. 25; and while this is probably in excess of the real figures, nevertheless all evidence tends in the same direction: that, as a means of bringing famine to England, and thus "forcing England to her knees," the submarine has small chance of success.

It is now said in Germany that the real object of the submarine warfare was not to reduce England to submission by famine, but to compel her to withdraw tonnage she had lent to Russia and Italy, thus isolating these two countries, as a step toward compelling them to make a separate peace. But this explanation is really an admission of failure, so far as England is concerned. It was so widely announced in Germany that unrestricted submarining was Germany's last weapon, which was to bring her rapid victory, that it is difficult to see how the new aspect of the situation can long be withheld from the German people.

* * *

APPAM CASE DECIDED

THE United States Supreme Court on March 6 in a unanimous decision decreed restoration to her English owners of the liner Appam and cargo, brought into Hampton Roads more than a year ago by a prize crew from the German raider Möwe. The ship and cargo, valued at between \$3,000,000 and \$4,000,000, must be delivered by April 6, 1917.

The decision upholds the original ruling by Secretary Lansing that prizes coming into American ports unaccompanied by captor warships have the right

to remain only long enough to make themselves seaworthy.

American neutrality was violated in bringing the Appam into Hampton Roads, the court said, and neither the ancient treaties relied upon by Lieutenant Berg, the German prize commander, The Hague Conventions, nor the Declaration of London entitled any belligerents to make American ports a place for deposit of prizes as spoils of war under such circumstances.

"The principles of international law," the opinion adds, "leaving the treaty aside, will not permit the ports of the United States to be thus used by the belligerents. If such use were permitted it would constitute the ports of a neutral nation harbors of safety into which prizes might be safely brought and indefinitely kept."

"From the beginning of its history this country has been careful to maintain a neutral position between warring Governments, and not to allow use of its ports in violation of the obligations of neutrality, nor to permit such use beyond the necessities arising from perils of the seas or the necessities of such vessels as to seaworthiness, provisions, and supplies."

FIFTEEN BILLIONS OF FOREIGN TRADE

THE foreign trade of the United States, imports and exports combined, since the outbreak of the war in Europe at the end of July, 1914, to Feb. 11, 1917, amounted to the sum of \$15,622,785,853. Exports during this period were a little more than double the imports, and the balance of trade in favor of this country resulting from these thirty months of trade was \$5,501,568,835. This table shows how this trade has accumulated and the huge movement of gold which resulted from it:

MERCHANDISE

	Exports.	Imports.	Credit Trade Balance (Excess of Exports.)
January, 1917.....	\$613,441,020	\$241,674,851	\$371,766,169
Year, 1916.....	5,481,423,589	2,391,654,335	3,089,769,254
Year, 1915.....	3,554,670,847	1,778,596,695	1,776,074,152

COLOMBIAN TREATY DEFEATED

THE treaty with Colombia was debated in the United States Senate on March 13 and 14, having been reported for passage by the Foreign Relations Committee; but it was withdrawn on the 16th, it being clear that it would fail to receive the necessary two-thirds vote. The objections to the treaty are: (1) That \$25,000,000 is an excessive amount to pay Colombia for the Panama strip, being \$15,000,000 more than Panama received; (2) that there is a clause in the treaty giving Colombia preference in the canal, which is deemed perilous; (3) that the urgency for its passage at this time savors of a threat by Colombia that it is her price for refusing an alliance with Germany; (4) that the treaty implies that President Roosevelt committed a wrong with respect to the Panama revolution, which resulted in the loss of the canal strip by Colombia. It is reported that the treaty when reintroduced will be reconstructed. Senator Knox, Republican from Pennsylvania, who was Secretary of State in the Roosevelt Administration, surprised his Republican colleagues by strongly advocating the treaty as presented.

THE GALLIPOLI REPORT

EARLY in March the Commission on the British Failure at Gallipoli reported that the question of attacking the Dardanelles was, on the initiative of Winston Churchill, brought under the consideration of the War Council on Nov. 25, 1914, as the ideal method of defending Egypt. The Commissioners hold that the possibility of making a surprise land and water attack offered such great military and political advantages that it was mistaken and ill-advised to sacrifice this possibility by deciding to undertake a purely naval attack, which, from its nature, could not obtain completely the objects set out in the terms of the decision. A part of the blame is laid upon Lord Kitchener, who, says the report, was the sole mouthpiece of War Office opinion in the War Council. He was never overruled by the Cabinet in any matter, great or small. Lord Fisher is criticised be-

cause he did not voice his known dislike of the proposed operation. When, because of this dislike, he threatened to resign, a minority report says, Lord Kitchener took Lord Fisher aside and prevailed upon him to return to his seat in the Council. The report makes it clear that the Dardanelles attack was made in part in response to an appeal from Russia on Jan. 2, 1915, Russia being then hard pressed by the threatened Turkish invasion of the Caucasus. It is evident, from this report, that Britain's naval advisers were convinced at the outset that the purely naval attack must fail, but failed to press their view. As a defense of Egypt and of the Russian Caucasus, however, the Gallipoli attack was completely successful.

IN GERMAN EAST AFRICA

IN the last four or five months very decided progress has been made by the British in German East Africa, the last of Germany's colonial possessions. In September last the struggle there entered a new phase; the Germans, driven from the northern part of their protectorate, and divided into three isolated bodies, were fighting only to detain in Africa troops which the Allies might otherwise employ in the European war theatres or in Mesopotamia.

On Sept. 11 the Belgian field force drove out of Tabora the contingent of the Prussian General, Wahle, of at least 4,000 seasoned native troops and over 500 Europeans. The Belgians found in Tabora over a hundred British subjects, men and women, who had been subjected to many indignities, with the deliberate intention of degrading them in the eyes of the natives. General Wahle at first retreated along the railroad in the direction of Kilima-tinde, with the Belgians in pursuit and an English force under General Crewe on his flank. On Oct. 22 there began a series of encounters between General Wahle and General Northey, which lasted until the end of November. On Nov. 26 one division of Wahle's force, numbering 500, and including fifty-four Europeans, was compelled to surrender. By Jan. 6 Wahle's

force, reduced by one-half, had retreated to Mahange, on which, at the end of January, General Northey was converging three columns.

On Jan. 1 General Smuts began a new offensive against Colonel von Lettow-Vorbeck's German force in the Rufiji Valley; hard pressed, these troops endeavored to reach Mahange, to form a junction with the remnants of General Wahle's force. British and Belgian forces, from all sides, are now converging on Mahange, where the struggle is likely to come to an end.

GERMAN INFLUENCE IN MEXICO

IT was announced on March 14 that confidential diplomatic reports from Mexico indicated that the German Bank in Mexico City and the German Legation there are guiding virtually the entire financial and diplomatic activities of Mexico. According to these reports the recent Mexican peace note was inspired by the German Legation, while the German Bank is said to have come into full control of the Mexican financial situation, having accepted quantities of the paper money issued by the Mexican Government. A very large influx of German money from the United States is also recorded.

Two further facts point in the same direction—the exodus of German reservists, who have crossed the Rio Grande in large numbers since the diplomatic break with Germany, bearing passes issued by the Mexican Consulate here, and who are reported to be drilling Mexican soldiers and initiating them into the methods of modern warfare; and the announcement that there are several large German-owned radio stations on Mexican soil, one being in Southern California, capable of communicating directly with Germany. These stations can easily make connections with the internal telegraph systems of the United States, and could thus with practical impunity gather all details of military preparations and movements throughout the United States and send them the same day to Berlin.

There are similar reports of the existence of strong radio stations in Colombia,

a few miles from the Panama Canal Zone, likewise owned and operated by Germans, and in communication with the stations in Mexico and, through these, with Berlin. This wireless network over Central and South America rivals the great system of radio stations in Africa, by means of which German Southwest Africa could communicate with Berlin through a single link in the Cameroons. There were equally powerful radio stations in Germany's Pacific possessions.

COUNT ZEPPELIN IS DEAD

COUNT ZEPPELIN shares with the late General Shrapnel the distinction of having given his name to a new instrument of war; but, while the English officer died long before the shells called after him had reached the height of their fame, Count Zeppelin lived long enough to see his very vulnerable airships tested in a great war—and pretty well discredited as weapons of offense. Born nearly eighty years ago, he came to the United States as a military observer during the civil war, serving on the staff of General Carl Schurz and narrowly escaping capture at Fredericksburg. He was decorated in the Franco-Prussian war and later represented the Kingdom of Württemberg at Berlin in the Federal Council of the Empire.

In 1891 he devoted all his time and a great part of his large fortune to the construction of lighter-than-air flying machines. Seven years later, after much ridicule and many hairbreadth escapes, he gained his first great triumph by ascending from Friedrichshafen on Lake Constance, and remaining aloft for thirty-seven hours, in the fifth of his airships, and sailing in a straight course for more than eight hundred miles. The Kaiser and all Germany hailed him as the conqueror of the air. But this ship also was soon wrecked, representing a loss of \$500,000. It is interesting to remember that it was in the United States that Count Zeppelin made his first ascent, going up in a captive balloon belonging to the Union Army.

While his great airships have proved a failure as a means of "bringing England

to her knees" by terrorism from the clouds, and while admittedly the Zep- pelins proved to be England's best re- cruiting sergeant, it is only fair to say that Count Zeppelin did in fact com- pletely succeed in his main purpose—to make a dirigible balloon with great speed and carrying power and with an immense flying radius, a really fine achievement. Count Zeppelin died on March 8.

GERMANS IN AMERICA

THE number of native-born Germans and Austro-Hungarians in the United States at the time of the census of 1910 was 4,181,615, divided as follows:

Native Austrians.....	1,174,973
Native Germans.....	2,501,333
Native Hungarians.....	495,609

Of native-born Americans with one or both parents born in Germany or Austro-Hungary there were 6,811,699 in the United States in 1910, divided as follows:

Native born, with one or two parents born in	
Austria	\$26,635
Germany	5,781,437
Hungary	204,627

Total native-born Germans and Austro-Hungarians and Americans of first gen- eration in the United States in 1910, 10,993,314.

THE YARROWDALE PRISONERS

FIFTY-NINE Americans taken from vessels sunk by the German raider in the South Atlantic and borne to Swine- münde, Germany, on Jan. 1, on board the captured British steamer Yarrowdale, were released from quarantine March 9, and left at 4 P. M. for the Swiss frontier. The route over which they departed was the one chosen for their return by the United States Government.

Much irritation was felt over the delay in the release of the men, and the ex- planation of the German authorities that they were held on account of quarantine was questioned, but later it was officially confirmed by the Spanish Embassy doc- tor that typhus fever had appeared at the camp on Feb. 20, and the quarantine was not lifted until March 7. The men

were relieved at the German frontier; they were practically in rags and com- plain that they had insufficient food. They were cared for by Americans in Switzerland and will be sent home via Spain.

* * *

ACCORDING to English official lists, German casualties in January were 77,534, and for February 60,471; of the latter 21,105 were killed or missing, 12,- 451 severely wounded. It is computed from unofficial reports that the total German casualties up to March 1, 1917, are 4,148,163, exclusive of those in the navy and colonies.

* * *

GERMAN Zeppelins after a long period of inactivity, made an attack on London, March 16 and 17, which the British authorities assert was fruitless. A Zeppelin, evidently bound for Paris, was brought down by the French near Campiègne when at an altitude of 10,- 000 feet, and the entire crew was killed. The airship was completely consumed.

THE United States Congress passed and the President signed on March 2 the bill granting full citizenship to the inhabitants of Porto Rico. The law pro- vides that any resident of Porto Rico may renounce his American citizenship within a year. Prohibition is imposed in the bill, but is accompanied by a refer- endum provision. The first election un- der the new law will take place in July.

* * *

IT is estimated that the German U-boat blockade reduced the foreign trade of the United States in the month of February \$190,000,000. At one time 300,- 000 tons of cargoes on ships of neutral registry were tied up in New York Har- bor alone, fifty-three steamships being of American, Danish, Swedish, Norwegian, and Dutch registry.

The British Advance on Bagdad and Jerusalem

TURKEY in Asia is again fighting for life against three allied armies that are converging upon it from three directions.

Bagdad, the immediate goal of the new Mesopotamian campaign, has been captured, while Jerusalem lies in the path along which another British army, coming out of Egypt, is advancing, after driving off the Turks who were threatening the Suez Canal. From a third direction the Russians are aiming another blow at the Turkish Empire in Asia, namely, from Persia and Armenia, where they have again assumed the offensive.

The most important fighting has been in Mesopotamia. Here the British have completely regained the prestige which they lost when General Townshend, with 9,000 men of the British and Anglo-Indian armies, surrendered at Kut-el-Amara on April 28, 1916. When the British began the first Mesopotamian campaign from the head of the Persian Gulf in 1915, it was understood that the object was to destroy German aims in Asiatic Turkey, and particularly the scheme of expansion connected with the Bagdad Railway. The British marching on Bagdad were to have effected a junction with the Russians advancing from Persia in the east and from Turkish Armenia in the north. But when the British, after being defeated at Ctesiphon, had to fall back, and were later caught in a trap at Kut-el-Amara, and forced to surrender after a long siege, the Russo-British plan collapsed. The Turkish forces released by Townshend's failure were sent to reinforce the army holding back the Russians, and the Russians also had to retreat. The disastrous end to the first British expedition was due entirely to inadequate preparation and insufficient supports when they were wanted.

After a considerable interval plans for the resumption of the campaign were

completed early in December, 1916, and on the 13th of that month, with General Maude in command, a new advance on Kut-el-Amara was begun along the right bank of the Tigris. The British force consisted of three divisions of 120,000 men and was assisted by a large flotilla of war craft specially adapted for river work. The British marched through the evacuated Es Sinn lines and established themselves on the Shatt-al-Hai, a canal which enters the Tigris above and below Kut from the south. About Christmas time operations were impeded by heavy rains, but early in January, 1917, the advance was again pressed, and on Jan. 9 and 10 the enemies' trenches northeast of Kut were captured after a stubborn conflict. Rain caused another delay of more than a week, but by Jan. 21 the whole of the right bank of the river east of the Shatt-al-Hai was clear of Turks, and on Jan. 25 further movements to the west began. The Turks made a vigorous resistance and lost heavily. On Jan. 27 and 28 there were hot encounters, and after a further engagement on Feb. 3 General Maude was able to report that the enemy had been driven from the whole of the right bank.

Recapture of Kut-el-Amara

The British had now to clear the Turks from the left bank of the Tigris, where at Sanna-i-Yat, fifteen miles below Kut, they were strongly intrenched. Kut itself lies in a sharp bend on the left bank of the Tigris. The licorice factory opposite the town was shelled, and on Feb. 13 it was officially announced in London that the British had established a line across the Tigris bend west of Kut, and were thus hemming in the Turks. On Feb. 23 the British launched a fierce frontal attack against Sanna-i-Yat.

While the Turks were concentrating their forces on the defensive at this point the British made a successful at-

tempt to cross the Tigris at the Shumran bend, about six miles above Kut. As soon as the landing was effected a bridge was built as the result of nine hours' strenuous work by the engineers. The way was thus open for an attack on the Turks in the rear. Discovering their danger, the Turks began on Feb. 24 to retreat in the direction of Baghela, twenty-four miles west of Kut, burning their stores as they went, but maintaining a strong rearguard defensive. In the meantime the British pressed the advance on Sanna-i-Yat, carrying one line of trenches after the other. With the taking of all the Turkish positions from Sanna-i-Yat to Kut-el Amara the town passed automatically into the hands of the British, whose prestige was thereby re-established.

The scene of operations rapidly changed from Kut to points much further up the river. On Feb. 25 the British gunboats on the Tigris and the cavalry and infantry on the land moved westward in an endeavor to cut off the enemy's retreat. The Turkish rearguards made a stubborn stand about fifteen miles northwest of Kut, but were driven from their trenches. On Feb. 26 the pursuit was maintained, and there were engagements over thirty miles west-northwest of Kut. On Feb. 27 General Maude's report described the Turkish force retreating to Bagdad as degenerating into a disorderly mob. After passing through Aziziyah, fifty-two miles north of Kut, the Turks tried to fight another rearguard action at Lajij, nine miles southeast of Ctesiphon.

The Fall of Bagdad

The British were now within a few miles of their furthest advance during the first Mesopotamian campaign. It was expected that the Turks would make a stand at Ctesiphon, but when the British arrived there they found the place evacuated. On March 7 British cavalry found the Turks in position on the Diala River, eight miles from the outskirts of Bagdad. The river was unfordable and constituted a formidable obstacle. General Maude therefore withdrew his cavalry and brought his infantry into action.

Meanwhile the Turks had received reinforcements from Bagdad. They offered stubborn resistance along the Diala and in a position covering Bagdad from the southwest. General Maude threw a bridge across the Tigris at its confluence with the Diala. Notwithstanding the heat and dust, the British made a brilliant march of eighteen miles toward Bagdad and found the Turks strongly posted six miles southwest of the town. The Turks were attacked at once and driven back to their second position, two miles in the rear.

On the night of March 8 the British established a footing on the north bank of the Diala. On the 9th and 10th troops on the right bank of the Tigris, in spite of dust storms, pressed their advantage and drove back the Turks to within three miles of Bagdad. At the same time the troops on the Diala thrust the Turks back on the city, which was entered on Sunday morning, March 11.

In announcing this success in the House of Commons the next day, Bonar Law said there was every reason to believe that two-thirds of the Turks' artillery had fallen into the hands of the British or had been thrown into the Tigris. He added this comment:

General Maude, in these operations, has completed his victory by a pursuit of 110 miles in fifteen days, during which the Tigris was crossed three times. This pursuit was conducted in a country destitute of supplies, despite the commencement of the Summer heat. Such operations could be carried out in such a country only after the most careful arrangements made for the supply of the troops thoroughly and systematically had been effected. The fact that General Maude not only has been able to feed the army, provide it with munitions, and assure proper attention for the sick and wounded, but has been able to report that he is satisfied he can provide for the necessities of his army in Bagdad, reflects the greatest credit on all concerned.

By March 15 the British forces were thirty miles above Bagdad on their way toward Mosul.

In the two months' fighting since December, 1916, it is estimated that the Turks lost over 20,000 men in killed and wounded. The British reported having taken over 7,000 prisoners, and also large quantities of guns, war material, and

SKETCH MAP SHOWING LOCATION OF THE THREE ALLIED EXPEDITIONS THAT ARE CONVERGING TO CUT THE BAGDAD RAILWAY AND ISOLATE A LARGE PORTION OF ASIATIC TURKEY

stores of all kinds which the Turks were unable to destroy in their retreat. The British river craft had the satisfaction of recapturing the gunboat Firefly, which the Turks had taken a year before, as well as securing a considerable number of prizes in the way of river steamers, tugboats, barges, and pontoons.

The Advance From Egypt

No less interesting was the news on March 7 that the advance guards of the British forces marching through Palestine from Egypt were within fifteen miles of Jerusalem. The dispatch stated that the Turks had abandoned a strong position in the neighborhood of Sheik Nuran, west of Shellal. Shellal, which is also known as El Chalil or El Khulil, is the ancient Hebron, which lies half way between the Mediterranean and the Dead Sea, twenty miles from each and only fifteen miles from Jerusalem. The Turks prepared for an offensive to keep the enemy out of Syria and Asia Minor, to save the Bagdad Railway, and to prevent the Russians, now at Bitlis, from effecting a junction with the British.

These preparations account for the comparatively slight resistance with which General Maude met after he captured Kut-el-Amara. Between Feb. 26, when Kut fell, and March 8 the British had advanced nearly a hundred miles. For some time past the Germans have been extremely busy completing railroad communication, transporting war material, and establishing military camps and depots, with a view to making good their occupation in the territories of which the Bagdad Railway is the main artery.

The Advance Through Persia

Simultaneously with the British strokes in Mesopotamia and Palestine the Russians reopened their drive in Western Persia toward Bagdad. On March 2 they occupied Hamadan, an important city 240 miles east of Bagdad, and on the 6th captured Asadabad Summit, ten miles west of Hamadan. On the 13th they had captured Kermanshah, seventy miles further in the direction of Bagdad.

Without waiting for the completion of the various moves in Asiatic Turkey, the British Government has taken decisive

measures to bring Persia under control. How this was achieved by a British expedition was described in the House of Lords in February, 1917, when Lord Curzon made the first statement on the situation in Persia since the speech delivered by Lord Crewe in the same house on Dec. 7, 1915, (see CURRENT HISTORY, February, 1916, Pages 877 to 879.) The position at that time was one of considerable convulsion. The British Consul at Shiraz had been recently arrested under circumstances of some ignominy. Coming down to the operations of the Turks and Germans in Persia last year the report of Lord Curzon's speech continues:

The movement reached its maximum force in August last. The Turkish military advance was exercising so disastrous an influence on the situation in Teheran at that time that the Persian Government was on the eve of evacuating the capital. Since then there had been not merely a sensible alleviation, but a steady improvement in the conditions. The Russian Army had recovered its position and effectively barred the way of the Turkish forces to Teheran. In that manner the Russian force had rendered great service to the allied cause, and we found ourselves in the somewhat strange and anomalous position of having the Russian Army acting as a successful screen of defense to our Indian Empire. The British Consul at Shiraz and the few male members of the community there who were imprisoned with him had been released after eight months of harsh captivity. Most of the German agents in the country had been captured, and he hoped that before long the few who were still at large would be taken.

British Forces in Persia

The march of the force under Sir Percy Sykes from Bunder Abbas to Ispahan and finally to Teheran, for 1,000 miles, in circumstances of the most arduous and, in some places, of a perilous character, had not, he thought, been mentioned hitherto in this country. It resulted in establishing order over a wide area. In Teheran itself we had

secured the existence of a Government friendly to the allied powers; and Russia and Great Britain had been constant, although not imprudent, in giving steady financial assistance to the Persian Government in the difficult times through which it had passed.

The object of Sir Percy Sykes was to organize in Southern Persia a force of military gendarmerie, or police, under the Persian Government, but officered by British officers with Indian training and experience. That force was ultimately to attain to a strength of 11,000 men. Sir Percy Sykes had at present a force of 5,000 men in addition to a military escort of about 800 troops from India, and his military position was being strengthened by reinforcements now being dispatched from India under a military officer experienced in tribal warfare. A similar force of gendarmerie was being raised from Bakhtiari tribesmen, who had always been very friendly to us. He hoped that before long Sir Percy would be able to march from Shiraz, where he was now, and to clear up the brigand camps and robber nests with which that part of Persia was infested. On the eastern side of Persia a similar success had been obtained by another force under a British officer, Major Keith, who had succeeded in pacifying the whole of that considerable quarter.

In Afghanistan the Ameer, in spite of solicitations and the offer of bribes, had, as far as was known, remained entirely loyal to his obligations to Great Britain, and had declined to be seduced from that loyalty by the tempting offer of the spoil of the Punjab.

The attempt to improve the general situation in Persia had been considerably assisted by two independent movements of a military character outside the borders of that country. The first was the success of General Maude in Mesopotamia. The second outside group of events tending to improve the situation arose from the movement of the Sherref of Mecca. He could not say that the situation was altogether free from anxiety. Turkish troops had still to be turned out of parts of Persia, and in the hinterland of the Persian Gulf there was still disorder. The position of the oil fields was practically secure, and he had not heard for many months past of any interruption of communications in that region.

GERMAN SUBMARINE BLOCKADE

Arming American Merchant Ships and the Events Attending It

THE severance of diplomatic relations with Germany was followed three weeks later by the second step in the determination of the United States to preserve the freedom of the seas for its citizens, notwithstanding the establishment of a so-called "barred zone" by German submarines, intended to cut off ingress to European ports.

Count von Bernstorff, the German Ambassador, was dismissed on Feb. 3, 1917; on Feb. 26 President Wilson appeared in person before the houses of Congress in joint session and read an address, the substance of which was that he should be authorized to supply armament and ammunition to American mer-

chant vessels and "to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate pursuits on the seas." The President's address embodied the conclusions reached by himself and his Cabinet after it had become apparent that the German submarine blockade was operating practically as an embargo on American trade with Europe.

While the President was proceeding to the Capitol to deliver his address news reached him of the torpedoing of the Cunard liner *Laconia* without warning, by which American lives were lost. This fact gave additional weight to his words.

Text of the President's "Armed Neutrality" Address to Congress

PRESIDENT WILSON'S address before Congress on Feb. 26 asked for a formal concession of power enabling him to arm merchant ships and to take other measures needed for the protection of American citizens and property on the high seas when attacked by submarines. The full text of the address follows:

Gentlemen of the Congress:

I have again asked the privilege of addressing you because we are moving through critical times during which it seems to me to be my duty to keep in close touch with the houses of Congress, so that neither counsel nor action shall run at cross-purposes between us.

On the 3d of February I officially informed you of the sudden and unexpected action of the Imperial German Government in declaring its intention to disregard the promises it had made to this Government in April last and undertake immediate submarine operations against all commerce, whether of belligerents or of neutrals, that should seek to approach Great Britain and Ireland, the Atlantic coasts of Europe, or the harbors of the

Eastern Mediterranean and to conduct those operations without regard to the established restrictions of international practice, without regard to any considerations of humanity even which might interfere with their object.

That policy was forthwith put into practice. It has now been in active exhibition for nearly four weeks. Its practical results are not fully disclosed. The commerce of other neutral nations is suffering severely, but not, perhaps, very much more severely than it was already suffering before the 1st of February, when the new policy of the Imperial Government was put into operation.

We have asked the co-operation of the other neutral Governments to prevent these depredations, but I fear none of them has thought it wise to join us in any common course of action. Our own commerce has suffered, is suffering, rather in apprehension than in fact, rather because so many of our ships are timidly keeping to their home ports than because American ships have been sunk.

Two American vessels have been sunk, the *Housatonic* and the *Lyman M. Law*. The case of the *Housatonic*, which was carrying foodstuffs consigned to a London firm, was essentially like the case of the *Frye*, in which, it will be recalled, the German Gov-

ernment admitted its liability for damages, and the lives of the crew, as in the case of the Frye, were safeguarded with reasonable care.

The case of the Law, which was carrying lemon-box staves to Palermo, disclosed a ruthlessness of method which deserves grave condemnation, but was accompanied by no circumstances which might not have been expected at any time in connection with the use of the submarine against merchantmen as the German Government has used it.

In sum, therefore, the situation we find ourselves in with regard to the actual conduct of the German submarine warfare against commerce and its effects upon our own ships and people is substantially the same that it was when I addressed you on the 3d of February, except for the tying up of our shipping in our own ports because of the unwillingness of our ship owners to risk their vessels at sea without insurance or adequate protection, and the very serious congestion of our commerce which has resulted—a congestion which is growing rapidly more and more serious every day.

This, in itself, might presently accomplish, in effect, what the new German submarine orders were meant to accomplish, so far as we are concerned. We can only say, therefore, that the overt act which I have ventured to hope the German commanders would in fact avoid has not occurred.

But while this is happily true, it must be admitted that there have been certain additional indications and expressions of purpose on the part of the German press and the German authorities which have increased rather than lessened the impression that, if our ships and our people are spared, it will be because of fortunate circumstances or because the commanders of the German submarines which they may happen to encounter exercise an unexpected discretion and restraint, rather than because of the instructions under which those commanders are acting.

It would be foolish to deny that the situation is fraught with the gravest possibilities and dangers. No thoughtful man can fail to see that the necessity for definite action may come at any time if we are, in fact and not in word merely, to defend our elementary rights as a neutral nation. It would be most imprudent to be unprepared.

I cannot in such circumstances be unmindful of the fact that the expiration of the term of the present Congress is immediately at hand by constitutional limitation and that it would in all likelihood require an unusual length of time to assemble and organize the Congress which is to succeed it.

I feel that I ought, in view of that fact, to obtain from you full and immediate assurance of the authority which I may need at any moment to exercise. No doubt I already possess that authority without special warrant of law, by the plain implication of my constitutional duties and powers; but I prefer

in the present circumstances not to act upon general implication. I wish to feel that the authority and the power of the Congress are behind me in whatever it may become necessary for me to do. We are jointly the servants of the people and must act together and in their spirit, so far as we can divine and interpret it.

"No one doubts what it is our duty to do. We must defend our commerce and the lives of our people in the midst of the present trying circumstances with discretion but with clear and steadfast purpose. Only the method and the extent remain to be chosen, upon the occasion, if occasion should indeed arise.

Since it has unhappily proved impossible to safeguard our neutral rights by diplomatic means against the unwarranted infringements they are suffering at the hands of Germany, there may be no recourse but to armed neutrality, which we shall know how to maintain and for which there is abundant American precedent.

It is devoutly to be hoped that it will not be necessary to put armed forces anywhere into action. The American people do not desire it, and our desire is not different from theirs. I am sure that they will understand the spirit in which I am now acting, the purpose I hold nearest my heart and would wish to exhibit in everything I do.

I am anxious that the people of the nations at war also should understand and not mistrust us. I hope that I need give no further proofs and assurances than I have already given throughout nearly three years of anxious patience that I am the friend of peace and mean to preserve it for America so long as I am able. I am not now proposing or contemplating war or any steps that need lead to it. I merely request that you will accord me by your own vote and definite bestowal the means and the authority to safeguard in practice the right of a great people, who are at peace and who are desirous of exercising none but the rights of peace, to follow the pursuit of peace in quietness and good-will—rights recognized time out of mind by all the civilized nations of the world.

No course of my choosing or of theirs will lead to war. War can come only by the willful acts and aggressions of others.

You will understand why I can make no definite proposals or forecasts of action now and must ask for your supporting authority in the most general terms. The form in which action may become necessary cannot yet be foreseen.

I believe that the people will be willing to trust me to act with restraint, with prudence, and in the true spirit of amity and good faith that they have themselves displayed throughout these trying months; and it is in that belief that I request that you will authorize me to supply our merchant ships with defensive arms should that become necessary, and with the means of using them, and to employ

any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and peaceful pursuits on the seas. I request also that you will grant me at the same time, along with the powers I ask, a sufficient credit to enable me to provide adequate means of protection where they are lacking, including adequate insurance against the present war risks.

I have spoken of our commerce and of the legitimate errands of our people on the seas, but you will not be misled as to my main thought—the thought that lies beneath these phrases and gives them dignity and weight. It is not of material interest merely that we are thinking. Is is, rather, of fundamental human rights, chief of all the right of life itself.

I am thinking not only of the right of Americans to go and come about their proper business by way of the sea, but also of some-

thing much deeper, much more fundamental than that. I am thinking of those rights of humanity without which there is no civilization. My theme is of those great principles of compassion and of protection which mankind has sought to throw about human lives, the lives of noncombatants, the lives of men who are peacefully at work keeping the industrial processes of the world quick and vital, the lives of women and children and of those who supply the labor which ministers to their sustenance. We are speaking of no selfish material rights, but of rights which our hearts support and whose foundation is that righteous passion for justice upon which all law, all structures alike of family, of State, and of mankind must rest, as upon the ultimate base of our existence and our liberty.

I cannot imagine any man with American principles at his heart hesitating to defend these things.

The Armed Ship Debate in Congress

FOLLOWING President Wilson's appearance at the Capitol, Congressman Flood, Chairman of the Committee on Foreign Affairs, introduced a bill to carry out the President's recommendations, the bill having been drafted at the White House. It was passed by the House on March 1 by a vote of 403 to 13; of those voting "No" nine were Republicans, three Democrats, and one a Socialist. As passed by the House the bill empowered the President to arm merchant ships, but did not extend to him authority "to use other instrumentalities," and it prohibited insurance of munition-carrying ships in the Government War Risk Fund. The passage of the bill in the House was marked by many patriotic addresses and a complete absence of partisanship; the leaders of the Republican minority advocated the measure as enthusiastically as the Democratic leaders. It was debated for more than seven hours, and more than fifty speeches were made in its favor; there was no serious opposition.

Flood Proclaims Our Policy

Chairman Flood of the Foreign Affairs Committee vigorously announced the policy of the Administration to submit no longer to the virtual blockading of American ports by the German submarine decree.

Germany, he said, had violated the promises made in the interchange of notes between the United States and that nation, "and she is now undertaking to destroy every merchant vessel, whether belligerent or neutral, that is undertaking to land at any port of Great Britain or Ireland, on the Atlantic Coast, or the eastern ports of the Mediterranean. The American merchant marine is tied up in our harbors and American commerce is blockaded in our ports as effectually as if an enemy had blockaded those ports. This condition is intolerable to a free and a brave people, and it has continued as long as the American Government and the American people are willing to submit to it. The pending bill gives the President means to remedy this intolerable condition and free our commerce and protect the lives of American citizens in their lawful pursuits on the high seas."

Mr. Flood said the bill might not avert war, but it would do little directly to bring about war.

"We may have to go further," he continued, "but if we do the fault will not be ours. Our warships have the right to sail the seas, our citizens have the right to go there, and we propose to protect them in that right. I hope we can do it peacefully. If we cannot we will do it

with force and with arms. It is clear that Germany does not intend to lessen the ruthlessness of her submarine warfare in order to avoid a conflict with this country. Our duty is clear—to protect our citizens and our ships in their lawful pursuits.”

Mr. Flood said if Germany were conducting her submarine warfare in accordance with international law and the instincts of humanity, if she were merely exercising the right of search and seizure, this country would take its chances in the prize courts, and there would be no need for the legislation of today.

“But Germany is not doing that. She proposes to sink merchant vessels without warning and without the slightest opportunity for noncombatants on board to save their lives. America is not willing to fail to defend her citizens, and I cannot understand how any man with American blood in his veins and American sentiment in his heart can hesitate to give to the President the authority to protect lives of American citizens.”

Fails in the Senate

On Feb. 27 the Foreign Relations Committee of the United States Senate reported the measure to that body, with the fullest indorsement of the Administration. The text of the bill, as reported, was as follows:

Be it enacted by the Senate and House of Representatives, of the United States of America, in Congress assembled:

That the commanders and crews of all merchant vessels of the United States and bearing the registry of the United States are hereby authorized to arm and defend such vessels against unlawful attacks, and the President of the United States is hereby authorized and empowered to supply such vessels with defensive arms, fore and aft, and also with the necessary ammunition and means of making use of them; and that he be, and is hereby, authorized and empowered to employ such other instrumentalities and methods as may in his judgment and discretion seem necessary and adequate to protect such vessels and the citizens of the United States in their lawful and peaceful pursuits on the high seas.

The sum of \$100,000,000 is hereby appropriated, to be expended by the President of the United States for the purpose of carrying into effect the foregoing provisions, the said sum to be available until the first day of January, 1918.

For the purpose of meeting the expenditures herein authorized, the Secretary of the Treasury, under the direction of the President, is hereby authorized to borrow on the credit of the United States and to issue therefor bonds of the United States not exceeding in the aggregate \$100,000,000, said bonds to be in such form and subject to such terms and conditions as the Secretary of the Treasury may prescribe and to bear interest at a rate not exceeding 3 per centum per annum: Provided that such bonds shall be sold at not less than par, shall not carry the circulation privilege, and that all citizens of the United States shall be given an equal opportunity to subscribe therefor, but no commission shall be allowed or paid thereon; that both principal and interest shall be payable in United States gold coin of the present standard of value, and be exempt from all taxation and duties of the United States as well as from taxation in any form of all State, municipal, or local authorities; that any bonds issued hereunder may, under such conditions as the Secretary of the Treasury may prescribe, be convertible into bonds bearing a higher rate of interest than 3 per centum per annum, if any bonds shall be issued by the United States at a higher rate than 3 per centum per annum by virtue of any act passed on or before Dec. 31, 1918.

In order to pay the necessary expenses connected with the said issue of bonds, or any conversions thereof, a sum not exceeding one-fifth of 1 per centum of the amount of bonds herein authorized to be issued, or which may be converted, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended as the Secretary of the Treasury may direct.

The President is authorized to transfer so much of the amount herein appropriated as he may deem necessary, not exceeding \$25,000,000, to the Bureau of War Risk Insurance, created by act of Congress, approved Sept. 2, 1914, for the purpose of insuring vessels, their freight, passage moneys, and cargoes against loss or damage by the present risks of war.

The Senate Filibuster

The discussion of this measure in the Senate and its failure of passage through a filibuster by a small group marked one of the most sensational episodes in the history of the upper house of the National Legislature, and resulted in a change in the rules which had been advocated fruitlessly for over 100 years.

The session of Congress was to end automatically on March 4, hence there were but four days remaining when the measure was introduced. A certain group of Senators, in view of the critical foreign situation, had previously insisted

that the President should call an extra session of the new Congress, to convene immediately on the expiration of the old Congress, and to force this action they had been filibustering for several days over important revenue and appropriation bills. Under the then existing rules of the Senate, there was no limit to debate, and a very small opposition group could block all legislation and indefinitely postpone final action on any measure by dilatory motions and long speeches.

When the armed neutrality measure came up for debate a small but determined opposition developed, which undertook to prevent a vote until the session ended, at noon March 4. Senator La Follette of Wisconsin was at the head of this group, and he was assisted by Senators Norris of Nebraska, Cummins of Iowa, Gronna of North Dakota, Clapp of Minnesota, and Works of California, Republicans, and Senators Stone of Missouri, O'Gorman of New York, Kirby of Arkansas, Lane of Oregon, and Vardaman of Mississippi, Democrats.

Senator Stone was Chairman of the Foreign Relations Committee. In consequence of his opposition to the bill, he relinquished parliamentary control of it to Senator Hitchcock of Nebraska, the next ranking member of the committee. The debate over the measure proceeded with more or less bitterness for three days, but it was not until the final day of the session, when it was clear that this small group had determined to defeat the measure by dilatory tactics, that the acrimony

reached its acute stage. The leaders of the Senate, both Democratic and Republican, as well as all the influence of the Administration, exerted all possible pressure on the filibusters to allow the measure to reach a vote, but in vain. Senators La Follette and Clapp were deaf to all appeals, and throughout the long session, lasting all night of the 3d of March and until the stroke of 12 on the 4th, they blocked every effort to have a vote. At noon the bill died by the automatic end of the session.

The Famous Manifesto

During the early hours of March 4, when it was apparent that the filibuster would succeed, the Senate majority performed the unprecedented act of signing a manifesto declaring that the will of the overwhelming majority of the Senate was being defeated by a small group of recalcitrants. Seventy-five of the ninety-six members of the body signed the document, and eight more would have signed it could they have been reached. This historic manifesto was as follows:

The undersigned, United States Senators, favor the passage of Senate Bill S322, to authorize the President of the United States to arm American merchant vessels.

A similar bill already has passed the House of Representatives by a vote of 403 to 13.

Under the rules of the Senate, allowing unlimited debate, it now appears to be impossible to obtain a vote prior to noon March 4, 1917, when the session of Congress expires.

We desire the statement entered in the record to establish the fact that the Senate favors the legislation and would pass it if a vote could be obtained.

President Wilson's Appeal to the Country

PRESIDENT WILSON was deeply indignant over the success of the Senate filibusters in defeating the armed neutrality measure, and issued the following address to the country a few hours after Congress adjourned, following closely on the heels of his second inauguration:

The termination of the last session of the Sixty-fourth Congress by constitutional limitation disclosed a situation unparalleled in the history of the country, perhaps unparalleled in the history of any modern Government. In the immediate presence of a crisis fraught

with more subtle and far-reaching possibilities of national danger than any the Government has known within the whole history of its international relations, the Congress has been unable to act either to safeguard the country or to vindicate the elementary rights of its citizens. More than 500 of the 531 members of the two houses were ready and anxious to act; the House of Representatives had acted, by an overwhelming majority; but the Senate was unable to act because a little group of eleven Senators had determined that it should not.

The Senate has no rules by which debate can be limited or brought to an end, no rules by which dilatory tactics of any kind can be

prevented. A single member can stand in the way of action, if he have but the physical endurance. The result in this case is a complete paralysis alike of the legislative and of the executive branches of the Government.

This inability of the Senate to act has rendered some of the most necessary legislation of the session impossible at a time when the need of it was most pressing and most evident. The bill which would have permitted such combinations of capital and of organization in the export and import trade of the country as the circumstances of international competition have made imperative—a bill which the business judgment of the whole country approved and demanded—has failed. The opposition of one or two Senators has made it impossible to increase the membership of the Interstate Commerce Commission to give it the altered organization necessary for its efficiency. The Conservation bill, which should have released for immediate use the mineral resources which are still locked up in the public lands, now that their release is more imperatively necessary than ever, and the bill which would have made the unused water power of the country immediately available for industry have both failed, though they have been under consideration throughout the sessions of two Congresses and have been twice passed by the House of Representatives. The appropriations for the army have failed, along with the appropriations for the civil establishment of the Government; the appropriations for the Military Academy at West Point and the General Deficiency bill. It has proved impossible to extend the powers of the Shipping Board to meet the special needs of the new situations into which our commerce has been forced or to increase the gold reserve of our national banking system to meet the unusual circumstances of the existing financial situation.

It would not cure the difficulty to call the Sixty-fifth Congress in extraordinary session. The paralysis of the Senate would remain. The purpose and the spirit of action are not lacking now. The Congress is more definitely united in thought and purpose at this moment, I venture to say, than it has been within the memory of any men now in its membership. There is not only the most united patriotic purpose, but the objects members have in view are perfectly clear and definite. But the Senate cannot act unless its leaders can obtain unanimous consent. Its majority is powerless, helpless. In the midst of a crisis of extraordinary peril, when only definite and decided action can make the nation safe or shield it from war itself by the aggression of others, action is impossible.

Although, as a matter of fact, the nation and the representatives of the nation stand back of the Executive with unprecedented unanimity and spirit, the impression made abroad will, of course, be that it is not so and that other Governments may act as they please without fear that this Government can do anything at all. We cannot explain. The

explanation is incredible. The Senate of the United States is the only legislative body in the world which cannot act when its majority is ready for action. A little group of willful men, representing no opinion but their own, have rendered the great Government of the United States helpless and contemptible.

The remedy? There is but one remedy. The only remedy is that the rules of the Senate shall be so altered that it can act. The country can be relied upon to draw the moral. I believe that the Senate can be relied on to supply the means of action and save the country from disaster.

Supplementary Statement

At the same time the President authorized the further statement that what rendered the situation even more grave than had been supposed, was the discovery that, while the President under his general constitutional powers could do much of what he had asked Congress to empower him to do, it had been found that there were certain old statutes as yet unrepealed which might raise insuperable practical obstacles and nullify his power.

Popular Indignation

A wave of indignant protest swept the country. Legislatures of many States passed resolutions denouncing the filibustering Senators and pledging support to the President; mass meetings were held in many cities, and at some places the opposing Senators were hanged in effigy. Telegrams of protest poured in from all parts of America and resolutions of protest were passed by important bodies and associations throughout the country.

The Senate had been convened in extra session, as is the custom after the inauguration of the President, to act upon nominations. As soon as the body convened steps were taken to amend the rules so that there could never be a repetition of such a filibuster. An amendment was agreed upon by the Democratic and Republican caucuses, and on March 8 it was adopted by a vote of 76 to 3, the three negative votes being cast by Senators La Follette, Gronna, and Sherman of Illinois. This rule provides that a two-thirds vote of the Senators present may bring a measure to a vote, and thereafter each Senator may debate the measure

only one hour, when it is to be put upon its passage without any dilatory motions or further debate being in order.

This rule is regarded as the most far-reaching change in the procedure of the Senate since the organization of our

Government. The adoption of the rule, as was anticipated, removed all obstacles to the effectiveness of an extra session of Congress, and President Wilson therefore called such a session by proclamation on March 9, summoning the body to meet on April 16, 1917.

Sinking of the Laconia and Algonquin

PRESIDENT WILSON declared in his address of Feb. 3, in which he severed diplomatic relations with Germany, that "only actual overt acts" of German submarines against American citizens and ships on the high seas could change the situation into one of war. The succeeding weeks brought a growing list of acts of that nature. On Feb. 3 the German submarine U-53 sank the American freight steamer Housatonic, bound from Galveston to Liverpool with grain. On Feb. 12 the American sailing schooner Lyman M. Law, en route with lumber from Maine to Italy, was destroyed by a submarine off the coast of Sardinia. Five Norwegian steamers with Americans on board were sunk without adequate warning in the next ten days.

The first American to perish by submarine attack after the break with Germany was Robert A. Haden, a missionary, traveling from China on the French steamer Athos, which was carrying Senegalese troops and colonial laborers. The Athos was torpedoed 210 miles east of Malta on Feb. 17. Mr. Haden perished while trying to aid the Chinese on board. Two American members of the crew of the British bark Calgorm Castle were reported lost after the torpedoing of that vessel in British waters on Feb. 27.

The Laconia Disaster

A far graver case, however, occurred at 10:30 o'clock Sunday night, Feb. 27, when the Cunard liner Laconia, 18,000 tons burden, carrying seventy-three passengers—men, women, and children—of whom six were American citizens—manned by a mixed crew of 216, bound from New York to Liverpool and loaded with foodstuffs, cotton, and war material, was torpedoed without warning by a German submarine 150 miles off the

Irish coast. The vessel sank in about forty minutes. Twelve persons perished in the bitter weather before the survivors in open boats were rescued by British patrol vessels.

Two of the dead were American citizens—Mrs. Mary E. Hoy and her daughter, Miss Elizabeth Hoy, of Chicago. Both were in a lifeboat that was swamped, and, though taken into another open boat, they died of exposure and were buried at sea. The Rev. Dunstan Sargent of Grenada, British West Indies, a passenger on the Laconia, who administered the last rites of the Roman Catholic Church to seven persons who perished, gave the following account of tragic events in his boat:

"Mrs. Hoy died in the arms of her daughter. Her body slipped off into the sea out of her daughter's weakened arms. The heartbroken daughter succumbed a few minutes afterward, and her body fell over the side of the boat as we were tossed by the huge waves.

"In icy water up to her knees for two hours, the daughter all the time bravely supported her aged mother, uttering words of encouragement to her. From the start both were violently seasick, which, coupled with the cold and exposure, gradually wore down their courage. They were brave women.

"The first to die in our boat was W. Irvine Robinson of Toronto. After his body had been consigned to the sea we tossed about for an hour, getting more and more water until the gunwales were almost level with the sea. Then Cedric P. Ivatt of London, who was not physically strong, succumbed in the arms of his fiancée, who was close beside him, trying in vain to keep him warm by throwing her wealth of hair about his neck. Even after he died she refused to give him up,

and, although the additional weight made the situation more dangerous for us all, we yielded to her pitiful pleading and allowed her to keep the body. It was taken aboard the rescuing patrol, from which it was buried.

"The Hoys were the next to pass away after Mr. Ivatt. Then a fireman died, and later two others of the crew who were too thinly clad to resist exposure. Altogether, we were in the boat ten hours. We were rescued in the middle of the morning."

Word Picture of Scene

One of the survivors, Floyd P. Gibbons, has placed on record this picture of the last moments of the *Laconia*:

The torpedo had struck at 10:30 P. M., according to our ship's time. It was thirty minutes afterward that another dull thud, which was accompanied by a noticeable drop in the hulk, told its story of the second torpedo that the submarine had dispatched through the engine room and the boat's vitals from a distance of 200 yards.

We watched silently during the next minute, as the tiers of lights dimmed slowly from white to yellow, then to red, and nothing was left but the murky mourning of the night, which hung over all like a pall.

A mean, cheese-colored crescent of a moon revealed one horn above a rag bundle of clouds low in the distance. A rim of blackness settled around our little world, relieved only by general leering stars in the zenith, and where the *Laconia's* lights had shown there remained only the dim outlines of a blacker hulk standing out above the water like a jagged headland, silhouetted against the overcast sky.

The ship sank rapidly at the stern until at last its nose stood straight in the air. Then it slid silently down and out of sight like a piece of disappearing scenery in a panorama spectacle.

As the vessel was sinking, the submarine that had done the deed suddenly rose out of the sea within a few feet of a boatload of passengers, and a German voice demanded the name of the ship, its tonnage and cargo, and the whereabouts of the Captain. When he had received civil answers the German commander remarked: "Well, you'll be all right. A British patrol will soon pick you up. Good night!" Then he and his ship vanished, and the lifeboats full of shivering victims were left weltering on the empty sea until picked up the next morning by patrol boats.

The sinking of the *Laconia* furnished

the overt act which the President had indicated would call for a more vigorous policy, but it rested with Congress to determine the extent of the warlike step to be taken. On Feb. 28 President Wilson made public the following cablegram which he had received from Austin Y. Hoy, whose mother and sister had perished through the act of a German submarine:

I am an American citizen, representing the Sullivan Machinery Company of Chicago, living abroad, not as an expatriate, but for the promotion of American trade. I love the flag, believing in its significance. My beloved mother and sister, passengers on the *Laconia*, have been foully murdered on the high seas.

As an American citizen outraged and as such fully within my rights and as an American son and brother bereaved, I call upon my Government to preserve its citizens' self-respect and save others of my countrymen from such deep grief as I now feel. I am of military age, able to fight. If my country can use me against these brutal assassins, I am at its call.

If it stultifies my manhood and my nation's by remaining passive under outrage, I shall seek a man's chance under another flag.

German Government officials regarded the *Laconia* case as the climax of the situation, and expected the United States to act, but added that there "could be no going back" in their submarine policy.

Sinking of the Algonquin

The next act seriously affecting the relations of the two countries was the sinking of the American steamship *Algonquin*, bound from New York to London with foodstuffs. The *Algonquin* was attacked without warning at 6 o'clock on Monday morning, March 12, by a German submarine, which sank her with shellfire and bombs. After twenty-seven hours in open boats the crew of twenty-six men reached Scilly. Captain A. Nordberg gave the following account of the event:

Just after daylight I was on the bridge. It was the mate's watch. I saw two steamers, apparently colliers, steaming west, one on the starboard and the other on the port side. Two minutes later the mate called my attention to another object and at once I said, "I think that is a submarine."

The submarine was about three miles distant, as were also the steamers. Immediately I saw a flash of a gun and a shell fell short. At once I stopped the engines and then went full speed astern, indicating this by three

blasts on the whistle. The submarine kept on firing, the fourth shot throwing up a column of water which drenched me and the man at the wheel. It was a close thing.

The fifth shot struck the ship's side and the next went aft. The submarine was using two guns. Twenty shots were fired at us. I ordered the crew to the boats, and we pulled away two ship's lengths. All this time the submarine was firing at us. Some of the shots came very close.

Once we were in the boats the Germans ceased firing and the submarine dived. Later we saw the periscope, which circled the Algonquin half a dozen times. Then, finding her abandoned, the submarine came to the surface and a boat's crew boarded the steamer.

The first thing done was to lower the American flag. Then I concluded they were going to sink my ship. Ten minutes after I heard the crackle of an explosion and saw

smoke. They had blown the ship up with bombs. In fifteen minutes the Algonquin had sunk.

The submarine was flying the German ensign. Her commander asked me the name, nationality, destination, and cargo of the ship, which had the American colors painted on her side and flew the American flag day and night. I asked him to tow us toward land, but he refused, saying: "I'm too busy. I expect a couple of other steamers."

The Algonquin, as it happened, changed owners after its departure from New York, but the fact was unknown alike to the Captain and crew and to the German submarine commander. Fourteen members of the crew were Americans, and Captain Nordberg was a Norwegian who had become a naturalized American citizen.

Ships Armed by Presidential Proclamation

PRESIDENT WILSON issued on March 9 the proclamation calling Congress in extra session April 16, 1917, without specifying any particular purpose, but the following statement announcing the President's determination to arm merchant vessels was given out at the White House:

Secretary Tumulty stated in connection with the President's call for an extra session of Congress that the President is convinced that he has the power to arm American merchant ships and is free to exercise it at once. But so much necessary legislation is pressing for consideration that he is convinced that it is for the best interests of the country to have an early session of the Sixty-fifth Congress, whose support he will also need in all matters collateral to the defense of our merchant marine.

The President decided to act at once, and on March 12 formal notice was given to the world of this decision. The following statement, prepared by Secretary of State Lansing, after a conference with President Wilson, was sent out by the State Department on the 12th to all members of the Diplomatic Corps in Washington:

In view of the announcement of the Imperial German Government of Jan. 31, 1917, that all ships, those of neutrals included, met within certain zones of the high seas would be sunk without any precautions being taken for the safety of the persons on board, and without the exercise of visit and search, the Government of the United States has de-

termined to place upon all American merchant vessels sailing through the barred areas an armed guard for the protection of the vessels and the lives of the persons on board.

Legal Basis of Action

In arriving at the decision that he had legal authority to furnish armament to merchantmen President Wilson was guided by the advice of both Secretary Lansing and Attorney General Gregory. Mr. Lansing had had no doubt from the first of the President's power to take means for the defense of American ships and American lives on the seas. Others thought, however, that a law enacted in 1819 prohibited the President from permitting any merchant vessel of American register to use force against the ships of a nation with which the United States was not actually and officially at war. This law specified that armed merchant vessels should not use their guns against national vessels of a Government with which the United States was in amity.

Secretary Lansing held that this statute had been enacted with particular reference to protection against pirates, and that it had no application whatever to the present situation. It could not properly be construed, he contended, to apply to the use of arms by an American merchant vessel to protect itself against

the unlawful attack of a German submarine.

To make assurance doubly sure President Wilson referred the question of the interpretation of the law to Attorney General Gregory, who sustained the Secretary of State, holding that the law of 1819 had reference to conditions when the seas were infested with piratical craft, and was not a bar to a ship protecting herself from the effort of a German submarine to sink her without warning. The President, therefore, felt that no occasion existed for postponing the issuance of an order to furnish Government armament to merchant vessels.

Although the Armed Ship bill, which failed of passage in the Senate, provided for a bond issue of \$100,000,000 to pay the expenses of armed neutrality, the Government has sufficient money available for its immediate purposes. Congress will be asked to provide more when the extra session convenes.

Crux of the Situation

Under a bill passed during the last days of the last Congress, the funds at the disposal of the Federal War Risk Bureau to insure American ships was increased to \$15,000,000. Armed neutrality is expected to remove the practical blockade of American ports and place the issue of eventual war squarely upon Germany. An attack upon an armed American vessel would precipitate a fight if the ship got sight of the submarine, and an unwarned attack would be regarded by the United States as an act of war.

Germany and Austria both have declared armed merchantmen war vessels. These declarations were based largely, however, upon the charge that British merchant ships used their armament offensively, and it remains to be seen whether Germany will so class and treat American craft with defensive arms. The whole German press comment and unofficial utterances since the question was raised in this country have indicated the conviction that any armed vessel should be considered hostile and sunk in the same way as a belligerent war vessel. There has been no official expression on the subject.

The guns defending American merchantmen will be in charge of gunners belonging to the United States Navy. The official instructions to these men have not been made public, but reliable correspondents have asserted with an air of authority that in view of the warnings by the German Government, the discovering of a submarine in the war zone by an armed ship would presuppose that it had hostile intent, and that it would be fired upon on sight. German official opinion as quoted by the German press asserts that the firing upon a German submarine by an armed American merchantman would be regarded by that country as an act of war.

The Secretary of the Navy issued a formal request to American newspapers and news agencies to refrain from publishing the departure of any American ships from American or foreign ports, and to exclude any information regarding the arming of ships. It is known that six-inch guns were placed upon a large number of American ships in the week ended March 17, 1917, and it was understood that several large freighters and at least one American passenger liner, fully equipped fore and aft with six-inch guns, left American ports for the barred zone during the week named. No official announcement of the sailings was permitted.

Armed neutrality became the status of the United States the moment the first merchant ship under the American flag put to sea with a gun mounted for defense. President Wilson clearly forecast this fact in his address to Congress on Feb. 26.

Writers on international law have held that armed neutrality consisted in placing the country in a position to defend itself and its neutrality against threatened attacks or inroads by belligerents. This state of preparedness may last an indefinite length of time, through good fortune in avoiding contact with belligerent forces afloat or ashore, or through the design of the belligerent to confine its declaration of purpose to infringe the neutrality of a country to mere threats unsupported by action. On the other hand, the status of armed neutrality

may change into one of actual hostility through a collision, such as a submarine attack on an armed merchantman.

Armed Neutralities of 1780 and 1800

Oppenheim thus describes the origin of the armed neutralities of 1780 and 1800:

In 1780, during war with Great Britain, her American colonies, France, and Spain, Russia sent a circular to England, France, and Spain in which she proclaimed the following five principles:

(1) That neutral vessels should be allowed to navigate from port to port of belligerents and along the coast;

(2) That enemy goods on neutral vessels, contraband excepted, should not be seized by belligerents;

(3) That, with regard to contraband, Articles 10 and 11 of the treaty of 1768 between Russia and Great Britain should be applied in all cases;

(4) That a port should only be considered blockaded if the blockading belligerent had stationed vessels there, so as to create an obvious danger for neutral vessels entering the port;

(5) That these principles should be applied in the proceedings and judgments on the legality of the prizes.

George B. Davis, former Judge Advocate General and one of the best-known American authorities on international law, defines an armed neutrality as "an alliance of several powers, usually of a defensive character, though this is by no means essential."

"The purpose of such an alliance," he says, "is to secure the maintenance of certain views of neutral right, which are believed to be in danger or whose justice is likely to be questioned. If the commercial interests of several nations are threatened by unjust and unlawful measures on the part of a belligerent which they deem unjust or dangerous, there can be no question of their right to secure their menaced interests by such combinations as seem best calculated to accomplish this purpose."

Effects of Intensified Submarine Activity

GERMANY relentlessly made good her threat to institute unrestricted submarine warfare in the zone surrounding the United Kingdom and France. On March 19 the following official announcement was made at Berlin:

"In February 368 merchant ships of an aggregate gross tonnage of 781,500 were lost by the war measures of the Central Powers. Among them were 292 hostile ships, with an aggregate gross tonnage of 644,000, and 76 neutral ships of an aggregate gross tonnage of 137,500. Among the neutral ships 61 were sunk by submarines, which is 16.5 per cent. of the total in February, as compared with 29 per cent., the average of neutral losses in the last four months."

These figures differ widely from those given out by the French and English Admiralties. London reported that the total shipping sunk by submarines in February was 490,000 tons.

In the first three weeks of March Germany asserted that the February average was maintained, but again there was a disparity of figures; the English Admi-

ralty reported on March 15 that the total tonnage sunk from Feb. 1 to March 11 was 156 British, 51 other neutrals, and 3 Americans; between March 4 and 11, 1 American, 20 British, and 2 French. Forty-six British ships were sunk between March 1 and 15; of these 16 were less than 1,600 tons each, and 6 were small fishing craft. The Admiralty reported that at the beginning of 1917 Great Britain possessed 3,731 vessels of 1,600 tons and over. Of this number 78 were sunk up to March 15, leaving 3,653 ships of 1,600 tons or more after six weeks of the submarine war.

In the prosecution of their intensified warfare the U-boats spared nothing that came in sight. Hospital ships, Belgian relief ships, and any vessels of neutrals, whether coming or going, were attacked and sunk with the same disregard of the law of visit and search as that exercised toward the craft of Germany's enemies.

The most sensational episodes of the month were the sinking of six grain-laden Dutch ships and the news of the sinking of three American vessels, the

latter reported March 19. These ships were the City of Memphis, the Illinois, and the Vigilancia.

The City of Memphis had sailed on March 16 from Cardiff for New York in ballast. When she left port the steamship had the Stars and Stripes painted on both sides. She encountered a submarine about 5 o'clock Saturday evening. The German commander ordered the Captain of the steamer to leave his ship within fifteen minutes.

The entire crew entered five boats, and the submarine then fired a torpedo, which struck the vessel on the starboard side, tearing a great hole, through which the sea poured. The steamer settled down quickly and foundered within a few minutes.

The Memphis was of 5,252 tonnage, 377 feet long, and was valued at \$600,000. The Vigilancia was torpedoed without warning; she was of 4,115 tonnage and was proceeding to Havre, via the Azores, from New York on Feb. 28, with a cargo of provisions. She was marked on her sides with the American flag and her name in letters that could be read three miles away. The hailing port, "New York," was painted on the port and starboard bows in letters five feet high.

The Illinois was a tank ship, and sailed from Port Arthur, Texas, Feb. 17, 1917, for London. She was of 5,220 gross tonnage. She carried a cargo of oil.

On March 19 it was ascertained that fifteen members of the Vigilancia crew were lost. Captain Borum and eight members of the crew of the City of Memphis were not heard from until three days later when it was learned they had reached Glasgow.

The news aroused fresh indignation in this country and convinced the public that Germany had included in her plan of submarine ruthlessness American ships as well as those of belligerents. The feeling in Government circles was that the sinking of the vessels produced an actual state of war with Germany. President Wilson took measures to speed up the naval program; on the 20th 260 submarine chasers were ordered for immediate construction, the \$115,000,000 emergency fund was employed for purchase of naval equipment, and the immediate graduation of the first and second classes in the Annapolis Naval Academy was ordered, with the rushing of naval recruits to the full emergency limit of 87,000. The general conviction prevailed by March 20 that a formal declaration of war would soon follow. It was known that American merchantmen, armed fore and aft, had left American ports with naval gunners aboard, who were instructed to fire at sight on any submarine that made a hostile approach.

United States Prepares for Defense

SINCE the diplomatic break with Germany the War and Navy Departments of the United States Government have been working night and day to organize for adequate defense in case of war. The navy has made important progress in that direction. Congress, in its closing hours, passed a naval appropriation bill aggregating \$535,000,000, the largest in a single year of the nation's history. This total included the authorization of \$150,000,000 in twenty-year 3 per cent. bonds, the proceeds of which were to be made immediately available for the President's use, \$115,000,000 of the amount to be applied to

speeding up the construction of warships already authorized, and \$35,000,000 to be devoted to the building of submarines. For aviation in connection with naval operations \$5,133,000 was appropriated.

On March 6 Mr. Daniels, Secretary of the Navy, called a conference of the leading shipbuilders of the nation in Washington and asked what they could do in the emergency. He made it plain to them that the Government was counting on them for their fullest co-operation and would not hesitate to commandeer the shipyards if necessary. He told them that the Government was now de-

sirous of having some of the new submarines built in nine months. The best building time that had been offered previously was eighteen months. Mr. Daniels also indicated that the Government was desirous of having destroyers built within a year instead of two years, the best time previously offered. Many of the shipbuilding concerns declared their willingness and ability to meet the needs of the hour.

Large Contracts Placed

On March 15 Secretary Daniels placed contracts for what was probably the largest single order for fighting craft ever given by any nation. Under these contracts private builders undertook to turn out four great battle cruisers and six scout cruisers, costing nearly \$112,000,000 for hulls and machinery alone, and pledged themselves to keep 70 per cent. of their working forces on navy construction. Though the major ship builders were besieged with commercial orders, some of which would bring 50 per cent. profit, they agreed to accept 10 per cent. profit on the battle cruisers, whose cost will represent about \$76,000,000 of the total sums involved in the contracts. This action made it unnecessary for the President to use his authority to commandeer plants. A fifth battle cruiser will be built at the Philadelphia Navy Yard, so as to avoid overstraining the facilities of the private establishments.

Both classes of cruisers are of new types and are designed for a speed of 25 knots an hour. The scouts range in cost from \$5,950,000 to \$5,996,000 and the stipulated time of delivery is from thirty to thirty-two months. These figures can be no guide to the actual cost or time, however, as under the emergency clause of the Naval Appropriation bill construction will be hastened to the limit, the Government footing the bill for additional cost.

The battle cruisers, the fixed limit of cost of which is \$19,000,000 per ship, exclusive of speeding-up expense, were placed as follows: Newport News Shipbuilding and Dry Dock Company, two ships; Fore River Shipbuilding Corporation, one ship; New York Shipbuilding Company, one ship.

With the exception of the New York company, each private builder will have to install new ways and machinery for the huge craft. The Government will bear its fair share of this expense. Already an appropriation of \$6,000,000 has been ordered expended to equip the Philadelphia yard for capital ship building.

Four of the scout cruisers will be built on the Pacific Coast—two by the Seattle Construction Company and two by the Union Iron Works at San Francisco. The other two will be built by William Cramp & Sons, Philadelphia.

The Three-Year Program

In a statement to newspaper men, Secretary Daniels said:

The Navy bill provides the initial appropriations for the following vessels of the three-year program adopted by the first session of the Sixty-fourth Congress, which authorized the construction of 156 vessels of different types: 3 battleships, 1 battle cruiser, 3 scout cruisers, 15 destroyers, 18 submarines, 1 destroyer tender, and 1 submarine tender.

Of the three-year program, therefore, the money has been provided in this bill and in the former bill to commence the construction of the following vessels: 7 battleships, 5 battle cruisers, 7 scout cruisers, 35 destroyers, 48 submarines, 1 destroyer tender, 1 submarine tender, 1 hospital ship, 1 fuel ship, 1 ammunition ship, 1 gunboat, leaving to be first appropriated for next year the balance of the three-year program, consisting of 3 battleships, 1 battle cruiser, 3 scout cruisers, 15 destroyers, 19 submarines, 2 fuel ships, 1 repair ship, 1 transport, 1 destroyer tender, 1 ammunition ship, and 1 gunboat.

The outstanding features of the bill are, first, the \$115,000,000 appropriation for speeding up the construction of ships already authorized and authorized in the bill just approved, and the purchase or construction of aircraft, additional destroyers, submarine chasers, motor boats, and other small craft, which will be essential in an emergency, and which can be constructed in a comparatively short time. A further emergency appropriation of \$18,000,000 is provided specifically for the construction of twenty coast submarines in addition to the eighteen submarines for which money is provided in the bill of the three-year program, making thirty-eight submarines specifically appropriated for in this bill.

Contracts for sixteen non-rigid dirigible airships to be used for coast and harbor patrol were let by Secretary Daniels on March 12. The contracts are for \$649,250, and the specifications call

for the delivery of these airships in the remarkably brief period of 120 days, which means by the middle of June.

Under the leadership of Franklin D. Roosevelt, Assistant Secretary of the Navy, a volunteer reserve auxiliary fleet of 750 ships and motor craft, with 10,000 civilians to man them, is in process of organization for the protection of waters adjoining New York City.

Military Defense Measures

Military defense has made less progress. The Army Appropriation bill for \$279,000,000 was among the important measures that died in the Senate during the filibuster at the close of the session. The chief work of the Secretary of War has consisted in organizing the industries and executive talent of the nation for the emergency. The newly formed Council of National Defense has become an active force during the month. It is the central agency for the industrial mobilization of the country, and under the direction of Daniel Willard, a prominent railroad President, its advisory commission is organizing for the rapid transportation of large bodies of troops, for the conservation of great quantities of food and supplies of all kinds, and for the effective employment of all the country's resources at short notice.

All the remaining National Guard units on the Mexican border, embracing about 75,000 men, were ordered on Feb. 17 to return to their home States for immediate muster out of Federal service. A few days later Judge Advocate General Crowder delivered an opinion to the effect that there was no essential difference in the status of the militiamen

who had taken the Federal oath under the terms of the Hay National Defense act and those who had not; in other words, both classes of National Guardsmen would be subject to call by the President in case of war with Germany. * Meanwhile orders had been issued on March 7 by the War Department directing the Colonels of all regular army regiments along the border to designate sixty enlisted men from each regiment who could be commissioned as company officers in the army in case of an emergency call. This would furnish a total of 5,000 new officers, who would be eligible for offices up to the rank of Captain, and who could be promoted in case of need. In the event of real war the Government would be compelled to call to the colors not less than 500,000 men, and for such an army 25,000 officers would be necessary. These officers would be obtained from the regular commissioned personnel of the army, from the rapid graduation of West Point cadets, and from the new officers' reserve corps now in process of creation.

Late in February the Secretary of War, Newton D. Baker, sent to the Senate Committee on Military Affairs the draft of a bill framed by the War College Division of the General Staff calling for eleven months of compulsory military training for every American boy of 18 years who did not come within certain exemption clauses. Under this bill it was estimated that within three years the country would have a first-line reserve of 1,500,000 young men ready to respond instantly to a call to the colors until their thirtieth year. The bill failed of passage, but will be brought up in Congress again.

German Chancellor's Address on the Break With United States

CHANCELLOR VON BETHMANN HOLLWEG delivered an important address in the Reichstag on Feb. 27, reviewing Germany's position as affected by the intensified submarine warfare and the action of the United States in breaking off diplomatic relations with the Imperial Government. Discussing the attitude of neutrals the Chancellor said:

One step further than that taken by European neutrals has been taken (as is known) by the United States of America. President Wilson, after receiving our note of Jan. 31, brusquely broke off relations with us. No authentic communication about the reasons which were given for his step reached me. The former United States Ambassador here in Berlin communicated only in spoken words to the State Secretary of the Foreign Office of breaking off relations, and asked for his passports. This form of breaking off relations between great nations living in peace is probably without precedent in history.

All official documents being lacking, I am forced to rely upon doubtful sources—that is, upon the Reuter office's version of the contents of the message sent by President Wilson on Feb. 3 to Congress. In this version the President is reported to have said that our note of Jan. 31 suddenly and without previous indication intentionally withdrew the solemn promises made in the note of May, 1916. To the United States Government, therefore, no choice compatible with dignity and honor was left other than the way which had been announced in its note of April 20, 1916, covering the case if Germany should not wish to give up her submarine method.

If these arguments are correctly reported by Reuter, then I must decidedly protest against them. For more than a century friendly relations between us and America have been carefully promoted. We honored them—as Bismarck once put it—as an heirloom from Frederick the Great. Both countries benefited by it, both giving and taking.

Since the beginning of the war, things have changed on the other side of the waters. Old principles were overthrown.

On Aug. 27, 1913, during the Mexican troubles, President Wilson in a solemn message to Congress declared that he intended to follow the best usage of international law by a prohibition of the supplying of arms to both Mexican parties at war against each other. One year later, in 1914, these usages apparently were no longer considered

good. Countless materials of war have been supplied by America to the Entente, and while the right of the American citizen to travel without hindrance to Entente countries and the right to trade without hindrance with France and England, even through the midst of the battlefield, even the right of such trade as we had to pay for with German blood—while all these rights were jealously guarded, the same right of American citizens toward the Central Powers did not seem to be as worthy of protection and as valuable.

They protested against some measures of England which were contrary to international law, but they submitted to them. Under conditions of this kind objection as to lack of respect makes a strange impression.

With equal decisiveness I must protest against the objection that we, by the manner in which we withdrew the assurances given in the note of May 4, offended the honor and dignity of the United States. From the very beginning we had openly and expressly declared that these assurances would be invalid under certain conditions.

The Chancellor then recalled the last paragraph of the note of May 4, 1916, which he read verbatim, the last clause being: "Should the steps taken by the Government of the United States not attain the object it desires, namely, to have the law of humanity followed by all the belligerent nations, the German Government would then be facing a new situation, in which it must reserve to itself complete liberty of decision."

The Chancellor then continued:

As to the American answer given to the German note, it was so absolutely contrary to what we in our note had said clearly and without any possibility of misunderstanding, that a reply on our part would have changed nothing as to the standpoints maintained by both sides. But nobody, even in America, could doubt that already long ago the conditions were fulfilled upon which, according to our declaration, depended our regaining full liberty of decision.

England did not abandon the isolation of Germany, but, on the contrary, intensified it in the most reckless fashion. Our adversaries were not made to respect the principles of international law, universally recognized before the war, nor made to follow the laws of humanity. The freedom of the seas, which America wanted to restore, in co-operation with us, during the war, has been still more completely destroyed by our adversary, and

America has not hindered this. All this is common knowledge.

Even at the end of January England issued a new isolation declaration for the North Sea, and in this period, since May 4, nine months had passed. Could it then be surprising that on Jan. 31 we considered that the freedom of the seas had not been re-established and that we drew our conclusions from this? But the case extends beyond that of formal importance. We, who were ready for peace, now by mutual understanding fight for life against an enemy who from the beginning put his heel upon the recognized laws of nations. The English starvation blockade, our peace offer, its rebuke by the Entente, the war aims of our enemies purporting our destruction, and the speeches of Lloyd George are known also in America.

I could fully understand it if the United States, as a protector of international law, should have bartered for its re-establishment in equal fashion with all the belligerents, and, if desiring to restore peace to the world, had taken measures to enforce the end of the bloodshed. But I cannot possibly consider it a vital question for the American Nation to protect international law in a one-sided fashion, only against us.

Our enemies, and American circles which are unfriendly toward us, thought that they could point out an important difference between our course of action and that of the British. England, they have satisfied themselves, destroys only material values, which can be replaced, while Germany destroys human lives, which are impossible to replace.

Well, gentlemen, why did the British not endanger American lives? Only because neu-

tral countries, and especially America, voluntarily submitted to the British orders, and because the British, therefore, could attain their object without employing force.

What would have happened if Americans had valued unhampered passenger and freight traffic with Bremen and Hamburg as much as that with Liverpool and London? If they had done so, then we should have been freed from the painful impression that, according to America, a submission to British power and control is compatible with the essential character of neutrality, but that it is incompatible with this neutral policy to recognize German measures of defense.

Gentlemen, let us consider the whole question. The breaking off of relations with us and the attempted mobilization of all neutrals against us do not serve for the protection of the freedom of the seas proclaimed by the United States. These actions will not promote the peace desired by President Wilson. They must, consequently, have encouraged the attempt to starve Germany and to multiply the bloodshed.

We regret the rupture with a nation which by her history seemed to be predestined surely to work with us, not against us. But since our honest will for peace has encountered only jeering on the part of our enemies, there is no more "going backward." There is only "going ahead" possible for us.

Adverting to peace discussions, the Chancellor pointed out that the German Nation, in the Reichstag's last vote granting new war credits, demonstrated to the whole world its readiness to continue the struggle until its enemies were ready for peace.

Ambassador Gerard's Difficulties in Leaving Berlin

UNITED STATES AMBASSADOR GERARD received official notice of the break with Germany at 8 o'clock Sunday evening, Feb. 4. On Monday he made formal application for his passports, going in person to Foreign Secretary Zimmermann. The Ambassador's orders from Washington included certain instructions regarding the action of American Consuls in Germany. Telegrams were prepared in the usual code transmitting these instructions to these Americans. These messages were sent to the telegraph office in the customary way by an embassy messen-

ger. Each message bore across its face a stamp showing that it was an official message sent by the duly accredited representative of the American Government. But the telegraph office refused to receive those messages. Some one in the German Government recognized by the officials of the Government telegraph office had notified that office not to accept for transmission any further messages from officials of the American Embassy.

Later the telephone connection of the embassy was broken, his telegrams were not delivered, and the embassy

mail failed to be delivered. When this state of affairs dawned upon the Ambassador he proceeded to take precautions. He personally burned or destroyed all code books and ciphers or other means of confidential communication. Every confidential letter, telegram, or other form of communication in the embassy files went into the fire under Mr. Gerard's direction.

The situation following is thus described by a staff correspondent of THE NEW YORK TIMES:

"Officials of the Foreign Office and the War Office made more or less open efforts to cajole or induce American newspaper correspondents to remain in Berlin after Mr. Gerard had gone. There was an extraordinarily interesting session with Herr Zimmermann, the Foreign Secretary, at the Foreign Office on the Sunday evening when news of the rupture in relations was first received. Emphasis was then laid by him upon the German interpretation of the old treaty of 1799 between Prussia and the United States, and the vigor of his expression of hope that Germany would be able to negotiate with Mr. Gerard for reaffirmation of that treaty and its specific application to existing conditions gives a clear line on the motive for what was to occur so promptly to Mr. Gerard. Again on Tuesday evening, when the correspondents met Colonel Hafeton of the Military Staff, at military press headquarters, they received a renewed and emphasized impression of the importance with which Germans regarded their efforts to procure extended application of that old treaty to pending relations with the United States.

Interview with Montgelas

"It was while the correspondents were receiving their lecture from the military staff that evening that Mr. Gerard received a call from Count Montgelas, Chief of the American Affairs Division of the Foreign Office. It was at that interview that Count Montgelas submitted to Mr. Gerard a draft of the protocol proposed by Germany by way of reaffirmation and emendation of the old Prussian treaty.

"It was at that meeting that Mr. Gerard denounced the way in which he had been treated by the German Government, and received in explanation a statement of Count Montgelas that the German Government was as yet in ignorance of what had happened to Count von Bernstorff in America. But it was only the censorship of the German Government which was preventing the receipt of full authentic news from the United States, and it was inconceivable that Washington was preventing von Bernstorff from communicating with his Government if he desired to do so.

"It was in response to Count Montgelas's presentation of the proposed protocol that Mr. Gerard stated that he could not be 'sandbagged' into signing such a document. It was in reply to a further suggestion by Count Montgelas that favorable action by Mr. Gerard upon the German proposal would facilitate the withdrawal of newspaper correspondents and other Americans from Germany that Mr. Gerard vigorously declared he would sit right where he was until Christmas if his compatriots were not permitted to withdraw along with him.

"Moreover, the American Ambassador pointed out that it was in practical fact an act of war for Germany to refuse to permit Americans to withdraw from the country under the circumstances. There had been no declaration of war by the United States, only a rupture of diplomatic relations. Under every consideration and any interpretation of legal or moral right, Germany had no ground whatever for interference in such withdrawal. It was at this interview also that Mr. Gerard referred to efforts of the German Government to get his consent to the proposed protocol as an attempt to blackmail him.

Garbled News from America

"Berlin was without authoritative news from the United States. Nothing was coming through but criminally false stuff, carried by a news association which seemed bent on doing everything in its power to accentuate the trouble between the United States and Germany.

These dispatches purported to describe the confiscation of the German ships in American waters by the American Government.

"I had filed several dispatches for THE NEW YORK TIMES reporting these events and describing the mischievous character of these dispatches. Whether any of them got through or not I do not yet know, but I do know that on Thursday morning, when the tension in Berlin had become acute, I received a message from the managing editor of THE TIMES giving explicitly the situation in the United States and setting forth exactly the status of the German ships in American waters and their crews. I showed this message immediately to Ambassador Gerard, who said it was most important and urged that the widest possible publicity be given it. Thereupon I went at once to the Foreign Office and showed the message to one of the Under Secretaries.

"The effect was instantaneous. The message was taken at once to Secretary Zimmermann and sent by the Foreign Office to a German news agency, with the result that it was published that afternoon in all newspapers, and again the next morning.

"There was noticeable immediately a decided rise in the German official temperature. The attitude toward Americans and their departure from Germany was markedly friendly.

"It was not until Friday afternoon that the first passports were delivered, and those did not include Gerard's. His came Saturday morning. Some of the party who left Berlin on the train with him that evening did not receive their passports until 5 o'clock that afternoon. Despite the modification of the attitude following the receipt of THE NEW YORK TIMES dispatch, the decision to permit Americans to leave was not made until some time Friday afternoon. On Thursday evening, however, Gerard received a call from another member of the Foreign Office staff, the apparent purpose being to endeavor to smooth out the unpleasant impressions, also to see if something could not be done, even at that late date, on the important matter of that old

Prussian treaty, with its astounding joker, about the safe conduct for German ships to be furnished by the American Government in case of war between the two countries."

Ambassador Gerard and his party, numbering about 100, first proceeded to Switzerland. At the Swiss frontier representatives of the Government received them, and they were hospitably entertained at Berne. Again at the French frontier they were officially received, and at Paris a formal reception was tendered by the Government. From Paris the party proceeded to Madrid, where the King held a long interview with the Ambassador, and thence to Corunna, at which port they embarked on the steamship Alfonso XIII., arriving at Havana, Cuba, without incident on March 5. The Ambassador left on the 10th for Key West, and reached Washington Wednesday, March 14. He was cordially greeted en route by committees representing the cities and States, and was officially received at Washington. The President was confined to his room by illness, but the Ambassador was closeted on Wednesday for several hours with Secretary of State Lansing.

Mr. Gerard reached New York Friday, March 16, and was enthusiastically welcomed by Reception Committees representing the State and the municipality. He studiously declined to make any public statement, holding that any references to his report should be made by the Government.

It is a curious coincidence that Mr. Gerard reached Washington on the same day and practically at the same hour that Count von Bernstorff arrived at Berlin.

Thanks of British Government

Mr. Balfour, the British Foreign Secretary, announced in the House of Commons after the diplomatic break between the United States and Germany on Feb. 3 that he had communicated to the United States Government, through Ambassador Walter H. Page, the following letter of thanks for the services of Ambassador James W. Gerard and his staff in caring for British interests at Berlin since the beginning of the war:

I have the honor to acknowledge the receipt of your Excellency's note of the 4th inst., (No. 2,766,) in which your Excellency informed me that diplomatic relations between the United States of America and the German Empire had ceased as from 2 P. M. on the 3d inst. I request that your Excellency will be good enough to convey to your Government an expression of the thanks of his Majesty's Government for the action taken by them in transferring the charge of British interests in Germany to the Netherland Minister at Berlin.

I desire to take this opportunity of expressing to your Excellency his Majesty's Government's deep appreciation of the care and devotion with which the United States Government has taken charge of British interests in Germany since the outbreak of war. His Majesty's Government are fully conscious of the immense amount of work which the care of British interests has necessarily entailed upon the staffs of the United States Embassies in London and Berlin, and they feel that they cannot value too highly the promptitude and efficiency with which that work has invariably been performed, and the unfailing tact and courtesy shown by the members of your Excellency's staff in dealing with the care of German interests in this country.

His Majesty's Government are especially

grateful for all that has been done by the United States diplomatic and Consular officers in Germany for the British prisoners of war. There can be no doubt that their efforts have been the direct cause of a considerable improvement in the treatment of British prisoners, while the machinery devised for relief has, as far as possible, ameliorated the lot of those British subjects who, though not interned, have for various reasons been unable to leave Germany. His Majesty's Government fully realize that these results have not been achieved without much labor on the part of the American officials concerned, and, in some cases, in face of strenuous opposition on the part of the German authorities, and I can assure your Excellency that the work done by the representatives of the United States of America on behalf of British subjects in hostile hands will not readily be forgotten either by his Majesty's Government or by the British people.

I beg that your Excellency will accept personally, and convey to the members of your staff, this expression of the most cordial thanks of his Majesty's Government, and that you will also be so good as to ask your Government to express to Mr. Gerard his Majesty's Government's profound gratitude and recognition of their deep indebtedness to him and to his Excellency's staff.

The Alliance With Mexico and Japan Proposed by Germany

AN important phase growing out of our rupture with Germany and the subsequent drift toward war, (the main issues being treated fully in preceding pages,) was the uncovering of an anti-American alliance proposed by Germany with Mexico and Japan in the event the threatened war ensued.

The plot was revealed by the publication on March 1, 1917, of a letter dated Jan. 19, 1917, signed by the German Foreign Secretary and addressed to the German Minister, von Eckhardt, in Mexico City. The text of the letter is as follows:

Berlin, Jan. 19, 1917.

On Feb. 1 we intend to begin submarine warfare unrestricted. In spite of this, it is our intention to endeavor to keep neutral the United States of America.

If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general

financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.

You are instructed to inform the President of Mexico of the above in the greatest confidence as soon as it is certain that there will be an outbreak of war with the United States, and suggest that the President of Mexico, on his own initiative, should communicate with Japan suggesting adherence at once to this plan. At the same time, offer to mediate between Germany and Japan.

Please call to the attention of the President of Mexico that the employment of ruthless submarine warfare now promises to compel England to make peace in a few months.

ZIMMERMANN.

The revelation created a profound impression throughout the country. The immediate effect on Congress was the elimination of practically all opposition to the proposal then pending to authorize the President to proceed at once to arm American merchantmen against German submarines; it also crystallized the con-

viction throughout the country that the German submarine blockade must be sternly resisted, even though it resulted in a declaration of war by Germany. A question having been raised in the United States Senate as to the authenticity of the letter, a resolution was passed requesting the President to inform the Senate as to the genuineness of the German note; thereupon the following reply was communicated by the Executive on the same day:

Washington, D. C., March 1, 1917.

To the Senate:

In response to the resolution adopted by the Senate on March 1, 1917, requesting the President to furnish the Senate, if not incompatible with the public interest, whatever information he has concerning the note published in the press of this date purporting to have been sent Jan. 19, 1917, by the German Secretary for Foreign Affairs to the German Minister to Mexico, I transmit herewith a report by the Secretary of State, which has my approval.

WOODROW WILSON.

[Inclosure.]

To the President:

The resolution adopted by the United States Senate on March 1, 1917, requesting that that body be furnished, if not incompatible with the public interest, whatever information you have concerning the note published in the press of this date, purporting to have been sent Jan. 19, 1917, by the German Secretary for Foreign Affairs to the German Minister to Mexico, I have the honor to state that the Government is in possession of evidence which establishes the fact that the note referred to is authentic, and that it is in possession of the Government of the United States, and that the evidence was procured by this Government during the present week, but that it is, in my opinion, incompatible with the public interest to send to the Senate at the present time any further information in possession of the Government of the United States relative to the note mentioned in the resolution of the Senate. Respectfully submitted,

ROBERT LANSING.

How the Note Was Obtained

The authorities have given no intimation as to how the Zimmermann note was procured, but an unconfirmed explanation was given that four men of the First Indiana Infantry, a noncommissioned officer and three privates, doing patrol duty along the Rio Grande near Llano Grande, Texas, had overhauled a messenger sent by the German Ambassador, Count von Bernstorff, and found the note on his person. The details as related in a

dispatch from Houston, Texas, are as follows:

"Just opposite where the messenger attempted to sneak across the river was stationed a squad of thirty-five Carranza 'rurales,' fashioned after the organization of 'Texas Rangers.' However, the messenger did not meet the 'rurales,' but four men of Company G, First Indiana Infantry, and they got the Zimmermann note and other papers from his person. They caught him near the town of Progreso, where he was arrested on Feb. 21, when he attempted to cross the Rio Grande, twelve miles below San Juan Ferry and twenty-five miles west of the International Bridge at Brownsville, Texas, the two regulation crossings. Since the patrol of the border was begun no person is allowed to cross without being questioned, searched, and minutely examined by the patrol bodies, made up of four men and covering every foot of territory from Sam Fordyce, Texas, to Brownsville, Texas, along the Rio Grande—a distance of 106 miles. The messenger doubtless was following explicit instructions as to where to cross, and in so doing he aroused the suspicions of the militiamen."

It is stated, and not officially denied, that the document was in the hands of the President when he broke off relations with Germany by dismissing the Ambassador, but its absolute authenticity was not established until a day or two before it was made public.

Confirmed by Germany

When the Zimmermann proposal was first made public it evoked indignant protests from pro-Germans throughout the country, on the ground that it was spurious, and that its publication was a political trick. The German press in America denounced it as a palpable forgery, a clumsy artifice to influence American sentiment. However, on March 3 Secretary Zimmermann himself acknowledged that the letter was genuine, and the following statement was telegraphed from Berlin that day by the German Official News Bureau, the Overseas News Agency:

Foreign Secretary Zimmermann was asked

by a staff member of the Overseas News Agency about the English report that "a German plot had been revealed to get Mexico to declare war against the United States and to secure Japan's aid against the United States." Secretary Zimmermann answered:

"You understand that it is impossible for me to discuss the facts of this 'revealed plot' just at this moment and under these circumstances. I therefore may be allowed to limit my answer to what is said in the English reports, which certainly are not inspired by sympathy with Germany. The English report expressly states that Germany expected and wished to remain on terms of friendship with the United States, but that we had prepared measures of defense in case the United States declared war against Germany. I fail to see how such a 'plot' is inspired by unfriendliness on our part. It would mean nothing but that we would use means universally admitted in war, in case the United States declared war.

"The most important part of the alleged plot is its condition and form. The whole 'plot' falls flat to the ground in case the United States does not declare war against us. And if we really, as the report alleges, considered the possibility of hostile acts of the United States against us, then we really had reasons to do so.

"An Argentine newspaper a short while ago really 'revealed a plot' when it told that the United States last year suggested to other American republics common action against Germany and her allies. This 'plot' apparently was not conditional in the least. The news as published by *La Prensa* (Buenos Aires) agrees well with the interpretation given, for instance, by an American newspaper man, Edward Price, in Berlin and London, who said that the United States was waiting only for the proper moment in order opportunely to assist the Entente. The same American stated that Americans from the beginning of the war really participated in it by putting the immense resources of the United States at the Entente's disposal, and that Americans had not declared war only because they felt sure that assistance by friendly neutrality would be during that time much more efficient for the Entente than direct participation in the war. Whether this American newspaper man reported the facts exactly we were at a loss to judge in satisfactory fashion, since we were more or less completely cut off from communication with the United States.

"But there were other facts which seemed to confirm this and similar assurances. Everybody knows these facts, and I need not repeat them. The Entente propaganda services have sufficiently heralded all these pro-Entente demonstrations in the United States. And if you link these demonstrations with the actual attitude of the United States, then it is obvious that it was not frivolous on our part to consider what defensive measures we

should take in case we were attacked by the United States."

German Comment

The German newspaper press was cautious in its comments on the disclosure, though some influential organs criticised the manoeuvre as unwise. It was at first reported that the Reichstag would repudiate the Minister and demand his dismissal, but this story proved to be wholly unfounded. The Reichstag Budget Committee at an executive session on March 5, lasting six hours, unequivocally indorsed the action of the Foreign Office by unanimous vote. The Government's efforts to negotiate an alliance in the eventuality of war with the United States was approved as being within the legitimate scope of military precautions. The committee expressed regrets at the misfortune which resulted in the interception of Foreign Secretary Zimmermann's note.

After Dr. Zimmermann had given his report in regard to the instructions to the German Minister in Mexico the subject was debated by members of the Reichstag. Reporting the debate, the Overseas News Agency said that a National Liberal member reminded the committee that President Wilson had attempted to instigate neutrals against Germany. He said he was unable to object to Dr. Zimmermann's action.

Members of the Socialist minority criticised unfavorably the Foreign Secretary's move. Their remarks evoked energetic protests from a member of the Catholic Party. A Conservative member declared Dr. Zimmermann's action was unobjectionable and should be indorsed. The objections raised by the members of the Socialist minority were criticised by other Socialists.

The most caustic criticism of the matter came from Theodor Wolff, editor of the influential Berliner Tageblatt, who wrote:

The invitation to Mexico would have been a mistake even if it had not strayed from the right road. The fresh spirit of enterprise it shows too impatiently eliminated sober judgment.

The Minister to Mexico was instructed to hold out the conquest of Texas, New Mexico, and Arizona to Carranza, and it would cer-

tainly be interesting to see the face of the wily Mexican when this offer was made. The idea, too, that through Carranza's mediation one could win over rather self-conscious Japan is somewhat strange. With Russia, England, and America, all leading powers in Eastern Asia, standing on the other side, Japan will certainly not be very amenable to Mexico's influence. It is not probable one can help along the world's history in this way.

Naturally no man says a word about morality in this connection; in the first place, morality has for a long time been that thing whose nonobservance is self-understood; secondly, it hasn't the least to do with the Mexican matter. It is not immoral to offer Mexico an alliance for the eventuality of war, and it would not be immoral even to ask Japan, "My yellow beauty, will you go with me?" One who does so is far from being a Machiavelli.

Likewise, nothing justifies the charge that the authors of the plan have touched the fuse to the American powder barrel. The development of things would have been approximately the same, even without the Mexican correspondence. Neither should one condemn an action because it fails. The greatest diplomatic geniuses have occasionally gone wrong.

After we have thus blown ourselves up with righteousness, we can quietly say that the jewel of statesmanship went lost between Berlin and Mexico.

Georg Bernhard in the *Vossische Zeitung* expressed disapproval in these terms:

To begin with we cannot see what interest we might have in offering the Mexicans bits of American territory. Mexico is carrying on a war of defense against the Union. The Mexicans know full well for what reasons, not only financial, but political, the United States is forced to seek an extension of its territory beyond the Mexican boundary. The American need to defend the Panama Canal is a perpetual menace to every State lying between the Canal and the United States boundary. Therefore these States are bound to look upon the German proffer to assist them in their defense as highly valuable.

Wholly incomprehensible, however, is the inspiration of our diplomacy to negotiate with Japan by way of Mexico. It betrays a wholly false estimate of latent possibilities. We are fully acquainted with Japan's attitude toward America. All the beautiful speeches of the statesmen in Washington and Tokio cannot deceive us, for beneath the mask of friendship the two grimmest foes of the future are facing one another. Long before the war we were aware that Japanese diplomacy was not only astute, but very purposeful, and we know further that among no people has the art of keeping one's face been so keenly developed. Whoever assumed that Japan, in this war, would probably forsake her alle-

giance to her friends betrays anything but a diplomatic line of reasoning.

Mexico and Japan Speak

The State Department announced that it had no reason to believe that the Zimmermann proposal had ever been presented to the Mexican Government, and the Mexican Chargé d'Affaires of the Mexican Embassy at Washington, Ramon de Negri, issued a formal statement denying that the Carranza Government had been in any way implicated in the matter. The Japanese Embassy at Washington also issued a formal statement denouncing the letter as a "monstrous plot," and adding:

"If such a proposal were made, it is one that could not be entertained by the Japanese Government, as it is an absolutely impossible proposal. Japan is not only in honor bound to her allies in the Entente, but could not entertain the idea of entering into any such alliance at the expense of the United States."

The Japanese Foreign Minister, Viscount Motono, considered the suggestion ridiculous, and added: "If Mexico received the proposal, that country showed intelligence in not transmitting it to Japan." The Prime Minister of Japan, Count Terauchi, made the following statement regarding the matter on March 5:

The revelation of Germany's latest plot, looking to a combination between Japan and Mexico against the United States, is interesting in many ways. We are surprised not so much by the persistent efforts of the Germans to cause an estrangement between Japan and the United States as by their complete failure of appreciating the aims and ideals of other nations.

Nothing is more repugnant to our sense of honor and to the lasting welfare of this country than to betray our allies and friends in time of trial and to become a party to a combination directed against the United States, to whom we are bound not only by the sentiments of true friendship, but also by the material interests of vast and far-reaching importance.

The proposal which is now reported to have been planned by the German Foreign Office has not been communicated to the Japanese Government up to this moment, either directly or indirectly, officially or unofficially, but should it ever come to hand I can conceive no other form of reply than that of indignant and categorical refusal.

The Mikado of Japan sent President Wilson the following greeting on his second inauguration on March 5:

On the occasion of your inauguration as the President of the United States of America we desire to offer to you our sincere congratulations and to express our ardent wishes that your Administration may be attended by brilliant successes in the future, as it has been in the past, and that the United States may grow more and more in its prosperity.

Attitude of Carranza

The exposure of the proposed German-Mexican-Japanese alliance was followed by disclosures of intrigues by alleged German agents in nearly all the Central and South American States. On March 9 it was reported that Washington had discovered that a wireless station has been installed in Mexico, whereby direct communication could be had with Germany. Numerous reports came from points in Central and South America of plottings to involve various States in quarrels, and one circumstantial story was related to the effect that efforts had been made to embroil Mexico with all the Central American States, with the promise that Mexico should be permitted to acquire nearly all of Guatemala and British Honduras.

Carranza, the de facto President of Mexico, made no announcement regarding the exposure of the plot, and it was remarked that no official repudiation of the proposal had been made by any important official of the Carranza Government. It is recalled that on Feb. 12, 1917, Secretary Lansing received from R. P. de Negri, Chargé d'Affaires of the Mexican Embassy at Washington, the copy of an identical note which the de facto Government of Mexico had also dispatched to Argentina, Brazil, Chile, Spain, Sweden, Norway, and other nations, asking that they and the United States join with Mexico in an international agreement to prohibit the exportation of munitions and foodstuffs to the belligerents in Europe.

This proposal, contrary to international law and to the principles of neutrality as laid down by the United States in its notes to the German and Austro-Hungarian Governments, caused critics of in-

ternational affairs to say that, as the Central Powers were the only ones to be benefited by the proposal, it was probably due to German influence on General Carranza or to Carranza's own desire to have a hand in the European quarrel.

Carranza's Intervention Note

The text of the Carranza note reads, in part:

Over two years ago there began on the old Continent the most gigantic armed conflict which history records, spreading death, desolation, and misery among the belligerent nations. This tragic struggle has deeply wounded the sentiments of humanity of all the countries not taking any part in the struggle, and it would not be just or humane that these nations should remain indifferent before such great disaster. A deep sentiment of human brotherhood therefore obliges the Mexican Government to offer its modest co-operation in order to bring about the cessation of the struggle. * * *

The present European war seems to the whole world as a great conflagration, as a great plague that ought to have been isolated and limited long ago, in order to shorten its duration and avoid its extension. Far from that, the commerce of the neutral countries of the world, and particularly that of America, has a great responsibility before history, because all the neutral nations, more or less, have lent their assistance in money, in provisions, in munitions, or in fuel, and in this way have fed and prolonged this great conflagration.

By reason of high human morals and for their own national preservation, the neutral nations are obligated to abandon this procedure, and also to refuse to continue lending this assistance that has made possible the continuation of the war for over two years. To this end the Mexican Government, acting within the most strict respect for the sovereignty of the countries at war, inspired by the highest humanitarian sentiments, and guided at the same time by the sentiment of self-conservation and defense, permits itself to propose to the Government of your Excellency, as it is also doing to the other neutral Governments, that, working in mutual accord and proceeding upon the basis of the most absolute equality for both groups of combatant powers, to [we?] invite them to put an end to the present war, either by themselves or taking advantage of the good offices or of the friendly mediation of all the nations that jointly may accept this invitation.

If within a reasonable length of time peace cannot be established by this means, the neutral countries will then take the necessary measures in order to confine the conflagration to its strict limits, refusing to the belligerents all kinds of supplies and

stopping merchant traffic with the nations of the world until the end of the war is achieved.

The Mexican Government recognizes that in its proposition it steps aside a little from the principles of international law which until now have been in force in the relations of the neutrals with the belligerents. But we ought to recognize that the present European war is a conflict without any precedent in the history of humanity, which demands supreme effort and new remedies that cannot be found within the narrow and somewhat egotistical limits of international law as known up to date.

The Government of Mexico understands that no neutral nation, powerful as it may be, could by itself take a step of this nature, and that the result of this measure only can be reached with the co-operation of the neutral Governments possessing the greatest international influence before the belligerent nations.

It pertains especially to the United States, Argentina, Brazil, and Chile in America, and to Spain, Sweden, and Norway in Europe, which are more influential and more at liberty to take a determined stand before the belligerents concerned, to foster this initiative, which, not because it proceeds from a nation which is supposed to be weak at the present time, and therefore incapable of an effective international effort, is nevertheless worthy of serious study and minute consideration.

The proposal at the time brought sharp protests from the newspapers and prominent spokesmen of all the countries, and was denounced as a movement in the interest of Germany. General Carranza expressed surprise that his suggestion should be so construed, and disclaimed that it was made in the interest of any of the belligerents.

Earlier Intrigues in Mexico

German plottings with reference to Mexico were first divulged on Dec. 8, 1915, when it was reported that Franz Rintelen, an intimate friend of the German Crown Prince, and one of the financial advisers of the German Admiralty, had been sent to the United States in the Spring of that year for the double purpose of stirring up strikes in American factories engaged in the manufacture of munitions for the Allies, and also of bringing about a war between the United States and Mexico, the purpose of the last-named plot being to create a situation in this country which would make impossible the sale of war materials

to the Allies so long as the Mexican trouble lasted.

Rintelen arrived in the United States in April, 1915, under an assumed name, which he changed to another assumed name shortly after his arrival. He had offices in a New York bank building, and was known to the other tenants as Hansen. As Hansen he went to an uptown hotel with a letter of introduction to a man who was at that time a power in Mexican affairs.

The letter introducing him was written by an official of a bank in which Austro-Hungarian officials in this country have kept large accounts. Rintelen also had an account in this bank, which at one time amounted to several hundred thousand dollars. This money, according to American Secret Service agents, was part of a large fund given to Rintelen by the German Government to carry out the anti-American conspiracies which caused the Berlin authorities to send him to the United States. The total amount of the fund said to have been at the disposal of Rintelen has been placed by responsible officials as high as \$30,000,000.

Huerta and Rintelen

A few weeks after Rintelen arrived in New York, Victoriano Huerta, former dictator of Mexico, arrived here from Spain. He had fled to the latter country a few weeks following the American occupation of Vera Cruz, in the Spring of 1914. There is every reason to believe that Rintelen also came to this country from Spain, and that while in that country he had conferred with Huerta and other prominent Mexicans who were then in exile there.

Shortly after his arrival in New York Huerta met Rintelen. Several times later he met and conferred with Captain von Papen, then the German Military Attaché in Washington. Von Papen subsequently was recalled by the German Government at the request of President Wilson. The reason of the recall has never been made public, but those who are in close touch with the situation have never seen fit to deny that the Mexican activities of German agents had something to do with the disgracing of the Attaché.

The German proposition to Huerta was submitted to him at a conference held in a Fifth Avenue hotel, at which there were present, besides Huerta and Rintelen, at least one former Foreign Minister of the Mexican Government and several other Mexicans whose names were household words south of the Rio Grande five years ago.

Von Papen was not at this conference, but he conferred subsequently with Huerta. Von Papen is said to have gone to the border in the Summer of 1915, and, with trusted German agents, made a close study of the situation from a military point of view.

Huerta took kindly to the German proposition, and a few weeks later he announced that he had decided to make New York his home, and rented a house on Long Island. This statement regarding a change of residence proved to be a ruse to throw the United States Secret Service agents off Huerta's track, for a few days after he moved to his Long Island home he disappeared. The Secret Service agents found him in Missouri, speeding on a limited train for El Paso, Texas, where it was learned he was to be joined by confederates and was to slip across the line near Juarez and start the new revolution, the purpose of which was to bring on a war with the United States. The Germans, it is said, had promised Huerta 10,000 rifles, a huge amount of ammunition, and a first credit of about \$10,000,000 to finance the enterprise.

Huerta never arrived at El Paso. Instead, the Government agents intercepted him in New Mexico, near the Texas line,

and made him a prisoner. Pascual Orozco, a former Madero chieftain, who was also in the plot, was killed a few weeks later in trying to escape into Mexico. Whether or not Huerta ever confessed to the Federal authorities his part in the German plot has never been stated, but the impression is that he died in the jail at San Antonio without telling what he knew of the affair.

The arrest of Huerta and the subsequent investigation by the Secret Service agents resulted in the flight from this country of Rintelen. He sailed on a Holland-America liner on a fraudulent Swiss passport, and was arrested by the British when his ship called at Falmouth for examination by the British military authorities. He is still a prisoner of war in Great Britain, the place of confinement being, it is said, a prison near London.

A significant indication of the attitude of the Carranza Government toward Japan lies in the fact that about the time the Zimmermann note was due to be delivered at Mexico City the Mexican Government canceled orders for 20,000,000 rifle cartridges that had been let in this country and transferred them to Japanese munitions works. The ostensible reason given was the irksome regulation imposed by our Government in regard to deliveries.

It is stated that by March 10 there were 6,000 Germans in various parts of Mexico, all trained soldiers, and that the number is increasing rapidly by the departure from American cities of hundreds each week for Mexico.

Microbes as War Weapons

A German Plot to Infect Rumanian Horses and Cattle Is Charged

Robert de Lazeu, a writer for the Paris Figaro, has collected the evidence tending to prove that the Germans, under protection of diplomatic immunity in time of peace, had introduced into Rumania certain explosives and microbe cultures intended to be used to blow up Rumanian railways and infect Rumanian cattle and horses.

[This article is published without verification by the editor, and is presented as an ex parte contribution.—EDITOR CURRENT HISTORY MAGAZINE]

IN the course of the Dobrudja campaign I had occasion to witness and verify many Bulgarian horrors and German atrocities; but none of these seems to me to have equaled in infamy the discovery that was made on Oct. 5, 1916, at 11 o'clock in the morning, in the garden of the German Legation at Bucharest, of a case of powerful explosives and a whole set of tubes and little boxes of bacillus cultures, intended to spread in Rumania two dreaded epidemics—anthrax and glanders.

The fact is so unheard of, so monstrous, so unprecedented in the annals of civilization and even of barbarism, that I confess I did not give it entire credence at first. The newspapers presented it in an incomplete and cursory fashion. The Austro-German press denied it, and denies it still, sometimes with violence, sometimes with an air of rather strained levity. The newspapers of neutral countries, especially those of America, remained skeptical and concluded that such machinations passed the limits of probability. How could one blame them?

This is why it seems to me to be important to ascertain all the circumstances of an act which the mind and even the imagination refuse to admit, and to devote all the more care to the proofs because the facts involved seem incredible.

I have seen all the apparatus, all the poison bottles, discovered in the legation garden. I have had in my hands all the official reports and all the records in this unprecedented case. I am going to try to present them in such a way that the German press shall be obliged to implore its "good old God" for inspiration to invent new lies, and that no one can longer doubt that in 1916—in a coun-

try not at war—in a European capital, diplomats and Military Attachés who were in social intercourse every evening with Ministers or high officials were spending their days, with sleeves rolled up, in preparing explosives to blow up their hosts, and deadly microbes to destroy the horses attached to the vehicles in which they rode.

Bucharest has a Prefect of Police whom all the capitals might envy if they knew him—M. Corbesco. Several weeks before Rumania's entry into the war M. Corbesco had ascertained that explosives were being introduced into the country—coming surreptitiously from the Central Empires—and that the diplomatic channel was being used for this purpose. One day a policeman came and reported to the Prefect that he had found where the explosives were. They were at the German Consulate. M. Corbesco was stupefied, but he kept his counsel and bided his time.

After the mobilization M. Corbesco was anxious to search the legation. It required long parleying. The American Legation, which is intrusted with the protection of the German Legation, interposed purely formal difficulties. Finally, on Sept. 22, at the request of the Rumanian Minister of Foreign Affairs, the American Legation delegated its First Secretary, Mr. Andrews, to be present at the search.

Poor Mr. Andrews! Whoever knows Mr. Andrews, so obliging and correct, thin as certain scruples and long as an English novel, can guess with what melancholy that diplomat presented himself at that ceremony, for which the peaceful and distinguished manners of the Chancelleries had not exactly fitted him. He took his overcoat, his hat, his

gloves, his diplomatic phlegm plus his American phlegm, and, covered with all these phlegms, betook himself to the German Legation—very phlegmatically. There he found M. Corbesco, Chief of Police, and M. Rafaël, Chief Inspector. All three entered the premises, then the garden. They found there one Michel Markus, guardian, and one Andrei Maftei, domestic, both authorized to occupy the legation after the departure of the German Minister, their employer, in the capacity of guards.

"I know," said M. Corbesco, addressing Michel Markus, "that certain boxes have been buried in this garden, and that you have helped to place them here."

Michel Markus admitted that this was true.

"Do you know what these cases contain?"

"No, Sir."

"You are going," said the Prefect, "to show me immediately where these things are buried, and you are going to help me dig them up."

Markus and Maftei went to seek spades and picks, and set themselves to dig in the garden border along the wall of the house on the side next to Cosma Street. At a depth of about twenty inches, between the eighth and ninth tree from the corner of the house, they soon brought to light, first, fifty Bickford fuses, then fifty metal boxes of a long, rectangular shape.

"That is not all," insisted M. Corbesco.

"No, Monsieur le Préfet."

And the docile Markus led M. Corbesco to the fence that separates the legation garden from the adjoining premises on Cosma Street. He paused before a heap of fagots and firewood. Markus removed this and began a new excavation, which shortly brought to light a rectangular box wrapped in white paper and bearing the seal of the Imperial German Consulate at Kronstadt (Brachow) in red wax—also the following labels:

Durch Feldjäger! Ganz geheim! Nicht werfen!!! Bucarest.
Für Herrn Kostoff, S. Hochwohlgeb. Dem Oberst u. Militärattache an der Kaiserlich-Bulgarischen Gesandtschaft zu Bucarest, Herrn Samargieff.

[Translation: "By orderly. Absolutely secret. Not to be thrown! For Mr. Kostoff. To his Honor, Mr. Samargieff, Colonel and Military Attache at the Imperial Bulgarian Legation in Bucharest."]

Within this first envelope was found another envelope of white paper bearing in red pencil the words:

Ganz geheim! Durch Feld.
An den königlichen Oberst und Militärattache, Herrn von —.

[Translation: "Absolutely secret. By orderly. To Mr. von —, royal Colonel and Military Attache."]

The half-effaced name was easily deciphered. It was that of Colonel von Hammerstein, Military Attaché at the German Legation, just as Samargieff was that of the Military Attaché at the Bulgarian Legation. In all this business Kostoff was merely a sort of tool and go-between, ordered to carry the ignominious package from one legation to the other.

The box was opened and within it was found, on a bed of wadding, a typewritten note in German, as follows:

Anbei 1 Fläschchen für Pferde und 4 für Hornvieh. Verwendung wie besprochen. Jedes Rörchen genügt für 200 Stück. Wenn möglich den Tieren direct in das Maul, sonst in Futter. Bitten um kleinen Bericht über dortige Erfolge und falls Resultate zu verzeichnen, wäre Anwesenheit von Hr. K. für einen Tag hier Erwünscht.

[Translation: "One vial for horses, four for cattle. Use as agreed. Each tube is enough for 200 animals. If possible, to be placed directly in the mouth, otherwise in the fodder. Please inform us of the results in a brief note. The presence of Mr. K. is desired here for one day."]

The text of this outrageous document was immediately countersigned by the Chief of Police and by Mr. Andrews, representative of the Central Empires in the circumstances.

In the box, under the wadding, were found six little boxes of white wood, of oblong form. In each little box was a glass tube containing a yellowish liquid, whose nature remained to be ascertained.

How had these objects been buried here—by whom—under whose orders? This was to be learned by questioning Markus and Maftei, and it was done on that same day of Oct. 5 in the presence of Mr. Andrews, who became more and more depressed, in the hotel of the

United States Legation. I have been able to procure the exact text of the declarations of these two men. That of Michel Markus is as follows:

My name is Michel Markus. I am a German subject living at Bucharest in the premises of the German Legation, where I have been employed for twenty-two years. Regarding the facts on which you interrogate me, namely, what I know concerning the discovery of the fifty fuses and of the fifty boxes containing explosives, and concerning the box sealed with the seal of the German Consulate at Kronstadt, all found buried in the garden of the German Legation at Bucharest, I make the following declaration:

On the day before, or the very day of the departure of the German Diplomatic Corps from Bucharest, Mr. von Rheinbaden, counselor of the legation, gave me the order to burn the flags and everything that remained not locked up. The cases containing the objects above mentioned were in a room of the cellar, where they had been brought from the German Consulate before the day on which the decree mobilizing the Rumanian Army was published. When I called the attention of Mr. Rheinbaden to these cases he told me it would be necessary to bury them.

After the departure of the diplomats I asked Mr. Krüger, Chancellor of the legation, what I should do with the cases, and he replied that they must be buried. Then Mr. Krüger, Andrei Maftei, and I took them and buried them in a ditch dug by us at the place where you found them. I did not know what these cases contained; I only know that Mr. Krüger advised me to handle them carefully. Regarding the box wrapped in paper and bearing the seal of the Imperial Consulate, I recall that on the day before the mobilization, or on the day itself, Mr. Adolf (I don't remember his family name, but I know that he was Assistant Military Attaché, serving with Colonel Hammerstein, the Military Attaché) brought me this box and told me to bury it in the garden. I helped for a moment to dig a hole, but, as I was very busy with my own work, it was finally Mr. Adolf himself who buried the box. He did not tell me what was in the box, which he held in his hand. I do not know whence or by whom this box was brought to the legation; I saw it for the first time on the day when Mr. Adolf ordered me to bury it in the garden.

After having read over this declaration and pronounced it correct, the undersigned has hereto placed his signature.

(Signed) MICHEL MARKUS.

When Andrei Maftei was questioned regarding the same facts he made the following declaration:

My name is Andrei Maftei, and I am a na-

tive of Transylvania; I was employed at the German Legation until the day when Dr. Bernhardt left it to go and live at 8 Temisana Street.

Concerning the explosives, I know that after the departure of the diplomats—I don't remember the day—Mr. Markus told me to take the case and carry it into the garden, where it was buried by Mr. Markus and Mr. Krüger; then I went on to attend to my work. I know nothing more, either about this case or about the white box with a red seal which has been found by you at the back of the garden near the fence, under a pile of wood.

After having read over this declaration and pronounced it correct, the undersigned has hereto placed his signature.

(Signed) ANDREI MAFTEI.

What was the nature of the explosives and tubes of poison discovered in the garden of the German Legation? The Bureau of Pyrotechnics of the Rumanian Army and the Institute of Pathology and Bacteriology at Bucharest were asked to ascertain this. The results of their analyses proved beyond doubt that the affair was no "simple joke," as one German paper ventured to state—without joking.

Here is the report on the explosives written by Lieut. Col. Philipesco, Director of Pyrotechnics, and Lieutenant A. Pecuraru, chief of the Laboratory Service:

The explosives discovered at the German Legation and sent to us for examination consist of:

Fifty cartouches made of rectangular zinc-plate boxes of the dimensions of 20 by 7 by 5 centimeters; three of the larger surfaces each present points for priming, in order to permit of the discharge of the cartouche regardless of its position.

These cartouche mines, each weighing one kilogram, (two and one-half pounds,) bear the label, "Donarit I. Kavalerie Sprengpatronen. Sprengstoff A. G. Carbonit Hamburg 'Schlebusch.'"

The explosive contained in these boxes belongs to the class of shattering explosives, which have as their base nitrate of ammonia and trinitrotoluene (trotyl) with its less nitrous derivatives.

In destructive force this explosive is in the category of dynamite and "Kieselguhr," one kilogram developing 700 grand calories. Regarding this destructive effect it is sufficient to mention that 200 grams of the said explosive, that is to say, one-fifth of the contents of any one of these boxes, is sufficient to blow up one meter of a railway. The fifty kilograms could destroy a bridge pier or a large building, could be used to mine a railway, &c.

And here is the report of Dr. Babès, Director of the Institute of Pathology and Bacteriology, under date of Oct. 5 (18):

Having completed the testing of the vials of cultures received with your letter No. 143,008, dated Sept. 24, I have ascertained as follows:

1. The vial covered with red paper contained a culture of the bacillus of anthrax, which has been identified by derivative cultures and by inoculations of animals.
2. The vial covered with white paper contained a culture of the bacillus of glanders, which has been identified by derivative cultures and by injections applied to animals.

Comment of Professor Roux

In an article in the Bulletin des Armées the eminent director of the Pasteur Institute at Paris, Dr. Roux, accepts the foregoing charge as proved, and makes the following comment:

"These microbes have been identified by Professor Babès, director of the Bacteriological Institute at Bucharest. Besides, a label in German indicated the method of using these cultures; they were intended for cattle and horses. One vial of glanders was sufficient to infect 200 horses.

"It is very certain that if the contents of one of these tubes had been turned into the trough from which the horses of a cavalry squadron drink, most of the animals would have been infected, and, with the help of the fatigue of the campaign, an epidemic of glanders would

have followed. The Germans hoped that it would spread to other cavalry units. Cavalrymen whose horses are glandered are soon dismounted.

"In like manner the anthrax cultures, if thrown into the food of cattle or horses, would have given some of these the anthrax fever, which kills more surely and rapidly than glanders. The bacilli of glanders and anthrax are not only fatal for horses and cattle, they are also fatal for human beings, who can contract these diseases in caring for the animals or handling infected meat. The Germans, by infecting the animals, hoped also to communicate the disease indirectly to men.

"Our enemies, who pervert everything, even science, have thus attempted to make of the most beneficent of all sciences—that of bacteriology—a clandestine weapon. This incontestable and criminal ability, however, is not as formidable as one might imagine. It is not as easy to create an extensive epidemic among men or animals as the wickedness of our adversaries desired. To sow the disease is not enough; circumstances must lend themselves to the propagation of the microbes. It is probable that the number of human and animal victims in this case would not have been very great, for we now possess singularly effective means for checking the extension of these maladies."

A Historian's Answer

By Joseph Reinach

French Historian and Publicist

Shortly after President Wilson sent his peace note of Dec. 20, 1916, to the belligerent powers, Joseph Reinach wrote for the Paris Figaro the reply here translated for CURRENT HISTORY MAGAZINE.

POINTS OF FACT

I. PREMEDITATION OF THE WAR

CONSIDERING that on April 13, 1905, the Reichstag passed a new military law extending over six years, and providing for an initial, non-renewable credit of 87,000,000 francs and a supplementary credit of 39,000,000 annually for expenses in case of war;

That on March 7, 1911, the Reichstag voted a five-year non-renewable expenditure for military purposes of 103,000,000, with a supplementary annual expenditure of 55,000,000;

That on June 14, 1912, the Reichstag voted another non-renewable credit of 180,000,000 and a new annual supplementary credit of 55,000,000;

That on July 3, 1913, the Reichstag voted a non-renewable credit of 1,105,000,000 francs, with a new annual supplementary credit of 228,000,000;

CONSIDERING that during the same period the French Chamber voted: On March 21, 1905, a supplementary annual credit of 21,000,000, and, on March 26, 1914, through the necessity of parrying in part the menace of the enormous sums appropriated by the Reichstag since 1905, and especially in 1913, a permanent supplement of 257,000,000 francs for the war budget, and a non-renewable credit of 720,000,000;

That these facts and dates establish the respective tendencies of the two countries at the beginning of 1914;

II. RESPONSIBILITY FOR THE WAR

CONSIDERING that on July 25, 1914, in response to the Austro-Hungarian ultimatum of the 23d, the Serbian Government accepted in practical totality the conditions imposed by the Government at Vienna, and declared itself ready to submit any points of difference either to The Hague or the great powers;

That on the same day, without paying any attention to this reply, which had been made at the request of Russia and France, the Austro-Hungarian Minister broke off relations with Serbia and left Belgrade;

That on July 27, 1914, the British Government, in concert with France and Russia and with the support of Italy, proposed to Germany a conference in London with a view to preserving the peace of Europe;

That the German Government refused to consider this suggestion;

That on July 29, 1914, relying upon the declaration of Herr von Jagow, the German Minister of Foreign Affairs, "that Austria must have special guarantees before Serbia's reply could offer a basis for negotiations," the French Government immediately suggested that an international commission should take charge of the execution of Serbia's promises;

That no response was made to that suggestion;

That on the same day a personal telegram from the Czar of Russia to the German Emperor offered to submit the Austro-Serbian difference to The Hague tribunal;

That again there was no reply to this telegram; and that, furthermore, this important matter of record was omitted intentionally from the German White Book of August, 1914;

That on July 31 the British Government asked France and Germany whether, in case war could not be averted, they would respect the neutrality of Belgium;

That France, one of the parties to the Treaty of 1839, at once replied that the treaty would be scrupulously respected;

That Germany, also a party to that treaty, refused to give any guarantee,

and on Aug. 2, upon a pretext—since proved absolutely false—that France was preparing to send troops through Belgium along the Meuse, destroyed the treaty, qualifying it in the words of the German Chancellor as a “scrap of paper,” addressed an ultimatum to Belgium, invaded Luxemburg, whose neutrality she had no less solemnly guaranteed, and crossed the Belgian frontier with her armies;

That on July 31, 1914, Germany began mobilization under the pretext that she was “in danger of war”;

That on the next day France, while finding herself compelled to take a similar step, announced that in order to avoid any clash at the frontier she was withdrawing her border troops ten kilometers back of the line;

That on Aug. 2, early in the morning, the first German patrols set foot on French soil, while it was only in the evening of the following day, Aug. 3, 1914, that the German Government sent its declaration of war to the French Government;

That this declaration of war was accompanied by a statement that Belgian and German territory had been violated by French aviators, a statement since recognized by the German Government itself as without foundation of fact or truth;

POINTS OF RIGHT

III.—CONDUCT OF THE WAR

CONSIDERING that the whole world knows how the Central Powers and their allies have conducted the war, notably in violating the articles of the Geneva Convention relating to the Red Cross, those of The Hague Conference on the use of asphyxiating gas, the laws of maritime warfare, and Article 22 of the Convention of Nov. 29, 1909, forbidding a belligerent to force citizens of another belligerent to take part in war operations against their own country;

IV.—THE LESSONS OF HISTORY

CONSIDERING that the Imperial German Government has sought in vain to throw upon the Entente the responsibility for a catastrophe without precedent

and for the death of several millions of men;

That the statesmen, educators, and military officials of Germany, in their writings, teachings, and public addresses have long proclaimed the necessity of making right bow before might;

That whole German generations have been mentally formed upon a doctrine of contempt for the plighted word and the triumph of brute force;

That in connection with her increasing and unjustified military preparations, Germany, through an unscrupulous and immoral diplomacy, sought to impose upon free nations a habit of humiliation and fear;

That these nations, in the illusion of an imprudent confidence, had come to neglect—for the works of civilization and peace—the most legitimate precautions and preparations for self-defense;

That the men responsible for the disregard of plighted honor and the brutal aggression which the war has brought forth, could not, a few months before hostilities, longer keep their own evil counsel, as evidenced by the Emperor's conversation with the King of Belgium on Nov. 6, 1913, and the speech of the German Chancellor from the tribune of the Reichstag on Aug. 4, 1914;

That the rulers of Germany, therefore, by virtue of the very power they hold, have been the sole responsible and guilty parties, having for a long time previous to hostilities premeditated and prepared war, loosing it at the moment which they judged favorable and giving it its character of increasing ferocity, as manifested in the untold destruction of property and cruelty to humanity;

That in logical consequence these men, who have shown contempt for their sacred engagements, are disqualified to engage in peace negotiations, which they themselves, either through cynicism or through lack of conscience, characterize as “offensive diplomacy”;

That the Governments and peoples of the Entente cannot consider the question of peace as long as they have to treat with men who can no longer be trusted;

CONSIDERING that no chance exists for a just, honorable, and lasting peace,

a peace restoring the principles of right and honor, in the presence of men who have deliberately violated engagements and treaties signed by themselves;

CONSIDERING that these men thus remain the sole yet insurmountable obstacle to the re-establishment of that peace of which they pretend to be sincere champions, and which is longed for by their own people, who are suffering cruel deprivations, and even hunger;

CONSIDERING that if the German Nation has been deceived by official falsehood and systematically kept in ignorance of the true facts, the German rulers have followed out exactly a coldly premeditated plan;

CONSIDERING that, having failed to crush France, as they had hoped, in a

few weeks, and to turn then upon Russia and terrorize or corrupt Belgium, England, Japan, Italy, Portugal, and Rumania, they do not conceal the fact that peace for them now would be only a truce to prepare for a new aggression;

CONSIDERING that there could be neither security nor justice in a world over which is suspended the sword of Prussian militarism:

THE ENTENTE POWERS, resolved not to lay down their arms before the liberation of the oppressed peoples, declare, in the name of the nations that are the victims of German aggression and in the face of the world, that they will not treat with William II., the man responsible before humanity and history for this war, its mourning and its ruins.

America Through English Eyes

By William Archer

English Dramatist, Essayist, and Critic

[The severance of relations by the United States with Germany aroused widespread discussion of the attitude of Great Britain toward the United States. Among the many contributions on this subject, Mr. Archer's essay in *The Westminster Gazette* (London) is especially noteworthy for its truth, clarity, and keen analysis.—ED. CURRENT HISTORY MAGAZINE.]

MANY people do not realize that hitherto all the active political relations between Great Britain and America have been hostile relations. Twice the two nations have been at war, and there are not a few Americans who are fond of boasting that in both of these conflicts they "whipped" us. Our normal level relations have no doubt been amicable enough; but whenever the level has been broken it has been by incidents which left a certain legacy of ill-feeling. The general attitude of Britain during the great civil war was anything but sympathetic. Once we were on the verge of a rupture over the case of Mason and Slidell. The affair of the Alabama was exceedingly disagreeable. The Venezuelan squabble led us, not perhaps to the brink of hostilities, but some way in that direction. The incident of Manila Bay is perhaps the only international episode of any note that has definitely tended to draw the two nations together.

Of course this does not mean that there has not been real friendship between them. There has never been a moment when thousands of Englishmen and thousands of Americans have not felt the warmest regard for each other. Perhaps it may even be said that the reciprocal feeling of the majority of both peoples has been a sort of vaguely critical and suspicious kindness. But there have always been certain classes in America that cherished old and new rancors against England, and these were not a little encouraged by the general tone of common school education. No one can read the American newspapers of today without realizing that, except among a cultured minority in the Eastern States, pro-ally sympathies are centred rather upon France and Belgium than upon England, and that in the Middle West and West the feeling of the masses toward the Allies in general, and England in particular, is at best one of indifference.

GENERAL F. S. MAUDE

The British Victor of Kut-el-Amara, Who Has Defeated
the Turks and Fought His Way to Bagdad

(Photo Press Illustrating Service)

Whatever may happen, this is not going to change all at once. We are not going to fall on each other's neck and swear eternal friendship. Nevertheless, a great new fact has come into existence. In the most momentous crisis in the history of the world the whole English-speaking race is at last standing shoulder to shoulder. Nothing but criminal un wisdom or malignant ill-fortune can cancel or turn to evil the beneficent results that ought to flow from this wonderful and almost un hoped-for achievement of German political genius. Never again can it be said that "all active political relations between Great Britain and America have been hostile relations." That remark is expunged from the page of history.

And now it is up to us—why should we not talk American?—to make the best of this new situation. Hitherto—take us all around—we have been culpably and stupidly inappreciative of America. The time has been, no doubt, when there was a great deal of rawness in American life, which lent itself to caricature, and when, on the other hand, many Americans displayed at once great self-assertiveness and morbid resentfulness of criticism. But the civil war may fairly be said to have made an end to all that—or at least the beginning of an end. Since then half a century has passed, and now we have not the smallest rational excuse for carelessness or captiousness in our judgments of America.

To any one with a spark of imagination the United States is the most fascinating country in the world. Its past is romantic, its present marvelous, its future inconceivable.

Let me give one instance of the romance of the past that clings to so many places in America. I will not speak of Lexington or Concord; I will not speak of Mount Vernon or Charleston; I will speak of the place in all America which most people in England, perhaps, think of as the very antithesis of romance—I mean Pittsburgh. It is called "hell with the lid off," and I don't say it does not merit that term of endearment; but to stand on the big bluff over against the city, and look down upon the confluence

of the Allegheny and the Monongahela (most beautiful of words!) is to experience a strange and complex emotion. For the two rivers (each as great as the Rhine or the Rhone) unite to form the magnificent Ohio. And the Ohio rolls on into the still mightier Mississippi; and down these gigantic waterways the first French adventurers paddled thousands of leagues through the boundless, sinister wilderness; and Martin Chuzzlewit and Mark Tapley sought the city of Eden; and Huckleberry Finn and Jim went drifting through an Odyssey which I, for one, believe to be as surely immortal as any story in this world. A few miles up the Monongahela is the spot where General Braddock, with George Washington and George Warrington in his train, fell into the fatal ambush. And there, at the very tip of the tongue of land between the two rivers, nestling in the shadow of the skyscrapers like a beehive under St. Peter's, is the little octagonal blockhouse, pierced for musketry, which was once Fort Duquesne, and after that Fort Pitt, and from which the city takes its name. Of the titanic, lurid picturesqueness of the scene I shall not attempt to speak. I have merely tried to suggest a few of the historic and literary associations which cluster around the spot itself, and the vast river system to which it is, as it were, the northeastern gateway. How any one can find America prosaic or uninteresting passes my comprehension.

As for its present, as summed up and typified in New York, what is there in the world to compare with it? The view of the mountainous city, towering between its noble estuaries, is by far the most impressive testimony that can anywhere be found to the genius and daring of man. Beautiful? I don't know. There is an immense amount of beautiful architecture to be seen in New York and all through the Eastern States; but the whole impression of New York is more than beautiful—it is exciting, thrilling, inspiring. To land in New York on a cloudless day (and they are many) of Spring or Autumn is to realize why America is bound to lead the world. It is because there is some as yet un-

identified element in the pure, keen air, which, passing into the blood, tingles through the whole system in the form of energy and capacity.

Yet there is no greater error than to think that New York is a city of unresting rush, clatter, and whirl. It is a city where not only women but men have plenty of leisure and know how to enjoy it. Above all, it is a city where they have always time to be helpful and hospitable to the stranger within their gates. Nowhere are the amenities of life carried to higher perfection. I never return to England without feeling that I have come back some five-and-twenty years in the art of living, at any rate on the material side. Indeed, one might say fifty years, were it not that we have of late had the sense to learn a good deal from America.

And think, now, of the future! America has been, and still is, largely occupied in the development of her material resources; yet think what strides she has also made on the intellectual side! The splendid universities which stud the land may not rival those of Europe in pure scholarship; but they are humming hives of all sorts of eager intellectual activity. It will not, perhaps, be to their disadvantage if intimate relations with Germany are severed for a time. Their leading scholars confess that the German influence has not been wholly beneficial. But everywhere they have magnificent apparatus for research, and everywhere they make full use of it. Who does not know that the cultivated American is one of the finest products of civilization? And civilization of the best sort is spreading with enormous rapidity.

I am aware that in some ways my vision of America is unduly roseate, for the simple reason that it has been my good fortune, wherever I went, to move almost exclusively in the circles that were most congenial to me. Of course there are many less desirable sides of American life with which I have scarcely come in contact, or not at all. There are, for instance, the vulgarities and crudities inseparable from every great half-educated democracy—that is a matter in which we certainly have no right to

throw the first stone. Of course America, like all the rest of the world, has great social struggles, and possibly convulsions, to go through, before she can attain something like a just and stable social order. New York, Boston, Chicago, St. Louis—there is much that is terrible as well as much that is admirable in the life of these swarming, seething cities. But nowhere is there a more alert social idealism at work, or a more ardent spirit of social service.

My point, then, is this: Let us realize what an enormous advantage we possess in our community of language, of historical and intellectual traditions, and of political and moral ideals, with this nation of marvelous achievements and still more marvelous potentialities. If these ideals are to survive and flourish, it is of the utmost importance that America and Great Britain should grow together, instead of growing apart. The community of speech, while it is a priceless bond, is also a source of danger. Careless, carping, supercilious talk, narrow-minded comment, uncivil jesting, whether with pen or pencil, rankles doubly when it is brought home to us in our own language. This is an admonition to both sides, but mainly to England. We are the older people, and ought to show the finer consideration. In this respect our sins are many—sins, mainly, of ignorance and thoughtlessness. But, in spite of everything, we are, and have been any time this century, drawing together in a remarkable way. Note how half the most successful pieces on the London stage are of American origin, and are often most acceptable when played by American actors. Note how the bookstalls are piled with the writings of an author so redolent of the soil as O. Henry. Think how the cinema is familiarizing even the street arab and the factory girl with the surface aspects of American life. We have now a unique opportunity to draw closer all the countless ties which unite us with our "gigantic daughter of the West." Let us have done with carelessness, ignorance, supercilious patronage, flippant criticism, and make the best of this great boon which the Germans have so kindly forced upon us.

Military Operations of the War

By Major Edwin W. Dayton

*Inspector General, National Guard, State of New York;
Secretary, New York Army and Navy Club*

Major Dayton has personally studied the military methods of the European armies in six of the countries now at war, and has been officially recognized by the United States War Department as an authority on strategy and tactics. He is one of the experts who have chronicled the present war for *The Army and Navy Journal*. The subjoined article is the second in a series which Major Dayton is writing for *CURRENT HISTORY MAGAZINE*, covering in a rapid and authoritative narrative all the military events of importance since the beginning of the great European conflict.

II.—Battles of the Marne, the Aisne, and Tannenberg

SEDAN DAY—Sept. 5—in 1914 was only superficially an echo of Sedan Day in 1870. The armies of France had suffered defeat, but nowhere had allowed themselves to be cut off. The defenses of Paris were in poor shape and would not have withstood a German attack much better than had those of Antwerp or Namur. The necessity of the situation was for a counterattack in the open.

Von Kluck, flushed with continuous victories, thought the French and British in his front entirely demoralized, and he continued his headlong drive. He made a tactical blunder by marching his right flank across the enemies' front in an effort to separate the British from the supporting French Fifth Army. The British air scouts discovered von Kluck's manoeuvre and reported large detachments south of the Marne with one column on the Grand Morin. The French airmen, too, reported all the German dispositions from the lower Marne to Verdun. General Joffre decided that the time had come to strike back, and formed a plan which would have been impossible if the reports of the air scouts had been lacking.

On the night of Sept. 5 von Kluck's cavalry patrols got as far south as the

banks of the Seine. Conscious of a possible menace to his right rear from the west, he left a rear guard of considerable strength in the valley of the Ourcq facing the suspected menace. The crucial battle of the Marne, recognized by all the commanders as the supreme crisis of the war, began at dawn on Sunday, Sept. 6.

The new French Army, the Sixth, engaged in hand-to-hand fighting among the villages above Meaux, and turned von Kluck's flank. The British, covered by the Forest of Crecy, moved north-east toward a line between Dagny and Coulmiers.

The Fifth French Army on the British right struck north on

a route which, as they progressed, led them on the 7th across the Grand Morin, on the 8th over the Petit Morin, and by the 9th close to the south bank of the Marne below Mezy.

The British, making a half wheel to the left, made an alignment with the French Fifth Army, and on the 9th arrived on the Marne with their centre at La Ferté. The French Sixth Army, attacking at right angles, closed in above the Marne and on the west of the Ourcq, gradually as the victory progressed changing front toward the north, so that by Sept. 10 they were aligned on the left

GENERAL FOCH

abreast of the British and astride the Ourcq.

The battle was continuous and on a scale hitherto unknown. Military students will study its details for generations. Here I can only attempt the merest outline of the great struggle.

Von Kluck was outfought by a superior force, which caught him in a false position into which he had been betrayed by the belief that his opponents, soundly beaten, needed only one more hard blow to complete their collapse. Instead of that they were in excellent morale, and had received powerful fresh reinforcements. I believe that eventually it will be proved that the speed of von Kluck's pursuit had caused his great army to outrun much of its supplies. His change of direction toward the east was not only an attempt to drive a wedge through the allied front, but also was intended to close up his overextended lines of communication.

On Sept. 9, following a whole series of glorious battles, the British crossed the Marne at Château-Thierry, and by evening were some miles north of the river. The French, under d'Esperey, ended a day of terrific fighting by joining the British right at Château-Thierry. Further east one of France's greatest Generals, Foch, found von Bülow's right flank exposed and attacked the Prussian Guard at La Fère Champenoise. In the marshes drained by the Petit Morin, Foch took forty guns and many prisoners, and about Sept. 9 he had driven a wedge between the armies of von Bülow and von Hausen. As the battle progressed the French General Staff used Langle to help Foch, and the Germans were driven back toward Epernay and Châlons.

By Sept. 10 the Allies had virtually completed the great victory called the battle of the Marne. The German right (von Kluck) had received heavy reinforcements of perhaps 40,000 men, but von Bülow's crushing defeat to the east made it impossible for the German line to re-form for a counterattack.

The German retreat is admitted to have been a military masterpiece, and on Sept. 12 they had reached the line of positions on the Aisne and the Suippes

which they had previously prepared for emergency use. On the east the Crown Prince fell back to preserve the alignment, and this saved Fort Troyon, which, under bombardment, was ready to fall. The Crown Prince held the Argonne and St. Mennehoult. In the Vosges, after a prolonged struggle, the French, under General de Castelnau, withstood an attempt of the Crown Prince of Bavaria to force a passage through the Gap of Nancy. By Sept. 12 de Castelnau had taken Lunéville, St. Dié, and the line of the Meurthe.

Battle of the Aisne

The battlefield of the Aisne is the birthplace of modern trench warfare.

When the Germans were pursuing the French and British toward Paris in the first week of September it might have seemed as though the prospect of quick victory would obscure all other vision. Nothing in the long history of the war proves the value of trained professional staff officers more clearly than the fact that just then, as they crossed the Aisne flushed with victory, parties of sappers were left behind. Their mission was to prepare a defensive position on the plateau north of the river-valley and extending to the east across Champagne into the Argonne. Beyond the Argonne the Crown Prince was already closing in to the investment of Verdun with a great circle from the Argonne to the Woëvre.

It was nearly the middle of September when the victorious Allies, fresh from the victory of the Marne, began to be puzzled by the stern resistance they met along this line. It was no longer merely the hard fighting of rear guards determined to cover retreating armies, but seemed like the determined stand of an enemy unwilling to retreat further. On Sept. 12 Maunoury's Sixth Army, which had clung to the heels of von Kluck's army all the way from Paris, began to shell the hostile positions beyond the river with a view to covering a crossing by pontoon, as the bridges had been systematically destroyed. The British Army to the east, near Soissons, was similarly engaged. Beyond them the other French armies were delayed under d'Esperey

and Langle along the Vesle and the upper Suippe.

On the 13th Maunoury got several divisions across the Aisne under heavy fire, and a good part of the British Army crossed, but with great difficulty. The following day these French and British troops fought their way forward until they came in touch with the real German lines of intrenchment on the high ground of the plateau, where they proceeded to dig themselves in and try to hold on to the ground gained. Sir John French was the British commander, and in command of the First Corps was Sir Douglas Haig, who was destined to win much glory in the heavy fighting of the next week. England lost many officers in this hard-fought battle, including three Colonels in one brigade, all killed on the first day.

On the 15th the Germans began a series of violent counterattacks and forced both French and British to retire short distances, which, however, were largely regained on the 17th after the arrival of strong reinforcements. On the 18th the Allies failed, after furious efforts, to break the German fortified lines, and so the acute stage of the battle ended.

On the right, meanwhile, the German Crown Prince was delivering a fierce attack upon the fortress of Verdun, held by the French under General Sarraill.

First Battle of Verdun

Before the German defeat at the Marne the Crown Prince's right flank had held St. Meneshould, twenty miles west of the fortress, but in maintaining his alignment with the German armies to the west he had fallen back two days' march to the north. General Sarraill realized from the experience of the Belgian forts that no fortification could withstand a close bombardment by the heavy German howitzers. Consequently he threw up earthworks and intrenchments on every hill and across every valley for twenty miles or more around. On Sept. 20 the German heavy shells practically demolished Fort Troyon, south of Verdun, and on the 23d the Crown Prince's forces crossed the Meuse and captured St. Mihiel, with the bridgehead, thus establishing a marked salient in the

line of invasion which was destined to remain for years.

On Oct. 3 the Crown Prince attempted to turn Sarraill's flank and get through again to St. Meneshould, where he would have cut the railway communications between Verdun and Paris. In the Forest of Argonne the French won the battle and established touch with the right flank of General Langle's Fourth Army in Champagne, thus establishing a line which, with slight fluctuations, remains to this day.

Joffre's Extension to the Sea

General Joffre had formed two new armies meanwhile, and about the time the lines along the Aisne began to congeal into what we have since learned to call the stalemate, he brought these new units up on the left. General de Castelnau was brought from Lorraine to command the Seventh Army, and Joffre brought out of a professorship in the military college General Maud'huy to command the Tenth Army. The Seventh Army took its place on a line through Péronne and Roye about Sept. 20, and at the end of the month Maud'huy occupied Arras and Lens after a hard battle in which the French used every available reserve, including even marines.

This great extension was intended to outflank the Germans in their intrenchments on the Aisne, and by cutting their lines of supply compel another retirement. The plan failed because simultaneously the Germans were extending their right flank in an effort to gain the coast at Calais.

Early in October large forces of German cavalry were active about Lille, and General French asked for authority to transfer the British Army from almost the centre to the extreme left. General Joffre agreed and filled the gap with a new army of reserves under General d'Urbal. By Oct. 19 the British First Corps reached St. Omer just in time to prevent huge German armies from driving a wedge between the Allies and the Channel ports.

Alsace and Lorraine

As soon as it became evident that war could no longer be avoided, France de-

terminated to secure the advantage of the initiative by striking through the lost provinces of Alsace and Lorraine and invading Germany across the Rhine. There was no doubt that the Germans would violate Belgium, but it was hoped that the resistance at the fortified triangle—Liège, Namur, and Antwerp—would greatly delay the invasion of Northern France, and meanwhile it was hoped that a strong diversion could be created by the invasion of Germany below Metz. It would be worth much to make German soil, instead of French, the scene of war's devastations, and then, too, French patriotism cried out for the redemption of the provinces torn from France forty-four years ago.

France struck an eager blow, but with forces not really sufficiently mobilized to give the effort the weight it required for so great a mission.

On Aug. 7 a brigade from the fortress at Belfort crossed the frontier and routed small German detachments which endeavored to defend Altkirch, an Alsatian town in the plain between the southern end of the Vosges Mountains and the Swiss frontier. An invasion of Germany made through this gap between the mountains would, after crossing Alsace, strike Southern Württemberg, with Bavaria beyond and the Austrian Tyrol below. Certainly it would have been a brilliant stroke of genius if France could have transferred to those South German kingdoms the war which has since wrecked Flanders, Artois, Picardy, and Champagne. But not only would that have required a great force for the attack, but another army would have been needful to guard the flank against the German strongholds at Strassburg and Neu Breisach. To be successful, the effort launched here should have had something like the weight in men and material with which Germany struck down from the north.

On Aug. 8 the French occupied without opposition the important town of Mulhouse and attacked with success a German force stationed in the woods beyond. By the 10th strong German reinforcements arrived, and the French fell back to Altkirch. Here faulty reports from

French air scouts produced the impression that a comparatively weak German force was defending the Rhine country below Metz. Consequently a general offensive was undertaken by the French Army in Alsace, under General Pau, and the army of Lorraine, commanded by General de Castelnau.

The plan was to attack along the whole line from Nancy to Belfort, and by Aug. 15 the French had captured most of the passes through the Vosges and were looking down on the plains of Alsace beyond. Attempted diversions by German columns from Metz were defeated by de Castelnau, and Pau pressed forward, capturing Dannemarie, Thann, Mulhouse, and Saarburg.

By Aug. 17 not only the entire range of the Vosges had been captured, but at Saarburg the French were astride the railway communications between Strassburg and Metz. This point and date marked the high tide of the French invasion, for by Aug. 20 an overpowering German Army fell upon their left from the direction of Metz. The French attempted to retreat, but a division on the left was overwhelmed and practically destroyed in the battle of Metz. By the 22d the French armies of Alsace and Lorraine had lost all the ground gained, and the pursuing Germans were threatening the whole French sector between Toul and Nancy. Their victorious advance was halted by de Castelnau's splendid defense of the field works which he erected on the wooded hills about Nancy.

From the 6th to the 9th of September the Bavarians were encouraged in desperate attacks by the presence of the Kaiser, but they were unable to gain ground in face of the deadly fire of the French 75-millimeter guns, which made great practice at shore ranges. On Sept. 9 the Germans lost their positions in the Forest of Champenoux, and the French took Amance. Two days later they had St. Dié and the line of the Meurthe River. The fighting in this sector ended on Sept. 12, when de Castelnau's men reoccupied Lunéville, and since then the fortified eastern frontier of France has remained an impassable barrier to the German legions.

Eastern Theatre of War—Rise of Hindenburg

One of the earliest surprises of the war was the prompt mobilization of the Russian Army, which all professional critics looked upon as a brave, slow army good for defense, but lacking in initiative. The notion was proved wrong by a very speedy mobilization and a quick and effective attack upon East Prussia designed to relieve the pressure upon Russia's allies in the west.

Within the first week of August General Rennenkampf, a hero of the Manchurian war, crossed the Prussian frontier, cut the railway which skirts the Masurian Lakes, and drove back the whole line of Prussian outposts. General von François, the Prussian commander, made a stand at Gumbinnen, but after three or four days' fighting against greatly superior artillery and infantry he was compelled to retreat on Königsberg.

Meanwhile General Samsonov, another soldier who learned modern war by fighting Japanese, marched up from Mława through the region west of the Masurian Lakes. This army drove a strong German force headlong out of an intrenched position between Orlau and Frankenau and took many prisoners as the panic-stricken Germans retreated on Königsberg. By the last week in August what was left of the German armies in East Prussia was shut up in Königsberg.

Then Germany called out of his retirement at Hanover a veteran of 1870, General von Hindenburg, who knew thoroughly the terrain of East Prussia. In the period of his active service he had commanded army corps at Königsberg and Allenstein, and had frequently commanded at manoeuvres in the Masurian Lake region. He loved the ground, and knew it as no one else in the world did.

He had used every ounce of his influence at Berlin to block the project of a land improvement company, who had proposed to drain the lakes and marshes.

An army of something like 150,000 men was given to von Hindenburg, and he brought this force together east of Thorn and Graudenz. Rennenkampf, after his series of early successes, swept on confidently to the investment of Königsberg, a first-class fortress, with a garrison of 50,000 and 1,200 guns. Samsonov pushed on toward the north of the lake region, but was quite out of touch with Rennenkampf. He turned to pierce the lake region to his west via Allenstein, probably with the intention of striking in between Thorn and Danzig. He had about five army corps, of probably 200,000 men, and certainly outnumbered von Hindenburg's force.

GENERAL VON HINDENBURG

On Wednesday, Aug. 26, von Hindenburg struck on a wide front, and Samsonov's march was abruptly halted. He discovered that a strong army was posted behind the lakes and marshes, which were commanded by the German batteries. The strength of von Hindenburg's position consisted not only in a well-defended front, but in exceptionally good opportunities to develop quickly flank attacks both right and left.

The battle, one of the classics of strategy, lasted until the end of August, and gave the Germans one of the most complete victories of the entire war. Von Hindenburg, feinting first toward one flank, then toward the other, succeeded in rolling the Russian Army up in a confused and helpless mass, entangled in the marsh lands.

Von Hindenburg's complete mastery of the strategy of this great battle was evidenced as much by what he refrained

from doing as by what he did. Midway of the battle he had a great victory surely within his grasp, and could have driven a defeated enemy headlong back into Russia. He withstood the temptation, and carried the battle on for several days while he continued to entangle Samsonov in a position whence there might be no escape. By Aug. 31 von Hindenburg had scored the only complete victory of the war. Samsonov and most of his corps and division commanders were killed. Perhaps 20 per cent. of the Russian force escaped via Ortelsberg. The Germans took nearly 90,000 prisoners and so much artillery and booty that they had hard work to handle it.

This tactical victory made von Hindenburg a national hero, for, with a smaller force, he had surrounded and destroyed the larger army. Von Hindenburg turned north against *Rennenkampf*, who instantly abandoned the attack on *Königsberg*, and retreated precipitately into Russia via *Gumbinnen*, where he fought a rear-guard action.

Poland and Galicia

To the south early in August the Germans crossed the frontier and occupied without opposition several towns in Western Poland, and from the mining region began to ship coal back to Germany via *Posen*.

In Galicia Austria concentrated for an important campaign against Russian Poland. One army, whose base was at *Przemysl*, was for the attack toward the north, while the second army, with a base at *Lemberg*, faced east. These armies numbered over 300,000 men each.

The first army pushed north with no very serious opposition. A Russian army under General *Ruzsky* crossed the frontier, took *Sokal*, and advanced upon *Lemberg*. General *Brusiloff*, with another army, joined in the attack upon *Lemberg*. The fighting was general along a line between the *Vistula* and the *Dniester*. Austria's plan was to take advantage of the expected slowness of Russian

mobilization and strike without waiting to be struck. To their astonishment they soon met the armies of *Ruzsky* and *Brusiloff*, each with over a quarter of a million men. A third and smaller Russian army under General *Ewerts* was to engage the Austrians while the larger armies should envelop them.

By Aug. 27 *Brusiloff* took *Tarnopol* after a hard battle, and a few days later he captured *Halicz* and proceeded to invest *Lemberg*, which was in the hands of the Russians by Sept. 3. In the week's series of battles the Russians took 100,000 prisoners and great quantities of ordnance abandoned by the Austrian armies, whose retreat was a rout. From *Lemberg* the Russians pursued the demoralized Austrians into the *Carpathian* passes, taking many towns en route. To the north, *Ivanov*, who had succeeded *Ewerts*, attacked a mixed Austro-German army under General *Dankl* and the *Archduke Joseph*, and on Sept. 10 won a splendid victory. At *Rava Russka*, von *Auffenberg*, in command of *Dankl's* right, was crushed and his army dispersed. The utterly defeated remnants of the Austrian armies retreated to *Cracow*, *Przemysl*, and *Jaroslav*. The Austrians were expelled from Poland, and the Russians were going deep into Austria.

On the Serbian Front

When Austria declared war on July 28 a bombardment of the Serbian capital at *Belgrade* began, but the Dual Monarchy met unexpectedly stiff resistance when attempts were made to cross the *Danube*. A combined Serbian and Montenegrin force invaded *Bosnia*, and advanced toward *Serajevo*. On Aug. 17 a larger Austrian army was soundly beaten at *Shabatz* by a Serb force, and a few days later they suffered another reverse on the banks of the *Jadar*. Both defeats were costly, and the Serbs took many prisoners and much artillery. They showed a surprising ability to withstand whatever forces Austria dared divert from the Russian front.

[Continuation in May Issue]

Naval Power in the Present War

By Lieutenant Charles C. Gill

United States Navy

This article, describing the concluding phases of the Battle of Jutland, is the fourth of a series contributed to CURRENT HISTORY MAGAZINE by Lieutenant Gill of the superdreadnought Oklahoma—with the sanction of the United States Naval Department—for the purpose of deducing the naval lessons furnished by the sea engagements of the European war.

IV.—The Battle of Jutland—Continued

The Third Phase

The British Grand Fleet Joins in the Battle

DURING the first and second phases of the battle the Grand Fleet was closing at utmost fleet speed on a southeast by south course. Three battle cruisers, led by Rear Admiral Hood in the *Invincible*, together with screening light cruisers and destroyers, were in advance operating as a fast wing. At 5:45 an outpost light cruiser was engaged with a division of German light cruisers. At 6:10 Admiral Beatty's engaged squadron was sighted by the *Invincible*. At 6:21 Admiral Hood led his squadron into action, taking station in the van just ahead of the *Lion* and closing at 6:25 to a range of 8,000 yards. A few minutes later the *Invincible* was sunk by gun fire.

In the meanwhile the British battle fleet was coming into action, filling the previously mentioned gap opening up between Admiral Beatty and Rear Admiral Evan Thomas. At 5:55 advanced British armored cruisers, light cruisers, and destroyers were engaged with German cruisers and destroyers. At 6:16 the armored cruisers *Warrior*, *Black Prince*, and *Defence* under Sir Robert Arbuthnot were drawn between the lines and disabled by close-range fire from the German battleships. At 6:14 Admiral Jellicoe formed the Grand Fleet in battle line, and during deployment at 6:17 the first battle squadron opened fire on a German battleship of the *Kaiser* class. At 6:30 the other battle squadrons engaged ships of the *König* class. The four battleships of the *Elizabeth* class, previously engaged during the second phase, formed astern of the main battle

fleet. At this time the *Warspite* of this fifth battle squadron had her helm jam with right rudder, causing her to turn toward the German line, where she was subjected to severe fire, but the trouble being soon corrected she was extricated from this predicament. Admiral Jellicoe reports:

Owing principally to the mist, but partly to the smoke, it was possible to see only a few ships at a time in the enemy's battle line. Toward the van only some four or five ships were ever visible at once. More could be seen from the rear squadron, but never more than eight to twelve. * * * The action between the battle fleets lasted intermittently from 6:17 P. M. to 8:20 P. M., at ranges between 9,000 yards and 12,000 yards. During this time the British fleet made alterations of course from southeast by east to west (168° degrees) in the endeavor to close, but the enemy constantly turned away and opened the range under cover of destroyer attacks and smoke screens. The alterations of course had the effect of bringing the British fleet (which commenced the action in a position of advantage on the bow of the enemy) to a quarterly bearing from the enemy's battle line, but at the same time placed us between the enemy and his bases. During the somewhat brief periods that the ships of the High Seas Fleet were visible through the mist the heavy and effective fire kept up by the battleships and battle cruisers of the Grand Fleet caused me much satisfaction, and the enemy vessels were seen to be constantly hit, some being observed to haul out of the line and at least one to sink. The enemy's return fire at this time was not effective and the damage caused to our ships was insignificant.

Series of Local Actions

From the reports it appears that the area of the battle was covered by mist and smoke of varying density, interspersed with sections wherein opposing ships could see each other at the battle range. This gave rise to a series of local actions during which all ships of the

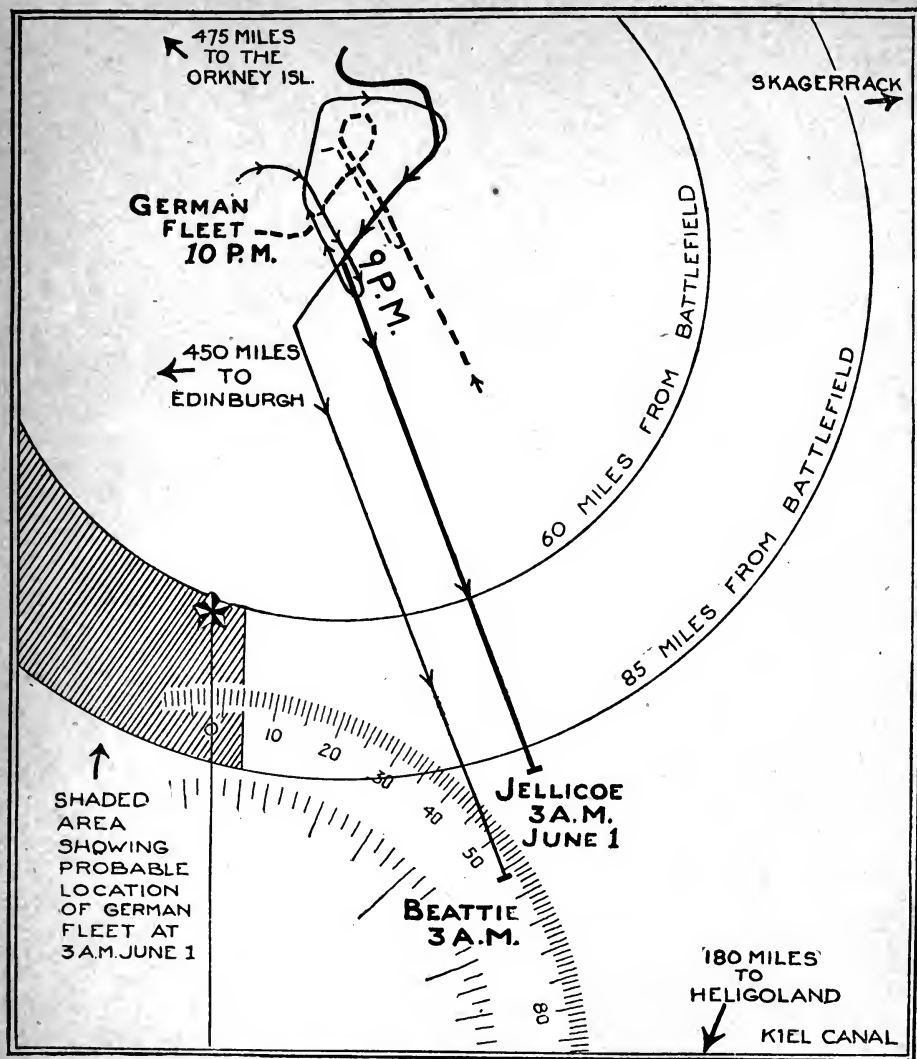

DIAGRAM OF LATER PHASES OF BATTLE OF JUTLAND

battle fleet became engaged, but at no time simultaneously. These detached actions were for the most part between few ships for brief periods. The aggregate fighting, however, seems to have been considerable, as may be gathered from the following synopsis of the principal incidents reported by Admiral Jellicoe and Vice Admiral Beatty:

At 6:17 the third battle squadron engaged German battleships, battle cruisers, and light cruisers at a range of 11,000 yards. The fourth battle squadron, in which was placed the Commander in Chief's flagship Iron Duke, engaged the battle squadron, consist-

ing of the König and Kaiser classes, as well as some of the German battle cruisers and light cruisers. The mist rendered range taking difficult, but the fire of the squadron was effective. The Iron Duke opened at 6:30 on a battleship of the König class at 12,000 yards range, hitting on the second salvo, and continuing to hit until the target ship turned away. The fire of other ships of the fourth squadron was principally directed at enemy battle cruisers and cruisers as they appeared out of the mist. The ships of the second battle squadron were in action with vessels of the Kaiser and König classes between 6:30 and 7:20, and fired also at a battle cruiser which had dropped back, apparently severely damaged. The first battle

squadron received more of the return fire than the remainder of the main fleet. The Colossus was hit, but not seriously damaged, and other ships were straddled with fair frequency by the German salvos.

Admiral Jellicoe makes special mention of the Marlborough of the third battle squadron, stating that at 6:17 she fired seven salvos at a German battleship of the Kaiser class, then engaged a cruiser and again a battleship. At 6:54 she was hit by a torpedo and took up a considerable list to starboard, but at 7:03 reopened on a cruiser, and at 7:12 fired fourteen rapid salvos at a battleship of the König class, hitting her frequently until she turned out of line. These details in the case of the Marlborough permit some rather interesting speculations. It seems that this ship alone fired approximately between 200 and 250 13.5-inch shells, each one weighing about 1,240 pounds, aggregating in the neighborhood of 140 tons of high explosive steel shell, at the effective battle range of 12,000 yards in the beginning and closing to 9,000 yards during the course of the action. If this is at all indicative of the fighting done by the other battleships of the main body it is apparent that a considerable weight of metal was let loose. In the first and second phases it is estimated that each of the ships under Vice Admiral Beatty and Rear Admiral Thomas fired four or five times this amount (about 600 tons each) and the Germans quite as much, if not more.

After the injury to the Marlborough Vice Admiral Burney transferred his flag to the Revenge.

It appears that the British battle cruisers after the loss of the Invincible were out of action for about half an hour. At about 6:50 the two remaining ships of Admiral Hood's squadron were ordered to prolong Admiral Beatty's line astern, and, having lost sight of the enemy, the battle cruiser squadrons reduced speed to 18 knots. Course was gradually changed to south and then to southwest in an effort to regain touch with the enemy. At 7:14 two German battle cruisers and two battleships were sighted at about 15,000 yards range, bearing north-westerly. At 7:17 Admiral Beatty's ships re-engaged and increased speed to 22

knots. At 7:32 the British battle cruisers had again reduced speed to 18 knots. German destroyers advanced, emitting clouds of dark gray smoke, under which screen the German capital ships turned away and were lost sight of at 7:45. British light cruisers were ordered to sweep westward to regain touch, and at 8:20 Admiral Beatty ordered a westerly course in support.

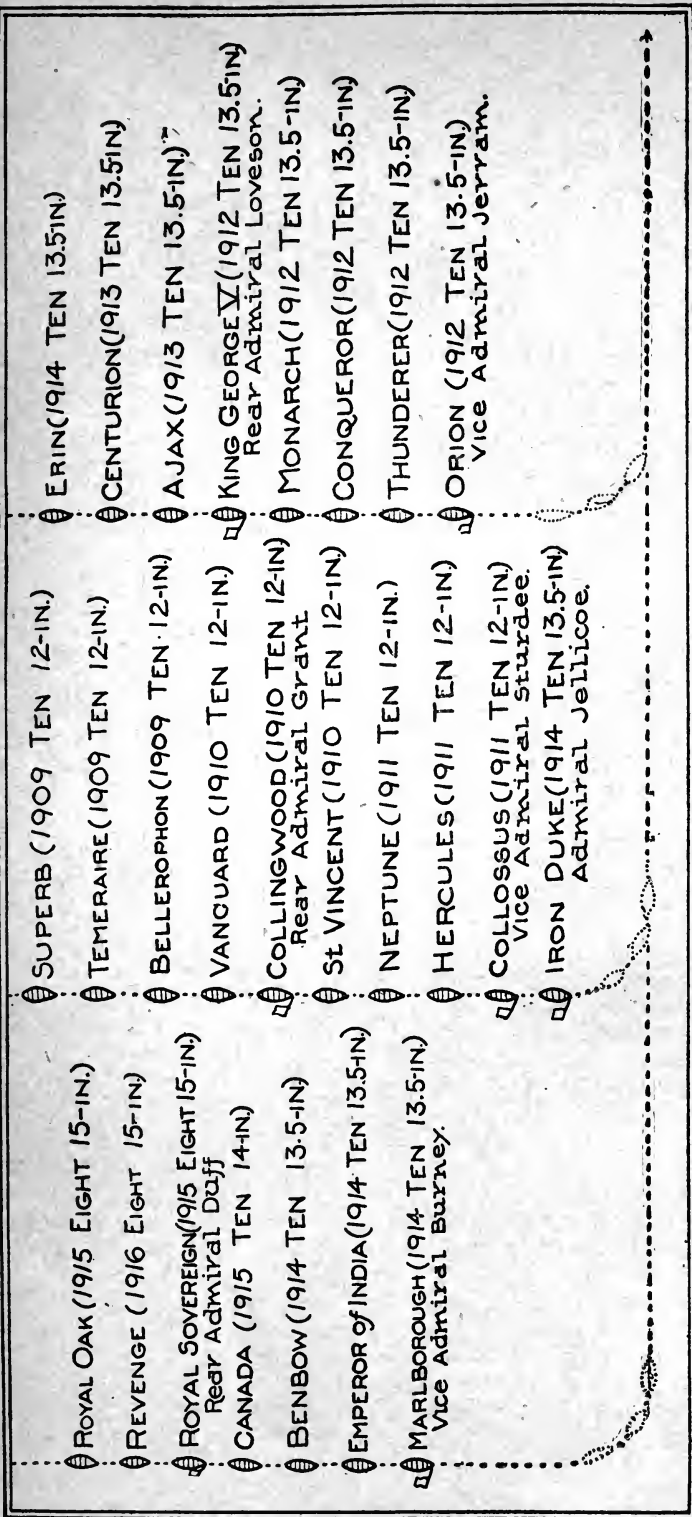

Climax of the Fighting

Soon afterward German battle cruisers and battleships were heavily engaged at 10,000 yards range. Admiral Beatty reports that the leading ship was hit repeatedly by the Lion and turned out of line eight points, emitting high flames; that the Princess Royal set fire to a three-funnel battleship, and that the New Zealand and Indomitable both engaged the third ship, forcing her to haul out of line on fire and heeling over. The mist at this time shut them from view, but the Falmouth reported the German ships as last seen at 8:38 steam to the westward. The British battle cruisers did not regain touch, and at 9:24 changed to the southerly course set by Admiral Jellicoe for the battle fleet.

During the third phase the conditions of mist and failing light favored torpedo attack, but few details have as yet been reported. The fourth light cruiser squadron occupied a position in the van until 7:20 P. M., when they carried out orders to attack German destroyers. Again at 8:18 P. M. this squadron moved out to support the eleventh destroyer flotilla in a torpedo attack. They came under a heavy fire from the enemy battle fleet at ranges between 6,500 and 8,000 yards, but succeeded in firing torpedoes at German battleships.

At 6:25 the third light cruiser squadron attacked the German battle cruisers with torpedoes, and the Indomitable reported that a few minutes later a German battle cruiser of the Derfflinger class fell out of line. This may have been the Lützow, as at about this time Vice Admiral Hipper, while under a heavy fire, transhipped his flag in a torpedo boat from the disabled Lützow to the Derfflinger.

Battle Line—The Formation for Approach

Above is shown the probable formation of the Grand Fleet for the approach and how the three squadrons may be swung into the battle column of "line ahead." If during the approach it is desired to gain distance to either the right or left, all ships may simultaneously turn to the right or left through any angle designated, turning back again before forming column for battle. The battle line may be formed by one 90° turn as shown above or by a succession of oblique movements. This chart also shows dates of completion and principal armament of dreadnoughts in Admiral Jellicoe's fleet. In addition there were four Queen Elizabeths, (1914-15, eight 15-inch guns,) five battle cruisers, (1908-12, eight 12-inch guns,) four battle cruisers, (1911-14, eight 13.5-inch guns.)

Losses on Both Sides

It is thus seen that during the third phase, lasting from 6:15 to about 8:30 P. M., practically the entire British Grand Fleet was engaged with practically the entire German High Seas Fleet. Early in the phase the British armored cruiser *Defense* (tonnage 14,600, carrying four 9.2-inch guns and 755 men) was sunk. At the same time the armored cruiser *Warrior* (tonnage 13,500, carrying six 9.2-inch guns and 704 men) and her sister ship, the *Black Prince*, were disabled. The *Warrior* was taken in tow by the *Engadine*, but broke away during rough weather in the night, and sank after the crew had been taken off. The *Black Prince* came in close contact with a German battleship during the night and was sunk by gunfire.

Between 6 and 6:30 the Germans lost the light cruiser *Wiesbaden*. Rear Admiral Hood's flagship, the *Invincible*, (tonnage 17,250, carrying eight 12-inch guns and 750 men,) was sunk soon after engaging. The German battle cruiser *Lützow* (tonnage 28,000, carrying ten 12-inch guns and 750 men) was disabled, and sank while returning to port. The German battleship *Pommern* (tonnage 13,040, carrying four 11-inch guns and 750 men) was probably disabled during the day battle and sunk in the night by a torpedo. The German light cruisers *Frauenlob* and *Rostock* were destroyed in the evening fighting, while the light cruiser *Elbing* was abandoned because of damage due to collision with another German ship. According to official admission, each side seems to have lost about four destroyers, either during this phase or during the night fighting.

The details of how Admiral Jellicoe manoeuvred his ships into action have not been disclosed, but the British battle fleet probably approached with squadrons or divisions in line or line of bearing. That is, the ships were in several parallel columns on a southerly course, with the leading ships in a line approximately east and west, at such a distance apart as to permit all ships to swing into one column, heading either east or west. The deployment into a battle line heading easterly seems to have been skill-

fully effected under trying conditions. Just what the relative positions of the two fleets were during this phase is not known, but the British seem to have had a tactical advantage in turning the German van. The conditions of poor visibility, however, did not permit them to get full benefit of it, although they had the German ships backed by the twilight sky, an important advantage, which must have increased as darkness approached.

Some criticism has been made of Admiral Jellicoe for not pressing the retiring enemy ships more closely, but it is to be remembered that retiring ships are in a favorable position for using mines and torpedoes. Moreover, the mist and the direction of the wind were helpful to the destroyers in making a good smoke screen for the Germans.

The Fourth Phase

Torpedo Attacks and Fighting During the Night of May 31 to June 1

Admiral Jellicoe reports that after the arrival of the Grand Fleet the tactics of the Germans were generally to avoid further action, in which they were favored by conditions of visibility.

At this stage of the action, shortly after 8:40, Admiral Jellicoe quotes Vice Admiral Beatty as follows:

In view of the gathering darkness, and the fact that our strategical position was such as to make it appear certain that we should locate the enemy at daylight under most favorable circumstances, I did not consider it desirable or proper to close the enemy battle fleet during the dark hours.

Admiral Jellicoe then reports:

At 9 P. M. the enemy was entirely out of sight, and the threat of torpedo boat destroyer attacks during the rapidly approaching darkness made it necessary for me to dispose of the fleet for the night, with a view to its safety from such attacks, while providing for a renewal of action at daylight. I accordingly manoeuvred to remain between the enemy and his bases, placing our flotillas in a position in which they would afford protection to the fleet from destroyer attack and at the same time be favorably situated for attacking the enemy's heavy ships.

The British fleet, after making dispositions to guard against night torpedo attacks, steamed at moderate

speed on southerly courses. During the night the British heavy ships were not engaged, but Admiral Jellicoe reports that the British Fourth, Eleventh, Twelfth, and Thirteenth Flotillas delivered a series of successful torpedo attacks.

Apart from the proceedings of the flotillas, the second light-cruiser squadron, stationed in the rear of the battle fleet, was in close action for about fifteen minutes at 10:20 P. M. with a German squadron, comprising one cruiser and four light cruisers. In this action the Southampton and the Dublin suffered rather heavy casualties, although their steaming and fighting qualities were not seriously impaired.

This night fighting comprises an interesting and perhaps an important phase of the battle, but too little is known about it at this time to permit profitable discussion. During both the day and night conditions were favorable for the use of torpedoes. Destroyer attacks seem to have been numerous, persistent, and daring. It may be assumed that a great many torpedoes were fired, but the resulting damage does not appear to have been very extensive.

The German fleet after nightfall probably steered a southwesterly course at somewhat reduced speed because of damaged ships. It should be kept in mind that the fleet speed of the British was 20 knots. The fleet speed of the Germans was 17 knots, as their dreadnoughts had been eked out with predreadnought battleships of less speed.

Of course, to deceive the enemy, Admiral Scheer may have set a different course, such as toward the nearest land to the eastward; but it seems more reasonable that he tried to ease around the British fleet in the general direction of his Heligoland base.

Early on the morning of June 1 (3 A. M.) Admiral Jellicoe's battle fleet was to the westward of Horn Reef, some ninety miles from the battlefield, as shown on the chart. The British fleet then turned to the northward and retraced its course.

Visibility was three to four miles. Admiral Jellicoe reports that the British fleet remained in the proximity of the

battlefield and near the line of approach to German ports until 11 A. M., June 1; that the position of the British fleet must have been known to the enemy, because at 4 A. M. the fleet engaged for about five minutes a Zeppelin which had ample opportunity to note and subsequently to report the position and course of the British fleet; that the waters from the latitude of Horn Reef to the scene of the action were thoroughly searched, but no enemy ships sighted; and that at 1:15 P. M., it being evident that the German fleet had succeeded in returning to port, course was shaped for British bases, which were reached without further incident. By 9:30 P. M. of the next day, June 2, the fleet having fueled and replenished with ammunition, was reported ready for further action.

Results of the Battle

The conduct of the British fleet on the morning of June 1, retracing its tracks to the northward over the battle area—apparently searching the least likely places to find enemy ships—raises a lot of perplexing questions. On the chart, Page 88, it is evident that, if the German fleet was trying to ease around the British fleet from the westward toward its bases, it must have been in the shaded area, whether using fleet speed of 17 knots for five hours, or more likely, say, 12 knots for that time. If, as suggested above, Admiral Scheer had taken an easterly course, with perhaps the Skagerrack in mind in case of emergency, the German fleet must have been to the eastward of the course taken by the British fleet in the night—which would seem the one lane where the German fleet could not be located.

With the Grand Fleet in position to put itself between the German High Seas Fleet and its bases, why was there no decisive engagement? The fleets could not have been very far apart. Considering that the June nights between evening and morning twilight are only five hours long in these latitudes, and also considering the numerous scouts, both German and British, it looks as though they should have been pretty well informed of each other's whereabouts. But before

criticising Admiral Jellicoe for not seeking an engagement in the vicinity of Heligoland it might be well to reflect upon the conditions confronting him on that morning: Visibility only three to four miles; close to enemy bases and comparatively far from home bases; a fleet somewhat knocked about after the previous day's fighting, and no doubt a number of the ships short of both fuel and ammunition; destroyers and light cruisers scattered, many more or less damaged, and perhaps the majority with torpedoes expended; an enemy skilled in the use of submarines and mines.

Because of these conditions, and since the success of the allied cause and the safety of the British Empire depend upon the Grand Fleet, there appear to be few grounds for questioning Admiral Jellicoe's wisdom in safeguarding his ships against the submarine and mine traps laid for them in the vicinity of Heligoland Bight. It is significant that the British Admiralty Staff, which comprises those who know most and care most about the conduct of the fleet, appears to be well satisfied with the way the ships were handled.

It is hard for persons unused to the sea to visualize the conditions and circumstances attending this engagement. Even seagoing men of excellent balance are liable, when transplanted temporarily to the tranquillity of a war college, to be somewhat influenced by environment, and, while in enthusiastic search of illustration for pet theories, they may overlook or fail to give due weight to modifying factors which cannot be simulated on the game board. Students of tactics on shore make their decisions after study and discussion in the comfortable quiet of a well-lighted room, and then use T square and ruler to move their miniature ships on a motionless wooden ocean. The fighters of the Jutland battle faced quite a different proposition. Decisions had to be made quickly, accurately transmitted by signal, and promptly carried out on a sea darkened by mist, smoke, and approaching night. All this had to be done, moreover, in the midst of battle, under the strain of apprehension, in the

uncertainties of meagre and conflicting information.

Which side won and which side suffered the more damage—these are and for some time probably will continue to be debatable questions. Great Britain and Germany both claim a victory, and one's point of view seems to determine which of these two opinions is accepted. Very likely history will judge the battle indecisive. As to the damage inflicted, present official British and German admissions show that Great Britain lost a greater tonnage in ships actually sunk, but this is by no means conclusive evidence that the British fleet suffered greater punishment than did the German fleet. A careful study of the reports of the battle as well as sidelights, such as the official veil of secrecy enshrouding the German fleet and the fact that an honorary degree has been conferred upon the Chief Constructor of the German Navy because of the structural merits of German warships, especially with regard to their non-sinkability after injury, all indicate that many British shells and torpedoes found their mark. The chief losses, moreover, occurred in the battle cruiser squadrons. The battleship line, the backbone of British sea power, was not shorn of a single unit.

As regards general results, the military situation does not seem to have been much changed. British sea power is still supreme and exerting its inexorable pressure; the German High Seas Fleet is still a fleet in being and a menace to its enemies.

The following is the British statement of losses:

BATTLE CRUISERS

A German Story of the Sinking of the Lützow

THE Telegraaf of Amsterdam has published a statement made by a deserter from the German Navy, a seaman of the first class who had been six years in the navy and received the Iron Cross after the Jutland battle. He stated that in the Jutland battle he was aboard the Lützow, which was sunk. Over 1,000 were saved of her crew, which totaled 1,600. He was taken aboard a destroyer, which was sunk five minutes later. The following remarkable details of the sinking of the Lützow formed part of his narrative:

It was 8 o'clock in the evening. We were first hit by a torpedo behind the foremast below the water line. The torpedo penetrated the walls and exploded within the ship, killing and wounding a great number of men and destroying the food store. The watertight compartment before the engine room held good, and everything was done to support the bulkhead, with the object of preserving the ship. Gradually, however, her condition became hopeless. The staff left the vessel about 10 P. M., the crew remaining on duty. After the staff had been transferred to a torpedo boat the Lützow received another hit, which destroyed the wireless room beneath the bridge. Every one within was killed. Afterward the ship received four severe hits from fifteen-inch shells. She was now proceeding at only three miles an hour.

At 3 o'clock in the morning the vessel appeared to be lost, and we were ordered to leave the ship. Four torpedo boats received 1,003 men surviving out of 1,600. Three hundred wounded remained on board, whom it was impossible to remove. Our torpedo boat was not 100 yards from the Lützow when it

was attacked by five English destroyers and two small cruisers. Our vessel was torpedoed and quickly sank. Three other German torpedo boats thereupon took us over. Some time afterward the torpedo boat I was on was hit near the engine room. An order then arrived to retire from further operations by developing smoke. A heavy screen of smoke hid us and the Lützow from the English. That was our salvation.

To save her from falling into English hands we were ordered to sink the Lützow with 300 of her own wounded on board. This order was executed. One of our torpedo boats torpedoed this great German ship, which quickly sank, carrying with it our 300 wounded into the depths. The English then left us in peace, and proceeded in the direction where the Lützow had sunk. Apparently they had not seen through the screen of smoke that the Lützow had sunk. While they were vainly seeking the ship we escaped and steamed at full power southward for thirteen hours. We were then taken over by the small cruiser Regensburg, in which we steamed for five hours more before our return at midnight to Wilhelmshaven.

It is remarkable that all our ships hit in the Jutland battle were hit in the forepart. Many ships were severely damaged while proceeding homeward. All the badly damaged vessels have been repaired, and new ships are serving, or are shortly to serve, in the fleet. Among the new ships are the Baden, Bayern, and Hindenburg. Shortly also there will be a new Emden, while a new Karlsruhe is already in active service. An Ersatz Blücher is on the stocks in Danzig Dockyard. The Derfflinger, which was seriously damaged in the Jutland battle, is again in service. The dockyards are now exclusively constructing submarines and large cruisers, because the greatest losses have been suffered in these types.

Comparative Strength of Navies Today

By Thomas G. Frothingham

Member of Military Historical Society of Massachusetts and of the United States Naval Institute

II.—The United States Navy and Others

U. S. S. ROANOKE, 1863
Seagoing Turret Vessel

Armament: two 15-inch, two 11-inch, two 150-pdr. rifled guns. Armor: $1\frac{1}{2}$ -in. wrought-iron deck in two layers of $\frac{3}{4}$ in. each, and side armor, $4\frac{1}{2}$ in. at top, $3\frac{1}{2}$ in. at bottom; wrought-iron plates 4 ft. below and 6 ft. above waterline.

AS was explained in Part I. of this article, the United States Navy fell back in tonnage from second to third place in the period of foreign naval increase, from 1906 to 1911. Through all these years our navy was restricted to the two-battleships-a-year program.

Fortunately, as has been shown when making comparisons with the British and German navies, tonnage does not tell the whole story. The United States Navy has been the leader in the development of the "all-big-gun" battleship of today, called the "dreadnought." From the first single-turret ship, the Monitor, to the two-turret monitors, then to the U. S. S. Roanoke—these were the three great strides in such ships designed by the United States Navy in the epoch-making times of the civil war, which led to the plan of big guns in turrets aligned over the keel.

With the present article are shown plans of the U. S. S. Roanoke and U. S.

S. Michigan. The design of this last ship has been imitated by all the navies in their dreadnoughts. The design of her parent ship, the Roanoke, will be of interest because some of the foreign navies have reverted to the plan of the Roanoke, as will be seen later.

In the recognized first essentials of sea power the strength of the United States Navy is given as follows:

UNITED STATES NAVY—BUILT AND BUILDING	
Dreadnoughts	17
Predreadnought battleships.....	21

The United States Navy has no battle cruisers.

As the object of this article is to give the strength of the navies at corresponding stages of their building programs, two of the dreadnoughts should be omitted from this list, the Tennessee and California, as their percentage completed is small. The three ships of the class of the Mississippi, recently launched, should be included on this basis, as these three ships might be hurried to completion, in

U. S. S. MICHIGAN, 1906.

Armament: eight 12-in. 45 cal. B. L. R., twenty-two 3-in. 50 cal. R. F., four 3-pdr. saluting. Armor belt: 10 in., 11 in., 12 in., at top; 8 in., 9 in., 10 in., at bottom. Casemate: 8 in. at top; 10 in. at bottom. Side plating forward and aft, 1½-in. nickel steel. Protective deck forward, 1½-in., after, 3-in. nickel steel.*

view of the indicated non-completion of the building programs of the British and German Navies. A look at the chart on Page 90 showing battle formation in Lieutenant Gill's article, will confirm what was said about this in Part I. of this article. The dates of the ships are conclusive.

Consequently, the dreadnoughts in the corresponding program of the United States Navy should be fifteen.

The Battle Fleet

Above is given the plan of U. S. S. Pennsylvania. As will be seen, this ship

is the developed design of the Michigan, with three guns in each turret instead of two. It is probably safe to say that this ship and her sister ship, the Arizona, are the most powerful battleships in the world. The nearest approach would be the Japanese battleships of the Fu-So class. The Japanese ships, while closely imitating ours in armament, followed our earlier design of the Arkansas, also shown, in which the twelve guns are carried in six turrets instead of four.

This arrangement of turrets in the Japanese battleships has made necessary

a longer hull and armor spread over more turrets—a less powerful fort with less available guns.

The recent building program of our first-line dreadnought battleships is given below:

Comp'd in—	Name.	Displacement.	Armament.	Speed Knots.
1912..	Arkansas	26,000	12 12-in....	21.05
1912..	Wyoming	26,000	12 12-in....	21.22
1913..	Texas	27,000	10 14-in....	21.0
1914..	New York	27,000	10 14-in....	21.0
1915..	Nevada	27,500	10 14-in....	20.5
1915..	Oklahoma	27,500	10 14-in....	20.05
1916..	Pennsylvania	31,400	12 14-in....	21.05
1916..	Arizona	31,400	12 14-in....	21.05
	Idaho	32,000	12 14-in....	21.0
	Mississippi	32,000	12 14-in....	21.0

In addition to the dreadnought battleships of the first line, it should be understood that our predreadnought battleships are better than those of other navies. Our consistent policy of making the gun the main thing has given many of these second-line battleships a clear title to be factors in a battle of modern fleets.

States Navy has been authorized. As this is for future years it has nothing to do with this article. But the program is here given because some of its features point out the real weakness of our navy—our weakness in auxiliaries of the battle fleet.

Auxiliaries of Battle Fleet

Our lack of battle cruisers does not now seem the fatal defect so often proclaimed in the first months of the war. Battle cruisers are not now considered equal to the task of standing up against battleships. The development of the submarine has lessened the raiding value of the battle cruiser, which was thought destined to be the knight errant of the seas. In consequence, the tactical use of battle cruisers, by such a navy as the

German or Japanese, against a navy without battle cruisers, seems restricted to the use of these ships as scout cruisers and screen.

Undoubtedly they would give great trouble to such a fleet as ours, but their limitations are now realized. As will be seen from the above table, unless there is some change, we are to build six battle cruisers in our three-year program. It is possible that we may be the last to build them.

The authorization of ten scout cruisers draws attention to the real weakness and greatest need of our navy. We have absolutely no scouts in the modern sense of the word—and from the great sums given by Congress to the navy a large number of these ships should be built as soon as possible.

In destroyers also we are below the needs of our fleet. We have sixty-three built and building. The tactics of the battle of Jutland and the development of the torpedo and submarine indicate an increased value for these craft. A great number should be built as soon as possible. Many are authorized in the future program—and these should be rushed to completion.

Fortunately, without any guiding wisdom of our own, the war has given our country great elements of preparedness. Where there were practically no high explosives available, we now have a great stock on hand. Many kinds of munitions of war are available for seizure in our emergency.

The same conditions have developed an efficient type of submarine that has been built—and can be built—in great numbers in an unprecedentedly short time. This is fortunate for our nation, as in our problem of defense submarines will be of great value. Our coasts are long, and the danger of raids by battle cruisers was very real before the war developed the submarine. Now only specially built monitors dare to stay near a coast long enough to attempt a serious bombardment.

Aircraft are now given a vogue, in spite of the fact that in the war very small tactical results have resulted from

the great sums expended on them. Outside of the limitations imposed on their use by the weather, the development of anti-aircraft guns compels them to fly at such great heights that their usefulness is diminished. It is obvious that we should have some of these craft of a reliable type—but there should not be a great deal of money and energy diverted to aircraft. Their usefulness at sea is greatly diminished, because they are unable to navigate. Out of sight of land, or out of sight of the mother ship, they are lost.

Armament

The details of the principal guns of the United States Navy were given in Part I. of this article. The twelve dreadnoughts completed of the battle fleet carry sixty-four 12-inch guns and sixty-four 14-inch guns. The three ships of the Mississippi class will add thirty-six 14-inch guns to this total.

In addition to these, the two ships of the Michigan class, which are more powerful than many foreign dreadnoughts, carry sixteen 12-inch guns. Of the other predreadnought battleships six carry twenty-four 45-calibre 12-inch guns, and eight carry thirty-two 40-calibre 12-inch guns, which would make these ships factors in any battle of modern fleets. This cannot be said to the same extent of the predreadnought battleships of the other navies. Every gun in this list is available for a broadside because all our big guns are carried in turrets aligned over the keel.

The shortage of men is too much emphasized in current comment on our navy. It should be realized that we have a highly trained personnel, that even the second-line ships in reserve are in being with skeleton crews—and that we have unusually intelligent classes to draw upon for our war strength.

Great Britain's lesson in unpreparedness should be studied by our country. On land and sea it was not the lack of men that was the trouble. It was the lack of weapons for the men.

On land our energies should be concentrated on providing munitions and equipment—on the sea to provide ma-

FRENCH DREADNOUGHT NORMANDIE

Length, 574 feet. Beam, 92 feet. Maximum draught, 28½ feet.
 Ahead: 4—13.4 in. Broadside: 12—13.4 in. Astern: 4—13.4 in

terial is still more urgent. Great as is the need of more trained men for our navy, our need of scouts is outstanding; and with every resource of American ingenuity we should hasten the building of a fleet of scout cruisers.

The French Navy

The French Navy was for many years second only to the British Navy, but in the abnormal increase from 1906 to 1911 there was no effort made to keep pace with Great Britain and Germany—and this was probably wise from the peculiar situation of France. The strength of the French Navy in the main accepted essentials is as follows:

FRENCH NAVY—BUILT AND BUILDING
 Dreadnoughts 12
 Predreadnought battleships..... 17

The French Navy has no battle cruisers.

The known recent building program is as follows:

Comp'd in—	Name.	Displacement.	Armament.	Speed Knots.
1915..	Bretagne	23,172	10 13.4-inch..	20.0
1915..	Lorraine	23,172		
1915..	Provence	23,172		
1916..	Normandie	24,828	12 13.4-inch..	21.5
1916..	Languedoc	24,828		
1916..	Flandre	24,828		
1916..	Gascogne	24,828		
1917..	Bearn	24,828		

As will be seen from the plans of the Normandie given above, the French have

reverted to the plan of U. S. S. Roanoke, with three turrets aligned over the keel—but with four guns in each turret. No other navy has adopted this arrangement of guns.

The French have always designed and

FRENCH NAVAL GUN IN USE ON THE WESTERN FRONT
 (© Underwood & Underwood.)

built good battleships—and French ships have been of great use in the Mediterranean and elsewhere. But with the fearful drain of all the resources of France necessary to maintain her battle front, it is safe to say that not only has there been no completion of her naval building program, but that many of her ships are not now in active commission.

It is now known that equality in heavy artillery on the western front was only established by use of the French naval guns—many of them actually taken from French warships. Probably the French Navy was also drawn upon for men in this great emergency. Consequently the French Navy should be considered as a power in abeyance—not in proportion to its building program.

In auxiliaries of the battle fleet France is well equipped. Her submarines in particular are known to be very good, although, as has been the case with the British Navy, there has not been much chance to use them.

The Japanese Navy

The strength of the Japanese Navy in the first essentials in the known building program is as follows:

JAPANESE NAVY—BUILT AND BUILDING

Dreadnoughts	6
Predreadnought battleships.....	13
Battle cruisers.....	4

The recent building program, so far as known, is as follows:

DREADNOUGHTS

Comp'd in—	Name.	Displacement.	Armament.	Speed Knots.
1912..	Kawachi	20,800	12 12-inch....	20.5
1912..	Settsu	20,800		
1915..	Fu-So	30,600		
1916..	Yamashiro	30,600	12 14-inch....	22.0
1916..	Ise	30,600		
1917..	Hinga	30,600		

BATTLE CRUISERS

1913..	Kongo	27,500	8 14-inch....	{ 28.0
1914..	Hiyei	27,500		{ 27.0
1914..	Kirishima	27,500	8 14-inch....	{ 28.0
1915..	Haruna	27,500		{ 28.0

The first two dreadnoughts have the ineffective arrangement of the turrets of the German Helgoland class, (Part I, Figure 2.) The four dreadnoughts of the Fu-So class are formidable battleships, but, as explained above, they have followed the design of the Arkansas, and are probably not as powerful as the battleships of the Pennsylvania design.

The Japanese predreadnought battleships are not as good as those of the United States Navy.

As a matter of course Japan, like the other nations at war, has given out no naval information since she entered the war. Undoubtedly there has been a great increase of the Japanese building program, but it is not probable that any new capital ships are ready for service.

The Battle Cruisers

As in the case of the British Navy, it will be noted that the Japanese naval program did not include battle cruisers for completion later than 1915. Whether

JAPANESE DREADNOUGHT FU-SO

 Broadside: 12—14 in. Astern: 4—14 in.

JAPANESE BATTLE CRUISER KONGO

Length, 704 feet. Beam, 92 feet. Maximum draught, 29½ feet.
 Ahead: 4—14 in. Broadside: 8—14 in. Astern: 4—14 in.

or not other ships of this class have been recently laid down is not known.

The four battle cruisers in the Japanese building program probably make up the most powerful squadron of their class afloat today, but it is also possible that the Japanese regret building these ships instead of battleships. Their fine armament is carried on hulls that cannot be trusted to resist a serious combat with battleships. Their tactical use would greatly embarrass such a battle fleet as our own, but they cannot any longer be considered a menace.

In all the auxiliaries of the battle fleet

it may be assumed that the progressive Japanese are well equipped. In guns they have closely followed us—and it is probable that they are going to larger calibres, as is the United States Navy.

The Russian Navy

In the matter of sea power Russia has been at a disadvantage through being obliged to maintain two separate navies—the Baltic fleet and the Black Sea fleet. This unusual condition has come from closing the Dardanelles to Russian warships. Their strength in first essentials is as follows:

RUSSIAN DREADNOUGHT GANGOOT

Length, 590½ feet. Beam, 85½ feet. Mean draught, 27½ feet.
 Ahead: 3—12 in. Broadside: 12—12 in. Astern: 3—12 in.

RUSSIAN BATTLE CRUISER BORODINO

Guns: 9—14 in., 20—5.1 in. Torpedo tubes
 Ahead: 3—14 in. Broadside: 9—14 in. Astern: 3—14 in.

RUSSIAN NAVY—BUILT AND BUILDING

Dreadnoughts	7
Predreadnought battleships.....	7
Battle cruisers.....	4

The known building program of dreadnoughts is as follows:

Comp'd in—	Name.	Displacement.	Armament.	Speed. Knots.
1914..	Sevastopol ..	23,026	12 12-inch....	23.0
1914..	Petropavlovsk	23,026		
1914..	Poltava	23,026		
1914..	Gangoot	23,026		
1914..	Imp'sa Maria	22,435	12 12-inch....	21.0
1915..	Imp. Alex. III	22,435		
1915..	Ekaterina II..	22,435		

Of these the last three are for the Black-Sea fleet. It will be observed that the Russian dreadnoughts are turret ships of the Roanoke design, with four turrets instead of three—and three guns in each turret.

The program is as follows:

RUSSIAN BATTLE CRUISERS

Comp'd in—	Name..	Displacement.	Armament.	Speed. Knots.
1916..	Navarin	32,000	12 14-inch....	25.0
1916..	Borodino	32,000		
1916..	Ismail	32,000		
1916..	Kinburn	32,000		

In these Russian battle cruisers we find again the design of the Roanoke, with three guns in each turret instead of two.

Knowing the pressure that the war has brought upon Russia, it seems impossible that this building program of dreadnoughts and battle cruisers has been completed in any degree that would make the Russian Navy a factor in the balance of sea power at this time.

ITALIAN DREADNOUGHT GIULIO CESARE

Length, 575½ feet. Beam, 91½ feet. Mean draught, 27½ feet.
 Ahead: 5—12 in. Broadside: 13—12 in. Astern: 5—12 in.

Russia, however, is well provided with destroyers, having an unusual number of these craft for a navy of its size.

The Italian Navy

The corresponding strength of the Italian Navy is as follows:

ITALIAN NAVY—BUILT AND BUILDING			
Dreadnoughts	9		
Predreadnought battleships.....	7		

The Italian Navy has no battle cruisers. The latest construction in the known building program is as follows:

Comp'd in—	Name.	Displacement.	Armament.	Speed. Knots.
1913..	Giulio Cesare	22,022	13 12-inch....	22.5
1914..	C'ti di Cavour	22,022	13 12-inch....	22.5
1915..	Andrea Doria.	22,564	13 12-inch....	22.5
1915..	Duilio	22,564		
1917..	Carraciolo ..	30,000	8 15-inch....	25.0
1917..	Mar'co-Collona	30,000		
1917..	C'ro-Colombo.	30,000		
1917..	F'co-Morosini.	30,000		

The Italian naval constructors have been very skillful—and the above is an advanced program calculated to make Italy, if not a great naval power, a valuable ally to any naval power. The turret plan shown above should be noted, as it provides an ingenious way of mounting thirteen heavy guns—and it is unique among the navies of the world.

But, again in the case of Italy, it must

be realized that the country has probably been too much occupied in other fields to carry out this ambitious naval program.

The Hungarian Navy

Austria-Hungary's known strength in first essentials of sea power is given as follows:

Dreadnoughts	8
Predreadnought battleships.....	6

The Austro-Hungarian Navy has no battle cruisers. The recent known building program is as follows:

AUSTRO-HUNGARIAN NAVY—BUILT AND BUILDING

Comp'd in—	Name.	Displacement.	Armament.	Speed. Knots.
1912..	Viribus Unitis	20,010	12 12-inch....	21.0
1913..	Tegetthoff....	20,010		
1914..	Prinz Eugen.	20,010	12 12-inch....	21.0
1914..	Szent Istvan.	20,010		
(1) ...	One ship.....	24,500	10 13.5-inch...	21.0
(1) ...	One ship.....	24,500		
(1) ...	One ship.....	24,500		
(1) ...	One ship.....	24,500		

It is improbable that this program has been carried through to any degree. It is much more likely that with German assistance Austria-Hungary has been devoting her energies to submarines—and has thus become a factor in the war of destruction now being waged in the Mediterranean.

(1) Time due to be completed unknown.

AUSTRO-HUNGARIAN DREADNOUGHT VIRIBUS UNITIS

Austria-Hungary's Submarine Note

Reply to the United States

AUSTRIA-HUNGARY'S new Ambassador to the United States, Count Tarnowski von Tarnow, successor to Dr. Dumba, arrived in Washington almost simultaneously with the announcement of Germany's new policy of sinking all merchant ships without warning. Before accepting the credentials of Count Tarnowski, the United States Government decided that it must know the attitude of his Government on this vital subject. Accordingly on Feb. 18 a note was dispatched to Vienna asking for a definite and full statement as to the stand which the Dual Monarchy had assumed regarding submarine warfare, and inquiring whether the assurances given to the United States at the time of the sinking of the Ancona and Persia were to be regarded as changed or withdrawn. Frederic C. Penfield, American Ambassador at Vienna, handed this memorandum to Count Czernin, the Austro-Hungarian Foreign Minister, and the status of the new Ambassador remained one of suspense pending a reply.

Text of American Note

The text of the United States Government's inquiry of Feb. 18, as reported through the European press, is as follows:

In Note 4,107 of Dec. 9, 1915, the American Government laid down the points of view whereby it was guided regarding the activity of submarines in naval warfare. These points of view were on an earlier occasion clearly expressed to the German Government, and the United States Government was of the opinion that the Austro-Hungarian Government was acquainted therewith. The Austro-Hungarian Government replied with Note 5,735 of Dec. 14, 1915, wherein it declared it had neither adequate knowledge of the exchange of ideas which had taken place between the United States and Germany nor was of the opinion that even complete knowledge would suffice for judgment in regard to the Ancona incident, as the questions arising from this incident bore a different character.

Nevertheless, the Austro-Hungarian Foreign Ministry declared, in Note 5,949 of Dec. 21, 1915: "As regards the principle set up in the United States Government's very es-

teemed note, that enemy private ships, provided they do not flee or offer resistance, should not be destroyed before the passengers are placed in safety, the Austro-Hungarian Government is in a position to assent in the main to this view of the Washington Cabinet."

Further, the Austro-Hungarian Government on the occasion of the sinking of the steamer Persia in January, 1916, declared that, although not informed regarding this incident, it would be guided by the principles whereto it agreed in the Ancona affair, should events prove that responsibility falls on Austria-Hungary in this matter.

Simultaneously with the communication from the German Government on the 10th of January, 1916, the Austro-Hungarian Government declared that every merchant ship which for whatever purpose was armed with a gun forfeits by this circumstance alone the character of a peaceful vessel, and that in consideration of these circumstances the Austro-Hungarian naval forces had received orders to treat such vessels as warships. In conformity with this declaration, ships whereon were American citizens were sunk in the Mediterranean, presumably by Austro-Hungarian submarines. Some of these ships, for example the English steamer Welsh Prince, were torpedoed without warning by a submarine under the Austro-Hungarian flag. The American Ambassador at Vienna requested information regarding these cases, but thus far has received no reply.

At the same time as the German declaration of Jan. 31, 1917, which described certain portions of the sea off the coasts of Entente countries as exposed to danger from submarines, the Austro-Hungarian Government made known that Austria-Hungary and her allies, as from Feb. 1, would prevent with all available means shipping within the defined barred area.

From the foregoing it can be concluded that the assurance, given on the occasion of the Ancona case and renewed on the occasion of the discussion of the Persia case, is in all material respects the same assurance contained in the note of the German Government of May 4, which reads: "In conformity with the general principles of international law concerning the holding up, search, and destruction of merchant ships, such ships will not be sunk either inside or outside that portion of the sea which has been declared a naval war zone without previous warning and without taking such means as are available for saving human lives, unless such ships flee or endeavor to offer resistance," and that this assurance is more or less

altered by the declaration of the Austro-Hungarian Government of Feb. 16 and Jan. 31.

Since the United States Government is in doubt regarding the meaning to be attached to these declarations, especially the last, it desires to be finally and clearly informed of the standpoint which the Austro-Hungarian Government adopts in these circumstances and also whether the assurance given in the Ancona and Persia cases is to be regarded as changed or withdrawn.

Text of Austrian Note

The reply of Emperor Charles's Government to the foregoing memorandum was handed to Ambassador Penfield on March 6. It took the unsatisfactory position that neutrals at sea would enter the barred zone at their own risk, and that only neutrals on neutral ships had any right to freedom of the seas. At the same time the Austro-Hungarian Government asserted that it adhered strictly to the assurances given at the time of the Ancona incident, though it had declared in the second Ancona note: "The Imperial and Royal Government can substantially concur in the principle that private ships, in so far as they do not flee or offer resistance, may not be destroyed before the persons on board have been brought into safety."

The full text of the Austro-Hungarian reply to the United States is as follows:

From the memorandum of Feb. 18 of the American Ambassador, the Austro-Hungarian Foreign Minister has concluded that the Washington Cabinet, in view of statements made on Feb. 10 of last year and on Jan. 31, 1917, by the Austro-Hungarian Government, is now in doubt regarding the attitude which Austria-Hungary will henceforth observe regarding the submarine war and as to whether the assurances given by the Austro-Hungarian Government to the Washington Cabinet, in the course of negotiations about the Ancona and Persia papers, have not been nullified by the aforementioned statement. The Austro-Hungarian Government is ready to make a clear and definite statement so that these doubts may be solved.

The Austro-Hungarian Government may be allowed first of all to discuss briefly the methods employed by the Entente Powers in waging submarine war, because they are the starting point for the intensified submarine war begun by Austria-Hungary and her allies and also throw a bright light upon the attitude which the Austro-Hungarian Government has taken hitherto in regard to the questions which have arisen.

When Great Britain joined the war against the Central Powers only a few years had

elapsed since that memorable time when she, in union with other States, began to lay the foundation at The Hague for modern naval war law. Soon afterward the British Government had assembled in Holland representatives of the great powers in order to consolidate the further work of The Hague Conference, especially in the sense of a just arrangement between interested belligerents and neutrals. These efforts aimed at nothing less than the mutual establishment of principles of right which even in war times should embody the principles of freedom of the seas and the safeguarding of the interests of neutrals.

Neutrals were not to enjoy these benefits for long. Hardly had the United Kingdom decided to participate in the war when, almost at once, it began to break down the barriers which the principles of international law had erected. While the Central Powers, in the very beginning of the war, had declared that they would observe the Declaration of London, which also bore the signature of the British representative, Great Britain threw overboard some of its important provisions. In an endeavor to cut off the Central Powers from supplies from overseas she enlarged, step by step, the list of contraband until nothing was missing in the list of things which today men want for their subsistence.

Then Great Britain proclaimed what she called a blockade of the coasts of the North Sea, which form also an important commerce route for Austro-Hungarians, in order to prevent goods which were still missing in the list of contraband from entering Germany and in order to prevent all sea traffic by neutrals to those coasts as well as all exports through neutrals. That this blockade was in flagrant contradiction to the customary principles of the right of blockade, as established by international agreements, was explicitly declared by the President of the United States of America in words which will continue to live in the history of international law.

By the illegal prevention of reports from the Central Powers Great Britain aimed at paralyzing the countless factories and works which the industrial and highly developed peoples of Central Europe had created and, by forcing workmen to be idle, to incite them to rebellion.

When Austria-Hungary's southern neighbor joined the enemies of the Central Powers his first act was to declare as blockaded all coasts of the enemy, following, of course, the example of his allies in ignoring all the legal rights in the creation of which Italy had taken an active part a short time before. Austria-Hungary did not neglect to inform neutral powers at once that the blockade was not legal.

Long-Suffering Central Powers

For more than two years the Central Powers hesitated. Only then, and after long and careful consideration of pros and cons, did

they begin to return like for like and attacked the enemy on the sea. As the only ones of the belligerents who had done everything to secure the existing treaties which were to guarantee to neutrals the freedom of the seas, they felt with pained hearts the law of the hour which commanded them to violate this freedom. But they took this step to fulfill the paramount duty toward their peoples and from the conviction that it would help the principle of the freedom of the seas to be victorious. The proclamations which they issued last January are apparently directed only against the rights of neutrals. In reality they serve toward the restoration of these rights, which their enemies have incessantly violated and which, if they were victors, they would destroy forever. Thus the submarines which are cruising around the English coast announce to peoples who need the sea—and what people does not want coasts?—that the day is not far off when the flags of all States, in the glory of their newly won freedom, can freely fly over the seas.

We cherish the hope that this announcement will find an echo everywhere where neutral peoples live, and that it will especially be understood by the great people of the United States, whose most illustrious representative has during the war defended with flaming words the freedom of the seas as the highway of all nations.

Working for "Freedom of the Seas"

If the people and Government of the United States keep in mind that the blockade proclaimed by Great Britain is not only meant to wear down the Central Powers by starvation, but aims at subjecting the seas to her rule in order to establish in this manner her tyranny over all nations, while, on the other hand, the blockade of England and her allies only serves to make these powers incline toward peace with honor and a guarantee to all nations of the freedom of the sea traffic and sea commerce, and thereby a secured existence, then the question which of the two parties has the right on its side is already decided. Though the Central Powers have no desire in this war to beg for allies, they yet believe that they will be entitled to look to neutrals to appreciate their efforts to revise in the interest of all the principles of international law and equal rights of nations.

In replying now to the question put in the American note of Feb. 18, the Austro-Hungarian Government firstly remarks that in the exchange of notes referring to the cases of the Ancona and the Persia it restricted itself to defining its attitude to concrete questions which individually arose, without laying down its fundamental legal conception. But in its note of Oct. 19, 1915, referring to the Ancona case, it reserved to itself the right to bring up for discussion at a later date difficult international questions which arise in connection with submarine warfare. It now refers to this reservation, and now

briefly discusses the question of sinking enemy vessels, to which that note refers, it is guided by the desire to show the American Government that it now, as heretofore, strictly adheres to the assurance already given, and endeavors by clearing up that important question arising from submarine warfare, because it touches the laws of humanity, to avoid misunderstandings between the monarchy and the American Union.

Above all, the Austro-Hungarian Government desires to emphasize that it is also its opinion that the thesis set up by the American Government, which also is represented in various learned records, that enemy merchantmen, apart from cases of attempted flight and resistance, must not be destroyed without precautions being taken for the safety of the persons aboard, forms, so to say, the kernel of the whole subject. Regarded from a higher standpoint, this thesis can, of course, be ranked in a further suggestive connection, and from that view its domain of application can be marked out more exactly.

"General Warning" Sufficient

From the laws of humanity, which the Austro-Hungarian Government and the Washington Cabinet take in the same manner as judging the lines, the more general principle can be derived that when executing the right of destroying enemy merchantmen the loss of human life should as far as possible be avoided. To this principle the belligerent can only do justice by issuing warning before exercising the right. Therein he can choose the way which the aforementioned thesis of the American Government indicates, according to which the commander of the war vessel himself gives warning so that the crew and passengers may bring themselves into safety in the last moment, or the Government of a belligerent State can, if this is recognized as an inevitable necessity of war, issue warning of full effect also before the departure of the vessel which is to be sunk; or, finally, it can, if it establishes extensive measures against enemy sea trade, employ a general warning for all enemy vessels in question.

That the principle according to which care must be taken for the safety of the persons aboard undergoes exceptions the American Government itself recognized. But the Austro-Hungarian Government believes that destruction without warning is admissible not only when a vessel flees or offers resistance. It appears—to mention only one example—that the character of the vessel itself also must be taken into consideration. Merchantmen or other private vessels which carry a military garrison or arms aboard in order to commit hostile acts of any kind may, according to valid right, be destroyed without hesitation.

Austrian Ships Sunk Without Notice

The Austro-Hungarian Government need not call attention to the fact that the belligerent is released of all consideration for human life if his opponent sinks enemy mer-

chantmen without previous warning, as happened with the vessels *Electra*, (German;) *Bubrovnik*, (Austrian;) *Zagreb*, (Austrian,) &c., which already has been repeatedly censured; and in this respect the Austro-Hungarian Government never returned like for like, notwithstanding its uncontested right. In the course of the entire war Austro-Hungarian war vessels have not sunk one enemy merchantman without previous, if only general, warning.

The repeatedly mentioned thesis of the United States Government also allows various interpretations, in so far, namely, as it is doubtful whether, as is asserted from various sides, only on resistance justifies the destruction of a vessel with persons aboard, or resistance of another kind; as is shown if the crew intentionally neglects to take the passengers into boats—the *Ancona* case—or if the passengers themselves refuse to enter boats. According to the opinion of the Austro-Hungarian Government, the destruction of a warned vessel without rescuing the persons aboard is admissible in cases of the latter kind, because otherwise it would be left to the individual passenger to nullify the right of belligerents to sink vessels.

Moreover, it may be pointed out also that there is no unanimity as regards in what cases the sinking of neutral merchantmen at all is admissible. The obligation to issue a warning immediately before sinking vessels leads, according to the opinion of the Austro-Hungarian Government, on the one hand, to harshness which could be avoided; on the other hand, it is under circumstances calculated to injure the justified interests of belligerents. In the first place, it must not be overlooked that the rescue of persons is almost always left to mere chance, as the only choice remaining is to take them aboard war vessels which are exposed to any enemy influence, or to expose them in small boats to the dangers of the elements; so that it therefore corresponds much better to the principles of humanity to prevent persons, by timely warning, from using endangered vessels.

Neutrals Must Not Use Enemy Ships

Furthermore, notwithstanding careful examination of all legal questions referring thereto, the Austro-Hungarian Government could not come to the conviction that subjects of neutral States are entitled to travel unmolested on enemy vessels.

The principle that neutrals in war time also should enjoy the advantages of freedom of the seas refers only to neutral vessels, not to neutral persons on board enemy vessels, because belligerents, as is well known, are entitled to prevent the enemy's sea traffic as far as they are able. Being in possession of the necessary war means and considering it necessary for the attainment of their war aims, they can prohibit sea traffic of enemy merchantmen on pain of their destruction, provided they have pre-

viously announced this to be their intention, so that every one, whether enemy or neutral, may be enabled to avoid endangering life. Even if doubts should arise regarding the justifiableness of such procedure, and if the enemy should threaten reprisals, then this would be an affair for settlement between the belligerents only, who, as generally recognized, are entitled to make the high seas the scene of military operations and to oppose any interference with their enterprises and to decide for themselves what measures shall be taken against enemy sea traffic.

In such cases neutrals have no other legitimate interest, and therefore no other legal claim, than that the belligerent inform them in time of prohibitions directed to the enemy, that they can avoid intrusting their lives and their goods to enemy vessels.

The Austro-Hungarian Government can suppose that the Washington Cabinet will agree with these explanations, which, according to the Austro-Hungarian Government's firm conviction, are unassailable, as otherwise disputing their correctness would doubtless be tantamount to saying—which certainly does not correspond to the opinion of the United States—that neutrals must be free to interfere with military operations of belligerents or even directly assume the office of judging as to the war means which are to be employed against enemies.

Analogy of Land Warfare

It appears that it also would be a flagrant misunderstanding if a neutral Government, only to enable its subjects to travel on enemy vessels, while they as readily, and even with far greater security, could use neutral vessels, should fall to arms with a belligerent power which, perhaps, was fighting for its existence, not to speak of the most serious abuses for which the road would be left clear if the belligerent were to be forced to lower arms before every neutral who desired to use enemy vessels for his business or pleasure trips. Never was there the slightest doubt that neutral subjects themselves have to bear all the loss which they suffer by entering on land territory where warlike operations are taking place. There obviously is no reason to allow different principles for war on sea, the more so as at the Second Peace Conference the wish was expressed that, until the time when war on sea should have found a settlement by agreements, the law in force for war on land should be employed, as far as this was possible, also for war on sea.

In the spirit of what was previously said, the regulation that warning must be given to a ship which is to be sunk undergoes exceptions of various kinds, under certain circumstances, as, for instance, as mentioned by the American Government, in cases of flight and resistance, when vessels may be de-

stroyed without warning, while in other cases warning before the departure of a vessel is necessary. The Austro-Hungarian Government can therefore state, whatever attitude the Washington Cabinet may take in regard to individual questions raised here, that it, as especially regards protection of neutrals against endangering their lives, is essentially in accord with the American Government. But it was not only satisfied to put into effect in the course of this war the conception represented by her, but beyond that it also accommodated its attitude with painful care to the thesis set up by the Washington Cabinet, and would feel inclined to support it in its endeavor to secure American citizens against dangers at sea, which endeavor it supports by the warmest philanthropy, and by instructing and warning those intrusted with it.

As regards Circular Note 10,602 of last year, regarding the treatment of armed enemy merchantmen, the Austro-Hungarian Government, it is true, has to state that, as already mentioned previously, it is of the opinion that the arming of merchantmen, even solely for defense against the exercise of the right of capture, is not established by modern international law. A war vessel is obliged to come into contact with enemy merchantmen in a peaceful manner. It has to waylay the vessel by certain signals, to enter into communication with the Captain, to examine the ship's papers, draw up a protocol, and, if necessary, take an inventory, &c. Fulfillment of these duties presupposes naturally that the war vessel has full certainty that the merchantman, on its part, also will act peacefully. Without doubt such certainty does not exist if the merchantman possesses armament which is sufficient to fight the war vessel. It can hardly be expected to discharge its duties under the muzzles of guns, whatever their purpose may be, without mentioning the fact that merchantmen of the Entente Powers, despite all assurances to the contrary, are—as this has been proved—provided with arms for an aggressive purpose and also use them for this purpose.

It would also be a misinterpretation of the duties of humanity to demand the crews of war vessels expose themselves without defense to arms of the enemy. No State could value its duties of humanity toward the legal defenders of the Fatherland less than its duties toward subjects of foreign powers. The Austro-Hungarian Government therefore could have stated from conviction that its promise made to the Washington Cabinet did not extend, from the very beginning, to armed merchantmen, because they, according to the valid principle and right which restrict hostilities to organized forces, are to be regarded as private vessels, which may be destroyed.

As history shows, it was never permitted under general international law that merchantmen oppose the exercise of the right of capture by war vessels. Even if a regulation of such kind could be found, this would not

prove that vessels should be allowed to arm themselves. It must also be taken into consideration that the arming of merchantmen would completely transform warfare on the sea, and that such a transformation cannot correspond with the intentions of those who endeavor to bring to bear the principles of humanity in warfare on sea. In fact, since the abolition of privateering no Government, until a few years ago, has thought in the least of arming merchantmen. At the Second Peace Conference, which was occupied with all questions of naval war law, the arming of merchantmen was mentioned only once. This utterance, however, is significant because it was made by high naval officers, who freely declared: "When a warship proposes to stop and visit a merchant ship, the commander, before launching a small boat, will cause a cannon shot to be fired. A cannon shot is the best guarantee that can be given. Merchant ships have no cannon on board."

Notwithstanding that, Austria-Hungary adhered to her promise also as regards this question. In the mentioned circular note neutrals were warned in time against intrusting their persons and property to armed vessels. The issued measure was not put in force at once, but a period of grace was given in order to enable neutrals to leave armed vessels which they had already boarded. Finally, Austro-Hungarian war vessels themselves have been instructed, even in the case of encountering armed enemy merchantmen, if, in view of the circumstances, it is possible, to issue a warning and take care of the rescue of passengers.

The statement of the American Embassy that the armed British steamers *Secundo*, *Uno*, and *Welsh Prince* were torpedoed by Austro-Hungarian submarines without warning is erroneous. [The *Secundo* and *Uno* are listed in marine registers as Norwegian vessels.] The Austro-Hungarian Government meanwhile received information that no Austro-Hungarian war vessel took part in the sinking of these steamers.

In the same manner as in the repeatedly mentioned circular note, the Austro-Hungarian Government—and therewith it comes back to the question of intensified submarine warfare—as mentioned at the beginning of this aide-mémoire and also in its declaration of Jan. 31 of the current year, issued a warning to all neutrals by fixing a certain period. Moreover, the whole declaration represents in essence nothing else but a warning, namely, that no merchantmen will be allowed to enter the sea areas exactly described in the declaration.

Moreover, Austro-Hungarian war vessels are instructed if possible to warn merchantmen encountered in these areas and to bring into safety the crews and passengers. The Austro-Hungarian Government also possessed numerous reports that crews and passengers of vessels which have been destroyed in these areas have been brought into safety. For the eventual losses of human life which never-

theless may occur in the destruction of armed vessels or such encountered in the barred zone the Austro-Hungarian Government can take no responsibility.

Little Risk From Austrian U-Boats

Moreover, it may be pointed out that Austro-Hungarian submarines solely are operating in the Adriatic and Mediterranean, and that, therefore, an encroachment of American interests is hardly to be feared from Austro-Hungarian war vessels.

In view of everything mentioned in the beginning of this aide-memoire, there need hardly be an assurance that the barricading of sea areas described in the declaration does not aim at destruction of human life or even its endangering. But apart from the higher aim of sparing further suffering to mankind by shortening the war, and solely to place Great Britain and her allies, who, without an effective blockade over the coasts of the Central Powers, prevent the sea traffic of neutrals with these powers in the same isolation, the step is taken to render them by this pressure more pliable toward a peace which bears in itself a guarantee and is durable.

That Austria-Hungary uses different means is especially caused by circumstances over which mankind has no power. The Austro-Hungarian Government is convinced that it has done everything in its power to avoid human losses. It would attain this aim, which is intended by the Central Powers, most quickly and most certainly if in those sea areas no single human life were lost and no single life were endangered.

Says Ancona Pledge Stands

Summarizing, the Austro-Hungarian Government can state that the assurance given to the Washington Cabinet in the Ancona case and renewed in the Persia case has neither been abolished nor restricted by its declaration of Feb. 10, 1916, and Jan. 31, 1917. Within this assurance it will also in the future, united with its allies, do everything so that the peoples on earth will soon again participate in the blessings of peace. If in the prosecution of this aim, which, as is well known, finds full sympathy in the Washington Cabinet, it sees itself obliged to prevent neutral sea traffic in certain sea areas, in justification of this measure it will point not so much at the attitude of the enemy, which it considers not at all worthy of imitation, but it will point out that Austria-Hungary, by reason of the obstinacy and malignity of her enemies, who intend her destruction, has been placed in a state of self-defense than which history knows no more typical example.

As the Austro-Hungarian Government finds inspiration in the consciousness that the fight which Austria-Hungary is waging serves not only for maintenance of its vital interests but also for realization of the equal rights of all States, it lays the greatest stress in this last and most severe period of the war, which, as it deeply deplores, demands sacrifices also from friends, on the confirmation by word and deed that the principle of humanity guides it, in the same manner as the law of respect of the interests of neutral peoples.

[Russian Cartoon]

An Unspeakable Libel

—From *Novi Satirikon*, Petrograd.

SHARK: "Ah, neighbor, I have been grossly insulted!"

"How?"

"I was mistaken for a German submarine."

"The Blacks Attack!"

A Vivid Battle Scene by Rheinhold Eichacker, a German Officer
on the Western Front

"After a lengthy artillery preparation, white and colored Frenchmen attacked our positions in heavy force. They succeeded in getting a foothold in some of our most advanced trenches. A furious counterattack drove them back again in a hand-to-hand encounter. Nothing else of importance."—*German Army Report.*

AT 7:15 in the morning the French attacked: The black Senegal negroes, France's cattle for the shambles. After a seven-hour suffocating drumfire that, according to all human reckoning, should not have left a mortal man alive. But we still lived—and waited. Six meters under the sod lay our "waiting rooms." Burrowed into the ground on a slant. "Courage bracers," they call them out there.

At 7:15 the enemy shifted his fire backward upon our reserves. Our pickets sounded the alarm. We sprang to arms, with our gas masks in place. For a few seconds the trenches resembled an antheap. There was feverish hurrying, running, shouting, and shoving. Just for seconds. Then everybody was at his post. Everybody who was alive. Every one a rock in the seething waves. Every one determined to hold his position against hell itself.

A gas attack! Several hundred pairs of wide-open warriors' eyes fixed their glances upon the ugly, smoking cloud that, lazy and impenetrable, rolled toward us. Hundreds of fighting eyes, fixed, threatening, deadly. Let them come, the blacks! And they came. First singly, at wide intervals. Feeling their way, like the arms of a horrible cuttlefish. Eager, grasping, like the claws of a mighty monster. Thus they rushed closer, flickering and sometimes disappearing in their cloud. Entire bodies and single limbs, now showing in the harsh glare, now sinking in the shadows, came nearer and nearer. Strong, wild fellows, their loglike, fat, black skulls wrapped in pieces of dirty rags. Showing their grinning

teeth like panthers, with their bellies drawn in and their necks stretched forward. Some with bayonets on their rifles. Many only armed with knives. Monsters all, in their confused hatred. Frightful their distorted, dark grimaces. Horrible their unnaturally wide-opened, burning, bloodshot eyes. Eyes that seem like terrible beings themselves. Like unearthly, hell-born beings. Eyes that seemed to run ahead of their owners, lashed, unchained, no longer to be restrained. On they came like dogs gone mad and cats spitting and yowling, with a burning lust for human blood, with a cruel dissemblance of their beastly malice. Behind them came the first wave of the attackers, in close order, a solid, rolling black wall, rising and falling, swaying and heaving, impenetrable, endless.

"Close range! Individual firing! Take careful aim!" My orders rang out sharp and clear and were correctly understood by all the men. They stood as if carved out of stone, their lips tightly pressed, the muscles of their cheeks swollen, and took aim. Just like rifle range work. The first blacks fell headlong in full course in our wire entanglements, turning somersaults like the clowns in a circus. Some of them half rose, remained hanging, jerked themselves further, crawling, gliding like snakes—cut wires—sprang over—tumbled—fell.

Nearer and nearer rolled the wall. Gaps opened and closed again. Lines halted and—rolled on again. Whrrr ratt—tenggg—sssstt—crack! Our artillery sent them its greeting! Whole groups melted away. Dismembered bodies, sticky earth, shattered rocks, were mixed in wild disorder. The black cloud halted, wavered, closed its ranks—and rolled nearer and nearer, irresistible, crushing, devastating! And the rifles were flashing all the time. A dissonant, voiceless rattle. The men still stood there and took aim. Calmly, surely, not wasting a

single shot. The stamping and snorting of thousands of panting beasts ate up the ground between us.

Now the wave was only 300 paces from our defenses—from their remnants—now only 200—100—irresistible, seething and roaring—50 paces!—"Rapid fire!" I roared, I shrieked, through the swelling cracking of the rifles. A hurricane swallowed my voice! Hell seemed let loose at a single blow, raging, storming, obliterating all understanding! Shoving and stamping, shrieking and shouting, cracking and rattling, hissing and screeching. A heavy veil hung over the wall. In this cloud pieces of earth, smoke spirals, black, red, white, yellow flashes, quivered and flared. Rattling, rapping, pounding, hammering, crackling. And the shots fell unceasingly. Clear and shrill the rifles, heavy and roaring the shells.

And now came the gruesome, inconceivable horror! A wall of lead and iron suddenly hurled itself upon the attackers and the entanglements just in front of our trenches. A deafening hammering and clattering, cracking and pounding, rattling and crackling, beat everything to earth in ear-splitting, nerve-racking clamor. Our machine guns had flanked the blacks!

Like an invisible hand they swept over the men and hurled them to earth, mangling and tearing them to pieces! As an Autumn storm roars over the fields they swept in full flood over the ranks and snuffed out life! Like hail among the ears of grain, their missiles flew and rattled and broke down the enemy's will! Singly, in files, in rows and heaps, the blacks fell. Next to each other, behind each other, on top of each other. Hurled in heaps, in mounds, in hillocks. Fresh masses charged and fell back, charged and stumbled, charged and fell. And there were always fresh forces! They seemed to spring from the very earth!

We had losses; heavy losses. Here a man suddenly put his hand to his forehead and swayed. There another sprang gurgling to one side and fell, as flat and heavy as a block of stone. S-s-s—it went above our heads. The French were throwing shrapnel against our trenches, hissing, cracking, and in volleys.

Hell still rages. The blacks get reinforcements. Finally the whites themselves charge, a jerky, rolling, bluish-green mass! In a powerful drive they get over the first rise in the ground. Now they have disappeared. Now they bob up, as out of a trap door. Here and there the ranks shoot forward in great leaps, the officers ahead of all, with their swords swinging high in the air, just as in the pictures! A splendid sight. Now they reach the bodies of the blacks. They halt for a few seconds, as if in horror, then on they roll over the dead, jumping, wallowing, dozens falling.

We still stand firmly in the breach. Our nerves are strained to the snapping point, gasping, bleeding, feverish! We dare not waver. "Steady, men! Steady!" We must calmly let them come as far as the wire entanglements, as the blacks did. The blacks? Where are they? Disappeared! Only they left their dead behind. The same thing will happen to the whites. We are waiting for them. The death-spewing machine guns are lying over there. They lie there and wait until their time comes. Steady, steady! They lie there and wait impatiently—but yet they are silent—Now!—No—I am raving! "Rapid fire!"—I hiss—My neighbor staggers—I only listen and wait, wait and listen, for only one thing. Something that has to come, must finally come, has to come! Great God, otherwise we are lost! Be calm, be calm! Now they will begin reaping! Now they must begin to rattle, our machine guns, our faithful rescuers—now—at once! What can they be waiting for? Why, they are there in the wires already. Hell and Satan! No man can endure that! They are hesitating too long—the enemy is almost in the trenches! Ah! At last! A rattling—a hoarse crackling—Heaven help us, what is that?

A devilish howling rises hoarsely from over there, lacerating, bestial, shrieking! The blacks, the devils! How did they reach our flank over there? That's where our machine guns are. It cannot be. There! Hell! They are carrying hand grenades, are in their rear! Heaven help us! And the whites! They are at our breastworks. Already they are in the

trenches, fighting like wild beasts. Horror makes them crazy. Help is coming to us from the left. The second company has fallen upon their flank. The French run like hunted animals. A shell bursts in their midst, catches twenty or thirty of them and throws them in the air like toys. They run still further, through the air, bowling along on their heads, gruesomely—and fall in heaps to the ground. Heads, legs, twitching bodies! The French run until back of the bodies. The rest of them are cut to pieces, or made prisoners. But now our men must come back.

We struggle for breath. Wounded men writhe around and moan and groan heavily. The trench is bathed in blood. Far more than half of the company has been slain. We are only a handful. I assemble the valiant men and distribute them among the trenches. They stand resolutely, breathing hard and gasping.

A furious rattling and buzzing and hissing calls us again to our posts. They are charging anew. Now the whites again, in front, on the side. They are on our flank! Back of them the blacks in frightful clusters. "Bring the sand-

bags!" The sandbags fly from hand to hand. A wall rises in the midst of the trench. The other half was overrun long ago and is a knot of struggling men. A piece of wood hits me on the shoulder—crack—I cry out! A shot lands in the midst of our ammunition—it was our last. This way with the hand grenades! We have got to smoke them out!

A roaring hurrah! Heaven help us, aid is at hand! The Fourth, and the Fifth—I know the men—and some of the First, too—all mixed up—dispersed troops rallied again. Now, up and at them! The French defend themselves furiously. They hold the trench. The dead are heaped up before their ramparts—but keep it up! A wild passion takes possession of me. My revolver and my dagger have been lost in the fighting. I seize a bottle. Hell sends it to me at the right moment! Like an animal mad with hate I rush forward. My bottle lands, crashing and splintering, on a woolly skull, with a distorted grimace. A hot shock rushes through my shoulder—a shock—a wrench—I grasp at the air—grasp something convulsively—throw myself in the air—and fall in a heap. A confused mist dances before my eyes.

Colossal War Expenses of Great Britain, Germany, and France

THE request of the British Chancellor of the Exchequer, Bonar Law, for a supplementary credit of \$250,000,000 on March 14 disclosed the fact that the total amount voted for the war by Great Britain for the year ending March 31, 1917, reached \$10,000,000,000. A total of \$3,000,000,000 was voted between Feb. 12, 1917, and the end of March.

Great Britain's "victory" popular loan exceeded all estimates; the total subscribed was \$5,001,564,750; the total number of applicants was 5,289,000.

Germany's New War Credit

The German Reichstag voted a new credit of \$3,750,000,000 early in March. In submitting the new budget the Minister of Finance, Count von Roedern, uttered some significant phrases. He said:

Germany's sincere proposal of peace has met with a refusal. Mediation from the side of the neutrals failed in consequence of the decision of our enemies. The British blockade of the German and neutral coasts, which neither as regards the means by which it is put into effect nor its extension to different classes of goods and neutral countries corresponds to the hitherto existing usages of international law, has been answered by an actual blockade by means of a weapon created by this war. For this reason there could not yet be any written regulations in international law governing this weapon. This weapon is the submarine.

He affirmed that Germany was forced into the war. In discussing the new budget he said:

New taxation proposals are submitted to you which amount for the next year to 1,250,000,000 marks and hold out the prospect of additional taxation on war profits later on. Moreover, a further war credit of an un-

precedented amount—namely, 15,000,000,000 marks—is asked for. The payment of interest on previous credits is fully provided for. The safety law which became necessary last year provides for an increase of the legal reserve from 50 to 60 per cent., but the budget brings in during the financial year no new money; therefore, an additional tax of 20 per cent. on the existing war taxation is necessary.

Count von Roedern then pointed out the great value of the coal produced in Germany and imported into Germany, which he had estimated before the war at 2,500,000,000 marks. The idea of taking over the coal mines by the State had been rejected as impossible. Germany could safely rely on her own production of coal and even on having coal for export during normal times. Coal could be taxed the more readily, since the prices at home during the war, as compared with those in foreign countries, were comparatively low. The average price in Germany, he said, was 15 to 18 marks, while Great Britain paid 20s. to 30s. per ton; Italy over 300 lire; France, in November, 125 francs to 150 francs for house coal; and North America \$6 to \$7; so that "an average tax of 2½ marks on coal and 80 pfennigs on lignite was not too high." Count von Roedern then dwelt on the proposed taxation of railway tickets and bills of lading. He pointed out that similar measures had already been taken in other belligerent countries. A tax of 7 per cent. would be placed on all freights and a tax of from 10 to 16 per cent. on railway tickets. He proceeded:

World's Total \$75,000,000,000

The war credit voted last October is nearly exhausted. As in all belligerent countries, our war expenditure during the last few months has experienced a certain tension. Our average extraordinary expenditure during October to January amounted in all to 2,775,000,000 marks. I have reason to suppose that, as between both groups of belligerents, the proportion today is still two to one; the war expenditure of the whole world exceeds 300,000,000,000 marks, (\$75,000,000,000,) and therefore not more than 100,000,000,000 marks (\$25,000,000,000) fall on us and our allies, while over 200,000,000,000 marks (\$50,000,000,000) fall on the Entente. The tension will not relax in the war expenditure during the next few months. The war credit of 15,000,000,000 marks is therefore asked for. Next month we must issue another loan. This exact picture, as shown by the budget,

is certainly serious, but our economic life gives no reason to look into the future with less confidence than hitherto. If the German people firmly believe in a happy issue of the final struggle which, in consequence of the plan of our enemies, has become inevitable, the German people may also expect that for this reason financial consequences are also to be deduced. Against the demand of our enemies for reparation we shall be able to put the word "indemnity." I have confidence in our economic future, in the unbroken financial strength of our people, and am convinced that, in view of our rapid technical development during the war and the firm determination of all circles of productive industry, everything which the war has destroyed will be rebuilt by our common labor.

Our strength is not founded on paper, as our enemies suppose, but on the unexhausted income of the people and on the fact that we did not fall into the slavery of debt to foreign countries, as our European enemies had to do in so high a degree. Our financial strength has been proved by the increase of the deposits in the savings banks, which in 1916 again exceeded 3,000,000,000 marks, by the extraordinary increase in the deposits of the banking institutes, and by reports of 400 limited companies, which show not only increasing profits but also wise reserves. The war has proved that we are united in the will to hold out to victory. I know that after the war we shall not be united on all economic questions, but there is one thing we shall carry over into peace time—the conviction that the development and increase of our production are of equal importance to all classes of the population, and that we must work together toward reconstruction. The Federal Governments count on co-operation on these lines, especially from the Reichstag, which will prove its determination to do its share by maintaining a sound financial policy, by the impartial examination of the proposed taxes, by providing the means for the continuance of the war, and by ready support of the coming loan.

War Expenditures of France

At the end of June France will have spent during the war in round figures 83,000,000,000 francs, or more than \$16,000,000,000. The amount of the short-term national bonds in circulation at the end of February was 14,500,000,000 francs.

In addition to her expenditures, France has advanced to her allies 3,875,000,000, making a total outlay since Aug. 1, 1914, of 87,000,000,000 francs. Loans made in the United States amount to 2,188,860,000 francs. The bonds placed in England will yield 5,927,128,000.

Great Britain Restricts Imports to Food and Munitions

PREMIER LLOYD GEORGE announced to the House of Commons Feb. 23, 1917, that orders would be issued at once for a drastic restriction of non-essential imports, so that the full cargo space of shipping would be employed for food and munitions. He announced that minimum prices for farm products would be guaranteed over a term of years to encourage the farmer to plant every available foot of land, and that this would be supplemented later by an announcement that land owners would be forced to cultivate their land.

The Premier announced that a million tons of food luxuries and several million tons of paper, ore, and lumber would be lopped off the nation's imports. He said that the stocks of food were lower than ever before, not because of the enemy's submarine activities so much as because of the bad harvests. In the course of his address he stated that shipbuilding was increasing by special efforts, at some yards as much as 40 per cent.

The following is the royal proclamation, dated Feb. 23, 1917, relating to this announcement:

(1) As from and after the date hereof, subject as hereinafter provided, the importation into the United Kingdom of the following goods is hereby prohibited, viz.: Aerated, mineral, and table waters; agricultural machinery; antimony ware; apparel, not waterproofed; (except boots and shoes;) art, works of; baskets and basketware of bamboo; books, printed, and other printed matter, including printed posters and daily, weekly, and other periodical publications, imported otherwise than in single copies through the post; boots and shoes of leather, and material used for the manufacture thereof, not already prohibited; brandy; clocks and parts thereof; cloisonné wares; cocoa, preparations of; cocoa, raw; coffee; cotton hosiery, cotton lace and articles thereof; curios; diatomite and infusorial earth; embroidery and needlework; fancy goods, known as Paris goods; feathers, ornamental, and down; fire extinguishers; flowers, artificial; flowers, fresh; fruit, raw, of all descriptions, (except lemons and bitter oranges,) and almonds and nuts used as fruit; glass manufactures not already prohibited; gloves; hats and bonnets; hides, wet and dry; incandescent gas mantles; jute, raw; leather, dressed and undressed; linen,

yarns, and manufactures of; lobsters, canned; mats and matting; mops; painters' colors and pigments; perfumery; photographic apparatus; pictures, prints, engravings, photographs, and maps; plated and gilt wares; quails, live; quebracho, hemlock, oak, and mangrove extracts; rum; salmon, canned; silk, manufactures of, not including silk yarns; skins and furs, manufactures of; Soya beans; stereoscopes; straw envelopes for bottles; straw plaiting; sugar, articles and preparations containing, used for food; (except condensed milk;) tea; tomatoes; typewriters; wine; wood and timber of all kinds, hewn, sawn, or split, planed or dressed.

Provided always, and it is hereby declared, that this prohibition shall not apply to any such goods which are imported under license given by or on behalf of the Board of Trade, and subject to the provisions and conditions of such license.

(2) As from and after the date hereof the prohibition imposed by the Prohibition of Import (paper, tobacco, furniture, woods, and stones) Proclamation, 1916, on the importation of the following goods shall be removed, and the said proclamation amended accordingly, viz.: All periodical publications exceeding 16 pages in length, imported otherwise than in single copies through the post.

Of the above articles now barred to Great Britain the exports from the United States in 1915 were \$9,220,809, and \$67,613,814 in 1916.

The Prime Minister's announcement also contained the following proposals:
MINIMUM PRICES TO BE GUARANTEED TO FARMERS

Wheat—60s. per qr. this year, 55s. per qr. in 1918-19, 45s. per qr. in 1919-20, 1920-21, and 1921-22.

Oats—38s. 6d. per 336 lbs. this year, 32s. per 336 lbs. in 1918-19, and 24s. per 336 lbs. in the next three years.

Potatoes—£6 per ton this year.

In case the State commanders' cereals or potatoes, the maximum prices to be fixed in consultation with the Board of Agriculture.

FARM LABORERS' WAGES

As a corollary of the guarantee of prices, a minimum wage of 25s. per week to be paid by farmers to every able-bodied man during the period of the guarantee.

The National Service machinery to be used for deciding whether a man is able-bodied.

RENTS

Farmers to be guaranteed against the raising of rents except with the consent of the Board of Agriculture.

IMPORTS TO BE PROHIBITED

Apples, tomatoes, and certain raw foods; aerated, mineral, and table waters; coffee and cocoa.

Printed posters, paperhangings, and certain kinds of foreign printed matter and periodicals.

Foreign teas.

Certain manufactured articles of luxury.

IMPORTS TO BE REDUCED

Imports of paper material to be reduced to 640,000 tons, the reduction to be distributed equally between the printing and packing trades, and the use of paper for posters, catalogues, and for Government publications to be restricted.

Imports of oranges, bananas, grapes, almonds, and nuts to be restricted to 25 per cent. of the supply of 1915.

Canned salmon imports to be cut down by 50 per cent.

Indian tea, (amount of reduction not stated.)

(A total saving of 900,000 tons to be effected on food and feeding stuffs.)

ALCOHOLIC LIQUORS, &c.

Output of beer to be reduced from the 18,000,000 barrels now allowed to 10,000,000 barrels, (to effect a saving of 600,000 tons of foodstuffs per annum.)

Imports of spirits and wines to be further reduced by 75 per cent. on the 1913 basis.

Rum to be excluded.

Imports of leather goods, boots, raw hides, and bottles to be restricted.

Timber for British Army in France to be obtained in France.

Timber for home use to be obtained at home.

Home production of iron ore to be increased.

A Deserter's Wife and Her Dilemma

IS a woman to blame if she receives her husband when she knows him to be a deserter and does not denounce him? This was the question discussed in the Paris Appeal Court in a recent case. Mme. Marcelle Veryken, a corsetmaker, aged 27 years, was surprised last July by a visit from her husband, who had deserted from the Seventy-fifth Regiment of infantry. She gave him an asylum, remained with him at the conjugal domicile, and did not denounce him. Arrested in September, the soldier's wife wrote to the examining magistrate requesting to be set at liberty. She had, she said, always lived an honorable life; her only fault was that she had kept her husband at home, and no one expected a wife to do less.

Mme. Veryken was released, but was brought up before the Correctional Chamber for complicity in desertion by concealing her husband, and sentenced to three months' imprisonment. When her appeal came on for hearing the prosecution urged that in such circumstances a wife ought to abandon her home instead of remaining with a deserter, whose crime constituted a grave insult to her.

The court, however, took another view.

There was no proof, it maintained, that the wife had provoked or approved of the desertion of her husband, or concealed him. The court could not reproach her with having remained at home after her husband's return, for she was only fulfilling a legal obligation. It would be excessive, continued the judgment, to blame Mme. Veryken because she did not denounce her husband. To do so would be to demand of a woman having affection for her husband a sacrifice above her power. The court, therefore, annulled the previous judgment, and acquitted Mme. Veryken.

A like indulgence was, however, denied to Mme. Desmares for a similar act. She, unfortunately, was unable to produce her marriage lines, and the case of the deserter, named Goujy, was aggravated by the fact that in 1913, when he saw the war approaching, he hid himself, changed his name and address, and remained in concealment until discovered in 1916. His companion and accomplice was sentenced to one year's imprisonment with the benefit of the First Offenders' act, and the deserter Goujy was sent to prison for five years.

A German Peace League That Failed

By John T. Wheelwright

"Territorial aggression and national abasement will pave the way for fresh war."—Address of British Labor Independents, September, 1914.

BOURRIENNE* reports Napoleon as saying in 1805: "There is not sufficient unanimity among the nations of Europe. European society must be regenerated. A superior power must control the other powers and compel them to live at peace with each other, and France is well situated for this purpose"—and thus of Germany would the German Emperor speak today. The great Corsican battled for ten years after 1805 to establish that supreme power of France in Europe, which was to insure peace on earth, but the nations to be controlled were too human to enjoy peace on such terms.

At Napoleon's downfall tired Europe rested on its arms for nearly forty years.

It is now proposed to substitute for the one "superior power" a league of States to enforce peace by mutual agreements, and President Wilson, in an address to our Senate, recently proclaimed his belief that the United States should be a party to this agreement, and that the present war should be terminated by a peace that shall stop short of conquest by either side.

At a dinner given in New York on Nov. 24 last by the League to Enforce Peace communications were received approving the principle of forming such a permanent league of nations from Aristide Briand, Premier of France; Chancellor von Bethmann Hollweg of Germany, and Viscount Grey, Great Britain's Secretary of State for Foreign Affairs.

The German Chancellor in his message said: "The first condition for evolution of international relations by way of arbitration and peaceful compromise of conflicting interests should be that no more aggressive coalitions are formed in the future. Germany will at all times be ready to enter a league for

the purpose of restraining the disturbers of peace, and will honestly co-operate in the extension of every endeavor to find a practical solution, and will collaborate to make its realization possible. This all the more, if the war, as we expect and trust, shall create political conditions which do full justice to the free development of all nations, the small as well as the great nations. Then it will be possible to realize the principles of justice and free development on land, and of the freedom of the seas."

The Chancellor's message is couched in language none too clear. Can it be believed that the German Empire will co-operate in this league? As Prussia, Austria, and the other German States were once members of a "league to enforce peace" called the German Confederation, it is conceivable that the Teuton allies might, after this war, under certain circumstances, join such a league and abide by the compact.

The "Bundes act" of the German Confederation provided that in case of a difference between two States the questions at issue should be submitted to a committee of the Diet for solution. When the Diet decided a question, and made a decree, it was the duty of the Diet to appoint a corps to carry out an execution against a Federal State. The Federal army was not intended to be brought into requisition except to repel a foreign foe. By the Federal act members of the Confederation were strictly forbidden to make war on each other. In case of a State proving refractory, a summons was to be addressed to it to conform with the resolution of the Diet. Then, in case of refusal, an execution was ordered, and a State or States charged with carrying it out; but before the last forcible means were taken another summons was to be made, so as to give the State at fault another chance to avoid punishment.

War between the States was considered

*Scribner's edition. Vol. II., Page 385.

to be impossible, but this was a false assumption, as the events of 1864 proved.

Decree and Execution

The Schleswig-Holstein question became acute in 1860, when Denmark endeavored to get control of Holstein, a member of the German Confederation.

In 1864 Federal execution was ordered by the Confederate Diet against the Grand Duke Charles of Holstein to compel him to carry out Confederate decrees of 1860 and 1863, and an army was formed of the lesser States, composed of 6,000 Saxons and 6,000 Hanoverians; a further army of 5,000 Prussians and 5,000 Austrians was held in reserve, but the latter two great powers of the Confederation undertook the task.

Great Britain had encouraged Denmark to resist, but in the end she stood aside and allowed the Danes to be crushed in the war, so that Denmark, instead of gaining control of the Duchy of Holstein, lost both it and Schleswig.

Austria and Prussia came to an agreement in regard to the Duchies to the effect that Prussia was to have the administration of Schleswig and Austria that of Holstein, although the countries to be thus governed by these two powers wished to be united. Then Austria refused to consent to the annexation of the Duchies to Prussia, and appealed to the Diet and to the Middle German States to aid her in case of attack by Prussia. At the same time Prussia addressed a circular note to the German States, in which she begged them to inform her what course they would pursue supposing she were to be attacked by Austria. The majority of these States referred her to the Diet of the Confederation.

Prussia then made overtures to Austria, but the latter power refused to entertain them. The powers stepped in to try to prevent war. Austria placed the solution of the Schleswig-Holstein situation in the hands of the Diet of the Confederation, promising to abide by its decision. In this case the Diet voted a decree to accede to the demands of Austria, although her call for execution by a Federal army was contrary to the spirit and letter of the act. The vote of the

States for this decree stood 9 to 6 on June 14, 1866. Prussia thereupon issued a circular note calling for a new confederation, from which Austria and Luxemburg were to be excluded, and the "six weeks' war" between Prussia and Austria ensued.

We see, then, that the elaborate machinery to avoid war failed to work successfully when the two strong members of the confederation came to a disagreement. Each was struggling for the leadership of the confederation—Austria to retain her old hegemony, and Prussia, under the subtle Bismarck, to displace her. These two powerful nations with totally irreconcilable views had to settle their differences by the sword, notwithstanding their being members of a "league to enforce peace."

In this war the "needle-gun" brought swift victory to King William and his allies, and four years later the aggrandizement of Prussia brought about its war with France. The annexation of Alsace-Lorraine, considered necessary for the protection of Prussia and the subjection of France, has led to the alliance of that country with Russia. Thus we find that the present catastrophe in Europe goes back lineally to the Pandora's box of the Schleswig-Holstein question.

This review of events shows that the first league to enforce peace was not happy in its results, and yet it may be that, as Prussia once accepted a constitution which provided for the submission of rival claims of Confederate States to the Confederate Diet and the promulgation of decrees and the enforcement of those decrees by Federal execution, it might, in order to bring about a stable peace between the States of Europe and Great Britain, bring itself to an adhesion to some such a league as is now planned.

The present upheaval in Europe was perhaps caused by the disturbance of the equilibrium of the Balkan States as well as by the growing military power of the German Empire and its avowed ambition, which were curbed by the constriction of Germany within its narrow bounds. The first serious vibrations felt

in Western Europe came from the Balkan States. Now, after two years and a half of war, the control of the bridge between the Teuton allies and the Near East is being bitterly contested. If the Entente Allies should not succeed in barring this eastern extension of Germany over its wished-for vassal States of Austria-Hungary, Serbia, Bulgaria, Rumania, and Turkey, the German Empire, like Prussia in the old German Confederation, would be too strong to submit a quarrel to the arbitration of a council of a league of nations. But if the Teutons fail in the Balkans, and the Entente Allies hold the "bridge," Germany might well be a tractable member of such a league, after the experience of this war. This contest on the eastern front seems the vital tug of war, and the western fighting seems now to be a necessary corollary of it.

The practical question, then, before the world is this: If a State, a member of such a league, is strong enough, or thinks it is strong enough, to stand against all the others to gain its end, will it abide by any decree made by the proposed League to Enforce Peace, even after arbitration before the league tribunal, it being understood beforehand that such a refusal would lead to the coalition of the whole world against it?

It is quite clear that before the expe-

riences of the "world war," great nations would not have been bound by any such agreement. When the important interests of a nation are at stake, its course has almost always been selfish, but the terrible war may be teaching a lesson even to that nation whose strict adherence to a league would be the only guarantee of its success.

It seems fairly clear, then, that rather than to attempt what may be impossible, that is, the humiliation of Germany, an effort should be made, after a check to the Teutons in the east, to make a peace which should give all the countries their aspirations—the return of Alsace-Lorraine to France, a recognition of Germany's necessity for expansion, and an outlet for Russia to the Mediterranean, and provide for the restoration and indemnification of ruined small countries; Great Britain has all she wishes today, and only desires to be left alone.

The unstable equilibrium of Europe must be cured before a stable foundation for peace—or for a peace league—can be laid. Communities under alien rule, races governed by other races, religions ruled by other religions, countries shut off from their natural development, countries forced into unnatural expansion, are never content. It is only by minds convinced of these premises that a sound peace can be made.

Jerusalem

By O. C. A. CHILD

Again the Briton nears the ancient gates!
The city of the Holy Sepulchre
Sits in its Eastern calm and dumbly waits
The coming of the legions from afar.

They're dust a thousand years, the knightly train
That followed Richard's leopard-blazoned shield
Down the long road that valor pointed plain—
The path of honor to the stricken field.

Now men as bold as they, their sires' sons,
Toil through the sands where centuries ago
Their forebears fought—awake with roaring guns
The dead who heard crusading trumpets blow.

Perchance the ghost of grim old Saladin
A scimitar across their path may fling,
Yet shall one wave them onward till they win—
The wraith of England's Lion-hearted King!

At the Western Fighting Fronts

By Frank H. Simonds

Frank H. Simonds, associate editor of The New York Tribune, visited the battlefields in France and had personal interviews with the British and French Premiers and military chiefs in February, 1917. He presented his conclusions in a series of articles, parts of which, by special agreement, are herewith presented in CURRENT HISTORY MAGAZINE. Mr. Simonds's judgment on the situation in Europe is highly regarded in well-informed circles.

[Copyrighted—Printed by Special Arrangement]

BEFORE I went to the British front and talked with the British commanders I shared the view of most uninformed observers from afar that the main purpose of British strategy and tactics alike was to pierce the German lines, to force the Germans out of France by some swift, complete stroke—I believed that this was a possible thing.

But I doubt if any British General of authority really believes or expects this sort of outcome to the war at the present time. Rather the prevailing notion is summed up in Grant's memorable words—and the British Army expects to fight the present campaign out on the existing lines if it takes all Summer or several Summers. Indeed, I was struck with the emphasis Sir William Robertson laid on the parallel of the civil war when I talked with him in London later.

Here is about the point of view of the British Army in France:

"Today we have more guns and more ammunition than the Germans. We are pounding them day and night as they once pounded us. The weakening in their morale is slowly but surely growing, as is demonstrated by the number of desertions that are taking place and the growing readiness of units to surrender.

"We are pounding without ceasing, and the results of the pounding prove not

that the German troops in front of us are about to collapse, not that the German lines are about to break up like a frozen river with the Spring thaw, but that some day this process of weakening will have serious consequences. It may be that the Germans will avoid these consequences by gradual retirement, but such gradual retirement shakes the morale of the soldier and of the nation. It may be that the Germans will hold on as Lee did before Richmond until the last, and thus court disaster, such disaster as came to Lee. But these things are in the future.

"As to piercing the German lines, given the present style of war, given the magnificent organization of the German lines, given their mechanical resources, notably,

machine guns, this is a long task. And the main thing is not to pierce lines, but to kill Germans and to wear out the German armies. It makes relatively little difference whether this is done on the line of the Somme or on the line of Cambrai, or even at the French frontier, from Hirson to Lille, behind which is again the line of the Scheldt and the Meuse—the best line of all. Each time the German shortens his line he reduces the number needed to hold it and the strain upon his resources.

"The parallel is, after all, not the football field, but the prizering. We shall only defeat Germany by exhausting her;

FRANK H. SIMONDS

we shall only win by a knockout; and the knockout may come in one corner of the ring or the other.

"Two years ago we were holding our lines by rifle fire against high explosives. In the second week in May, 1915, Field Marshal French was compelled to attack at Festubert to aid the French and take the pressure off the Canadians in the Ypres salient. He had ammunition for forty minutes of bombardment, and that was all. Then the infantry had to attack, and it cost 8,000 casualties. We had neither machine guns, trench mortars, nor any of the instruments Germany had been accumulating for years. German aircraft were supreme in our sector.

"But today we have more guns and better guns than the Germans. We fire four shells to the Germans' one, and in the battle of the Somme not a German aircraft 'came over' for days on end. Their artillery shot in the dark; ours was informed by our aviators. At the beginning of the battle of the Somme we had terrific losses because it was a new experience and a new army. A brigade attacking at one point lost 1,900 killed, 1,800 wounded, and brought back 300 men. The other day, in one of the last attacks, another brigade lost 1,400 men, and, in addition to burying 900 Germans, brought back 1,800 prisoners.

"Night and day we pound the Germans. Their artillery does not reply much of the time. We raid their trenches, and they seldom react. We take an ever-increasing number of prisoners. We see ever-increasing signs of wearing out. Do not misunderstand—the Germans are still very strong. The new units arrive, each soldier carrying his extra pair of shoes. They are well fed and well led; they will be to the last.

If there is desertion and surrender in some units, others fight as well as ever and there is no 'Kamerad' business with them." * * *

No Victory This Year

I do not believe the British Army in France expects to win the war this year. I do not believe that the Generals are thinking in terms of a day, a month, or a year. What seems to be the feeling is

that after two years and a half of war there has been fashioned a British Army which is still gaining in knowledge and strength, but already has a proved superiority over its foe in morale, in material, and in the things that may be measured by the slow but sure retrogression of the Germans before them. For nearly two years the British Army hung on, now it is advancing; it escaped annihilation, it is experiencing success.

One of the questions I asked all the Generals with whom I talked was as to the possibility of a German offensive at some point on the British front. All agreed that it was possible; some expected it. A push at the Ypres salient, the worst position on the whole front, was frequently suggested. General Malletterre in Paris quite strongly argued that the Germans would make this attack. I think that there is a considerable expectation in London that it will come, and I find this view repeated in later dispatches commenting upon the German retirement about Bapaume.

But such an offensive carries no real peril to the mind of the British Army in France, which is chiefly interested to know if the Germans will bring out some new device, some new weapon like "poison gas," and endeavor by using it to open a gap in the British front such as was opened at Ypres just two years ago next month and offered the Germans one of the golden chances of the whole war.

Troops in Fine Condition

Of the physical condition of the British Army it is impossible to speak too highly. I was in France in the zero weather of January. Every morning I rode out along the roads and camps, and never have I seen so many soldiers, or soldiers looking so young and strong and fit. It seemed as if all the eastward leading valleys of France were swarming with British, Canadian, and Australian troops pushing onward to the front; it seemed an endless and inexhaustible flood, while behind, each little village had new reservoirs of khaki-clad Tommies. * * *

From the British Army in France, with which I stayed a week, I brought away the feeling of confidence and of intelli-

gent optimism. It has the appearance of an army which has undertaken a contract, not with a time-limit clause, not with a fixed hour or place of completion. It has undertaken a contract to dispose of the German military problem, of that part of the German Army assigned to it to deal with. It feels that it is doing the work, it recognizes that the way is still difficult and the time may yet be long. It expects new German attacks and it envisages the possibility of local German successes, but it has only one possible apprehension: it looks not to the front and the Germans for its main peril, but to England and the man behind the lines—if he can hold, the end is assured and the fate of the "Hun" is sealed. And this is the feeling of the French Army quite as well. The soldier sees victory, unless his civilian fellow-citizen weakens—and of this the signs are few in England, as in France.

I can perhaps sum up my impression of the British Army in France by saying it recalls all that I have heard and read of the armies of the North in 1864. It

is a volunteer army in the main; its officers are men proved by the test of two years and a half of war. Its men, volunteers though they are, are no longer raw or green. Haig, Horne, Rawlinson, Gough, Allenby, Plumer—these Generals commanding armies have survived the test of battle elimination.

As an army the British force has been battered, driven, it has been defeated and it has been repulsed. Its experiences recall those of the Army of the Potomac from the Peninsula to Gettysburg—but, like the Army of the Potomac, it has found itself, it has measured itself against a foe ready and trained and equipped as Lee's army was not. And it is advancing. The Tommy in the trench more clearly than any General or military writer sees and weighs the evidence of German weakening. Hence his supreme confidence. Hence for him the German peace proposal was the plea of the beaten.

The nearer you get to the German line the more serene the spirit of the British seems.

The Battlefield of the Somme

Over an area perhaps of ten miles by twenty, of the battlefield on the Somme, the whole face of the earth has been changed, the heart of hills has been blown out; you look up the slope of a considerable hill, you climb with difficulty up its rounding slope, and suddenly you gaze down into a chasm, a volcano's crater; all the interior of the hill has been blown out by a mine; the hillside is an open shell; an ocean liner could be concealed in the crater.

Coming out of Albert along the road so many thousands of men have followed to death one approaches the field of actual fighting with little real warning. Albert itself is a shelled, half-destroyed town. The tower of its church, with a statue of the Virgin suspended in a prostrate position across the tower, has become a thing familiar to all who have read of the battle. When it falls, so the people of the region believe, peace will come. But Albert is only a shelled

town; many of its houses stand, most of them retain their walls and many their roofs.

But a mile the other side of Albert, traveling toward Péronne, one comes suddenly out upon the most terrible and bewildering scene of desolation it is possible to imagine. From the upper layer of the earth there has been swept away not alone the trees, the sod, the outer covering, but the very depth of the lower strata has been churned up and scattered about. Of a sudden in the midst of the landscape of Picardy, with smiling valleys and pleasant woodlands, there is the image of the Sahara, of something more than the Sahara, of the fields above Pompeii or Messina, down which have flowed the streams of lava which not only engulf but endure.

Only Skeletons of Hills

Turning off the main road one leaves the car and climbs heavily up a hillside.

Along this hillside ran the first line of German trenches, but now there are neither trenches nor semblances of trenches. This hill and all the surrounding hills are worked by shell fire until they resemble nothing so much as the pictures of the surface of the moon, familiar to all who recall the geographies of their youth. The flesh of the hill has been swept away; only the skeleton remains.

Occasionally, where the slope of the hill is undulating, the suggestion of a German dugout remains, perhaps a dugout overwhelmed by the first deluge of fire and still holding in its unexplored depths the scores of Germans who inhabited it when the avalanche arrived. All over the hillside, too, is the litter of war, unexploded shells, the fragments of bombs, the débris of earlier and later camps. Always, too, wherever there is a bit of level ground are graves, endless graves, graves placed without order and without system—the graves dug by men pressed with the need to get forward, compelled to lay aside all regard for the ceremony of inhumation.

From the hill of Mametz one looks westward beyond the battlefield. Across a little ravine the opposite slope rises, still but little scarred. The frontier of desolation is exactly marked; it is as plain to the eye as if it were indicated upon a map. But looking westward over miles and miles, there is nothing but the wild scene of desolation. The surface of hill and valley has been swept away; it is as if the outer and the inner strata of the earth had in some fashion changed places. It is destruction suggesting that of Sodom and Gomorrah—a destruction deliberately designed to make impossible forever the return of men to their old fields.

I do not know any way that one can give any slight hint of the desolation of the battlefield of the Somme. There it lies, ten miles deep, one shore touching the furnace which is still burning up and destroying the surface of the earth and all animate and inanimate things thereon. At the other shore there begins sharply the countryside of France, and between the two shores is an infernal

region in which at least a million and a half of men, British, German, and French, have been killed or wounded. Perhaps half a million men lie buried in the shattered folds and turns of the scarred hillsides or in the flats beside the little brooks.

Mametz Swept Off the Earth

Sometimes in the Sunday supplements scientists or alleged scientists used to write articles describing the time when the earth would begin to dry up, when flames from inside the narrow crust would burst forth. What they sought to describe the artillery of the last great war has illustrated on the slopes of the Picardy hillsides.

Standing still on the slopes of the Mametz hill, on the slopes toward the north and east, one looks out upon the sites of many villages. At your feet was Mametz, but of Mametz there is not a stone, not a fragment. It has not been buried; it has been literally blown from the face of the earth; it has dissolved in dust, and the dust has been swept away. Here was a well-built little French town, with its solid houses of plaster and stone, old houses enduring from other centuries. It had the usual church, the familiar place, the fountain, all the slight but permanent details of a French village, and now there is just nothing.

And what is true of Mametz is true of Montauban; it is true of Fricourt; it is true of I do not know how many more villages. They are gone, and sometimes the hills upon which they stood are gone. On the map you will see marked many little bits of woodland, the usual communal grove or the inevitable clump of trees surrounding the frequent châteaux. But the woods are gone.

Woods Obliterated Near Verdun

I saw the same thing at Verdun, when I visited Fort de Vaux before I went to the Somme. There half a dozen of the woods that have filled the battle reports have vanished—Bois de Laufée, Chenois, Capitre—they are gone, and there are left neither stumps nor stump holes; the ground out of which they grew has been worked into a mass of holes, huge cavities

in which men and animals have disappeared and been drowned.

This new artillery fire does not wreck; it does not even pause with obliteration; it alters the very surface and the sub-surface; it raises new hills and it destroys old elevations.

And when the armies are gone and the war ends, (for even this war must end some time,) it is interesting, if tragic, to think of what will be the emotions of all the little people who inhabited these regions, people who, faithful to the French love for the land, will return to their old homes. And of their old homes they will find not even a fragment; the fields that they cultivated and that their fathers cultivated will have disappeared; the subsurface will still be honeycombed by the corridors of mines or the molelike burrows of the dugouts.

I do not think one can get any conception of the real terror of this war who has not seen the country of the Somme or of Verdun, who has not seen the fashion in which this war, like a malignant war spirit, has not alone destroyed all that there was of homes of human habitation and of the fields of human effort, but has swept the earth with fire and sown it with salt, as if in the determination that there should never again be life, that men should not exist or fruit and foods grow in the fields over which it had passed.

Yet it is not alone the sense of destruction that one feels at the Somme. Indeed, I think the sense of human industry, of enormous effort of innumerable men at their tragic task of war, even passes the impression of desolation. Take one of the large anthills that one sometimes sees in a country field, draw a rake deeply through its curved summit, and watch the myriad of ants come swarming up and begin what seems a mad and frantic outburst of industry, and you will have some faint suggestion of what the battlefield of the Somme is like.

Industry Amid Ruin

For, in spite of the desolation, there is no lack of population, there is no lack of human activity. Indeed, looking down upon any section of the field, it suggests

pictures that one sees of some great engineering operation, the removal of a mountain, the transformation of some square miles of the surface of the earth, a labor like that of Panama. For grid-ironed amid all the waste are railroad tracks, the bottom of every valley is carpeted with rails, and the noise of the distant artillery is deadened by the shrill whistles of engines as they drag cars up toward the front—toward the railroad—the “dump” of the military argot.

And beside the railroads are highways, the white, even, and splendid highways of France. They alone have survived the ruin, as the stones of the Appian Way have outlived the centuries and the onrush of other barbarians. And along these highways flow the most amazing streams of mankind that are conceivable, and not alone men but motors and horses; the voice of the Missouri mule challenges the passage of the “tank” and the donkey of the pack train alike.

Up these roads, following their artillery, surrounding their rolling kitchens, the men of Australia and of Canada move between those of Scotland and of England. And the roads are crowded day and night, like the roads that lead to the Polo Grounds when a ball game is scheduled. And on the shell-swept hillsides every sort of shanty and barrack affords temporary resting place for the mender of highways or police of the rear. It is as if the flower and pick of British imperial manhood had suddenly sought a dwelling place in the desert.

And the impression is bewildering beyond all else I have ever seen. Here are some square miles of the earth's surface which have been swept and torn and wrecked by shell, by the fury of the weapons invented by man, and the men who have done these things with the maddest of all energy, with the most terrible of all machines, have now come forward to restore to human use what they have just destroyed. First they have created a wilderness, and worse than a wilderness, and then they have fared forward into the wilderness, bringing with them all the machinery they could devise, not to repair all the injuries they have wrought, but such of these injuries as

are hampering their purpose—which purpose is to get forward swiftly and turn still more miles of France into the same centre of desolation.

Scene of Lasting Destruction

I do not know how any one can quite describe this battlefield of the Somme so that the man who lives in peace on this side of the Atlantic can understand it or grasp something of the supreme insanity and the supreme intelligence which are both unmistakable there. I am sure that centuries from now men and women will go to this place to see the surviving evidences of the storm that blighted it a year ago. I have never seen anything that approached the terribleness of the sight, save about Verdun.

Yet an engineer, a man interested in the moving of mountains or the transformation of valleys to human ends, would look down also upon these fields today and see an order, an organization, a development of human genius and human system, which would take him completely and command his admiration. The saddest and most completely wasted corner of a valley may conceal a terminal station that would make an operating railroad man jealous. A New York policeman, a traffic man, used to the problems of Fifth Avenue and Forty-second Street, might shrink from the task of separating and ordering the stream that flows through what was once the main street of Montauban and is now a white road in the midst of powdered ashes.

And like the forest fires of the North, destruction advances, steadily, surely. The road below the hill at Mametz passes Montauban, Guillemont, Ginchy, it reaches Combles, it arrives at Sailly-Saillisel, which is now the extreme front, but tomorrow the flames will pass Sailly-Saillisel. And when the storm has passed, then the railroad and the highway will push forward, more men will come with tools and with machinery, and they will reclaim to their own purposes this land that has been deluged with steel, torn by mines, watered by the blood of thousands and thousands of men coming from the uttermost parts of the earth and exhaust-

ing their resources, first of destruction and then of reconstruction.

Last Summer we used to wonder why the British advance was so slow. I do not think one wonders when one clammers with difficulty up the steep slopes of one hill and sees beyond this hill after hill, valley after valley; not great hills, but sharp and steep hills, all now like to nothing so much as the deserted nest of hornets, along whose slopes there may still be traced in places the cuttings of the trenches and tangles of barbed wire.

"Tank" a Symbol of Fury

Beyond Mametz, at Trones Wood, my guide showed me a "tank," disabled and lying beside the road. Oddly enough, it seemed to me the only really appropriate thing in the whole accursed region round about. It seemed animal rather than mechanical, like a prehistoric animal, and it was not difficult to imagine that all the scene of desolation that extended on every side was the work of this animal, of many animals such as this; that there was still going forward the war of some prehistoric age between man and this scaled creature, and that in its fury, its dying fury—for this "tank" was dead—it had torn up the Trones Wood, lashed about itself and overturned trees and rooted them up.

One more detail. All this field of contrasting waste and reconstruction is well within reach of German shell fire. Now and again the storm begins and the caravans of men and animals slowly extend, draw out into thin groups, and go on. It never stops by day or by night, this steady, even flow of human life toward the extreme front at which annihilation becomes absolute, at an arbitrary frontier of sandbags.

The centre of the storm has passed, but the storm area includes all of the torn and wrecked country, and always there is to be heard, not distant, the steady drumming of heavy artillery; the hills are shaken almost every moment by the tremendous explosions, and the intermittent cannonade rises to the magnitude of an earthquake again and again.

A year ago I visited the field of the Marne. Here there was nothing of de-

struction visible that might not have been the work of the men and the machines that fought Napoleon on the same ground a century before. On the battlefield of Champagne, of 1915, as I have said, the effect of shell fire was patent but temporary; the walls of houses stood and the fields can be plowed and planted when the trenches are filled and the barbed wire removed. But at the

Somme there is nothing more terrifying in all the terrible things that one sees than the mutilation of the surface of the earth itself, the permanent destruction of the hills, and the lasting scarring of the hillsides, sown as they are with the shattered fragments of half a million of human beings and condemned to eternal sterility. Surely the Somme must be the last word in war.

America as Viewed by the Allies

Mr. Simonds, in discussing the effect of the break in diplomatic relations between the United States and Germany and the probable entrance of this country into the war, says:

I found no belief in Britain that it would be possible for America to organize, equip, and transport armies to the European front in time to contribute to the decision, although the British Prime Minister expressed the conviction that thousands of American volunteers would flock to the allied cause and serve either in British or French armies under the American flag, but commanded—as to higher officers—by the British or the French Army chiefs.

What the British felt was possible was that America would be able, by seizing German shipping in American ports, to contribute to mitigating the severity of the German submarine blockade, and, by giving the Allies credit, simplify and accelerate the financing of the war. Some slight help in the shape of convoys for merchant ships sailing under the American flag, but carrying munitions and foodstuffs, was also suggested.

But in the main I think London has few illusions as to the material benefits to flow from American participation in the war, and there is a profound suspicion that in some way or other a method will be found by the President to avoid coming in—that is, effectively.

The simple truth is that the British have put aside almost all the illusions that they had in the earlier period of the war. They do not expect to starve the Germans to death, however much dis-

comfort and privation their blockade may cause. They no longer expect that Germans will rise against their own Government and welcome their enemies as liberators, nor do they longer pin any faith to the old ideas of Anglo-Saxon solidarity, however pleasant to them is the sympathy and support of their American friends.

England—Britain, the empire—expects to win the war by fighting, by killing Germans on the western battle front. She is making her preparations not for one but for several years of war. If Russia or Italy, or even heroic France, whose contribution and devotion find only praise and admiration, are able to contribute much or little, so much the better; if America joins and contributes, still better. But these things will be as they may be—the main thing is for Britain to prepare to do all that Britain can.

The French Viewpoint

I do not believe that any one can go to France, despite all there is of suffering and of sorrow, and not feel that the will of the nation remains unshaken and that, though the loss of blood has been great, the strength of will remains unbroken. Confidence in victory there is, too. France expects to win, but beneath all is the grim realization that to submit now, to accept a German peace, is but to escape destruction for a little and to bind the nation to eternal slavery to the ideas and the ideals which are abhorrent to all Frenchmen and destructive of all that France means in the world or has meant.

Always Frenchmen, talking of America

and American views, speaking of President Wilson and his course, come back to the same point. To them it is incomprehensible that any democratic nation, any civilized nation, can fail to perceive the fact of this war, can fail to perceive the impossibility of making peace, not with Germans as Germans, but with the German race, so long as it clings to those doctrines which have brought so much of horror and shame into France and swept away so much of what was beautiful in man and in art.

The Germans persist in the notion that the French people desire peace and the French politicians compel war. I think the opposite is the truth. I think it is the politicians who are the sole pacifists, those who do profess pacifism, and I think this is due to their failure to understand the will and the determination of those whom they represent. A peace Government, a peace Ministry, could not live; no French politicians dare openly to talk of peace, save those who do not count and cannot gain or lose by their words.

When I was in Paris the city was suffering from the worst Winter since the siege. Coal was practically unobtainable and the suffering was great; there was a sense of suffering about that one does not think of in Paris, and yet through it all there was no outward evidence of any weakening of will, there were no disorders of the sort that one hears as

taking place in German cities; life is not easy in France, it is not pleasant, the sufferings that the war brings mount day by day, and the end of the increase is not in sight.

Yet I do not think that any one who loved the French would talk to them long of peace. I do not think any but an incredibly stupid man, or a German, would find evidence of the breaking of French spirit or the decay of French resolution.

Returning to France after a year, one could not help feeling the extension of sadness, the intensification of the strain. France is suffering and she is bleeding, but there has been no change in French spirit or the French conception of the ultimate issues of the war. It remains a battle between civilization and barbarism, and it remains a battle which must have a decision, and a decision which will insure the safety of France. All else means permanent ruin, the end of France. France, French men and French women are struggling with an unclean but powerful beast; they are struggling with a beast which will destroy them and their children, as it has devoured some and outraged more, unless they are able to destroy it, and no suffering, no agony, can make peace possible save death itself until the victory is won, because any other peace is death. This, I think, is the French view, and this is why for France the war will go on beyond this year, if necessary.

LAYING DEFENSIVE MINES AROUND NEW YORK HARBOR

The "Liberators" of Poland

Horrors of the Teutonic Invasion, as Attested by Russian Official Records

Eugene Griselle, General Secretary of the French Catholic Committee of Foreign Missions, contributes to *La Revue Hebdomadaire* the subjoined account of events attending the Prussian and Austrian occupation of Poland. His materials are drawn from Colonel A. S. Rezanoff's "German Atrocities on the Russian Front," summarizing the results of an official inquiry by the Russian Government. In each case the source is given in full in the original.

[This matter is published without verification by the editor, and is presented as an *en parte* contribution.—EDITOR CURRENT HISTORY MAGAZINE.]

THE château of A. Budny was visited by two Austrian officers, Count Zitchy and Baron Sardas.

They began by ordering a copious meal, and, while it was being prepared, they made a tour through the château, during which they stole shamelessly. Baron Sardas, without the smallest hesitation picked up from a table a valuable gold watch, with chain and charms, and, when M. Budny protested, drew a revolver and threatened to shoot him. Count Zitchy, carrying a small traveling bag in his hand, gathered up rare bibelots as "keepsakes." From the stable the two officers chose six thoroughbred horses, of a total value of 50,000 rubles, saying that they "requisitioned" them. The visit of these two Austrian "aristocrats" cost M. Budny something over 80,000 rubles.

The Austrians, when retreating, set fire to the villages and savagely shot down the pacific inhabitants. Among prisoners taken by the Russians was a Captain Schmidt, who made himself famous as an incendiary of defenseless villages, a destroyer of churches and shrines. * * *

A Russian officer testified: "I saw with my own eyes the savagery and insane cruelty of the Austrians, running from house to house, to burn a village and destroy, in the midst of so much suffering, whatever had miraculously escaped our artillery fire. The town of Iuzefov, on the Vistula, was burned to the ground. * * * At Iurov the Teutonic fury manifested itself with peculiar violence. After setting fire to the village at four points, the Germans began to fire on all who tried to save anything from the flames.

The hapless inhabitants who escaped from the burning houses were equally greeted with rifle fire. A few families hid in the cellars; others in potato pits. As soon as they discovered this, the Germans threw straw into the pits and set fire to it. The maddened refugees, when they tried to climb out, were met with bullet and bayonet. In the cellars forty-two bodies, slain in this horrible way, were counted. The Germans killed an old man named Bazarnik by firing four salvos at him, the first being aimed at his feet, the second at his loins, the third at his breast, the fourth at his head. These salvos were fired at intervals, intentionally lengthened." * * *

In the villages of Sonta and Veprie-Czero the Austrians assaulted the women. In the village of Sumin, according to the deposition of the parish priest of Ternovatka, a woman who resisted was murdered; her ears and breasts were cut off. * * *

The "woman tax" was reduced to system by the Austrians. The officers coldly ordered so many women to be brought to one or another detachment of their troops. Those who resisted were shot. * * *

The Deputy, Makonietchni, who visited the Lublin district, testified that the violations of women were innumerable; the most monstrous and incredible outrages were inflicted on them, many of them having their breasts cut off. * * * The Austrians, literally drunk with fury, threw the unfortunate inhabitants into the burning houses. There were numerous cases where soldiers impaled children on their bayonets and then threw them into the flames. * * *

The manager of an estate on the outskirts of Lovicz testified: "The Teutons

came to us toward evening, at least seventy in number. They put their horses in the stables, the sheds, and the cow houses, driving out the cows. Then they came into the house, crying: 'Give us supper!' 'Give us wine!' We killed poultry and I opened the cellar. Meanwhile, the officers wandered from room to room, with drawn swords, slashing at everything, portraits, porcelains, the grand piano.

"But the worst came later. When supper was over, the officers, three in number, who had drunk six bottles of wine, were completely drunk. 'Bring us women!' they cried. The soldiers rushed to fulfill their orders. I had my wife and a little girl of 12; the mechanician who lived in the house had a young wife; he had been married only that Summer. The poor creatures were seized. Terrorized, broken down, I could not move. The mechanician's wife struggled to escape, crying to him: 'Save me from dishonor!' He dashed toward her, but a dragoon cut him over the head with his sabre. She died during the night. They brought the two women and the little girl into the officers' room. The little girl was found dead in the morning. * * *

An eyewitness records a monstrous piece of cruelty which he saw in the village of Kilniki, in the district of Versh-bolovo, in the Government of Suvalki: The inhabitants led me to the hut of a Polish peasant, aged 56, Ossip Binderovitch by name. The miserable wretch was lying on a mattress, torn by convulsions of agony. His daughters, without a word, led me close to the body, which was beginning to stiffen, and with their fingers opened his mouth. I shuddered with horror; in place of the tongue there was a gaping wound. A few minutes later Binderovitch died under my eyes. His daughters told me the Germans had torn his tongue out because he had refused to show them the direction in which the Cossack scouts had retreated from the village. * * *

The prior of the famous Polish Monastery of Czenstochovo has testified to the thefts of the Germans. Thousands of

pounds of silver and gold, the offerings of pilgrims to the shrine, a great quantity of pearls from the halo of the famous image of the Virgin, among others a costly pearl given by the Chancellor, Prince Lubomirski; the giant ruby taken from the haft of a dagger captured by Jan Sobieski under the walls of Vienna, an emerald weighing more than forty karats, given by an unknown pilgrim in 1812, were carried away. * * * When the German officers, installed in the monastery after the expulsion of the monks, had emptied the wine cellars, they "requisitioned" the women of the town. The razzia was carried out under atrocious conditions. [The details here are so abominable that it is impossible to translate them.—Ed.] * * * Soon there was not a house in which were not heard foul German oaths; in the streets the conduct of the Germans was revolting. * * * There was not a house in Czenstochovo that had not some infamy to lament. * * *

By evening, more than fifteen hundred had been arrested, men and women. All were declared prisoners of war and sent to Germany. * * * In the village of Topaltcha, the soldiers of the Apostolic Emperor, Francis Joseph, established their hospital in the church, which was found littered with excrement. The church vessels were gone. * * * On the altar the soldiers had drunk, eaten, and played cards. In the sacristy, all objects of value were stolen. The fonts were turned into urinals. * * *

Michlachevski, an employe of the Countess Branitzka, testified: With a considerable group of Poles, I was moved from town to town in Germany, working at the supply of provisions for the troops, in the slaughterhouses, at the burial of soldiers, digging trenches. Finally, we were dressed in military uniforms and sent to fight against the French at Lunéville. * * *

S. F. Koninski testified: The Germans brought a large body of civilian prisoners to Silesia, drilled them, and sent them to Belgium and France, where they were put on the firing line. * * *

Ordeals of the Wounded

Extraordinary Phases and Episodes Described by Medical Experts

I.

[Translated for CURRENT HISTORY MAGAZINE from a report made by Professor Ludovico Isnardi to the Royal Academy of Medicine of Turin, Italy. Professor Isnardi has been Director of the Military Reserve Hospital at Vercelli since the beginning of the war.]

THERE is a sort of suppurating wound produced by the so-called wounds by explosion, with orifice of ample exit, funnel-shaped and especially dangerous when found in the thigh and leg. In these wounds for the most part the skeleton is affected.

It is easy to understand how in these cases the wounds become infected, if one thinks of the difficult places in which our war is being carried on. Some wounded have been lowered with ropes from the rocks. Many with serious wounds are compelled to go on foot over long tracts of most laborious road. One soldier fell at fifty meters from the enemy's trenches with fracture of the femur near the base of the thigh and with a wound on the internal side as large as a hand; all alone he bound the sick leg tightly to the well one with his belt, then slid down the slope of a hill, and for five hours crawled on hands and feet until he reached his own camp.

The inflammation of these wounds is impressive. From the orifices issue black blood, pus, and sometimes gas; the intermuscular spaces are invaded by the pus, the whole joint is discolored and much swollen; high fever, and in the first nights delirium. One condition only is favorable, the extent of the cutaneous opening.

I ought to say parenthetically that, in spite of everything, in general our wounded soldiers on arrival at the hospital with the clinical history which accompanies them, the dressings perfected, the fractured joints immobilized, often with plaster on which is written clearly the diagnosis and the facts, attest a calm,

an order, a solid scientific preparation in our field physicians which are truly admirable.

II.

[Translated for CURRENT HISTORY MAGAZINE from a recent article in *Revue de Chirurgie*, Paris, by André Chalié and Roger Glénard. These two men made a military hospital out of a Summer hotel in the high valley of the Moselle, near one of the most frequented passes of the Vosges.]

The wounded were brought to us from the firing line, distant some 20 to 25 kilometers, in French, English, or American automobiles. They came to us either directly or after having passed through a division ambulance located in front of us, in relay fashion. We have received many wounded barely a few hours after they were put hors de combat, but the majority have come to us quite late, after one or several days of waiting, the delay being accounted for by the difficulties encountered in picking them up and by the length of the transport in the mountainous regions where our soldiers were fighting.

Thus, for example, an infantryman receives a ball in the chest at 3 P. M. He loses blood by the mouth, and, very much oppressed, does 300 meters on foot in order to gain the relief station; in traversing this distance he has to rest himself three times. He remains at the relief station until 9 P. M., then the stretcher bearers carry him for two hours, until he reaches a shelter for sappers, where he rests for three hours, and continues to spit much blood. The next day, at 2 A. M., he is placed on a mule, which carries him for three hours across the mountain, only to put him down by the edge of the road at 5 A. M. There a cart picks him up at 7 A. M., and puts him down at 10 A. M. at a point where finally horse-drawn vehicles arrive, which conduct him to the division ambulance.

Another infantryman, wounded at 10

A. M., also in the chest, at first remains there, where an individual dressing is applied for him. At 7 P. M. he leaves on foot and walks in the darkness until midnight; then he stretches himself out on the ground in a bit of woods and sleeps, covered by the beautiful stars. At the first trace of dawn he begins to walk again, and reaches the relay of stretcher bearers. These take him at 5 A. M., and at 8 A. M. they place him in a vehicle which bears him to the ambulance of the first line. He remains there some hours, and is finally brought to us in an automobile; he reaches us at 10 P. M., or thirty-six hours after receiving his wound.

Quite recently, in an action where a surrounded company was delivered only at the end of four days, certain wounded, their dressings done only in the most summary manner, were obliged to remain all this time on the ground.

In general, we have kept our wounded on the least time possible, so as to reserve the largest number of places in our hospital ready for emergency use. However, as far as major wounds are concerned, particularly those of the extremities, we have made it a point not to discharge them before the seventh or eighth day after the time of wounding, for it is during this first week that ordinarily the worst infectious accidents supervene if they are to occur. Likewise, we have kept at least two weeks the cases of trephining, of amputation, of serious wounds of the chest, of the abdomen, and of the joints.

III.

[Translated from *España Médica*, Madrid, for CURRENT HISTORY MAGAZINE.]

The following episode was overheard in the corridor of a hospital and was told by a Spaniard who enlisted in the French Army and was wounded:

"The good Lalane, the merriest comrade of the region, has made an ugly death. Toward evening we had repulsed an attack of the 'boches'; we had leaped out of the trench, which was turned upside down by the artillery; then we had regained our posts. Seventeen men were missing, and among these was Lalane.

When the cannonading and the fusillade had ceased we heard the usual tormenting cries of our wounded, fallen on the ground between our trench and that of the enemy. 'Help, mercy, mamma!' pleaded the poor wretches.

"Uselessly we tried to aid them. Our self-denial cost us two men, because the enemies made a terrible fire every time that we repeated the attempt.

"At the dawn of day the cries had stopped; only one of our men continued to shriek tremendously. We recognized the voice of Lalane, who was roaring with pain and with anger. The unfortunate man was the prey of delirium; he pretended that nasty rats were gnawing him and that he could not free himself from them. Two days and three nights the torture of our unfortunate friend lasted. They were two days and three nights during which we did not sleep in the trench. We were obsessed. Little Cazan cried like a baby.

"In the end there was silence, which said clearly that Lalane was dead. There was a sigh of relief for all. 'Poor devil!' I proposed by all means to go after the corpse of our friend as soon as a favorable chance presented itself, in order to prevent it from being torn up by a flock of ravens roosting in the grove near by. The chance did not keep us waiting long; the thickest sort of a morning fog permitted Cazan to betake himself to the spot and to tie a small rope to one of his feet; pulling and pulling, we succeeded in dragging him along up to the trench. A cry of horror leaped from our throats! The eyes, empty; the nose, the ears, the lips, gnawed; all the body stripped, torn asunder, devoured—the bones could be seen here and there. Of his clothes there remained intact only his leather belt and shoes. The unhappy man had a slight wound in the spine, which had paralyzed and immobilized him; hence he could not defend himself against the trench rats, which had devoured him alive!"

At this point the narrator was interrupted by the protests of his comrades, who wished to sleep. That night I slept badly; I dreamed of struggling with all the monsters of the Apocalypse.

A Darkened Church in the War Zone

An Irish Officer's Word Picture

AT a certain point at the front there is a village where the troops come from time to time to rest, and there the church each evening is crowded with the soldiers. Lights of a brilliant kind are not allowed in this village, as it is so near the line, and it is urgent at night to give no sign which might make the place a target for the long-range guns of the enemy. Therefore the church is never lighted in the evening, and it is by the flames of a few candles alone on the altar of Our Lady of Dolores that the rosary is recited.

It is a strange scene in this church at night. Entering it, all is dark save for the few fluttering candles on the altar before which the priest kneels to say the prayers. It is only when the men join in that one becomes aware that the church is really full, and it is solemn and appealing beyond words to describe when up from the darkness rise the great chords from hundreds of voices in the prayers. The darkness seems to add impressiveness to the prayers, and from the outside are heard the rumble and roar of the guns which, not so very far away, are dealing out death and agony to the comrades of the men who pray. Sometimes the church is momentarily illuminated by the flashes of the guns and the windows are lighted up as though by lightning.

The writer of these lines has seen many an impressive spectacle of large congregations at prayer in great and spacious churches in many lands, but nothing more truly touching, impressive, and moving has ever been witnessed than the darkened church behind the lines, thronged with troops fervently invoking the intercession of the Mother of God under almost the very shadow of the wings of the Angel of Death! In France and Belgium the Catholic troops are fortunate in having at hand so many churches of their own faith, and this makes it easier for the devoted chaplains

to get their flocks together. For so many days the battalions are in the trenches, and for so many days in the comparative safety of the camps in the little villages somewhere back from the firing line. The day and night before a battalion goes to the trenches the chaplains are busy in the churches, for the men throng to confession, and it is a wonderful and most faith-inspiring sight to see them in hundreds approaching the altar before marching off to danger, and in many cases to death itself.

When the turn in the trenches is over and the men resume their rosary in the darkened church in the evenings there are always some absent ones who were there the week before. For this very reason, perhaps, because of the comrades who will never kneel by their side again, the men pray all the more fervently and with ever-increasing earnestness say, "May the souls of the faithful departed through the mercy of God rest in peace!"

While some of the chaplains attend the men who are resting in the back villages, others follow the men into the line, and there, in some ruined house close by or in a shelter or dugout in the trench itself, they are always at hand to minister to the suffering and the dying. Who can measure the consolation they bring, or who can describe the comfort and happiness of the soldier whose eyes, before they close forever, rest upon the face of the priest of his own faith? If the priest in peace is the ever-sought comforter of the afflicted and dying, how much more so is the priest in time of war and in the battle line! The writer has met at the front many chaplains, and the dominant feeling of one and all is thankfulness that they were able to go out with the men and share their lot.

Of all the actors in the great tragedy of the war none stand out more heroically than the chaplains, none fill a greater place in what has come to be called the theatre of war. No wonder so many of

them have received decorations, and no wonder the men highly value the presence and the consolation and the encouragement of the "padre," as the officers call the minister of religion. To the Catholic soldiers, however, the priest remains "father," and it is good to see them smile as he approaches and to hear the sound ring of the old faith in their voices as they reply to his salutation and address him always as "father." Mass has been said in the very trenches, and the writer has attended mass in many a ruined church and many a shell-wrecked shelter. And ever and always the men are the same, devoted and earnest, and the more wretched their surroundings the more eager they are.

Nothing is more noticeable than the

way the Catholic soldier holds by his beads. The writer has seen men who were killed in the line. Their little personal belongings are carefully collected by comrades and safely kept to be sent home, but the rosary when found in the pocket is often, usually indeed, reverently placed round the dead man's neck before he is wrapped in his blanket for burial. "I put his beads about his neck, Sir," is the report often given by the stretcher bearer to the chaplain or other officer, as a man is given to the grave. How many Catholic soldiers lie in their lonely graves today in the war zone with their beads about their necks! How very, very many! And so, indeed, one feels sure would they wish to be buried.

The Great Work of the Belgian Relief Commission

THE breaking off of diplomatic relations between the United States and Germany threatened to interrupt, if not entirely end, the valuable work of the American Commission for Relief in Belgium, which has become equally well known by its initials, "C. R. B." When the German invasion cut off the 80 per cent. of Belgium's food imported from over the seas, nearly ten million people, including those in the invaded part of France, were in danger of starving to death. Something had to be done to help the Belgians, and somebody had to do it.

The emergency produced the man, Herbert C. Hoover, an American mining engineer and business organizer resident in London, and the head of industrial undertakings employing 125,000 men. Mr. Hoover marshaled a small legion of fellow-Americans—business men, sanitary experts, doctors, social workers—who as unpaid volunteers set about the great task of feeding the people of Belgium and Northern France. Today the C. R. B., which Mr. Hoover and his colleagues have built up, is a great institution, rec-

ognized by all Governments, receiving contributions from all parts of the earth, with its own ships in every great port, and in the eyes of the Belgians and French who receive their daily bread through its agency a monument of what Americans can do in social organization and business efficiency, for Americans have furnished the entire personnel of the commission from the beginning.

The initial negotiations with the various belligerent Governments in 1914 were conducted on behalf of the commission by the American Ambassadors and Ministers in London, Brussels, and Berlin. Mr. Hoover, early recognizing the possibility that the United States might become involved in the war, obtained the patronage of the Spanish and Dutch Ambassadors and Ministers in London, Berlin, and Brussels, and at every crisis which has threatened America in the war the commission has had the support of the Spanish and Dutch diplomats, who have been ready, if necessary, to find a new staff to replace the American personnel. The commission is a distinct organization from the Belgian National

Committee, through and with which it works in Belgium itself. Its functions are those of direction, supervision, and all matters that have to be dealt with outside Belgium. In the occupied territories it has the help of thousands of Belgian and French workers, many of them women.

The commission does not depend upon any one of its American members for leadership, since, as Mr. Hoover says, any one of them could at any time take charge and carry on the work. "Hon-nold, Poland, Gregory, Brown, Kellogg, Lucey, White, Hunsiker, Connet, Young, and many others who at various periods have given of their great ability and experience in administration could do it." At the same time it is admitted that the commission would never have been so successful if Belgium had not already had in existence a well-developed communal system. The base of the commission's organization is a committee in every commune, or municipality. The communal committees consist of representatives of the trade unions, the communal authorities, the medical profession, and the business or professional class. Through their knowledge of everybody in their communes and of local conditions the committees are able to estimate exactly the extent of the relief required.

"You can have no idea what a great blessing it has been in Belgium and Northern France to have the small and intimate divisions which exist under the communal system," says Mr. Hoover. "It is the whole unit of life and a political entity much more developed than in America. It has been not only the basis of our relief organization, but the salvation of the people." Altogether there are 4,000 communal committees, which are linked up in larger groups under district and provincial committees, which in turn come under the Belgian National Committee.

Up to date the commission has spent \$250,000,000, most of which has been provided by the British and French Governments. The remainder has come from the Belgians and French themselves, and from contributions sent from all parts of

the world, including Madagascar, remote places in China, the Solomon Islands, Greenland, Liberia, and Tasmania. Tasmania, the smallest of the States of the Australian Commonwealth, has the honor of heading the per capita contributions, with \$6.53 subscribed for every inhabitant.

When Mr. Hoover and his fellow-Americans began the work of saving Belgium from starvation, they made their first appeal to the people of the United States. They considered that they were working on behalf of America in the name of humanity, and they felt that they were in this way writing "a page of true Americanism in Europe." But the American response to the appeal for contributions has thus far been sadly disappointing. It has amounted to only \$9,000,000, less than 9 cents per capita, while Canada has contributed 28 cents, Australia \$1.25, and New Zealand \$1.98. The miners of Johannesburg, South Africa, gave 10 per cent. of their wages, which was added to by a similar amount from the owners of the mines.

During his stay in America in the early part of 1917, Mr. Hoover more than once expressed himself on the subject of his own country's niggardliness, pointing out at the same time that the chief profits made out of providing food for Belgium had gone into American pockets. Out of the \$250,000,000 spent by the C. R. B., \$150,000,000 had been used in the United States to purchase supplies, and on these orders America had made a war profit of at least \$30,000,000. Yet in two years the American people had contributed only \$9,000,000. On these facts Mr. Hoover based this indictment of his fellow-countrymen:

Thousands of contributions have come to us from devoted people all over the United States, but the truth is that, with the exception of a few large gifts, American contributions have been little rills of charity of the poor toward the poor. Everywhere abroad America has been getting the credit for keeping alight the lamp of humanity, but what are the facts? America's contributions have been pitifully inadequate, and, do not forget it, other peoples have begun to take stock of us. We have been getting all the credit. Have we deserved it? We lay claim to idealism, to devotion to duty, and to great benevolence; but now the acid test is being

applied to us. This has a wider import than mere figures. Time and time again when the door to Belgium threatened to close we have defended its portals by the assertion that this was an American enterprise, that the sensibilities of the American people would be wounded beyond measure, would be outraged, if this work were interfered with. Our moral strength has been based upon this assertion. I believe it is true, but it is difficult in the face of the figures to carry conviction, and in the last six or eight months time and again we have felt our influence slip from under us.

The result of the war will be that America will be rich, prosperous, wealthy, and will have made untold millions out of the woe and swelter of Europe. The justification of any rich man in the community is his trusteeship to the community for his wealth. The justification of America to the world-community today is her trusteeship to the world-community for the property which she holds. There is growing up and there has grown up in Europe a note of bitterness which will seriously affect our whole relations with Europe for years to come. The only amelioration to this bitterness possible is for this country to properly assume its burden toward the helpless in Europe.

Speaking at Washington, D. C., on Feb. 17, Mr. Hoover said it made him feel ashamed when he heard Belgian children expressing their gratitude by singing "The Star-Spangled Banner," and he knew that the food they were eating had not been paid for by Americans.

The commission's requirements have grown to between \$18,000,000 and \$19,000,000 a month. Of this amount the Allied Governments are contributing \$14,000,000, leaving between four and five million dollars a month to be raised by public charity. The Belgians resent bitterly the very suggestion of charity, and have continued to borrow heavily with British and French support. Nevertheless, they have had to leave 3,000,000 of their people, who are totally destitute, as well as 1,250,000 adolescent children, to depend upon the commission's efforts. Mr. Hoover's mission during his visit to America included a plan to get the United States to undertake the provision of \$1,250,000 a month for the wants of the 1,250,000 adolescent children. The commission has had to cope with an alarming increase in tuberculosis and other diseases among adolescents, caused by the lower power of resistance consequent upon inadequate diet. A dol-

lar a month for each one of these children is needed to stop the gradual degeneration of the youth of Belgium.

One of the first noteworthy results of Mr. Hoover's criticism was that the Rocky Mountain Club of New York, whose members are mostly men interested in mining enterprises, decided to turn over to the commission the \$500,000 which they had raised for a new clubhouse costing \$1,000,000, and voted that every one of their 1,200 members should go to work to get contributions. In other directions Mr. Hoover made his presence felt, and there was an improvement in American subscriptions to the funds of the commission.

The statement that the Germans have taken food intended for the Belgians was disposed of by Mr. Hoover in a speech in New York City on Feb. 13. "We are satisfied," he said, "that the German Army has never eaten one-tenth of 1 per cent. of the food provided. The Allied Governments never would have supplied us with \$200,000,000 if we were supplying the German Army. If the Germans had absorbed any considerable quantity of this food, the population of Belgium would not be alive today."

When the break came between the United States and Germany, it was stated that the feeding of the people of Belgium and Northern France would go on, because the C. R. B. had become a unique international society, supported by contributions from both belligerents and neutrals, and represented by American citizens in the occupied territories. If America became involved in the war, the citizens of some other neutral country, such as Spain or Holland, would carry on the work.

Immunity from blockade measures for the commission's steamers was secured by Mr. Hoover after negotiation with Germany and Great Britain. At the outbreak of the war foodstuffs were not contraband, and the commission was free to transport its supplies in neutral ships to Holland. But sufficient neutral ships could not be obtained, and belligerent vessels had also to be chartered. The German Government agreed to consider immune from attack all ships flying the

flag of the commission and carrying passes from the German Ambassadors at the neutral capitals. The Captains of the commission's ships were pledged not to engage in belligerent practices, and the commission not to send anything but food and clothing for the Belgian population.

When Great Britain declared food-stuffs contraband, the commission's ships were exempted from the Order in Council. It was provided that they should be specially marked with the letters "C. R. B." At the beginning of the submarine warfare around the British Isles in February, 1915, the German Government agreed that the commission's steamers should go through the war zone immune from attack.

On President Wilson's announcement of the diplomatic break, the commission ordered all its ships in America, Argentina, India, and Europe to remain in port till further notice. But fifteen ships were either in or approaching the war zone, and could not be reached by wireless. Two of them were sunk. It was said that the German Government would no longer respect the commission's flag unless the ships took a course entirely to the north of the newly established war zone on their way to Holland. The German Government gave assurances that it had no intention of interfering with the work of feeding the civil populations of Belgium and Northern France.

Despite the diplomatic break, the commission decided at first not to withdraw its representatives from Belgium, but on Feb. 12, after a German order had been issued for all Americans to withdraw from the occupied territories, leaving in Brussels only a few of their representatives, headed by Brand Whitlock, the American Minister to Belgium, the commission notified the German authorities that the Americans would cease to participate in the relief work in Belgium and Northern France. However, after a conference on Feb. 15 between the German Civil Governor of Brussels, the American and Spanish Ministers, and representatives of the commission and the Belgian National Committee, permission was given by the German authori-

ties for the commission to continue its work, and it was decided not to withdraw. The German action in ordering Americans to leave the occupied territories was so promptly reversed that the continuity of the work was not interrupted.

In regard to immunity from attack by submarines, it was announced on Feb. 24 that the sailing of the commission's ships had been resumed as the result of arrangements with the British and German Governments whereby a route between North American ports and Rotterdam had been agreed upon. Meanwhile, however, many of the commission's vessels had accumulated in British ports, and were held there. Concerning these Sir Maurice de Bunsen, British Under Secretary of Foreign Affairs, made the following statement on March 5:

In declaring the war zone, Germany explicitly canceled all her safe conducts, giving only a few hours for the relief ships then in United Kingdom ports to clear for Rotterdam. It was impossible to get them away in time. It was also impossible to communicate with the ships on the high seas, as they were not provided with wireless.

Since then the Germans have alleged that they accorded to these and to other neutral ships a further period of grace. Nobody ever heard of this until the Germans announced that the period had expired. All that the commission or the world knew was that the Germans had opened their submarine campaign by sinking two Belgian relief ships.

There has thus been a steady accumulation of relief ships in the United Kingdom ports. Their cargoes have been deteriorating, valuable anchorages have been taken up, and the whole of this tonnage, which urgently is required to take additional relief cargoes from American ports, has been held in suspense for a month.

The commission immediately opened negotiations with the Germans through the Spanish, Dutch, and Swiss Governments, and the Entente Governments strongly supported their representations. The only reply which the Germans vouchsafed regarding the ships in the ports of the United Kingdom is that they will reserve any question as to the giving of guarantees for such ships until they have received a detailed list of their names and of the reports where they now are. This request was received virtually simultaneously with the sinking of Dutch liners in the English Channel.

His Majesty's Government have replied that, in view of that occurrence, to give any such information to the Germans before the latter have guaranteed absolute immunity to all these ships, would be to lay them open

to attack and invite treachery. In view of the evident intention of Germany to hold up this tonnage for the longest possible period, and in view of the urgent need of these ships to take further cargoes to the starving populations in Belgium and Northern France, his Majesty's Government have agreed with the commission to discharge these cargoes in the United Kingdom and provide storage for them until the Germans either have given the necessary guarantees to relief ships from the United Kingdom ports passing Rotterdam or have shown even more clearly than at present that they do not intend to give such guarantees.

Meanwhile a regular supply of foodstuffs for Belgium and Northern France will go on in ships passing under German safe conducts from American ports to Rotterdam. The

position therefore is as follows: His Majesty's Government have respected and will respect property of the commission in these cargoes. All that they have done is to provide storage room for foodstuffs which the Germans are apparently anxious to hinder reaching Belgium and Northern France.

On the other hand, the Germans already twice have broken their safe conducts and destroyed property of the commission. By this act of faithlessness they have struck one blow at the work of relief. They now invite his Majesty's Government to assist them in destroying more relief ships by informing them where the ships are and consequently how they can best be attacked when the ships set sail. To satisfy the German demands would be to become accomplices in their crimes.

Secret Journalism in Belgium

Story of *La Libre Belgique*

LA LIBRE BELGIQUE, the secret newspaper whose tenacity of life exasperates the German authorities in the occupied provinces of Belgium, recently celebrated the second anniversary of its birth. At the end of January, 1915, appeared the first number of this unique organ, which describes itself as "regularly irregular," and which states under its title that its office is in an "automobile cellar." Naturally, this indomitable organ of patriotic propaganda, which circulates mysteriously in every Belgian town under the German yoke, celebrated the anniversary by coming out yet again and evading the frantic efforts of Baron von Bissing's police to suppress it.

La Libre Belgique (Free Belgium) is irrepressible. The Germans have arrested numerous persons suspected of being connected with it, but they have never succeeded in preventing or even retarding its publication. Neither the promise of a large reward for any one who will betray it, nor the threat of heavier punishments, nor yet the implacable attempt to hunt down all who carry or read the paper—nothing has been able to ruin the audacious enterprise. In its first issue of last December, when the forced deportation of civilians was in full swing, *La Libre Belgique* published on its front page an article depicting

this modern slavery in its most odious light, concluding with these words:

"Belgians, do you desire that when our brave soldiers return from the front they shall say to you, 'You dug the trenches which we had to fight for'? Take flight, or, if you cannot do that, resist; if necessary, even die, but die free!"

Baron von Bissing, the Governor General, finds the little sheet in his mail every week, and he will probably be the only person after the war, says a writer in the *Paris Temps*, "to possess a complete file of this publication, which mocks the German Emperor in the midst of Prussian terrorism, and which, in spite of all the censors, calls a cat a cat, Bethmann Hollweg a liar, and William II. a knave."

The only result obtained by the oppressor is an extraordinary development of clandestine printing in the occupied districts. The success of *La Libre Belgique* has caused other journals to spring up, edited by no one knows who, printed no one knows where, circulated no one knows by what means. There exists in downtrodden Belgium a *Weekly Review of the French Press* which has passed its sixtieth number and which reproduces for Belgian readers the chief articles in the *Paris* newspapers and magazines;

there is *Le Motus*, a satirical sheet, full of a biting, something cruel, irony; there is *Patrie!* which competes with *La Libre Belgique*—for there is competition even there—and indulges in the perilous luxury of reproducing the most striking cartoons of Louis Raemaekers, notably the famous “*En Route to Calais*,” which shows the corpses of German soldiers floating in the flood of the inundated region along the Yser.

How do these newspapers live? How can they get together their “copy”? How do they get their type set, or make the plates for their pictures, or procure the necessary paper, or recruit their salesmen, or deliver the printed copies to their subscribers? There is a series of complex problems, when one recalls that the German authorities have thousands of spies at their command, that every house is watched, and that a man cannot move from one town to another without a special permit from the “*kommandatur*.” And yet all this is accomplished regularly; hundreds of patriotic persons risk prison and deportation every week to devote themselves to this task. It is their way of fighting the Germans on the ground where these pretend to be absolute masters.

Later, when everything can be told, the story of the adventures of clandestine newspapers in the occupied regions will constitute one of the most curious chapters in the history of the war. The Germans will be astonished at the simplicity of the means used to circumvent them. The Belgian, a protester by nature, with rare tenacity in anything he undertakes, at once bold in conception and prudent in execution, was admirably fitted for a struggle of this sort. The writer above quoted remarks that the Germans understand nothing of the Belgian temperament, and do not even suspect the rivalries and complicities which are always to be found alike in Flanders and in Wallonia, for the most incredible tasks

that involve circumventing the police. No letter can enter Belgium or leave it without passing under the eyes of the German censors, and yet at Brussels, at Antwerp, at Liège, the people know exactly what the Paris papers of four or five days ago contained. *La Libre Belgique* in June, 1916, reproduced in extenso a speech by M. Briand that had appeared in *Le Temps* on May 19. At no moment since the beginning of the German occupation have the leading French papers ceased to circulate in Belgium. There is a well-known system which consists in obtaining for two or three francs the regular reading of this or that journal for half an hour. Another form of “subscription” is more curious, and more expensive: every day one receives two or three mimeographed sheets summing up the news and reproducing the essential passages from the latest Paris and London papers. What sort of an organization handles this service? Nobody knows; the Belgians themselves do not know. They read and reread the sheets, fixing the details in the memory, then carefully burn them. When the Germans afterward wish to impose on them with a false version of events, they have the laugh on their oppressors, for even in the remotest and smallest towns the people know the truth.

“The rapidity with which the news circulates in the invaded regions,” says a French writer, “has been one of the essential factors in maintaining the admirable morale of the Belgian people. The clandestine press, with its disconcerting phenomena, has kept the population in touch with the outer world and played an important rôle in the nation’s passive resistance to its oppressors. These little leaves, printed no matter how, in the chance of the hour, have demonstrated the fallibility of Prussian terrorism, for they sum up for a whole people its passion of patriotism and its inflexible will not to die.”

Serbia and the War's Beginning

By Woislav M. Petrovitch

Former attaché of the Royal Serbian Legation at the Court of St. James's; author of "Serbia: Her People, History, and Aspirations."

THE defeat of the Sultan's forces by the Balkan allies in 1912-13 had been a tremendous blow to Austria-Hungary and especially to Germany, whose officers had reorganized and trained the Ottoman Army, and who, for the success of her schemes of expansion in Asia Minor and Mesopotamia, depended on her ascendancy in Constantinople. The utter débâcle of Bulgaria, inflicted upon her by the Serbians in the memorable battle of the Bregalnitsa, in July of 1913, the Greek occupation of Saloniki, and the rise in power and prestige of Serbia, the friend of Russia and the apostle of the Yugoslav, or Southern Slav, emancipation, constituted for the powers north of the Danube a still greater catastrophe. The high road to Saloniki, by the valleys of the Serbian rivers, Morava and the Vardar, was definitely closed to Austria, and Germany was cut off from Turkey, whose army was to act in conjunction with the Teutonic hosts in the event of a European war.

Only prompt action could retrieve such a miscarrying of the Austro-German plans, and it is not surprising to hear that as early as the Summer of 1913 the Dual Monarchy was bent on declaring war on Serbia, and endeavored to secure the support of Italy. As this help was not forthcoming, action was deferred for the moment, and a huge army bill was promulgated in Germany to redress the balance of power and make ready for any eventuality.

Such was the position when, on June 28, 1914, the Archduke Franz Ferdinand, heir to the Hapsburg throne, and his consort were murdered in the streets of Serajevo, the capital of Bosnia. "There are many mysterious features about that tragedy. His death certainly did not serve any Southern Slav interests, for, however great and dangerous his ambi-

tions, he is known to have been quite out of sympathy with the short-sighted policy of repression which had hitherto found favor in Vienna and in Pesth, where, for various reasons, he had many enemies in extremely influential quarters. The absence of all the most elementary precautions for his safety during the visit to Serajevo, though, according to the Austrians themselves, the whole of Bosnia was honeycombed with sedition, is an awkward fact which has not

hitherto been explained."*

On the morrow of the crime the Austro-Hungarian press started a violent campaign against Serbia, openly putting upon the Serbian Government the responsibility for the outrage. It availed nothing to point out that a country still bleeding from the wounds of two desperate wars, and whose most urgent need was a period of quiet and of internal consolidation, could not have chosen so unfavorable a moment to involve itself in new difficulties with a powerful neighbor; still less was considered the fact that the young miscreants

WOISLAV M. PETROVITCH

*Sir Valentine Chirol, "Serbia and the Serbs," Oxford, 1914.

were Austrian subjects, and that "Bosnia, Dalmatia, and Croatia are a seething pot which needs no stirring from the outside;* the Viennese press set itself deliberately to spread the idea that the misdeed had been organized in and by official Serbia. Although the Bosnian Serbs, who constitute the bulk of the population of that province, are always referred to in Austria by such names as "die Bosniaken" or "die Orthodoxen aus Bosnian," the assassins were referred to invariably as "Serben," and in such a manner as to create the impression that they were Serbs from the Kingdom of Serbia.

On July 3, when the remains of the Archduke and his consort were brought from Serajevo to Vienna, the Serbian flag was very properly half-masted at the Serbian Legation in Vienna; noisy demonstrations took place in front of the legation, and the incident was referred to the next day under the heading: "Provocation by the Serbian Minister."

The "Case" Against Serbia

In the meantime a "case" against Serbia, resting upon a secret investigation in the prison of Serajevo, was in course of preparation; it had been intrusted to Austria's professional forger, Count Forgach, notorious especially by the Friedjung trial, who now fittingly occupied the post of permanent Under Secretary at the Foreign Office, and who, in the early days of July, provided the Hungarian correspondence bureau with a plentiful supply of falsehoods. On July 3 the following communication was issued to the press:

The inquiries made up to the present prove conclusively that the outrage is the work of a conspiracy. Besides the two perpetrators, a considerable number of persons have been arrested, mostly young men, who are also, like the perpetrators, proved to have been employed by the Belgrade Narodna Odbrana (National Defense) in order to commit the outrage, and who were supplied in Belgrade with bombs and revolvers.

The Foreign Office in Vienna, however, probably realized that zeal was outrunning discretion, for on the same

date, late at night, the newspapers received the following request:

We beg the editor not to publish the report relating to the Serajevo outrage, which appeared in our evening's bulletin.

From this moment profound silence fell upon the inquiry at Serajevo and upon the proceedings at the Foreign Office. The attempt to trace the crime to any responsible quarters in Serbia was evidently beyond the power of even Count Forgach. Count Berchtold discontinued the usual weekly receptions at the Ballplatz; he refused to discuss the Serajevo outrage with the representatives of foreign countries, or, if discussion did arise, care was taken to dispel all apprehension and suspicion that Austria-Hungary was meditating any serious action against Serbia. Petrograd was assured that the step to be taken at Belgrade would be of a conciliatory character; the French Ambassador was told that only such demands would be put forward as Serbia would be able to accept without difficulty. The press campaign, nevertheless, continued unabated and took its tone from the utterance of the inspired *Neue Freie Presse*: "We have to settle matters with Serbia by war * * * and if we must come to war later, then it is better to see the matter through now."

On July 20, 1914, Mr. Jovanovitch, then Serbian Minister in Vienna, ciphered to Mr. Pashitch, the Premier:

It is very difficult, almost impossible, to discover here anything positive as to the real intentions of Austro-Hungary. The mot d'ordre is to maintain absolute secrecy about everything that is being done. Judging by the articles in our newspapers, Belgrade is taking an optimistic view of the question pending with Austria-Hungary. There is, however, no place for optimism. That which is chiefly to be feared and is highly probable is that Austria is preparing for war against Serbia. The general conviction that prevails here is that it would be nothing less than suicide if Austria-Hungary once more failed to take advantage of the opportunity to act against Serbia. It is believed that the two opportunities previously missed—annexation of Bosnia and the Balkan war—have been extremely harmful to Austria-Hungary. In addition to this, there is the still more deeply rooted opinion that Serbia, after her two wars, is completely exhausted, and that a war against Serbia would in fact merely

*R. W. Seaton-Watson, "The War and Democracy," London, 1915.

mean a military expedition to be concluded by a speedy occupation. It is also believed that such a war could be brought to an end before Europe could intervene.

The Austrian Note

It was at 6 P. M. on July 23 that the Austro-Hungarian Minister in Belgrade handed to the Minister of Foreign Affairs the note embodying the demands of Austria, and insisting on a reply within forty-eight hours.

The Serbian Government was charged with fomenting a revolutionary propaganda having for its object the detachment of part of the territories of Austria-Hungary from the monarchy. It was asserted, though no proof was given, and dossier communicated, that the Serajevo assassinations were planned and the murderers equipped in Belgrade.

The following demands were included in the note:

The Royal Serbian Government will publish in the *Journal Officiel* of July 26, and as an army order, a condemnation of the anti-Austrian propaganda and of all officers and officials who have taken part in it.

The Royal Serbian Government will undertake besides:

1. To suppress all publications inciting to hatred or contempt of the Austro-Hungarian Monarchy, and the tendency of which is directed against that power's territorial integrity.

2. To dissolve immediately the *Narodna Odbrana* and all other societies or affiliations which foster an anti-Austrian propaganda.

3. To eliminate without delay from the Serbian schools any members of the staffs or vehicles of instruction with anti-Austrian tendencies.

4. To remove from the army and the civil service a number of officers and officials guilty of anti-Austrian propaganda, whose names will be communicated by the Austrian Government.

5. To accept the collaboration in Serbia of agents appointed by the Austro-Hungarian Government, for the suppression of the subversive movement.

6. To institute a judicial inquiry with regard to the accomplices to the plot of June 28, residing in Serbian territory; Austro-Hungarian delegates to take part in this investigation.

7. To arrest at once Major Tankositch and Milan Ciganovitch, both of whom are implicated in the assassination.

8. To prevent the illicit trade in arms and explosives across the frontier, and to punish those who assisted the murderers to cross the frontier.

9. To furnish explanations regarding the

hostile and unjustifiable utterances of high Serbian functionaries at home and abroad since the outrage of June 28.

10. To notify the Austro-Hungarian Government without delay that the measures enumerated above have been duly carried out.

A reply is expected at the latest on Saturday, July 25, at 6 P. M.

So secret had the contents of the note been kept from the representatives of the powers—except the German Ambassador Tschirschky, who was understood to have co-operated in drafting it—that when its contents were published on the 24th all of them were dumfounded. The French and British Ambassadors and the Russian *Chargé d'Affaires* held the view that the step taken by Austria-Hungary must be considered not as a note but as an ultimatum. They expressed indignation at its form, its contents, and the time limit, and they also declared it to be unacceptable.

It was not intended to be accepted, and all Vienna went wild with jubilation at the certainty of war, a short war and a merry one, or rather an "execution,"* to be rushed to a termination before the powers of the Entente had time to decide on a course of action; for Austria-Hungary had been assured by Herr von Tschirschky that the conflict would be localized, that Germany would keep the ring and that Russia must remain passive.

It was indeed a fact that neither Serbia nor Russia wanted war, and before the expiration of the time limit Serbia handed in a reply to the note, in which she exceeded all expectations in the direction of conciliation. The Serbian Government unreservedly accepted all the demands of Austria-Hungary, except Nos. 5 and 6, and promised to revise those articles of the Constitution (e. g., Article 22 on the liberty of the press) which stood in the way of these demands.

With regard to Nos. 5 and 6, further explanations were requested; the participation in the inquiries and investigations of Austrian functionaries could only be accepted in so far as it should

*On July 25, in a conversation with the Russian *Chargé d'Affaires*, Herr von Jagow said that what Vienna intended against Serbia was not a war, but an "execution."

conform with international equity and with the maintenance of friendly relations as between State and State.

Furthermore, if the manner of carrying out the different clauses enumerated above were not entirely satisfactory to Austria-Hungary, the Serbian Government was ready to refer any point either to The Hague Tribunal or the powers who had taken a part in the settlement of March 21, 1909.

Declaration of War

A conciliatory answer was neither expected nor wanted, however; that very evening the reply was rejected and the Austrian Minister instructed to leave Belgrade; on the 28th Austria declared war on Serbia.

Within the next two days Austria awoke to the startling fact that Russia was beginning to move. In spite of the German Ambassador's assurances that the Czar would not and could not fight, he had decided to intervene! A bully likes a fight best when his opponent is much smaller than himself; at this appearance of a full-grown adversary Vienna pulled a very long face, and on July 21 the Ballplatz suddenly consented to eliminate from the ultimatum those demands which involved a violation of the sovereignty of Serbia, to discuss certain others, and, in short, to reopen the question. It was too late. Germany, having jockeyed Austria into a position from which there was no escape, declared war on Russia the next day.

The "Punitive Expeditions"

When on the evening of July 25 the Crown Prince Alexander, acting as Prince Regent, signed the order for mobilization, Serbia was as entirely unprepared for war in every respect, save actual experience of warfare, as any country that has ever been summoned to take the field in self-defense. Little or none of the recent wastage had as yet been made good. The orders placed abroad for cannon, rifles, ammunition, clothing, and stores had not yet been carried out; heavy guns, automobiles, flying machines were lacking. During the campaign which followed, it fre-

quently happened that a regiment went into the firing line with one rifle for every two men, those who were unarmed taking both the place and the weapons of those who fell.

The declaration of war on the 28th was followed by a desultory bombardment of the unfortified Serbian capital from batteries on the opposite shore and monitors on the river. This, however, was the only action taken during the first few days, and Austria's failure to strike while Belgrade lay defenseless and open to easy occupation is significant testimony to her alarm at the European situation and anxiety to compromise.

It was impossible for the Serbian armies to line the Austro-Serbian frontier, which extends to 340 miles, especially as in Summer the Save and the Drina are easily forded at numerous points. Voyvoda (Field Marshal) Putnik therefore fell back upon the traditional lines of defense, and, while the Government withdrew from Belgrade to Nish, he grouped the main armies in the Shumadija on the line Palanka-Arandjelovats-Lazarevts, whence they could rapidly move either north or west. Strong detachments were posted at Valjevo and Uzhitse, and outposts stationed at every important point on the frontier, after which all the General Staff could do was to wait till the enemy's plan of invasion materialized.

The First Invasion

At the beginning of August, Belgrade, Semendria, and Gradishte were subjected to vigorous bombardment, and a number of attempts to cross the Danube were made and repulsed with heavy losses, one Austrian regiment having been practically wiped out. The Serbian staff knew, however, that several army corps were stationed in Bosnia, and refused to be misled by these feints on the Danube. Attempts followed to cross the Drina at Lubovia and Ratsha, and the Save at Shabats, and these were looked upon as more significant. Desultory fighting round places as far apart as Obrenovats and Vishegrad continued until Aug. 12, when the first penetration of Austrian troops into Serbia was signaled from

Losnitsa. At that town and at Leshnitsa the Thirteenth Army Corps effected a crossing, while on the same day the Fourth Army Corps crossed the Save to the north of Shabats, and other troops the Drina at Zvornik and Lubovia. By the 14th, over a front of about one hundred miles, six great columns had crossed the rivers and were converging on Valyevo.

The great bulk of the invaders had entered by the valley of the Jadar; the Third Serbian Army and part of the Second Army now advanced with all possible speed to meet them; meanwhile the remainder of the Second Army was ordered to block the advance from Shabats. The Austrian plan was obviously to isolate and overwhelm the Second and Third Serbian Armies in the wedge of land between the Save, the Drina, and the Jadar; this object once attained, the road to Valyevo and Kraguyevats lay open, and Serbia was at the mercy of the invader.

On the 14th the Austrians were brought to a temporary halt by the Serbian detachments retreating from Losnitsa, who dug themselves in across the Jadar Valley at Jarebitsa, and gave the main armies time to hasten westward by forced marches; but the first real shock of battle came on the 16th when the Austrian column of almost 80,000 men, advancing from Leshnitsa to the north of the Tzer Mountains, was heavily defeated and routed at Belikamen, two regiments having been annihilated. Pursuing their advantage, the Serbians drove in a wedge between the Austrian forces advancing from Shabats and those operating south of the Tzer Mountains along the Jadar. From this moment the Shabats and the Jadar campaign became distinct operations.

At the same time, south of the Tzer, a violent and indecisive action had taken place, and the Serbians were at length compelled to evacuate Jarebitsa on finding their left wing threatened by a force advancing, in hitherto unsuspected strength, from Krupani. The retirement was completed by the morning of the 17th.

On Aug. 18 the Crown Prince Alexan-

der, having thrown the Austrians back upon Shabats and brought up reinforcements south of the Tzer, deployed his army on a front of thirty-five miles, extending from Leshnitsa to the neighborhood of Lubovia. Inspired with memories of Kumanovo and Prilip, the Serbians gradually forced their way westward, along the Tzer and Iverak ranges, and down each bank of the Jadar, throwing the enemy back upon Leshnitsa and Losnitsa.

Aug. 19 was the decisive day of the struggle; the Austrians gave way at every point; their retreat along the valleys was shelled by the Serbian guns advancing along the intervening heights, and gradually converted into a rout, in which rifle and bayonet completed the work of the guns. By the 23d the Serbian armies, after taking quantities of prisoners and artillery, had hurled what was left of the Austrians back across the Drina. Thus ended the five days' engagement which will be known as the battle of the Jadar.

In the meantime strong Serbian forces had crossed the Dobrava Valley and advanced on Shabats, round which the Austrians had fortified a wide circle. Violent fighting took place on the 21st and 22d, on which day the Serbian troops worked their way round to the western approaches of the town. They tightened their cordon on the 23d, and during the night brought up siege artillery. When the bombardment had begun on the morning of the 24th, it was discovered that the Austrians had decamped, after murdering in cold blood fifty-eight prisoners from the Thirteenth and Fourteenth Serbian Regiments, whose bodies were found piled up in three rows in a private house. By 4 P. M. the Serbians had reached the banks of the Save, and the first invasion of Serbia was at an end. The Austrians' explanation of their retreat, after the "successful accomplishment" of their incursion into the enemy's territory, on account of "more important operations at other points," is still fresh in public memory.

As a result of their attempt to "execute" Serbia, the Austrians had lost 8,000 dead, 4,000 prisoners, and about

The British Expedition From Egypt Has Driven the Turks Back as Far as Jerusalem. The View Here Given Is Looking Toward the Mount of Olives

30,000 wounded; forty-six cannon, thirty machine guns, and 140 ammunition wagons, besides an enormous mass of stores and transport. The Serbian troops had lost 3,000 dead and 15,000 wounded.

Treatment of Civilians

"Toward such a population there is room for no humanity or generosity."

As for the civilians of the districts invaded, they were treated with a disregard of every law of civilized warfare, and a fiendish refinement of cruelty and malice, probably without parallel in modern history. The instructions issued to the Austrian troops, in the form of leaflets, began with the words: "You are going into a hostile country, the population of which is animated by fanatical hatred, and in which murder is rife in all classes of society. * * * Toward such a population there is room for no feeling of humanity or generosity." The procedure adopted was, on entering any town or village, to shoot out of hand either the Mayor or a number of selected inhabitants, (amounting to fifty at Leshnitsa,) in order to "inspire terror"; to secure hostages among those that remained, and to take prisoners and remove to Austria the youths under military age, "in order that King Peter might remain without soldiers for some years."

At the same time the troops were given to understand that the campaign was an execution, and that they might not only loot and burn and ruin, but murder, violate and torture at will, "because these people were Serbians." The pent-up hatred and natural instinct of the Magyar found expression in deeds which could not, without offense, be described here; as a mild example we may cite the case of a man who in the village of Dvorska was tied to a mill-wheel; knifing him as he was whirled round was then engaged in by the soldiers as a game of skill.

Extortion of money from a woman by the threat to kill her babe was common, and generally followed by the murder of both; wanton mutilation was commoner still; all this during the invasion. The record of the Austrian retreat is probably one of the blackest chapters in the history

of mankind; whole families were burned alive, or systematically bayoneted and laid out in rows by the roadside; the treatment of the female population can only be hinted at; in their case the final act of murder must be looked on as a crowning mercy.

In the track of the army that fell back on Losnitsa followed a small group of doctors, officials, and engineers of Serbian, Dutch, and Swiss nationality, who reported circumstantially, and photographed, what they found. A day will come when the indictment thus constituted must be met by the Magyar race at the bar of public opinion.

It was not to be expected that Austria would accept as definite the blow inflicted on her military prestige at the battle of the Jadar. Having made good the losses in men and equipment, the enemy returned to the attack in September, and made a fresh attempt to invade the Matshva district and to occupy the left bank of the Jadar.

They were brought to an early halt, and again flung back across the Drina and the Save, retaining possession only of some of the heights of the Gutshevo and Boranya Mountains, with the territory to the immediate west, and of a small tract of land in the Matshva plain which was commanded by the guns of the river monitors. For six weeks they were held in these positions by the Serbian armies, who defended a line of close on a hundred miles of trenches with a totally inadequate force and supplies, and under a strain which no troops could long endure.

The Second Invasion

By the beginning of November a retirement to a shorter and stronger line of defense became imperative, and the staff decided to move right back to the Kolubara River. The Austrians immediately advanced in overwhelming numbers, and five columns totaling 250 battalions of infantry with their artillery and cavalry streamed into the north-western territory. After fierce fighting they gained command of the Suvobor Mountains, the key to the whole district; this catastrophe made it impossible to

hold the Kolubara line, Belgrade was evacuated, and preparations were made to abandon, if need be, Kragujevats and the arsenal. By the end of November the Austrians had extended on a line reaching from Tshavtshak to Belgrade, and were preparing to swing round, with the Suvobor Mountains as a pivot, on the Mladenovats to the northeast, and toward Kragujevats to the southeast, an enveloping movement which must have

ended in the capture of the whole Serbian Army.

The weak resistance hitherto opposed to the Austrian invasion was not due, however, to lack of stamina or a deterioration of morale among the Serbian troops, fatigued and worn though they certainly were. Retreat was made imperative by an almost total lack of ammunition, either for rifles or for the artillery. The bulk of the Serbian field

ordnance is of French manufacture, and the French were themselves too hard pressed to make regular delivery of these. Whole batteries of guns were reduced to six rounds apiece, which were held in reserve against an extreme emergency. At the same time the retreat was in part deliberate and carefully planned, for when later Voyvoda Putnik was asked how he had effected the crushing defeat of the Austro-Hungarian troops, he answered laconically: "All my strategy consisted in placing between the enemy's fighting line and their impedimenta the Serbian national mud."

By the end of November new guns and large supplies of ammunition from the British ordnance factories had been landed and were being conveyed into Serbia with all possible dispatch. At some points of the line of battle the position was almost desperate, and it may not be without interest to repeat here an incident which occurred at this time and which was related to the present writer by King Peter's cousin, Prince Alexis Karageorgevitch, on the occasion of the latter's recent visit to London. The aged ruler of Serbia mounted his charger and rode up to the trenches, where his brave peasants crouched with bayonets fixed to empty rifles, and exclaimed: "My dear brothers, you have sworn allegiance to your country and to your King: from this latter oath I release you. You are at liberty to return to your homes; your aged King has come to take your place, for you must be more than worn out." With these words he dashed forward, his drawn sword in his right hand and a Browning pistol in his left. His peasants followed with a cheer and made a bayonet charge which caused a panic in the enemy's lines.

The Austrian Debacle

In the meantime the long-expected ammunition had arrived, and on Dec. 3, to the Austrians' amazement, the whole of their front was subjected to a sudden and violent offensive. On the 4th Suvobor was stormed, the Austrian centre was pierced, and the right wing scattered in headlong flight along the road to Val-

jevo. By the 7th the Serbians were back on a line extending from Lazarevats to Valjevo, and thence to Uzhitse, and the enemy fleeing toward the Drina, which they crossed in disorder two days later.

The Austrians' right clung to their positions for a few days to the north and west of Maldenovats, and on the 7th and 8th made determined efforts to break through. They were repulsed with fearful losses and compelled to give ground, though they fought with the greatest obstinacy at every step of their retreat; on the 12th they were compelled to fall back upon Belgrade. The heights to the south of the capital had been fortified with extensive earthworks and gun emplacements and formed positions of great strength, but the Austrian troops were by now too demoralized to hold them and gave way on the 14th. They were still fleeing across the Save when, on the morning of the 15th, some Serbian batteries unlimbered on the surrounding heights and shelled the pontoon bridge, rendering further escape impossible.

The Austrians left behind them over 40,000 prisoners and hundreds of guns, with the transport and stores of a vast army.

So extraordinary was the Serbian rally, and so overwhelming the catastrophe that had befallen the Austrian arms, that for some days Europe refused to credit the news from Belgrade. As its full import was grasped, the Allies also realized their indebtedness to their Balkan ally; nor, we may well believe, will it, on the day of reckoning, be forgotten.

Crucifixion of a People

Almost a whole year passed in relative quiet; the Austro-Hungarians had obviously enough of their chastising of Serbia. Count Tisza, then Prime Minister of the Monarchy, declared that the Hapsburg forces were "not a match" for the Serbian experienced warriors. Simultaneously with his admission the oldest and most patriotic German newspaper, *Die Vossische Zeitung*, in its editorial columns, suggested that a separate peace should be made with Serbia, guaranteeing the absolute integrity of

her kingdom and granting her, as compensation, the "nobody's land" of Albania, from which its comical 'mpret had fled long since.

But Serbia continued her preparations for an eventual new foe, who, on the east and south of the kingdom, was sharpening his sword and fortifying his frontiers. The credulous Sir Edward Grey and his "wait and see" colleague were too deaf to the voice of the Serbian sage, Mr. Pashitch, who, in early June, 1915, informed the British Government that Prince Bülow had brought to Sofia a draft of the Treaty of Alliance and a military convention between the Central Powers and the Kingdom of Bulgaria.

What Mr. Pashitch required was a sanction, on the part of the Allies, of Serbia's timely action against isolated Bulgaria, in order to prevent the latter's intervention at a moment when the troops of King Peter would be too busily engaged in resisting a fresh attempt from the north. But the British Secretary for Foreign Affairs was still nursing the hope that a Balkan league could be renewed. This futile course of action—or, to be less incorrect, inaction—gave ample opportunity for Bulgaria to make good the wastage suffered in her disaster in the battle of Bregalnitsa in July of the previous year. According to her well-established tradition she awaited the moment when the fourth punitive expedition—this time composed chiefly of the best German Imperial Armies and of what was still left of the Austro-Hungarian forces—under the ingenious leadership of General Mackensen, penetrated far into the desolated Serbian land, to stab in the back the heroically resisting Serbian armies.

It is impossible to ascertain at this juncture the exact strength of the Teutonic forces advancing through Serbia. Certain writers assert that the Serbian armies—or what was still left of them—were outnumbered as ten to one by the combined forces of General Mackensen and those of King Ferdinand of Bulgaria. The Serbians fought desperately on both fronts, and, while the army officers were renewing their oath at Stalatch (in Cen-

tral Serbia) either to stop the invaders or to perish to the last man, suddenly came from France and Great Britain, not the long expected and officially promised help, but the wise advice: "Sauve qui peut!" The advice was good indeed, for, had the Serbians not followed it, they would have lost not only their land but also every one of their men. And after almost three years of continuous triumph of the Serbian arms over the Turks, the treacherous Bulgarians and the Babel-like Austro-Hungarian "punitive expeditions," a proud people, not a defeated army, had to retreat! But where? Surely not to Greece, Serbia's ally!

Horrors of the Exodus

Before the general exodus of the Serbian people had begun, the German Imperial Government, in chivalrous recognition of Serbian bravery, offered to the Nish Government a comparatively liberal peace, by which, so we are informed, the integrity of the Serbian territory was guaranteed. Moreover, if the Serbian armies would only simulate a resistance, but in truth leave a free passage to Salonki for the combined Austro-German forces, not only Albania but also so much of the Serbian-populated provinces in Austria-Hungary would be yielded as the dignity of the Dual Monarchy would permit. Although the Serbian Government had no specific treaties of alliance with either of the Entente Powers—the only one that had been concluded being that with Greece—and despite the imminent cataclysm which threatened from all the cardinal points, the Serbian Skupshtina, after a spirited and memorable speech delivered by Mr. Pashitch in which he accentuated that "it were better to die in beauty than to live in shame," unanimously decided to offer a stubborn resistance to the invaders, while the noncombatants were ordered to retreat through the rocky fastnesses of Albania to Durazzo, where British ships waited to transport them further.

More than one volume could be written on the horrors of that exodus, which stands unique in the history of mankind. The scenes from Dante's "Inferno" are but pallid shadows in comparison with

those in which a nation of hard-striving and honest soil-tillers played in reality to the amusement of the powers of darkness. Tens of thousands were dying in silence on the roadsides, afflicted by diseases, utter exhaustion, and hunger. The improvised graves gave up their dwellers; and corpses of domestic animals in a strange conjunction were intermingled with those of fathers and mothers of families, peasants and Senators, beggars and the wealthiest members of an old society. The bitter frost prevented the survivors from digging out the roots of young firs and pines, the only vegetation yet possible in the desolate Albanian mountains, and many were found frozen in the act of securing that last remnant of food. The exhausted women, once happy maidens, brides or mothers, either staggered, with bound-up eyes, over the narrow trails, on both sides of which yawned bottomless gulfs, or, in utter exhaustion, crawled on their knees, clutching convulsively at the rocks with their still rosy nails. Now

and then one could see a mother standing knee-deep in snow, erect as a statue, pressing to her bosom a sleeping babe, and fixing with her glassy eye every passer-by; and if some one, who had still a remnant of compassion or was not as yet maddened with his own fate, warned her to move, he would discover that she had long been dead. Or a volunteer, crouching on one knee and clutching his rifle, ready to fire at enemy or friend, would remain in that position until some Arnaout, puzzled by the irony, should come to him, and, cutting the weapon out of his frozen fingers, thrust the body back to its icy grave.

Such was the soundless death of a once happy people.

The Serbian State may eventually be restored, but there will be no Serbians to people it again. They have not been "punished"; that is what one does to naughty children; but one of the oldest Slav races has been exterminated—crucified—never to be resurrected.

The Torpedoing of the Westminster

The British Admiralty has published the following note:

The degree of savagery to which the Germans have attained in their submarine policy of sinking merchant ships at sight would appear to have reached its climax in the sinking of the British steamship *Westminster*, proceeding in ballast from Torre Annunziata to Port Said.

On Dec. 14 this vessel was attacked by a German submarine without warning, when 180 miles from the nearest land, and was struck by two torpedoes in quick succession, which killed four men. She sank in four minutes.

This ruthless disregard of the rules of international law was followed by a deliberate attempt to murder the survivors. The officers and crew, while effecting their escape from the sinking ship in boats, were shelled by the submarine at a range of 3,000 yards. The master and chief engineer were killed outright, and their boat sunk. The second and third engineers and three of the crew were not picked up, and are presumed to have been drowned.

Great Britain, together with all other civilized nations, regards the sinking without warning of merchant ships with detestation, but seeing the avowed policy of the German Government, and the refusal to consider the protests of neutrals, it is recognized that mere protests are unavailing.

The Captain of the German submarine must, however, have been satisfied with the effectiveness of his two torpedoes, and yet he proceeded to carry out in cold blood an act of murder which cannot possibly be justified by any urgency of war, and can only be regarded in the eyes of the world as a further proof of the degradation of German honor.

The Sufferings of Neutral Greece

By Adamantios Th. Polyzoides

Greek-American Journalist

GREECE neutral—why? Is not Turkey fighting, and Bulgaria, too, and is not the warfare of these two traditional enemies a sufficient inducement for the Hellenic people to join forces with those who battle to reduce German and Austrian power, Turkish barbarism, and Bulgarian greed, to a state in which they will no more be dangerous to mankind? What does Greece expect at the close of the war, when, in case of Entente victory, she will find herself without friends, while, should Germany win, Turkey and Bulgaria will crush every hope of a greater Hellas?

These questions and many others are persistently asked by the friends of Greece, who cannot explain an attitude condemned from every side as treacherous, faithless, cowardly, ungrateful, and generally out of keeping with the best traditions of the Greek people.

Greece has vainly tried to defend her course to the world. She has been prevented from so doing by a number of causes, chief of which is the denial of free speech and free intercourse with the outside world. In addition to that, Greece, besides giving explanations to the world at large, is forced to defend her actions even against a turbulent minority at home, which, notwithstanding the general Greek desire for peace, has persistently labored for war while the inducements offered therefor are continually lessening.

This minority is known both in and out of Greece as the Venizelist Party; and this party is first, last, and always a one-man party, existing only by the activity and the strength of its leader, Eleutherios K. Venizelos. This leader, however, has been clever enough to tie up his followers to the fortunes of the Entente, thus monopolizing for himself and his party the sympathies and goodwill with which all Greece follows the struggle of Great Britain and France.

Between the average Greek, however, and the regular Venizelist this difference exists: the former does not push his affection for the Entente to the extent of going to war for it; and this attitude is due to fear that Greece, by entering the European war, would be destroyed, as Belgium, Serbia, Montenegro, and Rumania were destroyed. In other words, we of Greece love the Entente, but not to the extent of committing suicide, especially when it is apparent that our sacrifice would not in the least affect the fortunes of the European war.

The Venizelist Greek, on the other hand, is loud in his sympathies for the Entente, and, besides that, he wants rather to commit suicide at the side of Great Britain and France than emerge living and disgraced from the great struggle.

Error of the Venizelists

Since the beginning of the war Venizelos has aligned himself with the Entente Powers and assumed the leadership of the so-called war party. He thought at that time—and in his opinion he had a large majority of people agreeing with him—that the European war would end shortly in an overwhelming victory of the Entente, and insisted that Greece ought to enter the struggle and secure those advantages which would be denied her if she stood out of the fray; contrary to this view, all the Greek military factors, including King Constantine and the Hellenic General Staff, were convinced that the war would last longer than any politician imagined; that the bloody game was being played on too large a scale to allow small participants any chance of success. Events subsequently justified this latter view against the Venizelos idealism. One after the other, all the little nationalities entering the war were knocked out in a few rounds; Greece succeeded in preserving her life despite tremendous pressure

brought to bear by Venizelos and the Entente Governments, and it is on that account that she has had to suffer, in addition to other indignities, an internal revolution in Saloniki and a rigorous blockade, which has continued since Dec. 1 of last year.

And yet the sufferings of Greece are the result of circumstances rather than of her mistakes. Could a little country like Greece do anything to affect the final result of the European war? The question is one to be answered with a smile by those who have an intimate knowledge of what the European conflict means. Yet the belligerent coalitions actually seem to have assumed that the side which had the assistance of Greece would be the victor in the gigantic conflict. Only under this assumption can we justify the intensity of the activity of both the Entente and the Teuton allies in Athens, which activity is responsible for all the troubles of Greece in the last months.

To go back over the history of the elapsed twelvemonth would be to repeat those things which are known to almost every reader of the daily press. The period may be recapitulated by saying that Greece was united in a policy of neutrality up to March, 1915, when Venizelos came out as the champion of immediate participation in the Dardanelles campaign. King Constantine and the Greek General Staff rejected his advice on grounds of military inexpediency, and subsequent events justified them. Venizelos resigned, but at the same time declared that should Greece enter the war at that time she was to secure important territorial concessions in Asia Minor; provided, however, she offered Greek Eastern Macedonia to Bulgaria.

The Gounaris Ministry, assuming power after Venizelos resigned, offered to cooperate with the Entente forces, but he asked, as a *sine qua non* condition, a written guarantee from the Entente to the effect that Greek territorial integrity on the Balkan Peninsula would be safeguarded against any covetous attack from Bulgaria at the time when the Greek troops would be fighting overseas in Asia Minor. This guarantee the En-

tente could not give, as it was trying to secure Bulgarian intervention also at the expense of Greece.

Following the dissolution of the Greek Chamber, an election was held on May 31, (June 13,) 1915, in which Venizelos won 180 seats out of a total of 316. The Entente hailed that result as a victory of the Greek war party; but Venizelos had avoided the issue in his campaign, and the people, although expressing their confidence in him, did not vote for war.

The Treaty with Serbia

In the first days of October, 1915, the great Teuton drive against Serbia began, and almost simultaneously Bulgaria attacked the Serbs from the rear; Venizelos, working on the assumption that the treaty with Serbia obliged Greece to attack Bulgaria, ordered a general mobilization of the Greek forces, a measure approved by the King, who wanted to forestall a possible attack from Bulgaria. King Constantine and the majority of the Greek people knew that the Serbian treaty was Balkan in its character, and was contracted at a time when the possibility of a European conflict did not enter the minds of at least the Greek delegates who signed it.

Greece was willing to stand by Serbia had she been attacked by a Balkan State; but Serbia was attacked by Germany, Austria, and Turkey, as well as Bulgaria; and meantime she was assisted in her struggle by such powerful allies as Russia, Great Britain, France, and Italy. Nevertheless, the Greek military command had good reason to expect an irresistible Teuton avalanche in the Balkans; it knew beforehand that the Serbian campaign was doomed, and also knew that if Greece attacked the Central Empires a small addition to the Teuton and Bulgar forces would crush her as surely and as effectively as they did Belgium and Serbia.

That King Constantine and the Greek military chiefs were right in their calculations is shown from this simple fact: In October, 1915, Germany had not suffered the losses of the Verdun campaign, which started in February, 1916; she had not suffered the losses of the Galician

campaign under General Brusiloff, which started later in May of the same year, and she had not suffered the losses incidental to the Anglo-French offensive on the Somme, which took place late in the Summer of last year. Now, the German losses in the Verdun, Galicia, and Somme campaigns must have been above one million men, if we take the lowest estimate of both sides. Yet, notwithstanding these losses, Germany was able to crush Rumania in three months. Does any one imagine that had Greece entered the war before Germany lost that million men, she could have saved herself from destruction?

But when we speak of Greek destruction we also have to face this naïve objection: Greece is an island kingdom, and Great Britain rules the seas. Undoubtedly this is true to a certain extent; but Greece has two million Greek population in Asia Minor, and has another three million Greeks in the lands which would have been invaded, not by the Germans and Austrians, but by the Bulgars and the Turks, who would have made a short job of the extermination of Hellenism in the peninsula and in Asia Minor. The fate of the Armenians points clearly enough to what the Greeks in Asia Minor could expect at the hands of the Turk; and as for Bulgarian sympathy toward the Greek, the less said the better.

All this goes to show that Greece was right when she followed the advice of her King to stay out of the war, and to adopt a program of "safety first."

Venizelos Evaded Issue

Venizelos resigned a second time in the same year, when his advice for intervention was rejected. And as no Government in Greece is constitutional without a Parliamentary majority behind it, the King ordered a new election to be held on Dec. 6-19, 1916, in order to have the people decide for war or peace. Venizelos in this instance not only dodged the issue put squarely before him, but in addition stayed away from the polls with his whole party, and gave proof of an untimely weakness when he clamored that the entire population was with him in a program of immediate entrance into war.

When one takes into account that in December, 1915, the German and Bulgar armies had cleared Serbia of the Serbian troops, one can easily infer the actual extent of the alleged Greek belligerency on which the Venizelist program was based.

From October, 1915, to June, 1916, Greece, although neutral and benevolent to the Entente, suffered all the trials of a belligerent country.

Venizelos just before his first resignation in March, 1915, had offered the Entente the islands of Lemnos and Tenedos to be used as naval bases against the Dardanelles; following the landing of the Anglo-French troops in Saloniki, which was effected through an invitation by Venizelos, and in violation of Article 99 of the Hellenic Constitution, General Sarraïl took over the Greek forts of Karabournou in Saloniki, and about the same time a French fleet secured possession of Corfu, where the broken and sick Serbian Army gathered to reorganize. Railway communication between Saloniki and Eastern Macedonia was severed following the blowing up of the great Demir Hissar Bridge by the Allies, and the Dova Tepé fort on the Bulgarian border passed under allied control shortly afterward; then naval bases were established by the Entente in the islands of Milo and Castellorizo, and the Teuton Consuls in Saloniki, instead of being ordered away, were arrested by the French forces. Subsequently the allied control was extended to the islands of Chios, Mitylene, Zante, Cefallonia, Crete, and Thassos.

Under suspicion that Greece was sending food to Bulgaria, the whole country was put under a rigid control as far as imports of foodstuffs were concerned, and the people experienced the first taste of a blockade when the wheat and coal ships from America to Piraeus began to be detained for days and weeks in the allied ports of Gibraltar, Algiers, and Malta.

Surrender of Fort Rupel

In the first days of June, 1916, a mixed German-Bulgarian force appeared before the Greek fort of Rupel in Eastern Macedonia and demanded immediate

possession. Had Greece decided to attack the invaders she would have proved, first, that her neutrality was one-sided, and in the second place she would have had to enter the war, not only against Bulgaria, but against the entire combination of the Teuton Powers. In the face of such a contingency Greece, wishing above all to remain neutral, turned over the fort and withdrew her troops.

The Allies, once more disappointed in their hopes to see Greece enter the war, immediately declared martial law all over Macedonia, placed an embargo on Greek shipping, and presented the ultimatum of June 21 with the following demands:

1. Immediate resignation of the Skouloudis Government, which, after Zaimis, took Venizelos's place following the latter's resignation in October, 1915.
2. Appointment of a new Government of a nonpolitical and nonpartisan character.
3. Immediate demobilization of the army.
4. Dissolution of the Chamber, and the holding of a general election, immediately following general demobilization.
5. Substitution of certain police officials suspected of anti-Entente leanings.

King Constantine forthwith complied with the demands of the Entente. Thus the Skouloudis Ministry resigned, Zaimis again came to power, the army was demobilized in record time, and the police officials were succeeded by others who were acceptable to the Entente.

Greece was getting ready to hold the general election, in accordance with the last demand of the ultimatum, when Venizelos, apprehending disaster at the polls, induced the Entente to hold back its ultimate demand.

This happened because the Greek Army, when demobilized, became the strongest anti-Venizelist factor, and through the organization known as the Reservist League threatened to make any Venizelos victory in the election impossible.

In their eagerness to shift Greek attention to other matters, and with the assurance that Rumania and Italy were to declare war on Germany, the Allies started on their great Balkan offensive in the last days of August, 1916; in order to try once more to get Greece on their side the troops of General Sarraïl left the en-

tire East Macedonian frontier unprotected, and when the few Greek troops stationed there attacked the Bulgarian invader, and a number of sanguinary clashes ensued, it was affirmed positively in every Entente capital that Greece was getting in. In order to make Greek participation sure, the Entente dispatched a fleet to Piræus, had the Teuton Ministers arrested, and took over the Greek fleet in order "to protect it."

The Venizelos Revolt

Greece once more refused to enter the war of destruction. And it was thus that Venizelos, despairing of coming into power as a war leader, or as chief of the Parliamentary majority, left Athens, and after a short cruise in the Aegean, touching Crete and Mitylene, settled down at Saloniki and established his so-called "Provisional Government." His was assumed to be a patriotic movement directed against the Bulgar invader, and for that reason succeeded in having immediately the support of a large number of patriotic Greeks, eager to fight the Bulgar; when, however, these people assembled in Saloniki, they received the impression that the Provisional Government was nothing else than an organized plot of Venizelos to drive King Constantine out of Greece and become himself the dictator of the country. This accomplished, Venizelos thought, there would be no difficulty in having the entire Greek people thrown into the war on the side of the Entente.

Venizelos claimed that he had the Greek people with him, and that the moment he became master in Athens Greece would take the field against the Teutons. The Entente believed the Cretan politician, and gave him every assistance in order that he might succeed in his effort. The Ionian Bank was ordered to place at the disposal of the "Provisional Government" an amount of funds approximating \$5,000,000; a number of officers were assigned to train the Venizelist volunteers, and numerous emissaries to the Entente capitals and other cities were sent to preach the gospel of Venizelism against Constantine, the neutralist King. Venizelos counted on fifty thousand

Greeks leaving the United States to place themselves in his army, and on substantial financial support from those who would not volunteer to serve with the troops.

In order to arm his troops Venizelos suggested that the Entente force the Athens Government to turn over its artillery and ammunition to the revolutionists; of course the arms would be used apparently against the Bulgar foe, and as Greece was not willing to fight, the Entente ought to secure those guns and hand them to the Venizelos men.

The Clash in Athens

The Entente with the usual eagerness acceded to the Venizelos demand, and through Admiral Fournet, commanding the allied fleet in Greek waters, demanded peremptorily that the Hellenic Government hand over its arms to the allied forces. The Royal Government, having information that the arms thus demanded were to be used against the established Hellenic régime, refused to comply with the Admiral's ultimatum, and when on Dec. 1 an allied force landed in Athens to take possession of the arms by force, the Greek troops in the capital offered a most stubborn resistance, succeeded in isolating Admiral Fournet, and almost made him a prisoner. They finally drove the invader out, after inflicting and suffering serious losses in the encounter.

It then became apparent that the Venizelist element in Athens had everything ready for a revolution to overthrow the Government and the King, and to establish the rule of the "Provisional Government" in the capital of Greece. The Venizelists were well armed for this purpose, and counted chiefly on the support that the allied troops would afford them in engaging the Greek troops. When Admiral du Fournet became aware that the entire population of Athens was for the King and against Venizelos, he immediately withdrew, and subsequently was punished by his Government.

It was following this "treacherous assault" on the Entente troops by the Greek Army that a new ultimatum was presented to Greece, asking reparation and the transfer of the Greek military

forces to the Peloponnesus; in addition the demand for the handing over of the weapons was again repeated. Greece complied with all the other desires of the Entente, but refused to hand over the guns. Thereupon the Entente established a new blockade, which is continuing still.

During well-nigh four months not a single ship was allowed to take any food to Greece; immense misery, starvation, sickness, and a diversity of epidemics have ensued; in vain the Royal Government protested against this inhuman treatment, which is costing scores of lives daily. Every Greek steamer has suspended sailings, and Greece is completely cut off from communication with the outside world.

Venizelos Movement a Failure

Venizelos at the same time is unable to go ahead with his movement. After having spent the \$5,000,000 given him by the Entente he has scarcely succeeded in assembling in Saloniki more than 5,000 volunteers; he is today despised by the majority of the Greek people; he is considered as the man who has split his country in two at a time when Hellas ought to present a united front. The Venizelos movement is a failure, and is maintained simply because it has behind it the prestige and the support of the Entente. Tomorrow, should the Entente abandon Saloniki, Venizelos would have to flee for his life.

What profit, therefore, do the Allies expect from a man and a party which cannot count on the sympathy of the majority of the Greek people?

This blockade, this misery, this suffering, of the Greek nation were expected to strengthen the Venizelist movement; but Greece starving and dying will not follow him. The Venizelos movement has ceased to thrill the nation. The Venizelist emissaries in Europe and America may continue their efforts, but neither a volunteer nor a dollar will be lured to Saloniki.

Greece has ceased to be a factor in the European war. Venizelos has ceased to be the powerful leader who could wrest his country from the King of the Hellenes. The Entente were deceived, and

are today pushing the Hellenic people into the arms of their traditional enemies. And the question arises: Is it Venizelos or Greece that the Allies care for? If it is the former, then let them continue the tactics which alienate them from the Greek people. But if it is the latter, then for God's sake don't push that country's sufferings and despair any

further. Because the Greek people have done no harm to any one, and history will place the plight of Greece beside that of martyred Belgium when the hour of reckoning comes; and it would be a pity to besmirch the noble struggle of the Allies with such a record of brutality and inhumanity as the Entente is today guilty of in Greece.

King Constantine's Statement of the Wrongs of Greece

KING CONSTANTINE of Greece gave The Associated Press correspondent at Athens a detailed statement on Jan. 14, in which he said that it had been impossible to get the truth about Greece into the newspapers of the Entente countries. After citing false reports in the French press regarding the events of the attempted Venizelos revolution on Dec. 1 and 2, 1916, the King continued:

After all, all we ask is fair play. But it seems almost hopeless to try to get the truth out of Greece to the rest of the world under present circumstances. We have been sorely tried these last two years and we don't pretend to have always been angels under the constant irritation of the ever-increasing allied control of every little thing in our own private life—letters, telegrams, police, everything. Why, do you know that my sister-in-law, Princess Alice of Battenberg, was only permitted to receive a telegram of Christmas greetings from her mother in England by courtesy of the British Legation here?

Moreover, by taking an active hand in our own internal politics, England and France especially have succeeded in alienating an admiration, a sympathy, and a devotion toward them on the part of the Greek people that, at the beginning of the war, was virtually a unanimous tradition. I am a soldier myself and I know nothing about politics, but it seems to me that when you start with almost the whole of a country passionately in your favor and end with it almost unanimously against you, you haven't succeeded very well. And I quite understand how those responsible for such a result seek to excuse themselves by exaggerating the difficulties they have had to contend with in Greece—by talking about Greek treachery and the immense sinister organization of German propaganda that has foiled them at every turn, and so on.

The only trouble with that is that they make us pay for the errors of their policy. The people of Greece are paying for them now in suffering and death from exposure and hunger, while France and England starve us out because they have made the mistake of assuming that their man Venizelos could deliver the Greek Army and the Greek people to the Entente Powers whenever they wanted to use Greece for their advantage, regardless of the interests of Greece as an independent nation.

There are just two things about our desperate struggle to save ourselves from destruction that I am going to ask The Associate Press to try to make clear to the people of America. The rest will have to come out some day—all the blockades and censorship in the world cannot keep the truth down forever. Understand, I am not presuming to sit in judgment on the Entente Powers. I appreciate that they have got other things to think about besides Greece. What I say is meant to help them do justice to themselves and to us, a small nation.

The first point is this: We have two problems on our hands here in Greece—an internal one and an external one. The Entente Powers have made the fundamental mistake of considering them both as one. They said to themselves: "Venizelos is the strongest man in Greece and he is heart and soul with us. He can deliver the Greeks whenever he wants to. Let us back Venizelos, therefore, and when we need the Greek Army he will turn it over to us."

Well, they were wrong, as I think you have seen for yourself since you have been here. Venizelos was perhaps the strongest man in Greece, as they thought. But the moment he tried to turn over the Greek Army to the Entente, as if we were a lot of mercenaries, he became the weakest man in Greece and the most despised. For in Greece no man delivers the Greeks. They decide their own destinies as a free people, and not England, France, and Russia together can change

them, neither by force of arms nor by starvation. And they have tried both. As for Venizelos himself—you had a man once in your country, a very great man, who had even been Vice President of the United States, who planned to split the country in two and set himself up as a ruler in the part he separated from the rest. I refer to Aaron Burr. But he only plotted to do a thing which he never accomplished. Venizelos, with the assistance of the allied powers—and he never could have done it without them—has succeeded for the time being in the same kind of a seditious enterprise. You called Aaron Burr a traitor. Well, that's what the Greek people call Venizelos.

The impression has been spread broadcast that Venizelos stands in Greece for liberalism and his opponents for absolutism and militarism. It is just the other way around. Venizelos stands for whatever suits his own personal book. His idea of government is an absolute dictatorship—a sort of Mexican government, I take it. When he was Premier he broke every man who dared to disagree with him in his own party. He never sought to express the will of the people; he imposed his will on the people. The Greek people will not stand that. They demand a constitutional Government in which there is room for two parties—Liberals and Conservatives—each with a definite program, as in the United States or England or any other civilized country, not a personal Government, where the only party division is into Venizelists and anti-Venizelists.

The other thing I wanted to say is about the effect of the so-called German propaganda in Greece. The Entente Powers seem to have adopted the attitude that everybody who is not willing to fight on their side must be a pro-German. Nothing could be falsier in respect of Greece. The present resentment against the Allies in Greece—and there is a good deal of it, especially since the blockade—is due to the Allies themselves and not to any German propaganda. The proof of it is that when the so-called German propaganda was at its height there was little or no hostility in Greece toward the Allies. It has only been since the diplomatic representatives of all the Central Empires and everybody else whom the Anglo-French secret police indicated as inimical to the Entente have been expelled from Greece, and any German propaganda rendered virtually impossible, that there has grown up any popular feeling against the Entente.

Part of this is due to the Entente's identification of its greater cause with the personal ambitions of Venizelos, but a great deal has also been due to the very unfortunate handling of the allied control in Greece. When you write a personal letter of no possible international significance to a friend or relative here in Athens, and post it in Athens, and it is held a week, opened, and half its contents blacked out, it makes you pretty

cross—not because it is unspeakable tyranny in a free country at peace with all the world, but because it is so silly. For, after all, if you want to plot with a man living in the same town you don't write him a letter. You put on your hat and go to see him. Half the people in Greece have been continually exasperated by just this sort of unintelligent control, which has irritated the Greek people beyond any telling. But to say that they are pro-Germans because they dislike having their private letters opened or their homes entered without any legal authority whatsoever is childish. It's a vicious circle. The Entente takes exceptionally severe measures because it alleges the Greeks are pro-German. The Greeks very naturally resent the measures thus taken, as would the Americans or anybody else. The Entente then turns around and says: "You see, that proves that the Greeks are pro-German, as we suspected."

The fact of the matter is that there is even now less pro-German feeling in Greece than in the United States, Holland, or any of the Scandinavian countries. And there is far less anti-Entente propaganda in Greece even now than there is anti-Hellenic propaganda in England, France, and Russia. The whole feeling of the Greek people toward the Entente Powers today is one of sorrow and disillusionment. They had heard so much of this "war for the defense of little nations" that it had been a very great shock to them to be treated, as they feel, very badly, even cruelly, for no reason and to nobody's profit. And more than anything else, after all the Greek Government and Greek people have done to help the Entente Powers since the very outbreak of the war, they deeply resent being called pro-German because they have not been willing to see their own country destroyed as Serbia and Rumania have been destroyed.

I have done everything I could to dissipate the mistrust of the powers, I have given every possible assurance and guarantee. Many of the military measures that have been demanded I myself suggested with a view to tranquillizing the Allies, and myself voluntarily offered to execute. My army, which any soldier knows could never conceivably have constituted a danger to the allied forces in Macedonia, has been virtually put in jail in the Peloponnesus. My people have been disarmed, and are today powerless, even against revolution, and they know from bitter experience that revolution is a possibility so long as the Entente Powers continue to finance the openly declared revolutionary party of Venizelos. There isn't enough food left in Greece to last a fortnight. Not the Belgians themselves under German rule have been rendered more helpless than are we in Greece today.

Isn't it, therefore, time calmly to look at conditions in Greece as they are, to give over a policy dictated by panic, and to display a little of that high quality of faith which alone is the foundation of friendship?

The Story of Saloniki

By James B. Macdonald

NINETY years ago, when the Hellenes were fruitlessly fighting for their independence, George Canning, the British Foreign Secretary, induced France and Russia to join his country in freeing them. The allied fleet destroyed that of Egypt at Navarino, and Greece again became a political entity in 1832 under the protection of Britain, France, and Russia.

The guaranteeing powers agreed to assist the new kingdom financially, to contribute toward the maintenance of a sovereign in suitable state, and that whatever ruler was chosen should not be a member of the British, French, or Russian royal families. They also agreed that none of the contracting powers should send troops into Greece without the consent of the other guarantors.

Otto, the first King—a son of King Louis I. of Bavaria—was deposed by a national assembly, following a military revolt in 1862. A plebiscite of the people elected Prince Alfred of Great Britain, better known as the Duke of Edinburgh, but the British Government refused to sanction it as being contrary to the agreement with their co-guarantors. The throne was next offered to the Earl of Derby, grandfather of the present War Minister, but declined by him. The British Government then suggested the Danish Prince, William George of Schleswig-Holstein-Sonderburg-Glücksburg, and this nomination was approved by a National Assembly and ratified by the guaranteeing powers.

The new sovereign, George I., was the father of the present King Constantine. As a special mark of good-will, Britain ceded Corfu and the other Ionian Islands to Greece. In 1864 the King accepted a new democratic Constitution drawn up by the National Assembly, and this is the one still in force.

Meanwhile, the relationship between the guaranteeing powers and their ward had not always been harmonious, and

coercive measures have had to be resorted to on several occasions. A French army occupied Greece during the Crimean war to prevent the Greeks from making war on Turkey and threatening the allied communications. Toward the close of the Russo-Turkish war of 1877-78 the Hellenes invaded Thessaly, but their claim of territory was set aside in the Treaty of San Stefano. At the instance of Lord Salisbury, two Greek delegates were permitted to address the Berlin Conference, and they obtained a rectification of the frontier.

In 1893 Greece defaulted in her national obligations, and four years later entered upon an unprovoked and aggressive war against Turkey. The Greek Army, under Crown Prince Constantine, was decisively beaten, and the capital lay at the mercy of the victorious Turks when the King telegraphed to the Czar to save Greece. The Czar made personal representations to the Sultan, and peace was arranged. Greece agreed to pay about \$15,000,000 for her escapade.

Smarting from disappointment, the military forces in 1909 set aside all constitutional government and substituted the Military League. They expelled Crown Prince Constantine and his brother from the army and threatened the Crown itself. Later the army and navy quarreled, and Venizelos, who at this time came into prominence, persuaded the Military League to dissolve and permit the re-establishment of constitutional government.

In 1912-13 came the first and second Balkan wars, the assassination of King George at Saloniki, and the crowning of King Constantine.

A French military mission had re-organized the Greek Army and equipped it with the latest pattern mountain guns and light howitzers.

In the first war the Bulgars broke the main Turkish resistance at Kirk Kilissé and Lulé Burgas, the Serbians

REGION OF ALLIED OPERATIONS IN MACEDONIA.

broke their western armies at Kumanova and Monastir, and King Constantine, after the fight at Yanitza, had a walk-over to Saloniki, where the demoralized Turks surrendered without resistance.

In the second war the Bulgarian objective was to seize Saloniki and to destroy the Greek and Serbian Armies in detail. King Constantine, with a superior Greek Army, fought his first real battle between Saloniki and Seres, and, after a struggle of five days, forced the Bulgars to retire. The King pursued the enemy energetically to the Rhodope Mountains, where the Bulgarians counter-attacked and enveloped both his wings, but the timely intervention of the Rumanians compelled the Bulgars to seek an armistice. This alone saved Constantine's army from discomfiture. The war closed with the Greek Army unbeaten and its morale good.

The Repudiated Treaty

Upon the outbreak of the great war the Serbian Army repulsed the Austrian incursion, and in the following year decisively routed the second army of invasion. During the Summer the attitude of Bulgaria had been uncertain and suspicious, and the Greek Government decided it was time to arm. Greece mobilized on Sept. 24, 1915, and three weeks later Bulgaria declared war on Serbia.

Both Greece and Serbia at the close of the second Balkan war expected that Bulgaria would sooner or later seek revenge, and to insure against this contingency they entered into a secret treaty providing that each would assist the other. Serbia, being attacked in the rear by Bulgaria while confronting Austria-Hungary, called on the Hellenes to assist

them in terms of their mutual agreement. The Venizelos Government acknowledged the obligation and proceeded to fulfill it.

As in duty bound, the Greek Government represented the situation to the three great powers who were guaranteeing the independence of Greece. It so happened that these powers were also allied to Serbia and engaged at the moment in war with the Teutonic States.

The Greek Government stated *inter alia*: that they desired to assist Serbia; that their resources were insufficient to make their intervention effective, as they could muster only 200,000 first-line troops with adequate reserves, and that if Britain and France would assist them with an additional 150,000 men they would take the field against Bulgaria. The western powers agreed, and the matter was arranged. Thirteen thousand Anglo-French troops landed at Saloniki on Oct. 6, 1915, as a first installment, whereupon the political situation changed at Athens.

King Constantine rightly diagnosed the political situation: that the drive eastward through the Balkans to Turkey was the Alpha and Omega of the war so far as his brother-in-law the German Emperor was concerned; that the Austrians were taking the same road, bent upon seizing Albania and Saloniki, and that the invasion of Belgium, France, and Russia was merely side play to engage and hold off the opponents to this eastern adventure. He also inferred that the Asquith Government had mistaken the real political direction of the war. The Teutons were opportunists—gamblers, if you will—in the west, but their heart was in the east.

Constantine erred, however, in supposing that the western powers did not appreciate the political importance of holding Saloniki and Valona (or Avlona) until the end of the war, and that they had no other means of countering the drive to the east than by a major campaign in the Balkans or at the Dardanelles. He concluded that there might be profit for himself in favoring his brother-in-law's ambition and danger to himself in opposing it. King Constantine thereupon reconsidered his pre-

vious concurrence in the pourparlers of his Government with the guaranteeing powers, decided that Greece, in the circumstances of a general European war, was not bound by the treaty with Serbia, and accordingly dismissed Venizelos. The latter obtained the suffrage of the electors with an increased majority, but was again dismissed by his sovereign. Since then the King has reigned as an absolute monarch, and his present Ministry professes to be nothing more than the mouthpiece of the King and the army.

New Greece and the Islands have risen in revolt under Venizelos, who has established a Provisional Government at Saloniki, while Old Greece supports the King at Athens. The situation resembles that in England before the civil war in the reign of Charles I. The guaranteeing powers, however, have asserted their authority, have curbed the power of the King, and will no doubt restore the Constitution at a more convenient period.

All the Greeks believe that Constantine is a great military genius, and, while one party would gladly accept him as a constitutional monarch, the other hails him as the successor of Alexander the Great—above all laws, for "himself he is the State." Venizelos, however, reminds Constantine that his father was elected of the people, and that his own title as King is no better than that of his father. Briefly, one party favors the autocracy of Alexander the Great and believes it has found his successor in Constantine, while the other prefers the democracy of the ancient Greek republics, but associated with the hereditary prestige of a constitutional sovereign.

Bulgaria's Military Strength

The population of Bulgaria, according to the census of 1906, comprised: Bulgaria proper, 2,853,704; Eastern Rumelia, 1,174,535; total, 4,028,239. Allowing for territory and extra population gained through the Balkan wars, natural increase of population, and war losses in 1912-13, the pre-war total may be set down as under 5,000,000.

Carried away by the Teutonic successes

in Poland, the British reverse at the Dardanelles, and their own ambition to attain the abortive terms of the Treaty of San Stefano, the Bulgars embarked upon the world war in the belief that it would be a brief one once they threw their weight in the scales. They immediately mobilized every available man down to the youngest class and enrolled about 750,000 men, leaving the women and old men to work the farms. It was essential to their success that the war be brief, because only about 35,000 youths mature every year, and they had no other reserves.

Their attack on the Serbian rear attained its object and made possible the Austrian advance under General von Mackensen. So far their losses had not been great, because their strength had not been tested out in a pitched battle with a well-equipped foe. They had, moreover, proved themselves good fighting material, and were well-backed up by heavy artillery lent by their northern allies.

The Retreat from Serbia

Meanwhile, at Saloniki, the French had landed a division under General Sarraill, the renowned defender of Verdun, and the British had disembarked the heroic remnants of the Tenth Irish Division under Sir Bryan Mahon, who had led the flying column to the relief of Mafeking during the Boer war. There was no Commander in Chief to co-ordinate the movements of the allied forces, who now moved up country, where the French took station on the left around Krivolak and the British on the right around Doiran. General Sarraill endeavored to extend his left flank to get in touch with some 5,000 Serbians who were retreating from Uskub, and were at the moment holding the Babuna Pass, north of Prilip. Owing to the weakness of his force he did not succeed, although his manoeuvre diverted the attention of the Bulgars and enabled the Serbians to escape into Albania.

The allied commanders themselves now had to think about retreating, but were hampered by the Greeks in their rear wrecking trains and endeavoring to prevent stores and ammunition reaching the

allied forces from the base at Saloniki. The Government at Athens announced that if the Anglo-French army came back into Greek territory they would intern it. The protecting powers responded with an ultimatum threatening to blockade Greece, whereupon Athens gave way with a bad grace.

In November, 1915, large allied reinforcements arrived at Saloniki, but were not sent up country, partly owing to the threatening attitude of the Greek Army and partly because a retreat from the front had already been decided on. They consisted of one French corps, and two British corps—of which two divisions were veterans from the old regular standing army.

General Sarraill retreated to Ghevgeli with small loss and saved his stores, but on Dec. 7, 1915, he was attacked in force and retired without advising his colleague on the right of his change of position. The British on the right still held their ground in ignorance of the French withdrawal, and were suddenly overwhelmed by a Bulgarian army several times their number. They were only saved from annihilation through the Bulgars not venturing to follow them into Greek territory. The Tenth Irish and a portion of the Twenty-second British Division in support were lost for days in the mountain mists, and some of the sentries were frozen to death in the hills.

The Allies fell back on Saloniki with the Greek Army all around them, truculent and obstructive, and with the Greek guns trained upon the allied camp.

Fortified Camp at Saloniki

General Sarraill was appointed Commander in Chief and instructed to fortify Saloniki, while the guaranteeing powers compelled the Greek King to withdraw his main army from Macedonia and retire it to Old Greece, or the kingdom as it existed prior to the Balkan war of 1912. General Mahon was given a high command in Egypt, and afterward succeeded General Maxwell in command of the troops in Ireland, he himself being an Irishman. General Milne of the Royal Artillery was appointed to the vacancy.

The position at the base was still highly unsatisfactory, mainly due to the Greek King having appointed pro-German sympathizers to all the chief posts throughout Greece. This organization became a network of spying and reporting in the German interest. The inadequate transportation service was further depleted by Greek officials sending railway cars across the frontier to the Bulgarians, until the British blew up the Demir-Hissar bridge in February and so stopped it.

In Saloniki itself the Greek division stationed there claimed the best landing facilities for themselves, and permitted Fort Kara-Burram to be used as a base of supplies for German submarines. When the position became intolerable, General Sarrail deported the enemy Consuls and ousted the Greek garrison from the fort and quay.

The military considerations which dictated the holding of Saloniki were not less important than the political. They are comparable to those which determined the Duke of Wellington to establish the succession of impregnable lines at Torres-Vedras to cover the Port of Lisbon during his operations in the Peninsula in 1809. These not only provided him with a safe retreat, but kept open his entry into the Peninsula until such time as his army could be suitably augmented, and had the additional merit of lying across the enemys' line of action. So with Sarrail at Saloniki. He found that nature had provided him with such a camp, and that, with little alteration, it could be made impregnable against assault by the whole Bulgarian Army of 750,000.

Sarrail's garrison now consisted of three French and five British divisions, with supplementary detachments—in all about 170,000 troops; but the great camp in Egypt was only three days distant and could be drawn upon for assistance if required. When General de Castelnau arrived at Christmas, 1915, from head-

quarters in France, he was eminently satisfied with the position at Saloniki.

Extending the Lines

The Royal Engineers and the Génie Français were directed to prepare for an extension of the lines beyond the intrenched camp, as at that time there

INNER DEFENSES OF SALONIKI

were only two roads available—one to Monastir and the other to Seres. Since then they have constructed over 5,000 miles of new roadways, besides building railways and improving the landing facilities at the port.

The outposts were then advanced about thirty miles, to just within the Greek frontier, from Karasuli to Kilindir. The British occupied the right with three divisions, the French the left with two divisions, and the remaining three divisions held Saloniki and the line of communications. The Greeks still had 12,000 troops in Saloniki and 38,000 in Eastern Macedonia, as well as other troops in Western Macedonia.

The major portion of the Serbian Army arrived in April and May, 1916, after leaving a division behind at Corfu. It consisted of 110,000 young hardy veterans, the survival of the fittest in the retreat through Albania; but they had still to be armed, equipped, and reorganized.

The Bulgars held the Midji Mountains on the west and the Belashitza Mountains on the east. They had encroached on the Monastir plain to within a short distance of Florina, then held by the French, and at the Vardar Pass they

had again come within Greek territory. Otherwise they adhered to their own frontier. This line was held by six Bulgarian divisions of 30,000 men each, under General Teodoroff, to whose command some German gunners and engineers were attached.

In Western Macedonia the Greeks were undisturbed. In Albania the Italians had occupied Valona (or Avlona) as a precautionary measure shortly after Austria entered the Balkan area. Their strong force at Valona, however, was not in touch with Sarraill's army at Saloniki until after the capture of Monastir.

The prompt action of the Italians in seizing Valona defeated one of the political objects Austria had in initiating the war, and the Anglo-French occupation of Saloniki completed the discomfiture of the Dual Kingdom.

The Bulgars Invade Greece

Satisfactory assurances having apparently been obtained by the Teutonic powers from the Greek King, the Bulgarian forces crossed the frontier on May 26, 1916. A German officer led the vanguard and demanded the surrender of Fort Rupel, the Hellenic key to the Struma River Pass. When the commander refused he was requested to telephone Athens, and, on doing so, was directed by the War Office to yield up the fort. The same procedure followed with the other forts guarding the passes into Eastern Macedonia.

The Central Powers were now in possession of all the strategic sites of value without Saloniki. The Greek Government had refused to permit the powers who were protectors of their kingdom to occupy these vantage points and so prevent such a *dénouement*.

General Sarraill immediately proclaimed martial law in Saloniki, seized all the means of communication, and expelled the Greek civil authorities. The British, on the right, left their intrenched lines and advanced to the Struma, while the Bulgars dug themselves in on the further bank.

King Constantine adopted the well-understood Levantine attitude of simulating compliance, but was hampered by his

own evanescent Government creations. Early in September, 1916, the whole Greek army corps in Eastern Macedonia declined to accept passage to Old Greece and voluntarily surrendered to the Germans with all their artillery and the stores which Sarraill had sent to them by motor transport from Saloniki.

This placed the seaport of Kavalla, the inland towns of Drama and Seres, and the Oriental railway from Greece to Constantinople in the hands of the Bulgarians. It also enabled them to bring in Turkish troops from Adrianople.

The protecting powers thereupon seized the Island of Thasos, which dominates Kavalla.

The Summer of 1916

Coincident with the arrival of the Serbian Army at Saloniki, the enemy had been reinforced by two Bulgarian divisions, or 60,000 troops. The military position now was that the Anglo-French army had about 120,000 rifles, 500 field guns, and some 200 heavy guns. The Serbians were being rearmed with about 80,000 rifles, and their organization had been taken in hand, as their primitive formations were unsuited for co-ordination with their allies. Their guns and horses had not yet come to hand. Until the Serbians were ready, Sarraill was unable to move, because the Bulgars were possessed of 150,000 rifles and 700 guns, including heavy artillery.

Throughout the Summer the British troops holding the line on the Struma marshes were afflicted with malarial fever, and half their number were on the sick list. The Bulgars were not so affected because, besides being acclimatized, their local knowledge of climatic conditions had warned them to keep to the higher ground which they were already in possession of.

The equipment of the British force, while admirable for defending the intrenched camp at Saloniki, was unsuited for taking the offensive in mountain warfare in a country where there were no cart roads. Pack mules must replace their motor transport and light railways, and mountain guns take the place of their garrison artillery.

The Asquith Government had their eyes on the great battle on the Somme, and, after their misadventures at the Dardanelles and Mesopotamia, were not sympathetic to a vigorous prosecution of the war in the East. For this they were later turned out of office. Contrary to press reports, there was no serious intention at this time of attempting to cut the Balkan railway.

The political object of foiling Austria had been attained by occupying Saloniki and Valona in force.

In August two more divisions arrived to reinforce the Bulgarian Army, and the latter now attacked the Serbians, whom Sarraill had placed on the left wing. The Serbs yielded Florina at the first onslaught and fell back behind Lake Ostrova, where they checked the Bulgar advance. Here they were strengthened on their extreme left by the arrival of a division of Russian infantry, together with French troops, who had been set free from the right wing by the timely arrival of Italian troops. The latter were inset in the British lines between Lake Doiran and Lake Butkova, or, in other words, at the base of the Belashitza Mountains. The Italians were better equipped for the hill fighting than the British, and this determined the task assigned to them.

Until the Bulgars are driven out of the Belashitza Mountains the railway to Seres cannot be used. With a view to the coming offensive, General Milne took over the greater part of the allied centre in addition to holding the right wing.

Autumn Campaign of 1916

If the Entente General Staff contemplated an attack on the Sophia-Adrianople railway at the moment when Rumania entered the war, then it seems clear from subsequent events that neither Sarraill's force nor the Rumanian Army

was designed to play the leading rôle. The only other striking force available was the Russian strategic reserve, but we know now that the Russians were not prepared for a move in this direction at that time. The inference, therefore, is that the press correspondents misinterpreted the situation.

REGION COVERED IN THE CAPTURE OF MONASTIR

The Autumn campaign opened with Sarraill's army aligned in the following disposition:

On the right wing, three British divisions held the line of the Struma and the Italians held the base of the Belashitza Mountains. In the centre, the Vardar front was held by two British divisions on the east side of the river and by French forces on the west side. On the left wing, the second Serbian army held the line of the Nidji Mountains, and their first army, supplemented by French and Russian detachments, held the country on either side of Lake Ostrova. The position of the Entente army was concentric, with its communications arranged accordingly.

The Bulgarian Army, augmented by

Austrian, German, and Turkish troops, was strung out along the hills in concave formation, and suffered from the absence of lateral communications.

Both sides in the early Autumn were jockeying for position, with the Bulgars uncertain whether the attack would come from the British on the right or from the French on the left. On Sept. 11, 1916, the British forded the Struma on a wide front, and during the next few days carried several villages. Simultaneously, artillery preparation commenced on the Vardar front. Sept. 29 and 30 the attack was renewed in force on the Struma front. These, however, were only feints while the mass of the French artillery and troops engaged the enemy's right.

The Capture of Monastir

The real fighting took place on Sarraïl's left wing, and this was quite a brilliant affair, in which the Serbians gained great honor.

The plain of Monastir is the dry bed of an ancient lake and one of the few level stretches in this war theatre. It lies in a north and south direction and, therefore, appeared to General Sarraïl an inviting entrance to outflank and turn all the Bulgar positions west of the Vardar. The Bulgarian flank was secure on that wing because the terrain was impossible. The eastern side of the valley is also protected by hills, but of a less formidable nature, and round this mountain mass the Cerna River bends back on its own course.

The Bulgars had constructed a series of intrenchments across the southern entrance of the valley near the town of

Kenali and stretching from the eastern mountains to those on the west. Between these lines and the Serbian front at Lake Ostrova lay a ridge of hills culminating in the high peak of Kaymakchalan. They were situated astride Sarraïl's line of advance and were held in by force by the enemy.

On Sept. 14 the Serbian outposts were heavily reinforced and counterattacked the Bulgars opposed to them. Meantime, a Franco-Russian column was outflanking the western end of the ridge, and next day the Serbian advance captured the main position with thirty-two field and heavy guns. The Bulgars fought a rear-guard action at the River Brod, but failed to hold their pursuers, and on the 18th the French and Serbians entered Florina.

On the 19th the Serbs carried by assault the high peak of Kaymakchalan and repelled successive counterattacks to recover it during the next week. Another fortnight passed in carrying forward the railway, bringing up the heavy guns and accumulating a sufficiency of shells. On Oct. 14 and 15 a frontal assault on the Kenali lines failed.

General Sarraïl now changed his tactics and directed the artillery against the positions on the eastern hills. The next month was occupied by the French artillery and Serbian infantry in clearing ridge after ridge from which they enfiladed the Kenali lines, and, in co-operation with a Franco-Russian frontal assault, compelled the Bulgars to evacuate them on Nov. 14. The latter were unable to make a further stand in front of Monastir, and on Nov. 19 General Sarraïl's troops entered the city.

British Operations at Saloniki

Official Report of General Milne

[See Map on Page 156]

SINCE the conference at Rome the situation in Macedonia has been radically changed. The weakness of General Sarrail's position lay in the fact that neither England nor France felt free to send from the critical western front the large reinforcements of men which the situation north of Saloniki called for. Italy had the men, but was unwilling to send them and to incur the heavy additional expense of maintaining them in Macedonia. The conference at Rome, in which Premier Lloyd George was the dominant figure, overcame that reluctance, probably promising Italy parts of the Turkish Empire that had been earlier assigned tentatively to Greece and guaranteeing the cost of the new expedition. The result has been immediate and of the highest importance. Rome dispatches indicate that Italy has sent, or is sending, a force of not less than 300,000 men; that these troops, to avoid the danger of submarines, are being dispatched, not to Saloniki, but to Avlona, which is within forty miles of the Italian coast; and, finally, these Italian forces have not only built an excellent highway through the Albanian mountains but have already joined forces with General Sarrail's right wing at Monastir. All these facts indicate early activity in the Macedonian sector.

This glimpse of present conditions will serve to introduce the following report of General G. F. Milne, commanding the British Saloniki Army in Macedonia, on last Summer's operations in that sector. His report, submitted to the British War Office early in December, 1916, covered the army's operations from May 9 to Oct. 8. The official text of the report is here reproduced, with a few minor omissions:

I have the honor to submit the following report on the operations carried out by the British Saloniki army since I assumed command on May 9, in accordance with instructions received from the General Officer Com-

manding in Chief, Egyptian Expeditionary Force.

On that date the greater part of the army was concentrated within the fortified lines of Saloniki, extending from Stavros on the east to near the Galiko River on the west; a mixed force, consisting of a mounted brigade and a division, had been pushed forward to the north of Kukush in order to support the French Army which had advanced and was watching the right bank of the Struma River and the northern frontier of Greece. Further moves in this direction were contemplated, but, in order to keep the army concentrated, I entered into an agreement with General Sarrail by which the British forces should become responsible for that portion of the allied front which covered Saloniki from the east and northeast. By this arrangement a definite and independent area was allotted to the army under my command. On June 8 the troops commenced to occupy advanced positions along the right bank of the River Struma and its tributary, the River Butkova, from Lake Tachinos to Lozista village. By the end of July, on the demobilization of the Greek Army, this occupation had extended to the sea at Chai Aghizi. Along the whole front the construction of a line of resistance was begun; work on trenches, entanglements, bridgeheads, and supporting points was commenced; for administrative purposes the reconstruction of the Saloniki-Seres road was undertaken and the cutting of wagon tracks through the mountainous country was pushed forward.

On July 20, in accordance with the policy laid down in my instructions, and in order to release French troops for employment elsewhere, I began to take over the line south and west of Lake Doiran, and commenced preparations for a joint offensive on this front. This move was completed by Aug. 2, and on the 10th of that month an offensive was commenced against the Bulgarian defenses south of the line Doiran-Hill 535. The French captured Hills 227 and La Tortue, while the British occupied in succession those features of the main 535 ridge now known as Kidney Hill and Horseshoe Hill, and, pushing forward, established a series of advanced posts on the line Doldzeli-Reselli. The capture of Horseshoe Hill was successfully carried out on the night of Aug. 17-18 by the Oxfordshire and Buckinghamshire Light Infantry at the point of the bayonet in the face of stubborn opposition. The enemy's counterattacks were repulsed with heavy loss.

As a result of these operations it became possible to shorten considerably the allied

line between Doiran Lake and the River Vardar, and on Aug. 29, in agreement with General Sarrail, I extended my front as far as the left bank of that river so as to set free more troops for his offensive operations. This relief was completed by Aug. 31, the position then held extending from Hill 420 to the Vardar River just north of Smol. In the Struma Valley a French mounted detachment was at the same time pushed forward to Seres:

Bulgarian Invasion of Macedonia

On Aug. 17 the Bulgarians, who, at the end of May, had entered Greek territory by the Struma Valley and moved down as far as Demir Hissar, continued their advance into Greek Macedonia. Columns of all arms advanced from seven different points, between Sarisaban, on the Mesta, and Demir Hissar. The four eastern columns converged on the country about Drama and Kavala, while the remainder moved southward on to the line of the Struma from Demir Hissar toward Orfano. On Aug. 19 a mounted brigade with one battery carried out a strong reconnaissance, and found the enemy in some force on the line Prosenik-Barakli Djuma; on the following day, after being reinforced by a battalion, this brigade again advanced in conjunction with the French detachment. These attacking troops, after encountering the enemy in force on the line Kalendra-Prosenik-Haznatar, withdrew after dark to the right bank of the Struma. The French detachment was subsequently placed under the orders of the General Officer Commanding British troops on this front, and received instructions to co-operate in the defense of the river line.

On Aug. 21 the railway bridge near Angista Station was demolished by a detachment from the Neohori garrison, and three days later two road bridges over the Angista River were destroyed. Both these operations were well carried out by yeomanry, engineers, and cyclists in the face of hostile opposition.

The Bulgarians continued their advance into Eastern Macedonia unopposed by the Greek garrison, and it was estimated that by the end of August the enemy's forces, extending from Demir Hissar southward in the Seres sector of the Struma front, comprised the complete Seventh Bulgarian Division, with two or three regiments of the Eleventh Macedonian Division, which had moved eastward from their positions on the Beles Mountain to act as a reserve to the Seventh Division, and at the same time to occupy the defenses from Vetrina-Pujovo northward. Opposite the Lower Struma was a brigade of the Second Division, with a brigade of the Tenth Division, in occupation of the coast and the zone of country between Orfano and the Drama-Kavala road. This brigade of the Tenth Division was supported by another brigade in the Drama-Kavala area. As a result of this advance and of a similar move in the west General Sarrail decided to intrust

to the British Army the task of maintaining the greater portion of the right and centre of the allied line.

Struma Crossed in Six Places

On Sept. 10 detachments crossed the river above Lake Tachinos at five places between Bajraktar Mah and Dragos, while a sixth detachment crossed lower down at Neohori. The villages of Oraoman and Kato Gudeli were occupied, and the Northumberland Fusiliers gallantly captured Nevolien, taking thirty prisoners and driving the enemy out of the village. The latter lost heavily during their retirement and in their subsequent counterattack. They also suffered severely from our artillery fire in attempting to follow our prearranged movements to regain the right bank of the river.

On the 15th similar operations were undertaken, six small columns crossing the river between Lake Tachinos and Orliak bridge. The villages of Kato Gudeli, Dzami Mah, Agomah, and Komarjan were burned and twenty-seven prisoners were taken. The enemy's counterattacks completely broke down under the accurate fire of our guns on the right bank of the river. On the 23d a similar scheme was put into action, but a sudden rise of three feet in the Struma interfered with the bridging operations. Nevertheless, the enemy's trenches at Yenimah were captured, fourteen prisoners taken, and three other villages raided. Considerable help was given on each occasion by the French detachment under Colonel Bescoins, and much information was obtained which proved to be of considerable value during subsequent operations.

On the Doiran-River Vardar front there remained as before the whole of the Bulgarian Ninth Division, less one regiment; a brigade of the Second Division, and at least two-thirds of the German 101st Division, which had intrenched the salient north of Machukovo on the usual German system. To assist the general offensive by the Allies I ordered this salient to be attacked at the same time as the allied operations in the Florina area commenced. With this object in view the whole of the enemy's intrenched position was subjected to a heavy bombardment from Sept. 11 to 13, the southwest corner of the salient known as the Piton des Mitraillouses being specially selected for destruction. The enemy's position was occupied during the night 13th-14th, after a skillfully planned and gallant assault, in which the King's Liverpool Regiment and Lancashire Fusiliers specially distinguished themselves. Over 200 Germans were killed in the work, chiefly by bombing, and seventy-one prisoners were brought in. During the 14th the enemy concentrated from three directions a very heavy artillery fire, and delivered several counterattacks, which were for the most part broken up under the fire of our guns. Some of the enemy, however, succeeded in forcing an entrance into the work, and severe fighting followed. As hostile reinforcements were increasing in

numbers, and as the rocky nature of the ground rendered rapid consolidation difficult, the troops were withdrawn in the evening to their original line, the object of the attack having been accomplished. This withdrawal was conducted with little loss, thanks to the very effective fire of the artillery. During the bombardment and subsequent counter-attack the enemy's losses must have been considerable. On the same front on the night of the 20th-21st, after bombarding the hostile positions on the Crête des Tentes, a strong detachment raided and bombed the trenches and dugouts, retiring quickly with little loss. A similar raid was carried out northeast of Doldzeli.

In addition to these operations and raids, constant combats took place between patrols, many prisoners being captured, and several bombing raids were carried out by the Royal Flying Corps.

Holding the Bulgarians

In order further to assist the progress of our allies toward Monastir by maintaining such a continuous offensive as would insure no transference of Bulgarian troops from the Struma front to the west, I now issued instructions for operations on a more extensive scale than those already reported. In accordance with these the General Officer Commanding on that front commenced operations by seizing and holding certain villages on the left bank of the river with a view to enlarging the bridgehead opposite Orljak, whence he would be in a position to threaten a further movement either on Seres or on Demir Hissar. The high ground on the right bank of the river enabled full use to be made of our superiority in artillery, which contributed greatly to the success of these operations. The river itself formed a potential danger, owing to the rapidity with which its waters rise after heavy rain in the mountains, but by the night of Sept. 29 sufficient bridges had been constructed by the Royal Engineers for the passage of all arms. During the night of Sept. 29-30 the attacking infantry crossed below Orljak bridge and formed up on the left bank.

At dawn on the following morning the Gloucesters and the Cameron Highlanders advanced under cover of an artillery bombardment, and by 8 A. M. had seized the village of Karadjakoi Bala. Shortly after the occupation of the village the enemy opened a heavy and accurate artillery fire, but the remaining two battalions of the brigade, the Royal Scots and Argyll and Sutherland Highlanders, though suffering severely from enfilade fire, pushed on against Karadjakoi Zir. By 5:30 P. M. that village also was occupied, in spite of the stubborn resistance of the enemy. Attempts to bring forward hostile reinforcements were frustrated during the day by our artillery, but during the night the Bulgarians launched several strong counterattacks, which were repulsed with heavy loss.

During the following night determined counterattacks of the enemy were again repulsed, and by the evening of Oct. 2 the position had been fully consolidated. Preparations were at once made to extend the position by the capture of Yenikoi, an important village on the main Seres road. This operation was successfully carried out by an infantry brigade, composed of the Royal Munster and Royal Dublin Fusiliers, on the morning of Oct. 3, after bombardment by our artillery. By 7 A. M. the village was in our hands. During the day the enemy launched three heavy counterattacks. The first two were stopped by artillery fire, which caused severe loss. At 4 P. M. the village, the ground in the rear, and the bridges were subjected to an unexpectedly heavy bombardment from several heavy batteries which had hitherto not disclosed their positions. Following on the bombardment was the heaviest counterattack of the day, six or seven battalions advancing from the direction of Homondos, Kalendra, and Topalova with a view to enveloping our positions. This attack was carried forward with great determination, and some detachments succeeded in entering the northern portion of Yenikoi, where hard fighting continued all night, until fresh reinforcements succeeded in clearing out such enemy as survived. During the following day the consolidation of our new line was continued under artillery fire. On the 5th, after a bombardment, the village of Nevlien was occupied, the Bulgarian garrison retiring on the approach of our infantry. By the following evening the front extended from Komarjan on the right via Yenikoi to Elisan on the left. On the 7th a strong reconnaissance by mounted troops located the enemy on the Demir Hissar-Seres railway, with advanced posts approximately on the line of the Belica stream and a strong garrison in Barakli Djuma. On Oct. 8 our troops had reached the line Agomah-Homondos-Elisan-Ormanli, with the mounted troops on the line Kispeki-Kalendra. The enemy's casualties during these few days were heavy, over 1,500 corpses being counted in the immediate front of the captured localities. Three hundred and seventy-five prisoners and three machine guns were taken.

I consider that the success of these operations was due to the skill and decision with which they were conducted by Lieut. Gen. C. J. Briggs, C. B., and to the excellent co-operation of all arms, which was greatly assisted by the exceptional facilities for observation of artillery fire. The Royal Flying Corps, in spite of the difficulties which they had to overcome and the great strain on their resources, rendered valuable assistance. Armored motor cars were used with effect. * * *

On the enforcement of martial law the management of the three lines of railway radiating from Saloniki had to be undertaken by the Allies; one line, the Junction-Saloniki-

Constantinople, is now entirely administered by the British Army; this, together with the additional railway traffic involved by the arrival of the Serbian Army, as well as the Russian and Italian troops, has thrown a considerable strain on the railway directorate, which, however, has successfully risen to the occasion and has worked harmoniously and smoothly with the French military and Greek civil officials.

Medical Services and Malaria

I desire specially to acknowledge the excellent work rendered by Surgeon Gen. H. R. Whitehead, C. B., and all ranks of the medical services under his command during a period in which sickness was prevalent. All branches of the Royal Army Medical Corps and the Canadian Army Medical Corps deserve the greatest commendation and have fully maintained their high traditions of efficiency.

The medical services have been called upon to face problems of great difficulty. It can be easily realized that in a climate varying from severe cold to intense damp heat, and in a mountainous country deficient in water, poorly supplied with roads, without local resources, and where dysentery and malaria are rife, the duties and responsibilities of these services must necessarily be heavy. Experiments as to the most efficacious types of mountain ambulance transport had been conducted in the Winter and Spring, and as a

result travois, mule litters, and cacolets now form integral portions of each field ambulance.

During the same period exhaustive measures were taken for an anti-malarial campaign. Officers with special knowledge were appointed to supervise anti-malarial work; swampy areas were drained and the defensive lines then held carefully surveyed with a view to only the most healthy portions being held. Although malaria has still been the prevailing disease, yet I feel certain that these careful precautionary measures have been greatly instrumental in lessening its intensity. The move to the valley of the Struma in June tested all the preparations made and severely tried the medical resources. The area occupied was found to be highly malarious, the heat intense and damp, and the single road from the base long, hilly, and of uneven surface. The organization of this line of evacuation and the arrangement of halting places and refilling points was, however, successfully undertaken. * * *

On the declaration of martial law at Saloniki on June 3, certain administrative functions had necessarily to be taken over from the Greeks by the Allies; among these was the control of the customs, which is now administered by a Greek director working under the supervision of a commission composed of British and French officers directed by French Headquarters. The administration of this important office has been conducted with discretion and common sense.

"The Mad Dog of Europe"

T. P. O'Connor, writing in The London Chronicle a few days after the breaking of America's diplomatic relations with Germany, offered this striking parable:

A mad dog rushes into the streets early in the morning when few people are about. Most of the citizens are still in bed. For horrible moments it has full and unchecked run; it bites here, there, everywhere. It catches the early postman and chambermaid and jumps at the baby in arms until the whole town is at last aroused and, pellmell, everybody rushes after the mad dog until at last its brains are dashed out by truncheon or rifle and the unclean and wicked thing lies on the ground with the poisonous foam still oozing from its dead and impotent lips.

This is a parable. It sums up and symbolizes to my imagination the story of Germany in this war. For years, as Lloyd George puts it in one of his great passages, she plotted to murder Europe in her sleep. Meantime she prepared herself for the devil's work by poisoning her mind and the mind of all her peoples with the devil's gospel that might alone constituted right; that war was not merely the means but the end; that the human conscience, free will, and the existence of nations should lie at the mercy of the biggest battalions and the best machine guns, and when the appropriate time was supposed to have come she burst on sleeping and unarmed Europe, foaming at the mouth with the fury of madness.

At first the mad dog was able to bite and to infect everybody and everywhere until at last the whole world woke up to the universal peril, and today the whole world, or almost the whole world, is in full pursuit of the noxious beast and its end is near at hand. America has come in to give the coup de grace—for it is quite certain America's intervention is the coup de grace.

Blame for the Dardanelles Failure

The Report of the Special Commission Headed by Lord Cromer

THERE was issued in London, March 8, 1917, a comprehensive report by the special commission appointed by Parliament to investigate the ill-fated Dardanelles campaign. The report is an ad interim one, dealing exclusively with the origin and inception of the attack on the Dardanelles. It is signed by the late Lord Cromer, who was Chairman of the commission; Andrew Fisher, representing Australia; Thomas McKenzie, representing New Zealand; Sir Frederick Cawley, Chancellor of the Duchy of Lancaster; James A. Clyde, Lord Advocate; Stephen L. Gwynn, Nationalist Member of the House of Commons; Rear Admiral Sir William H. May, Field Marshal Baron Nicholson, and Justice Pickford.

There were two minority reports—a dissent by Andrew Fisher, Australian High Commissioner, on one of the findings, and by Thomas McKenzie, New Zealand High Commissioner, on the same; and a separate report by Walter Roch, Liberal Member of the House of Commons from Pembrokeshire.

The signing of the report was the last act performed by Lord Cromer; his death followed a few days later. There has been some discussion as to why a document revealing the inner history of an ill-fated campaign should be published by the Government in time of war, and it is charged that it was done for political effect to discredit the Asquith Administration; in fact, in the discussion in the House of Parliament a few days after it was made public, the findings of the commission were quoted as a direct reflection on the Asquith Cabinet. Some influential English newspapers have gone so far as to demand proceedings against Asquith and other members of the Cabinet responsible for the campaign.

The report is remarkable for its candor. It blames in frank terms the

late Earl Kitchener, Secretary of War; Winston Spencer Churchill, then First Lord of the Admiralty; Lord Fisher, then First Sea Lord; Prime Minister Asquith, and other members of the War Council.

Kitchener a Dominant Force

The report begins with a general synopsis of the organization of the War Cabinet calling attention to the fact that the management in November, 1914, devolved upon a War Council of the Cabinet, consisting of Premier Asquith, Earl Kitchener, and Mr. Churchill, with Sir Edward Grey, Mr. Lloyd George, and the Marquis of Crewe, then heads of the Foreign, Treasury, and India Offices, participating, but with comparatively inactive advisory functions. Sea Lords Fisher and Wilson were with Mr. Churchill, and Chief of Staff General Murray with Earl Kitchener, theoretically as technical advisers, but in practice, according to the report, usually playing silent parts. The commission was "struck with the atmosphere of vagueness and want of precision which seems to have characterized the proceedings of the War Council."

Mr. Churchill testified that Mr. Asquith and Earl Kitchener "settled matters," although he had the same authority. The commission thought his view was overmodest. The Cabinet as a body placed all responsibility on the council, sometimes requesting that it was not to be told of occurrences on the ground that the fewer who knew of them the better.

Earl Kitchener's dominating influence pervades the testimony. The commission says he would not impart full information of his plans, even to the War Council. His action in holding troops back for three weeks without consulting the Admiralty greatly compromised the probability of success. Mr. Churchill de-

scribed him as "all powerful, imper-turbable, and reserved," adding, "he dominated absolutely our councils at this time. The belief that he had plans deeper and wider than any we could see silenced misgivings."

The report discusses the political aspects of the campaign, saying it was also designed to influence Bulgaria and Italy, then neutrals, and relieve pressure on Russia. General Hamilton said Earl Kitchener thought the operation would be successful in staving off Bulgaria's entrance into the war, in occupying 300,000 Turks for nine months, and in heartening Russia.

Designed to Defeat Egypt

The report summarizes the conclusions reached as follows:

The question of attacking the Dardanelles was, on the initiative of Mr. Churchill, brought under the consideration of the War Council on Nov. 25, 1914, as the ideal method of defending Egypt. It may reasonably be assumed that inasmuch as all the authorities concerned were *prima facie* in favor of a joint military rather than a purely naval attack, such an attack, if undertaken at all, would have been of the former rather than of the latter character had not other circumstances led to a modification of the program. A communication from the Russian Government of Jan. 2 introduced a fresh element into the case. The British Government considered that something must be done in response to it, and in this connection the question of attacking the Dardanelles was again raised.

The Secretary of State for War declared that there were no troops immediately available for operations in the East, and his statement was accepted by the War Council, who took no steps to satisfy themselves by reports of estimates as to what troops were available then or in the near future. Had this been done the Commissioners think it would have been ascertained that sufficient troops would be available for a joint military and naval operation at an earlier date than supposed, but this matter was not adequately investigated by the War Council. Thus the question before the War Council on Jan. 13 was whether no action of any kind should for the time being be undertaken or whether action should be taken by the fleet alone, the navy being held to be the only force available.

Political arguments, which were adduced to the War Council in favor of a prompt and effective action if such were practicable, were valid and of the highest importance, but the practicability of whatever action was proposed was of equal importance. Mr. Churchill appears to have advocated an at-

tack by ships alone before the War Council, on a certain amount of half-hearted and hesitating expert opinion which favored a tentative or progressive scheme, beginning with an attack upon the outer forts. This attack, if successful, was to be followed by further operations against the main defenses of the Narrows. There does not appear to have been direct support or direct opposition from the responsible naval and military advisers, Lord Fisher and Sir James Wolfe Murray, as to the practicability of carrying on the operations as approved by the War Council, viz., to bombard and take the Gallipoli Peninsula, with Constantinople as the objective.

Fisher Made No Objection

The First Sea Lord and Sir Arthur Wilson, who was the only naval adviser present at the War Council, expressed no dissent. Lord Kitchener, who occupied a commanding position at the time the decision was taken, was in favor of the project. Both Lord Fisher and Sir Arthur Wilson would have preferred a joint naval and military attack, but they did not express to the War Council and were not asked to express any opinion on the subject, and offered no objection to naval operations, as they considered them experimental and such as could be discontinued if the first results obtained were not satisfactory.

The Commissioners think that there was an obligation, first on the First Lord, secondly on the Prime Minister, thirdly on one other member of the War Council, to see that the views of the naval advisers were clearly put before the council, and that the naval advisers should have expressed their views to the council, whether asked or not, if they considered the project which the council was about to adopt was impracticable from a naval point of view.

Looking at the position which existed on Jan. 13, 1915, the Commissioners do not think the War Council was justified in coming to the decision without much fuller investigation of the proposition which had been suggested to them. The Commissioners hold that the possibility of making a surprise amphibious attack on Gallipoli offered such great military and political advantage that it was mistaken and ill-advised to sacrifice this possibility by deciding to undertake a purely naval attack, which from its nature could not obtain completely the object set out in the terms of the decision.

The decision taken on the 16th to mass troops in the neighborhood of the Dardanelles marked a very critical stage of the whole operation. It ought to have been clear that when this was once done, even if troops were not actually landed, it would be apparent to the world that a serious attack was intended, and a withdrawal could no longer be effected without running serious risk of loss of prestige. At that moment, as time was all important, no compromise was possible between making an immediate and

vigorous effort to insure success at the Dardanelles by joint naval and military occupation and falling back on the original intention of desisting from a naval attack if the experiences gained during the bombardment were unsatisfactory.

Troops Delayed by Kitchener

On Feb. 20 Lord Kitchener decided that the Twenty-ninth Division, part of the troops which by the decision of Feb. 16 were to be sent to the East, should not be sent at that time, and Colonel Fitzgerald instructed the Director of Naval Transport that transports for that division and the rest of the expeditionary force would not be required. This was done without informing the First Lord, and the dispatch of troops was thus delayed three weeks. This delay greatly compromised the probability of success of the original attack by land forces and materially increased the difficulties encountered in the final attack some months later.

We consider that in view of the opinions expressed by the naval and military authorities on the spot the decision to abandon the naval attack after the bombardment of March 18 was inevitable. There was no meeting of the War Council between March 19 and May 14. Meanwhile important land operations were undertaken. We think that before such operations were commenced the War Council should have carefully reconsidered the whole position.

In our opinion the Prime Minister ought to have summoned a meeting of the War Council for that purpose and, if not summoned, other members of the War Council should have pressed for such a meeting. We think this was a serious omission. We consider that the responsibility of those members of the Cabinet who did not attend the meetings of the War Council was limited to the fact that they delegated their authority to their colleagues who attended those meetings.

We are of the opinion that Lord Kitchener did not sufficiently avail himself of the services of his General Staff, with the result that more work was undertaken by him than it was possible for one man to do, and confusion and want of efficiency resulted.

We are unable to concur in the view set forth by Lord Fisher that it was his duty, if he differed from the chief of his department, to maintain silence at the council or to resign. We think that the adoption of any such principle generally would impair the efficiency of public service.

We think that although the main object was not attained, certain important political advantages, upon the nature of which we have already dwelt, were secured by the Dardanelles expedition. Whether those advantages were worth the loss of life and treasure involved is and must always remain a matter of opinion.

The report says that Lord Kitchener's premature death and the death of his secretary, Major Fitzgerald, render it impossible to state with the same confidence as in the case of living witnesses the opinions and aims of Lord Kitchener at different periods of the proceedings. The commission does not believe, however, that even deference to the memory of the illustrious dead justified it in abstaining from complete revelations of his course. The report adds: "It is necessary to do justice to the living as well as to the dead."

Colonel Churchill testified that Lord Kitchener's personal qualities and position played a very great part in the decision of events, the report says. It continues: "He was the sole mouthpiece of War Office opinion in the War Council. When he gave a decision it was invariably accepted as final. He was never overruled by the War Council or Cabinet in any matter, great or small. Scarcely any one ever ventured to argue with him in the council."

Major Gen. Charles E. Callwell, who was Director of Military Operations at the War Office at the time of the Dardanelles expedition, testified that the General Staff virtually ceased to exist, because it was not consulted.

The principle of centralization was pushed to the extreme point by Lord Kitchener. It proved successful in the minor operations in the Sudan, but in larger operations it threw on one man more work than any individual could cope with.

Australian Commissioner Dissents

Andrew Fisher, Australian High Commissioner in London, in a note issued with the Dardanelles report dissented from the findings of the majority—that the naval advisers should have expressed their views at the War Council; and from the opinion of the majority—that Lord Fisher was not justified in remaining silent. Mr. Fisher says:

I dissent in the strongest terms from any suggestion that departmental advisers of a Minister, in his company at council meetings, should express any views at all other than to the Minister and through him, unless specifically invited to do so. I am of the opinion

that it would seal the fate of responsible government if servants of the State were to share the responsibility of Ministers to Parliament and to the people on matters of public policy. The Minister has command of the opinions and views of all the officers of the department he administers on matters of public policy. Good stewardship demands from Ministers of the Crown frank, fair, and full statements of all opinions of trusted and experienced officials to their colleagues when they have direct reference to matters of high policy.

Thomas McKenzie, High Commissioner of New Zealand in London, took a similar stand regarding Lord Fisher and the naval advisers. Mr. McKenzie also expressed the opinion that the commission was not yet justified in coming to a decision as to the results of the enterprise. To do so, he said, it would be necessary to investigate the conduct of the offensive on the Gallipoli Peninsula and of the subsidiary operations.

A separate report was presented also by Walter F. Roch, Liberal member of the House of Commons from Pembroke-shire. Mr. Roch made an exhaustive exposition of the attitude of Lord Fisher, who, he said, vigorously opposed the Dardanelles enterprise and on Jan. 28 actually left the council table declaring he would resign his office.

"Lord Kitchener," he continued, "took Lord Fisher aside and urged him that his duty to the country was to continue in office. Lord Fisher reluctantly yielded to Lord Kitchener's entreaty and resumed his seat."

Lord Fisher, continues the Roch report, in his evidence before the Commissioners said he had "taken every step to show his dislike of the proposed operations," and replying to a question as to why he had made no formal protests at

the meetings of the War Council, told the Commissioners: "Mr. Churchill knew my opposition. I didn't think it would tend toward good relations between him and myself, nor to smooth working at the Admiralty, to raise an objection in the War Council's discussions."

Lord Fisher's Point of View

After the decision of the War Council had been taken and the expedition begun, Lord Fisher, the report continues, did everything in his power to assist. His whole theory of the use of the British sea power in the war, Mr. Roch states, was embodied in a memorandum submitted to Premier Asquith in January, as follows:

The Germans have already endeavored, without success, to scatter our naval strength by attacks on our trade and by submarines and mines. The pressure of sea power is a slow process and requires great patience. In time it will almost certainly compel the enemy to seek a decision at sea. This is one reason for husbanding our resources. Another reason is that the prolongation of war at sea tends to raise up fresh enemies for the dominant naval power, owing to the exasperation of neutrals. This tendency is only checked by the conviction that an overwhelming naval supremacy is behind the nation exercising the sea power.

The sole justification of bombardments and attacks by the fleet on fortified places, such as the Dardanelles, is to force a decision at sea. As long as the German High Sea Fleet possesses its present strength and splendid gunnery efficiency, so long is it imperative that no operation be undertaken by the British fleet calculated to impair its superiority, which is none too great in view of the heavy losses already experienced in ships and men, which latter cannot be filled in the period of the war, in which the navy differs materially from the army. Even the older ships should not be risked, for they cannot be lost without losing men, and they form the only reserve behind the great fleet.

AMERICA'S DECLARATION OF WAR

S. J. Res. 1. (PUBLIC RESOLUTION....NO. /65th CONGRESS.)

Sixty-fifth Congress of the United States of America;

At the First Session,

Begun and held at the City of Washington on Monday, the second day of April,
one thousand nine hundred and seventeen.

JOINT RESOLUTION

Declaring that a state of war exists between the Imperial German Government
and the Government and the people of the United States and making
provision to prosecute the same.

Whereas the Imperial German Government has committed repeated acts of
war against the Government and the people of the United States of
America: Therefore be it

*Resolved by the Senate and House of Representatives of the United States
of America in Congress assembled, That the state of war between the United
States and the Imperial German Government which has thus been thrust upon
the United States is hereby formally declared; and that the President be, and
he is hereby, authorized and directed to employ the entire naval and military
forces of the United States and the resources of the Government to carry on war
against the Imperial German Government; and to bring the conflict to a
successful termination all of the resources of the country are hereby pledged by
the Congress of the United States.*

Champ Clark

Speaker of the House of Representatives.

Thos. R. Marshall

Vice President of the United States and

President of the Senate.

PRESIDENT DELIVERING HIS WAR MESSAGE

President Wilson Reading the Historic Address of April 2,
Which Led to a Formal Declaration of a State of War

(Drawn by Victor Perard. © 1917 by New York Times Co.)

THE WAR MESSAGE

Delivered by President Woodrow Wilson Before
the United States Congress on April 2, 1917

Text of the address read by the President at 8:30 P. M., April 2, 1917, at the Joint Session of Congress, convened by special call at noon of that day.

Gentlemen of the Congress:

I HAVE called the Congress into extraordinary session because there are serious, very serious, choices of policy to be made, and made immediately, which it was neither right nor constitutionally permissible that I should assume the responsibility of making.

On the 3d of February last I officially laid before you the extraordinary announcement of the Imperial German Government that on and after the first day of February it was its purpose to put aside all restraints of law or of humanity and use its submarines to sink every vessel that sought to approach either the ports of Great Britain and Ireland or the western coasts of Europe or any of the ports controlled by the enemies of Germany within the Mediterranean. That had seemed to be the object of the German submarine warfare earlier in the war, but since April of last year the Imperial Government had somewhat restrained the commanders of its undersea craft, in conformity with its promise, then given to us, that passenger boats should not be sunk and that due warning would be given to all other vessels which its submarines might seek to destroy, when no resistance was offered or escape attempted, and care taken that their crews were given at least a fair chance to save their lives in their open boats. The precautions taken were meagre and haphazard enough, as was proved in distressing instance after instance in the progress of the cruel and unmanly business, but a certain degree of restraint was observed.

The new policy has swept every restriction aside. Vessels of every kind, whatever their flag, their character, their cargo, their destination, their errand, have been ruthlessly sent to the bottom without warning and without thought of help or mercy for those on board, the vessels of friendly neutrals along with those of belligerents. Even hospital ships and ships carrying relief to the sorely bereaved and stricken people of Belgium, though the latter were provided with safe conduct through the proscribed areas by the German Government itself and were distinguished by unmistakable marks of identity, have been sunk with the same reckless lack of compassion or of principle.

I was for a little while unable to believe that such things would in fact be done by any Government that had hitherto subscribed to humane practices of civilized nations. International law had its origin in the attempt to set up some law which would be respected and observed upon the seas, where no nation had right of dominion and where lay the free

highways of the world. By painful stage after stage has that law been built up, with meagre enough results, indeed, after all was accomplished that could be accomplished, but always with a clear view, at least, of what the heart and conscience of mankind demanded.

Ruthless Destruction of Life

This minimum of right the German Government has swept aside, under the plea of retaliation and necessity and because it had no weapons which it could use at sea except these, which it is impossible to employ, as it is employing them, without throwing to the wind all scruples of humanity or of respect for the understandings that were supposed to underlie the intercourse of the world.

I am not now thinking of the loss of property involved, immense and serious as that is, but only of the wanton and wholesale destruction of the lives of noncombatants, men, women, and children, engaged in pursuits which have always, even in the darkest periods of modern history, been deemed innocent and legitimate. Property can be paid for; the lives of peaceful and innocent people cannot be. The present German submarine warfare against commerce is a warfare against mankind.

It is a war against all nations. American ships have been sunk, American lives taken, in ways which it has stirred us very deeply to learn of, but the ships and people of other neutral and friendly nations have been sunk and overwhelmed in the waters in the same way. There has been no discrimination.

The challenge is to all mankind. Each nation must decide for itself how it will meet it. The choice we make for ourselves must be made with a moderation of counsel and a temperateness of judgment befitting our character and our motives as a nation. We must put excited feeling away. Our motive will not be revenge or the victorious assertion of the physical might of the nation, but only the vindication of right, of human right, of which we are only a single champion.

When I addressed the Congress on the 26th of February last I thought that it would suffice to assert our neutral rights with arms, our right to use the seas against unlawful interference, our right to keep our people safe against unlawful violence. But armed neutrality, it now appears, is impracticable. Because submarines are in effect outlaws, when used as the German submarines have been used against merchant shipping, it is impossible to defend ships against their attacks, as the law of nations has assumed that merchantmen would defend themselves against privateers or cruisers, visible craft giving chase upon the open sea. It is common prudence in such circumstances, grim necessity indeed, to endeavor to destroy them before they have shown their own intention. They must be dealt with upon sight, if dealt with at all.

The German Government denies the right of neutrals to use arms at all within the areas of the sea which it has proscribed, even in the

defense of rights which no modern publicist has ever before questioned their right to defend. The intimation is conveyed that the armed guards which we have placed on our merchant ships will be treated as beyond the pale of law and subject to be dealt with as pirates would be. Armed neutrality is ineffectual enough at best; in such circumstances and in the face of such pretensions it is worse than ineffectual; it is likely only to produce what it was meant to prevent; it is practically certain to draw us into the war without either the rights or the effectiveness of belligerents. There is one choice we cannot make, we are incapable of making; we will not choose the path of submission and suffer the most sacred rights of our nation and our people to be ignored or violated. The wrongs against which we now array ourselves are no common wrongs; they cut to the very roots of human life.

State of War Recognized

With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves, but in unhesitating obedience to what I deem my constitutional duty, I advise that the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the Government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it; and that it take immediate steps not only to put the country in a more thorough state of defense, but also to exert all its power and employ all its resources to bring the Government of the German Empire to terms and end the war.

What this will involve is clear. It will involve the utmost practicable co-operation in counsel and action with the Governments now at war with Germany, and, as incident to that, the extension to those Governments of the most liberal financial credits, in order that our resources may so far as possible be added to theirs.

It will involve the organization and mobilization of all the material resources of the country to supply the materials of war and serve the incidental needs of the nation in the most abundant and yet the most economical and efficient way possible.

It will involve the immediate full equipment of the navy in all respects, but particularly in supplying it with the best means of dealing with the enemy's submarines.

It will involve the immediate addition to the armed forces of the United States, already provided for by law in case of war, of at least 500,000 men, who should, in my opinion, be chosen upon the principle of universal liability to service, and also the authorization of subsequent additional increments of equal force so soon as they may be needed and can be handled in training.

It will involve also, of course, the granting of adequate credits to the Government, sustained, I hope, so far as they can equitably be sustained by the present generation, by well-conceived taxation.

I say sustained so far as may be equitable by taxation, because it seems to me that it would be most unwise to base the credits, which will now be necessary, entirely on money borrowed. It is our duty, I most respectfully urge, to protect our people, so far as we may, against the very serious hardships and evils which would be likely to arise out of the inflation which would be produced by vast loans.

In carrying out the measures by which these things are to be accomplished we should keep constantly in mind the wisdom of interfering as little as possible in our own preparation and in the equipment of our own military forces with the duty—for it will be a very practical duty—of supplying the nations already at war with Germany with the materials which they can obtain only from us or by our assistance. They are in the field, and we should help them in every way to be effective there.

I shall take the liberty of suggesting, through the several executive departments of the Government, for the consideration of your committees, measures for the accomplishment of the several objects I have mentioned. I hope that it will be your pleasure to deal with them as having been framed after very careful thought by the branch of the Government upon whom the responsibility of conducting the war and safeguarding the nation will most directly fall.

While we do these things, these deeply momentous things, let us be very clear, and make very clear to all the world, what our motives and our objects are. My own thought has not been driven from its habitual and normal course by the unhappy events of the last two months, and I do not believe that the thought of the nation has been altered or clouded by them. I have exactly the same things in mind now that I had in mind when I addressed the Senate on the 22d of January last; the same that I had in mind when I addressed the Congress on the 3d of February and on the 26th of February. Our object now, as then, is to vindicate the principles of peace and justice in the life of the world as against selfish and autocratic power, and to set up among the really free and self-governed peoples of the world such a concert of purpose and of action as will henceforth insure the observance of those principles.

The Menace of Autocracy

Neutrality is no longer feasible or desirable where the peace of the world is involved and the freedom of its peoples, and the menace to that peace and freedom lies in the existence of autocratic Governments, backed by organized force which is controlled wholly by their will, not by the will of their people. We have seen the last of neutrality in such circumstances. We are at the beginning of an age in which it will be insisted that the same standards of conduct and of responsibility for wrong done shall be observed among nations and their Governments that are observed among the individual citizens of civilized States.

We have no quarrel with the German people. We have no feeling

toward them but one of sympathy and friendship. It was not upon their impulse that their Government acted in entering this war. It was not with their previous knowledge or approval. It was a war determined upon as wars used to be determined upon in the old, unhappy days, when peoples were nowhere consulted by their rulers and wars were provoked and waged in the interest of dynasties or of little groups of ambitious men who were accustomed to use their fellow-men as pawns and tools.

Self-governed nations do not fill their neighbor States with spies or set the course of intrigue to bring about some critical posture of affairs which will give them an opportunity to strike and make conquest. Such designs can be successfully worked out only under cover and where no one has the right to ask questions. Cunningly contrived plans of deception or aggression, carried, it may be, from generation to generation, can be worked out and kept from the light only within the privacy of courts or behind the carefully guarded confidences of a narrow and privileged class. They are happily impossible where public opinion commands and insists upon full information concerning all the nation's affairs.

The Only Basis for Peace

A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic Government could be trusted to keep faith within it or observe its covenants. It must be a league of honor, a partnership of opinion. Intrigue would eat its vitals away; the plottings of inner circles who could plan what they would and render account to no one would be a corruption seated at its very heart. Only free peoples can hold their purpose and their honor steady to a common end and prefer the interests of mankind to any narrow interest of their own.

Does not every American feel that assurance has been added to our hope for the future peace of the world by the wonderful and heartening things that have been happening within the last few weeks in Russia? Russia was known by those who knew her best to have been always in fact democratic at heart in all the vital habits of her thought, in all the intimate relationships of her people that spoke their natural instinct, their habitual attitude toward life. The autocracy that crowned the summit of her political structure, long as it had stood and terrible as was the reality of its power, was not in fact Russian in origin, character, or purpose; and now it has been shaken off and the great, generous Russian people have been added, in all their naive majesty and might, to the forces that are fighting for freedom in the world, for justice, and for peace. Here is a fit partner for a League of Honor.

One of the things that have served to convince us that the Prussian autocracy was not and could never be our friend is that from the very outset of the present war it has filled our unsuspecting communities, and even our offices of government, with spies and set criminal intrigues everywhere afoot against our national unity of counsel, our peace within

and without, our industries and our commerce. Indeed, it is now evident that its spies were here even before the war began; and it is unhappily not a matter of conjecture, but a fact proved in our courts of justice, that the intrigues which have more than once come perilously near to disturbing the peace and dislocating the industries of the country, have been carried on at the instigation, with the support, and even under the personal direction of official agents of the Imperial Government accredited to the Government of the United States.

Even in checking these things and trying to extirpate them we have sought to put the most generous interpretation possible upon them because we knew that their source lay, not in any hostile feeling or purpose of the German people toward us, (who were, no doubt, as ignorant of them as we ourselves were,) but only in the selfish designs of a Government that did what it pleased and told its people nothing. But they have played their part in serving to convince us at last that that Government entertains no real friendship for us, and means to act against our peace and security at its convenience. That it means to stir up enemies against us at our very doors the intercepted note to the German Minister at Mexico City is eloquent evidence.

We are accepting this challenge of hostile purpose because we know that in such a Government, following such methods, we can never have a friend; and that in the presence of its organized power, always lying in wait to accomplish we know not what purpose, there can be no assured security for the democratic Governments of the world. We are now about to accept the gage of battle with this natural foe to liberty and shall, if necessary, spend the whole force of the nation to check and nullify its pretensions and its power. We are glad, now that we see the facts with no veil of false pretense about them, to fight thus for the ultimate peace of the world and for the liberation of its peoples, the German peoples included; for the rights of nations, great and small, and the privilege of men everywhere to choose their way of life and of obedience.

A World Safe for Democracy

The world must be made safe for democracy. Its peace must be planted upon the tested foundations of political liberty. We have no selfish ends to serve. We desire no conquest, no dominion. We seek no indemnities for ourselves, no material compensation for the sacrifices we shall freely make. We are but one of the champions of the rights of mankind. We shall be satisfied when those rights have been made as secure as the faith and the freedom of nations can make them.

Just because we fight without rancor and without selfish object, seeking nothing for ourselves but what we shall wish to share with all free peoples, we shall, I feel confident, conduct our operations as belligerents without passion and ourselves observe with proud punctilio the principles of right and of fair play we profess to be fighting for.

I have said nothing of the Governments allied with the Imperial

Government of Germany because they have not made war upon us or challenged us to defend our right and our honor. The Austro-Hungarian Government has, indeed, avowed its unqualified indorsement and acceptance of the reckless and lawless submarine warfare, adopted now without disguise by the Imperial German Government, and it has therefore not been possible for this Government to receive Count Tarnowski, the Ambassador recently accredited to this Government by the Imperial and Royal Government of Austria-Hungary; but that Government has not actually engaged in warfare against citizens of the United States on the seas, and I take the liberty, for the present at least, of postponing a discussion of our relations with the authorities at Vienna. We enter this war only where we are clearly forced into it because there are no other means of defending our rights.

It will be all the easier for us to conduct ourselves as belligerents in a high spirit of right and fairness because we act without animus, not with enmity toward a people or with the desire to bring any injury or disadvantage upon them, but only in armed opposition to an irresponsible Government which has thrown aside all considerations of humanity and of right and is running amuck.

Friends of the German People

We are, let me say again, the sincere friends of the German people, and shall desire nothing so much as the early re-establishment of intimate relations of mutual advantage between us, however hard it may be for them for the time being to believe that this is spoken from our hearts. We have borne with their present Government through all these bitter months because of that friendship, exercising a patience and forbearance which would otherwise have been impossible.

We shall happily still have an opportunity to prove that friendship in our daily attitude and actions toward the millions of men and women of German birth and native sympathy who live among us and share our life, and we shall be proud to prove it toward all who are in fact loyal to their neighbors and to the Government in the hour of test. They are most of them as true and loyal Americans as if they had never known any other fealty or allegiance. They will be prompt to stand with us in rebuking and restraining the few who may be of a different mind and purpose. If there should be disloyalty, it will be dealt with with a firm hand of stern repression; but, if it lifts its head at all, it will lift it only here and there and without countenance except from a lawless and malignant few.

It is a distressing and oppressive duty, gentlemen of the Congress, which I have performed in thus addressing you. There are, it may be, many months of fiery trial and sacrifice ahead of us. It is a fearful thing to lead this great, peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance.

But the right is more precious than peace, and we shall fight for the

things which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own Governments, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free.

To such a task we can dedicate our lives and our fortunes, everything that we are and everything that we have, with the pride of those who know that the day has come when America is privileged to spend her blood and her might for the principles that gave her birth and happiness and the peace which she has treasured.

God helping her, she can do no other.

Text of the Declaration of War

Joint Resolution Passed by the United States Senate and House of Representatives

[Effective April 6, 1917, at 1:18 P. M.]

Whereas, The Imperial German Government has committed repeated acts of war against the Government and the people of the United States of America; therefore, be it

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Imperial German Government, which has thus been thrust upon the United States, is hereby formally declared; and

That the President be, and he is hereby, authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial German Government; and to bring the conflict to a successful termination all the resources of the country are hereby pledged by the Congress of the United States.

Proclamation to the American People

Text of President Wilson's Formal Announcement of a State of War

[Issued on April 6, 1917.]

Whereas, The Congress of the United States, in the exercise of the constitutional authority vested in them, have resolved by joint resolution of the Senate and House of Representatives, bearing date this day, "that a state of war between the United States and the Imperial German Government which has been thrust upon the United States is hereby formally declared";

Whereas, It is provided by Section 4,067 of the Revised Statutes as follows:

"Whenever there is declared a war between the United States and any foreign nation or Government or any invasion or predatory incursion is perpetrated, attempted, or threatened against the territory of the United States by any foreign nation or Government, and the President makes public proclamation of the event, all native citizens, denizens, or subjects of a hostile nation or Government being male of the age of 14 years and upward, who shall be within the United States and not

actually naturalized, shall be liable to be apprehended, restrained, secured, and removed as alien enemies. The President is authorized in any such event by his proclamation thereof, or other public acts, to direct the conduct to be observed on the part of the United States toward the aliens who become so liable; the manner and degree of the restraint to which they shall be subject and in what cases and upon what security their residence shall be permitted, and to provide for the removal of those who, not being permitted to reside within the United States, refuse or neglect to depart therefrom; and to establish any such regulations which are found necessary in the premises and for the public safety."

Whereas, By Sections 4,068, 4,069, and 4,070 of the Revised Statutes, further provision is made relative to alien enemies;

Now, therefore, I, Woodrow Wilson, President of the United States of America, do hereby proclaim, to all whom it may concern, that a state of war exists between the United States and the Imperial German Government, and I do specially direct all officers, civil or military, of the United States that they exercise vigilance and zeal in the discharge of the duties incident to such a state of war, and I do, moreover, earnestly appeal to all American citizens that they, in loyal devotion to their country, dedicated from its foundation to the principles of liberty and justice, uphold the laws of the land, and give undivided and willing support to those measures which may be adopted by the constitutional authorities in prosecuting the war to a successful issue and in obtaining a secure and just peace;

And, acting under and by virtue of the authority vested in me by the Constitution of the United States and the said sections of the Revised Statutes,

I do hereby further proclaim and direct that the conduct to be observed on the part of the United States toward all natives, citizens, denizens, or subjects of Germany, being male of the age of 14 years and upward, who shall be within the United States and not actually naturalized, who for the purpose of this proclamation and under such sections of the Revised Statutes are termed alien enemies, shall be as follows:

All alien enemies are enjoined to preserve the peace toward the United States and to refrain from crime against the public safety and from violating the laws of the United States and of the States and Territories thereof, and to refrain from actual hostility or giving information, aid, or comfort to the enemies of the United States and to comply strictly with the regulations which are hereby, or which may be from time to time promulgated by the President, and so long as they shall conduct themselves in accordance with law they shall be undisturbed in the peaceful pursuit of their lives and occupations, and be accorded the consideration due to all peaceful and law-abiding persons, except so far as restrictions may be necessary for their own protection and for the safety of the United States, and toward such alien enemies as conduct themselves in accordance with law all citizens of the United States are enjoined to preserve the peace and to treat them with all such friendliness as may be compatible with loyalty and allegiance to the United States.

And all alien enemies who fail to conduct themselves as so enjoined, in addition to all other penalties prescribed by law, shall be liable to restraint or to give security or to remove and depart from the United States, in the manner prescribed by Sections 4,069 and 4,070 of the Revised Statutes and as prescribed in the regulations duly promulgated by the President.

And pursuant to the authority vested in me, I hereby declare and establish the following regulations, which I find necessary in the premises and for the public safety:

1. An alien enemy shall not have in his possession at any time or place any firearms, weapons, or implements of war, or component parts thereof, ammunition, Maxim or other silencer, arms, or explosives or material used in the manufacture of explosives;
2. An alien enemy shall not have in his possession at any time or place, or use or operate, any aircraft or wireless apparatus, or any form of signaling device or any form

of cipher code or any paper, document, or book written or printed in cipher or in which there may be invisible writing;

3. All property found in the possession of an alien enemy in violation of the foregoing regulations shall be subject to seizure by the United States;

4. An alien enemy shall not approach or be found within one-half of a mile of any Federal or State fort, camp, arsenal, aircraft station, Government or naval vessel, navy yard, factory, or workshop for the manufacture of munitions of war or of any products for the use of the army or navy;

5. An alien enemy shall not write, print, or publish any attack or threat against the Government or Congress of the United States, or either branch thereof, or against the measures or policy of the United States, or against the persons or property of any person in the military, naval, or civil service of the United States, or of the States or Territories, or of the District of Columbia, or of the municipal governments therein;

6. An alien enemy shall not commit or abet any hostile acts against the United States or give information, aid, or comfort to its enemies;

7. An alien enemy shall not reside in or continue to reside in, to remain in, or enter any locality which the President may from time to time designate by an Executive order as a prohibitive area, in which residence by an alien enemy shall be found by him to constitute a danger to the public peace and safety of the United States, except by permit from the President and except under such limitations or restrictions as the President may prescribe;

8. An alien enemy whom the President shall have reasonable cause to believe to be aiding or about to aid the enemy or to be at large to the danger of the public peace or safety of the United States, or to have violated or to be about to violate any of these regulations, shall remove to any location designated by the President by Executive order, and shall not remove therefrom without permit, or shall depart from the United States if so required by the President;

9. No alien enemy shall depart from the United States until he shall have received such permit as the President shall prescribe, or except under order of a court, Judge, or Justice, under Sections 4,069 and 4,070 of the Revised Statutes;

10. No alien enemy shall land in or enter the United States except under such restrictions and at such places as the President may prescribe;

11. If necessary to prevent violation of the regulations, all alien enemies will be obliged to register;

12. An alien enemy whom there may be reasonable cause to believe to be aiding or about to aid the enemy, or who may be at large to the danger of the public peace or safety, or who violates or who attempts to violate or of whom there is reasonable grounds to believe that he is about to violate, any regulation to be promulgated by the President or any criminal law of the United States, or of the States or Territories thereof, will be subject to summary arrest by the United States Marshal, or his Deputy, or such other officers as the President shall designate, and to confinement in such penitentiary, prison, jail, military camp, or other place of detention as may be directed by the President.

This proclamation and the regulations herein contained shall extend and apply to all land and water, continental or insular, in any way within the jurisdiction of the United States.

The President's War Economies Proclamation

THE WHITE HOUSE, April 15, 1917.

My Fellow-Countrymen:

THE entrance of our own beloved country into the grim and terrible war for democracy and human rights which has shaken the world creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

We are rapidly putting our navy upon an effective war footing, and are about to create and equip a great army, but these are the simplest parts of the great task to which we have addressed ourselves. There is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world. To do this great thing worthily and successfully we must devote ourselves

to the service without regard to profit or material advantage and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

These, then, are the things we must do, and do well, besides fighting—the things without which mere fighting would be fruitless:

We must supply abundant food for ourselves and for our armies and our seamen, not only, but also for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting.

We must supply ships by the hundreds out of our shipyards to carry to the other side of the sea, submarines or no submarines, what will every day be needed there, and abundant materials out of our fields and our mines and our factories with which not only to clothe and equip our own forces on land and sea, but also to clothe and support our people, for whom the gallant fellows under arms can no longer work; to help clothe and equip the armies with which we are co-operating in Europe, and to keep the looms and manufactories there in raw material; coal to keep the fires going in ships at sea and in the furnaces of hundreds of factories across the sea; steel out of which to make arms and ammunition both here and there; rails for wornout railways back of the fighting fronts; locomotives and rolling stock to take the place of those every day going to pieces; mules, horses, cattle for labor and for military service; everything with which the people of England and France and Italy and Russia have usually supplied themselves, but cannot now afford the men, the materials, or the machinery to make.

It is evident to every thinking man that our industries, on the farms, in the shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever, and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and their energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches. The industrial forces of the country, men and women alike, will be a great national, a great international service army—a notable and honored host engaged in the service of the nation and the world, the efficient friends and saviors of free men everywhere. Thousands, nay, hundreds of thousands, of men otherwise liable to military service will of right and of necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and factories and mines, and they will be as much part of the great patriotic forces of the nation as the men under fire.

I take the liberty, therefore, of addressing this word to the farmers of the country and to all who work on the farms: The supreme need of our own nation and of the nations with which we are co-operating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail. The world's food reserves are low. Not only during the present emergency, but for some time after peace shall have come, both our own people and a large proportion of the people of Europe must rely upon the harvests in America.

Upon the farmers of this country, therefore, in large measure rests the fate of the war and the fate of the nations. May the nation not count upon them to omit no step that will increase the production of their land or that will bring about the most effectual co-operation in the sale and distribution of their products? The time is short. It is of the most imperative importance that everything possible be done, and done immediately, to make sure of large harvests. I call upon young men and old alike and upon the able-bodied boys of the land to accept and act upon this

duty—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great matter.

I particularly appeal to the farmers of the South to plant abundant foodstuffs, as well as cotton. They can show their patriotism in no better or more convincing way than by resisting the great temptation of the present price of cotton and helping, helping upon a great scale, to feed the nation and the peoples everywhere who are fighting for their liberties and for our own. The variety of their crops will be the visible measure of their comprehension of their national duty.

The Government of the United States and the Governments of the several States stand ready to co-operate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed, at harvest time, and the means of expediting shipments of fertilizers and farm machinery, as well as of the crops themselves when harvested. The course of trade shall be as unhampered as it is possible to make it, and there shall be no unwarranted manipulation of the nation's food supply by those who handle it on its way to the consumer. This is our opportunity to demonstrate the efficiency of a great democracy, and we shall not fall short of it!

This let me say to the middlemen of every sort, whether they are handling our foodstuffs or our raw materials of manufacture or the products of our mills and factories: The eyes of the country will be especially upon you. This is your opportunity for signal service, efficient and disinterested. The country expects you, as it expects all others, to forego unusual profits, to organize and expedite shipments of supplies of every kind, but especially of food, with an eye to the service you are rendering and in the spirit of those who enlist in the ranks, for their people, not for themselves. I shall confidently expect you to deserve and win the confidence of people of every sort and station.

To the men who run the railways of the country, whether they be managers or operative employees, let me say that the railways are the arteries of the nation's life and that upon them rests the immense responsibility of seeing to it that those arteries suffer no obstruction of any kind, no inefficiency or slackened power. To the merchant let me suggest the motto, "Small profits and quick service," and to the shipbuilder the thought that the life of the war depends upon him. The food and the war supplies must be carried across the seas, no matter how many ships are sent to the bottom. The places of those that go down must be supplied, and supplied at once. To the miner let me say that he stands where the farmer does: the work of the world waits on him. If he slackens or fails, armies and statesmen are helpless. He also is enlisted in the great Service Army. The manufacturer does not need to be told, I hope, that the nation looks to him to speed and perfect every process; and I want only to remind his employees that their service is absolutely indispensable and is counted on by every man who loves the country and its liberties.

Let me suggest, also, that every one who creates or cultivates a garden helps, and helps greatly, to solve the problem of the feeding of the nations; and that every housewife who practices strict economy puts herself in the ranks of those who serve the nation. This is the time for America to correct her unpardonable fault of wastefulness and extravagance. Let every man and every woman assume the duty of careful, provident use and expenditure as a public duty, as a dictate of patriotism which no one can now expect ever to be excused or forgiven for ignoring.

In the hope that this statement of the needs of the nation and of the world in this hour of supreme crisis may stimulate those to whom it comes and remind all who need reminder of the solemn duties of a time such as the world has never seen before, I beg that all editors and publishers everywhere will give as prominent publication and as wide circulation as possible to this appeal. I venture to suggest, also, to all advertising agencies that they would perhaps render a very substantial and timely service to the country if they would give it widespread repetition. And I hope that clergymen will not think the theme of it an unworthy or inappropriate subject of comment and homily from their pulpits.

The supreme test of the nation has come. We must all speak, act, and serve together!

WOODROW WILSON.

UNITED STATES DECLARES WAR

Narrative of Events Before and After the Nation's Entrance Into War Against Germany

THE United States and the Imperial German Government were officially proclaimed to be at war on Friday, April 6, 1917, when the President of the United States signed a joint resolution passed in both houses of Congress by overwhelming majorities, formally declaring a state of war between the two Governments.

On March 9 President Wilson, after the Senate had modified its rules so that debate could be limited, called Congress to meet in extra session on April 16, "to receive such communications as may be made by the Executive." This call was contemporaneous with the President's decision that he would authorize the arming of merchant ships and the detail of naval gun crews to man them as a protection against unrestricted German submarines. It was construed as practically a war measure in that the President desired Congress to be at hand to give support to the Government in its defense of merchant shipping.

On March 12 Secretary Lansing gave the following formal notice of the action of the United States:

In view of the announcement of the Imperial German Government on Jan. 31, 1917, that all ships, those of neutrals included, met within certain zones of the high seas, would be sunk without any precaution taken for the safety of the persons on board, and without the exercise of visit and search, the Government of the United States has determined to place upon all American merchant vessels sailing through the barred areas an armed guard for the protection of the vessels and the lives of the persons on board.

On March 14 the news came that the American steamship *Algonquin*, bound from New York for London with a cargo of foodstuffs, had been attacked without warning on March 2, and had been sunk by a German submarine with shell fire and bombs; the crew had escaped, and after twenty-seven hours in open boats had been rescued. This news created a disagreeable impression

throughout the country. Public opinion at length burst into intense excitement on Monday, March 19, when it was announced that within the preceding twenty-four hours three American ships, the *City of Memphis*, the *Illinois*, and the *Vigilancia*, had been sunk by German submarines near the English coast, and that fifteen members of the *Vigilancia's* crew were lost. The *City of Memphis*, some of whose men were then missing, had left Cardiff in ballast for New York the day before; she was overhauled Saturday at 5 P. M. by a German submarine and the Captain was given fifteen minutes to get his crew into boats. The American flag was flying from the mast, but the ship was shelled, torpedoed, and sunk within twenty minutes. The *Vigilancia* was torpedoed without warning; she was in ballast. The *Illinois* was a tank steamship and was bound from Texas for London with a cargo of oil valued at \$1,000,000. The *City of Memphis* was of 5,252 gross tonnage; the *Vigilancia* 4,115, the *Illinois* 5,220 tons; all bore the American flag and were conspicuously marked as American ships.

The news of the sinking of these vessels created deep indignation. It was apparent that Germany had determined to defy the American people to do their worst, and the issue of peace or war was no longer in doubt.

The day following the receipt of the news President Wilson had a long conference with Secretary of the Navy Daniels, and as a result orders were issued for speeding up work on warships under construction; also for the issue of bonds to obtain money for this purpose. The eight-hour day for Government naval construction was suspended; two classes of midshipmen were ordered to be graduated ahead of time, and all other preparations for war were hurried. The country was in tense expectation of some momentous step.

The Cabinet was summoned by the

President on the afternoon of the 20th, and the session lasted more than two hours. No formal announcement of the decision was made, but it was given out that it was the unanimous opinion of the President's advisers that a state of war was in fact existing between the United States and Germany, and that the special session of Congress should be summoned to meet at an earlier date than April 16, the time originally set.

On Wednesday, March 21, the President reached his momentous decision, and forthwith issued a proclamation summoning Congress in extra session on April 2, "to receive a communication by the Executive on grave questions of national policy, which should be immediately taken under consideration."

Nation's War Sentiment

This action was recognized everywhere as the preliminary step to declaring a state of war. Europe regarded it as the definite plunge of the United States into the world conflict. Meanwhile all war preparations were actively proceeding, and the war policy of the country was taking shape.

The news from America was received in Germany without excitement and produced no alteration whatever in her submarine policy. During the night of March 22 the American tank steamer *Healdton*, proceeding with a cargo of petroleum from Philadelphia to Rotterdam, was sunk without warning in the North Sea, and seven of her crew were lost.

Mass meetings were held in many parts of the United States, pledging loyalty to the country, approving the severance of relations with Germany, and demanding war. Typical of these were the resolutions passed at a mass meeting of 12,000 people in Madison Square Garden, New York, on March 22. Addresses were delivered by former Secretary of State Root, a staunch Republican; former Secretary of the Treasury Fairchild, a strong Democrat, and Mayor Mitchel of New York. A letter from former President Roosevelt was read, in which he asserted that Germany was at war with the United States and demanded that we accept the gage of battle. The resolutions adopted were as follows:

Whereas, Germany has destroyed our ships, murdered our citizens, restricted our commerce by illegal submarine warfare, and attempted to array against us the friendly powers Japan and Mexico in a plot to dismember our nation; and

Whereas, By these and other hostile acts Germany is now virtually making war against the United States;

Resolved, That we approve the action of the President in severing diplomatic relations with Germany, in deciding to arm American vessels, and in calling Congress in extra session;

Resolved, That we call upon our Government for prompt, vigorous, and courageous leadership in the immediate mobilizing of the entire naval, military, and industrial strength of the nation, including the augmenting of our army and navy for the effective protection of American rights and the faithful discharge of America's duties in the present crisis;

Resolved, That we urge upon Congress the immediate enactment of a Universal Military Training bill providing for a permanent national defense based on the duty of every able-bodied citizen to share in the protection of his country and in the maintenance of its high ideals;

Resolved, That we declare our deep conviction that the principles of national conduct governing Germany's actions in the present war are inconsistent with the principles of democracy and with the purposes and aspirations of this Republic; and we hold that the time has now come when it is the duty of this nation to take part in the common task of defending civilization and human liberty against German military aggression; and

Whereas, Our Government in severing diplomatic relations with Germany gave notice that further overt acts of war would be forcibly resisted; and said overt acts have been committed in the sinking of the *Laconia*, the City of Memphis, the *Illinois*, the *Vigilancia*, and other vessels, with the loss of American lives; therefore, be it

Resolved, That we call upon Congress as soon as assembled to declare that by the acts of Germany a state of war does now exist between that country and the United States.

Activities of Pacifists

On the other hand, a group of prominent men were strongly opposed to our entry into the war. They instituted a nation-wide publicity propaganda to bring public pressure upon Congress and the President to keep us out of war. A mass meeting was held in New York on the night of March 24 at Madison Square Garden, and resolutions were passed opposing war and demanding a general referendum on the subject. All over the

country, however, there were evidences that the prevailing sentiment was overwhelmingly for war. Many States took steps toward defense and appropriated large sums to provide the measures.

Preliminary Call for Men

On March 25 President Wilson signed an order authorizing an increase in the enlisted strength of the navy to 87,000 men, being an addition of 26,000, and the War Department issued orders calling out units of the National Guard in nine Eastern States and the District of Columbia for police purposes. The order was regarded as indicating extensive precautions to forestall any outbreak by enemy agents upon the expected declaration of a state of war. Munitions plants, bridges, railroads, and all other important public property which might be in danger of attack upon the outbreak of war were to be carefully guarded.

The first call affected 13,000 men; on March 26 units from eighteen Western States, affecting 25,000 additional men, were called, and this was followed by other calls, so that by April 12 60,000 National Guardsmen had been called out.

Policy Toward Germans

To allay unrest and apprehension of Germans residing in the United States, it was announced at Washington on the 20th that there would be no general internment of German citizens or German reservists resident in this country in the event of war between the United States and Germany. Secretary of War Baker authorized the formal statement that "everybody of every nationality who conducts himself in accordance with American law will be free from official molestation, both now and in the future." He declared that rumors that the department had plans for the internment of resident aliens had no foundation in fact.

It was during this period of excitement that the arrival was announced of the first armed American steamship at a European port. The American liner *St. Louis* left New York March 17, with two guns forward and one aft and with a detail of crack marksmen of the United States Navy; she reached Liverpool with-

out encountering any hostile submarines, on Monday, March 26. During the same period merchantmen of various other lines were equipped with guns and departed daily from various American ports.

The period between the President's call and the assembling of Congress was full of excitement throughout the country. Every department of the Government was keyed up to the highest pitch of energetic preparation for war. The mustering out of National Guardsmen who had been on duty on the Mexican border was stopped, and 22,000 guardsmen who were about to be relieved were retained in the ranks. The navy intensified its recruiting work and the Cabinet held daily sessions to discuss questions of war policy and of ways and means.

German Chancellor's Speech

The first official word that came from Germany after it was clear that President Wilson had decided to ask Congress to declare war was made public March 30 in the form of a dispatch from Berlin, transmitted by the semi-official news agency, giving the text of a speech delivered in the German Reichstag March 29 by Chancellor von Bethmann Hollweg. He proceeded to review the causes which led up to the unrestricted use of submarines by Germany as a matter, he said, of self-defense. Then he added:

Within the next few days the directors of the American Nation will be convened by President Wilson for an extraordinary session of Congress in order to decide the question of war or peace between the American and German Nations.

Germany never had the slightest intention of attacking the United States of America, and does not have such intention now. It never desired war against the United States of America and does not desire it today.

How did these things develop? More than once we told the United States that we made unrestricted use of the submarine weapon, expecting that England could be made to observe, in her policy of blockade, the laws of humanity and of international agreements. This blockade policy (this I expressly recall) has been called illegal and indefensible (the Imperial Chancellor here used the English words) by President Wilson and Secretary of State Lansing.

Our expectations, which we maintained during eight months, have been disappointed completely. England not only did not give up

her illegal and indefensible policy of blockade, but uninterruptedly intensified it. England, together with her allies, arrogantly rejected the peace offers made by us and our allies and proclaimed her war aims, which aim at our annihilation and that of our allies.

Then we took unrestricted submarine warfare into our hands; then we had to for our defense.

If the American Nation considers this a cause for which to declare war against the German Nation with which it has lived in peace for more than 100 years, if this action warrants an increase of bloodshed, we shall not have to bear the responsibility for it. The German Nation, which feels neither hatred nor hostility against the United States of America, shall also bear and overcome this.

Among the speeches of party leaders commenting on the Chancellor's address those of Dr. Gustav Stresemann, National Liberal, and Count von Westarp, Conservative, were the most important. Herr Stresemann remarked:

"A declaration of war by America will be possible only because American public opinion has been misled."

Count von Westarp alluded briefly to America, saying:

"We can await the decision of America with complete calm, and the execution of our operations in the barred zone will not be changed thereby."

Lord Cecil's Bitter Reply

This declaration of the Imperial Chancellor was bitterly attacked the next day by Lord Robert Cecil, the British Blockade Minister, in the following formal statement:

The German Chancellor claims that Germany in the past renounced the unrestricted use of her submarine weapon in the expectation that Great Britain could be made to observe in her blockade policy the laws of humanity and international agreements. It is difficult to say whether this statement is the more remarkable for its hypocrisy or for its falseness. It would hardly seem that Germany is in a position to speak of humanity or international agreements, since she began this war by deliberately violating the international agreement guaranteeing the neutrality of Belgium, and has continued it by violating all the dictates of humanity.

Has the Chancellor forgotten that the German forces have been guilty of excesses in Belgium, unparalleled in history, culminating in the attempted enslavement of a dauntless people, of poisoning wells, of bombarding open towns, torpedoing hospital ships and sinking other vessels with total disregard for the safety of noncombatants on board, with

the result that many hundreds of innocent victims, including both women and children, have lost their lives?

The latest manifestation of this policy is to be seen in the devastation and deportations carried out by the Germans in their forced retreat on the western front.

The Chancellor states that it is because the Allies have not abandoned their blockade and have refused the so-called peace offer of Germany that unrestricted submarine warfare is now decided on. As to this I will do no more than quote what the Chancellor himself said in the Reichstag, when announcing the adoption of unrestricted submarine war.

He said that as soon as he himself, in agreement with the supreme army command, reached the conviction that ruthless U-boat warfare would bring Germany nearer to a victorious peace, then the U-boat warfare would be started. He continued:

"This moment has now arrived. Last Autumn the time was not ripe, but today the moment has come when, with the greatest prospect of success, we can undertake this enterprise. We must not wait any longer. Where has there been a change? In the first place, the most important fact of all is that the number of our submarines has been very considerably increased as compared with last Spring, and thereby a firm basis has been created for success."

Does not this prove conclusively that it was not any scruple or any respect for international law or neutral rights that prevented unrestricted warfare from being adopted earlier, but merely a lack of means to carry it out?

I think it may be useful once again to point out that the illegal and inhuman attack on shipping by the Germans cannot be justified as a reprisal for the action of Great Britain in attempting to cut off from Germany all imports.

The submarine campaign was clearly contemplated as far back as December, 1914, when Admiral von Tirpitz gave an indication to an American correspondent in Berlin of the projected plan.

As for the plea that the Allies are aiming at the annihilation of Germany and her allies and that ruthless warfare is, therefore, justified, it is sufficient in order to refute this to quote the following passage from the Allies' reply of Jan. 10, 1917, to President Wilson's note:

"There is no need to say that if the Allies desire to liberate Europe from the brutal covetousness of Prussian militarism, the extermination and political disappearance of the German people have never, as has been pretended, formed a part of their design."

Patriotic Rallies

A notable patriotic rally occurred March 31 at Independence Square, Philadelphia, when resolutions were adopted pledging loyal support to the President in

any action he might take for the protection of American rights on land and sea; it was one of the largest and most enthusiastic that ever assembled at Independence Square. Enthusiastic mass meetings with tumultuous ardor were also held in Chicago, Pittsburgh, Boston, Milwaukee, St. Louis, San Francisco, and in nearly all the important cities of the country.

The pacifist propagandists, however, were busy and were issuing appeals and urging united action to bring influences on Congress to avert a declaration of war. General calls were issued by both pacifists and war patriots to meet at Washington when Congress assembled, and there were acrimonious debates at various meetings between the contending parties, sometimes attended with violence.

Washington was a seething city on

April 1, the day before Congress convened; delegations of both pacifists and war patriots came from all parts of the country, though the number of pacifists fell considerably short of expectations. It was intended by both to hold conventions and parades, but in order to avoid possible trouble all parades in Washington were forbidden. The day Congress assembled there were few outward signs to indicate that the United States was about to enter into the greatest war in history. The only difference in the normal aspect of Washington was in the somewhat larger crowds in the streets and the fact that National Guardsmen and regular troops were on guard at strategic points, that the new iron gates of the White House grounds were closed and guarded, and that admittance to some of the Government departments was obtainable only on identification.

Historic Joint Session of Congress

THE new Congress, the Sixty-fifth, which had been chosen in the preceding November, met in response to the President's special call at noon on April 2. The members in assembling had to crowd their way through swarms of pacifists who had assembled on the Capitol steps to use what influence they could against war. The House of Representatives had resolved on acting in a patriotic spirit and determined to show no spirit of partisanship in organizing.

The blind Chaplain, the Rev. Dr. Henry M. Couden, offered a prayer in which he said:

God of the Ages, our father's God and our God, whose holy influence has shaped and guided the destiny of our Republic from its inception, we wait upon that influence to guide us in the present crisis which has been thrust upon us.

Diplomacy has failed; moral suasion has failed; every appeal to reason and justice has been swept aside. We abhor war and love peace. But if war has been, or shall be, forced upon us, we pray that the heart of every American citizen shall throb with patriotic zeal; that a united people may rally around our President to hold up his hands in every measure that shall be deemed necessary to protect American lives and safeguard our inherent rights.

Let Thy blessings, we beseech Thee, attend the Congress now convened in extraordinary session under extraordinary conditions which call for extraordinary thought, wise counsel, calm and deliberate legislation; that its resolves and all its enactments may spring spontaneously from loyal and patriotic hearts; that our defenders on land and sea may be amply supplied with the things which make for strength and efficiency.

And, O God, our Heavenly Father, let Thy strong right arm uphold, sustain, and guide us in a just and righteous cause; for Thine is the kingdom, the power, and glory, forever, amen.

The roll was then called, amid the usual confusion; but when Montana was reached the Clerk rapped for order, and in the stillness that finally followed he called the name of Miss Rankin, the first woman ever elected to Congress. Both sides of the House burst out in applause, and Miss Rankin blushed and smiled, but they wanted her to stand up, and they cheered until she did, bowing first to the Republican side, then to the Democratic.

Champ Clark as Speaker

Champ Clark was placed in nomination for his fourth term as Speaker by Mr. Schall of Minnesota, a man elected as a Progressive in a district which, he told

the House, contains 43,000 voters, of whom 32,000 are Republicans. Mr. Schall is a blind man. He spoke from the front of the House, leaning on a cane. The pith of Mr. Schall's speech was that both parties should sink partisanship and co-operate with the President, and that the best way to do it was to give him a Congress controlled by his own party.

"I, with my sightless eyes," he said, "would be of little use to my country on the field of battle, but I can cast my vote to help it. I know of no better way to stand by the President than to return his party to the control of the House."

James R. Mann was nominated by the Republicans. The vote stood: Clark, 217; Mann, 205; six Republicans declined to vote for Mr. Mann. The organization of the House was completed by 5 o'clock and adjournment was then taken until 8:30 to meet in joint session with the Senate to receive the President's address.

President Wilson came to the Capitol escorted by a squadron of cavalry.

The House an hour before had taken a recess. When it met again it was in a scene that the hall had never presented before. Directly in front of the Speaker and facing him sat the members of the Supreme Court without their gowns. Over at one side sat the members of the Diplomatic Corps in evening dress. It was the first time any one could remember when the foreign envoys had ever sat together officially in the Hall of Representatives.

Then the doors opened, and in came the Senators, headed by Vice President Marshall, each man wearing or carrying a small American flag. There were three or four exceptions, including Senators La Follette and Vardaman, but one had to look hard to find them, and Senator Stone was no exception. It was at 8:32 that they came in, and five minutes later the Speaker announced:

"The President of the United States."

President Delivers Address

As he walked in and ascended the speakers' platform he got such a reception as Congress had never given him before in any of his visits to it. The

Supreme Court Justices rose from their chairs, facing the place where he stood, and led the applause, while Representatives and Senators not only cheered, but yelled. It was two minutes before he could begin his address.

When he did begin it, he stood with his manuscript before him typewritten on sheets of note paper. He held it in both hands, resting his arm on the green baize covered desk, and at first he read without looking up, but after a while he would glance occasionally to the right or the left as he made a point, not as if he were trying to see the effect but more as a sort of gesture—the only one he employed.

Congress listened intently and without any sort of interruption while he recited the German crimes against humanity, his own and his country's effort to believe that the German rulers had not wholly cut themselves off from the path which civilized nations follow, and how the truth has been forced upon unwilling minds. Congress was waiting for his conclusions, and there was no applause or demonstration of any kind for the recital.

But when he finished his story of our efforts to avoid war and came to the sentence "armed neutrality, it now appears, is impracticable because submarines are in fact outlaws when used as the German submarines are used," the close attention deepened into a breathless silence, so painfully intense that it seemed almost audible.

The President ended at 9:11, having spoken thirty-six minutes. Then the great scene which had been enacted at his entrance was repeated. The diplomats, Supreme Court, the galleries, the House and Senate, Republicans and Democrats alike, stood in their places and the Senators waved flags they had brought in with them. Those who were wearing, not carrying, flags tore them from their lapels or their sleeves and waved with the rest, and they all cheered wildly.

Senator Robert Marion La Follette, however, stood motionless with his arms folded tight and high on his chest, so

that nobody could have any excuse for mistaking his attitude, and there he stood, chewing gum with a sardonic smile.

The President walked rapidly out of the hall, and when he had gone the Senators and the Supreme Court and the diplomats went their ways.

[The address of the President appears in preceding pages.]

After the departure of the President both houses of Congress were assembled and resolutions were introduced in each house embodying the President's recommendations that the state of war with Germany be declared. The resolutions were introduced in the House by Chairman Flood of the Foreign Relations Committee, and in the Senate by Senator Martin, both of Virginia, and at once referred to the respective committees, and the two houses thereupon adjourned.

[The text of the joint resolution is printed on page 198.]

Debate in the Senate

The war resolution was passed by the Senate at 11:11 P. M. Wednesday, April 4, after thirteen hours' debate, by a vote of 82 to 6, eight Senators being unavoidably absent—all the absentees favored the resolution, hence the true sentiment of the Senate was 90 to 6. The six Senators who voted nay were La Follette of Wisconsin, Gronna of North Dakota, Norris of Nebraska, Stone of Missouri, Lane of Oregon, and Vardaman of Mississippi, the first three being Republicans, the last three Democrats.

The opening speech was delivered by Senator Hitchcock of Nebraska, who was in charge of the resolution in substitution for Chairman Stone of the Foreign Relations Committee, who was in opposition. In his address the Senator said that Germany's resumption of submarine activity was not a violation of her word, but a revocation of it, a step taken in desperation.

It was not intended to provoke war with us, but it was followed by acts of war upon us. They were not made for the deliberate purpose of injuring us but rather to starve the English people. The effect, however, was the same. We were ordered off the high seas. We could not submit; no great nation could remain great and independent, if it did so.

No great nation could maintain its place in history if it permitted another to order it off the sea, if it permitted another to bottle up its commerce, if it permitted another to dictate to it in the exercise of its unquestioned right and to impose the penalty of murder of its citizens in case of refusal.

Words of Senator Lodge

Senator Lodge of Massachusetts, who had been precipitated into a personal affray in the Senate corridor the day before by a committee of pacifists and had knocked down one who attacked him, in the course of his remarks, said:

We have never been a military nation. We are not prepared for war in the modern sense; but we have vast resources and unbounded energies and the day when war is declared we should devote ourselves to calling out those resources and organizing those energies so that they can be used with the utmost effect in hastening the complete victory. The worst of all wars is a feeble war. War is too awful to be entered upon half-heartedly. If we fight at all, we must fight for all we are worth. It must be no weak, hesitating war. The most merciful war is that which is most vigorously waged and which comes most quickly to an end.

But there are, in my opinion, some things worse for a nation than war. National degeneracy is worse; national cowardice is worse. The division of our people into race groups, striving to direct the course of the United States in the interest of some other country when we should have but one allegiance, one hope, and one tradition—all these dangers have been gathering about us and darkening the horizon during the last three years. Whatever suffering and misery war may bring, it will at least sweep these foul things away. It will unify us into one nation.

This war is a war against barbarism, panoplied in all the devices for destruction of human life which science, beneficent science, can bring forth. We are resisting an effort to thrust mankind back to forms of government, to political creeds, and methods of conquest which we had hoped had disappeared forever from the world. We are fighting against a nation which, in the fashion of centuries ago, drags the inhabitants of conquered lands into slavery; which carries off women and girls for even worse purposes; which in its mad desire to conquer mankind and trample them under foot has stopped at no wrong, has regarded no treaty.

The work that we are called upon to do when we enter this war is to preserve the principles of human liberty, the principles of democracy, and the light of modern civilization; all that we most love, all that we hold dearer than life itself. We wish only to preserve our own peace and our own security, to uphold the great doctrine which

guards the American Hemisphere, and to see the disappearance of all wars or rumors of wars from the East, if any dangers there exist.

What we want most of all by this victory, which we shall help to win, is to secure the world's peace, based on freedom and democracy, a world not controlled by a Prussian military autocracy, but by the will of the free people of the earth. We shall achieve this result, and when we achieve it we shall be able to say that we have helped to confer a great blessing upon mankind, and that we have not fought in vain.

Senator Norris, in his opposition, said:

We are going into war upon command of gold. We are about to do the bidding of wealth's terrible mandate and make millions of our countrymen suffer and untold generations bear burdens and shed their life blood, all because we want to preserve our commercial right to deliver munitions to the belligerents. I feel that we are about to put the dollar sign on the American flag.

Senator Reed, Democrat, of Missouri, replied to Senator Norris by declaring that his charge that the war resolution was placing the dollar sign on the American flag was "almost treason." The assertion that the nation was going to war on the demand of gold was "an indictment of the President of the United States, an indictment of Congress, of the American people, and of the truth."

"It is not the truth!" shouted the Missouri Senator.

Opposition by La Follette

Senator La Follette of Wisconsin delivered the principal speech against the resolution. He read a number of telegrams reporting straw votes, postcard, and other polls in various communities in the Central West, where the sentiment was overwhelmingly against war. He asserted that, of 15,000 or 20,000 letters and telegrams he had received regarding his vote on the armed ship bill, 80 to 90 per cent. had approved his stand. He referred to the President's statement that Germany had violated her submarine pledges, and continued:

Her promise, so called, was conditional upon England being brought to obedience of international law. Was it quite fair to lay before the country the statement that Germany made an unconditional promise and had deliberately violated it?

It was England, not Germany, who refused to obey the Declaration of London, containing the most humane ideas of naval

warfare which could be framed by the civilized world up to that time. Keep that in mind.

If this is war upon all mankind, is it not peculiar that the United States is the only nation of all neutrals which regards it as necessary to declare war upon Germany? All have refused to join in a combination against Germany. Some may have a clearer view than we. This suspicion of a desire for war profits does not attach to them.

Senator La Follette said that the United States had not the confidence of the other American republics because of its war policies. He predicted that entrance of the United States would not shorten the conflict, "but will vastly extend it by drawing other nations in." It is idle, the Senator went on, to talk of a war on the German Government and not on the German people.

We are leagued, (he continued,) or are about to be, according to the President's speech, with the hereditary enemies of the German people. Words are not strong enough to protest against a combination with the Entente Allies which would have us indorse the violations of international law by Great Britain and her purpose to wreak vengeance on the German people. We do not know what is in the minds of those who made the compacts in which we are to share.

Reverting to the President's assertion that the German people were thrown into war without an opportunity to say anything about it, the Senator asked: "Will the supporters of this war bill have a vote on it before it goes into effect? Unless they do that, it ill becomes us to speak of Germany. Submit this question to the people. By a vote of ten to one they would register their declaration against war."

The German people, he asserted, were more solidly behind their Government than the people of the United States would be behind the President in waging war on Germany.

"The Espionage bill and the Military bill that have been drawn by the war machine in this country," he said, "are complete proof that those responsible know that it has not popular support. The armies, necessary to be raised to aid the Entente Allies, cannot be raised by voluntary enlistment."

Praising the character and services of German-Americans in this country, Senator La Follette said that they were

being "dogged" by Secret Service men. He denied that any one Government was responsible for the war, saying that it was caused by European secret diplomacy. He cited the Anglo-French Moroccan secret treaty as "the most reprehensible, dishonest, and perjured on record."

"England first began the ruthless naval warfare," he asserted, "by repudiating the declaration of London."

Senator Knox, Republican, of Pennsylvania, interrupted to suggest that England did not ratify the declaration. Senator La Follette replied that British representatives signed it, and Senator Stone said England had not actually rejected it.

"It has pleased those who have been conducting this campaign (for war) through the press to make a jumble of issues," Senator La Follette continued, "until now it is impossible to get an intelligent answer regarding the real issues. They say that Americans are being killed by German submarines. We haven't a leg to stand on in support of this war declaration."

That the United States did not protest more vigorously against the British mine field blockade was the Administration's great mistake, the Senator said, and the real and primary cause of an American war declaration. He added:

We have wallowed in the mire at the feet of Great Britain and submitted in silence to her dictation. Because we acquiesce we have a legal and moral responsibility to Germany. Thus we have been actively aiding her enemy in starving German women, children, and old men. Germany waited three long months for this Government to protest. In principle, therefore, Germany had the right to destroy, blindly, ships by submarines and mines, in her own blockade zone. Germany is only doing what England is doing. Germany has been patient with us, standing strictly on her right to be accorded the same treatment as England by us.

Reply of Senator Williams

Senator Williams of Mississippi, in replying to Senator La Follette, said:

The Senator from Wisconsin labored to establish an identity of purpose and action in the violations of our neutral rights by Great Britain and Germany. He proved that he did not know the difference between a prize court and a torpedo. Great Britain has drowned none of our citizens.

I am a little tired of utterances like that of the Senator from Wisconsin, denouncing the Entente Allies. He endeavors to twist the British lion's tail. Demagogues have been doing that ever since the Revolution, but it is a matter of history that most of the people of England were against the war on the colonies.

Which would you rather do, fight Germany now with France and Great Britain and Russia, or fight her alone later? You've got to do one or the other. I tell you that if Germany does win that fight on the Continent of Europe she will begin building and getting ready to whip us, unless the English fleet prevents it.

Referring to the Wisconsin Senator's statement that the United States had nothing to lose, no matter which side won the war, Senator Williams said:

Let's see. Have we no honor? No regard for the future sovereignty of our country? No regard for our flag? Is sentiment rot? Is patriotism rot? Is there nothing precious except money?

I'm getting tired of this talk that this is a Wall Street war. That's a lie. Wall Street did not sink the Lusitania, the Arabic, the Sussex, and these other ships. I'm tired of lies like that, and I think it is the duty of the American Congress and people to brand them as lies.

Senator Williams said that the resolution did not propose that the United States enter the European war, but that it go into an American war to protect American rights and for the sake of honor, justice, safety, liberty, and equality. Once at war, he added, the United States should stay until it became assured the houses of Hohenzollern and Hapsburg would no longer reign in Germany and Austria, and that the Turk would be forced back into Asia.

Debate in the House

The resolution declaring war was reported to the House of Representatives after its passage by the Senate on Thursday, April 5. In presenting the resolution for passage the Committee on Foreign Affairs submitted an exhaustive report, in which the American indictment against the German Government was reviewed. The full text of this report is printed on pages 214-222.

The resolution was discussed in the House from 10 A. M. Thursday until 3:12 A. M. Friday, when it was passed by a vote of 373 yeas and 50 nays, 9 not vot-

ing. Miss Rankin, the woman member of the House, voted "no" after being called three times; she prefaced her vote in a voice choked by emotion, with the words: "I want to stand by my country—but I cannot vote for war."

The first important speech against the resolution was made by Representative Cooper of Wisconsin of the Foreign Affairs Committee. He maintained that Germany had not violated her promise regarding submarines; that she specifically reserved the right to withdraw it unless the United States Government would induce Great Britain to modify the blockade regulations. He argued that Great Britain had violated American rights upon the seas, that America had not been neutral. He defended German militarism with the query:

What has overthrown Russia? The tremendous struggle of the Central Powers. Now, then, I ask you this question: If we were in the situation of the German people and had just across an imaginary boundary, say like the Rio Grande River, a country of 120,000,000 or 130,000,000 or 140,000,000 people, having the most absolute, tyrannical, corrupt despotism of modern times, with an army of 1,300,000, what would we have done to secure our own safety and how long before this would we have had universal military service?

He quoted from a speech of Lloyd George delivered in Queen's Hall, London, July 28, 1908, in which he justified Germany's military preparedness, and quoted Lloyd George as follows:

Here is Germany, in the middle of Europe, with France and Russia on either side, and with a combination of their armies greater than hers. Suppose we had here a possible combination which would lay us open to invasion—suppose Germany and France, or Germany and Russia, or Germany and Austria had fleets which in combination would be stronger than ours.

Would not we be frightened; would not we build; would not we arm? Of course we should. I want our friends, who think that because Germany is a little frightened she really means mischief to us, to remember that she is frightened for a reason which would frighten us under the same circumstances.

British Blockade Defended

Representative Harrison of Mississippi, in replying, said regarding England's blockade:

When she executed that order she said to the United States, "We have mined certain places in the North Sea, but if any of your

vessels wish to go through we will furnish you a diagram, so to speak; we will furnish you pilot boats, so that you may not run against the mines." Did Germany do that? No. Germany said, "Here is a zone 1,500 miles long and 1,100 miles wide your vessels cannot enter except once a week, and then only at a certain port and along a certain path, and your vessel shall be painted a certain color—like a barber's sign, so to speak." And then they said, so far as the Mediterranean is concerned, "You cannot enter it except in a strip of twenty miles wide." Can you not see the difference between the actions of Germany and the actions of England? A man who cannot is unable to see the difference between, as some one has said, a torpedo and a prize court.

England's prize courts have awarded hundreds of thousands of dollars for affecting the property rights of the citizens of this country. Their courts are open, and they have said, "We will try the cases coming before us, and award damages not upon the orders in council but upon international law." And on that principle hundreds of our citizens have collected the full market value of their cargoes taken. And yet men say that we ought to go to war against England for violating property rights and excuse Germany for destroying the lives of American citizens. By that argument you say to me I shall not be permitted to choose my assailant. If one comes into my home and steals my pocketknife, he can be prosecuted for petit larceny. The penalty will be light. But if he comes into my home and kills some one who is dear to me, the punishment will be death. * * *

For nearly three years we have tried every avenue of diplomacy commensurate with a nation's honor to avoid war. So intense has been our desire for peace that at home our Government has been criticised and abroad our patience and forbearance have been marveled at.

Indictment by Mr. Foss

Representative Foss of Illinois denounced Germany's attitude in these terms:

German belief in German power has fattened on the blood of innocents. She no longer seeks to hide behind her broken promise, but tells us she will sink on sight any ship within a certain zone, save one poor ship per week, and then only under conditions which, to accept, was to surrender each and all our dearly bought liberties.

At the same moment we caught her red-handed in the basest act of international treachery ever committed by a civilized nation. She offers as barter a part of our sovereign territory in exchange for an attack on us by two friendly nations—Mexico and Japan.

Now Germany has dropped her diplomatic mask and stands revealed in all her naked

savagery. She will now kill on sight; she has run amuck on the seas; she has now treacherously sought an alliance against our peace. Throughout all this we have remained neutral, and, as a reward for our neutrality, what have we received at the hands of William II.?

He has set the torch of the incendiary to our factories, our workshops, our ships, and our wharves.

He has laid the bomb of the assassin in our munition plants and in the holds of our ships. He has sought to corrupt our manhood with a selfish dream of peace when there is no peace.

He has wilfully butchered our citizens on the high seas.

He has destroyed our commerce.

He seeks to terrorize us with his devilish policy of frightfulness.

He has violated every canon of international decency and set at naught every solemn treaty and every precept of international law.

He has plunged the world into the maddest orgy of blood, rapine, and murder which history records.

He has intrigued against our peace at home and abroad.

He seeks to destroy our civilization. Patience is no longer a virtue, further endurance is cowardice, submission to Prussian demands is slavery.

Kitchin's Opposition Speech

Representative Kitchin of North Carolina, who is the Democratic floor leader, opposed the resolution. In his address he said:

Great Britain every day, every hour, for two years has violated American rights on the seas. We have persistently protested. She has denied us not only entrance into the ports of the Central Powers but has closed to us by force the ports of neutrals. She has unlawfully seized our ships and our cargoes. She has rifled our mails. She has declared a war zone sufficiently large to cover all the ports of her enemy. She made the entire North Sea a military area—strewn it with hidden mines and told the neutral nations of the world to stay out or be blown up. We protested. No American ships were sunk, no American life was destroyed, because we submitted and did not go in. We kept out of war. We sacrificed no honor. We surrendered permanently no essential rights. We knew that these acts of Great Britain, though in plain violation of international law and of our rights on the seas, were not aimed at us. They were directed at her enemy. They were inspired by military necessity. Rather than plunge this country into war, we were willing to forego for the time our rights. I approved that course then; I approve it now: Germany declared a war zone sufficiently large to cover the ports of her enemy. She infests it with submarines and warns the neu-

tral world to stay out, though in plain violation of our rights and of international law. We know that these acts are aimed not directly at us but intended to injure and cripple her enemy, with which she is in a death struggle.

We refuse to yield; we refuse to forego our rights for the time. We insist upon going in.

In my judgment, we could keep out of the war with Germany, as we kept out of the war with Great Britain, by keeping our ships and our citizens out of the war zone of Germany as we did out of the war zone of Great Britain. And we would sacrifice no more honor, surrender no more rights in the one case than in the other. But we are told that Germany has destroyed American lives while Great Britain destroyed only property. Great Britain destroyed no American lives, because this nation kept her ships and her citizens out of her war zone which she infested with hidden mines. But are we quite sure that the real reason for war with Germany is the destruction of lives as distinguished from property, that to avenge the killing of innocent Americans and to protect American lives war becomes a duty?

Mr. Kitchin argued that Mexicans had murdered American citizens, had invaded American territory, and committed acts of war against the United States; and that we had refrained from war on that occasion without sacrificing our honor. He continued:

Are we quite sure that in a war with Germany or Japan, if our fleet was bottled up, helpless, and our ships of commerce had been swept from the seas, all our ports closed by the enemy's fleet, imports of fuel and food and clothing for our people and ammunition for our soldiers were denied, with our very life trembling in the balance, we would not, in the last struggle for existence, strike our enemy with the only weapon of the sea remaining and in a manner violative of the international law? Would one contend that under the circumstances our submarine commanders should permit the landing at the ports of the enemy arms and ammunition with which to shoot down our brave American boys when they had it in their power to prevent it? Would we demand of our submarine commanders that they give the benefit of the doubt to questions of international law rather than to the safety of our country and the lives of our own soldiers?

There were more than fifty speeches delivered during the session.

The War Proclamation

The war resolution as passed by the two houses of Congress was signed by President Wilson at 1:18 P. M. Friday,

April 6, and by that act the United States and Germany became officially at war. At the same time the President issued a proclamation to the American people announcing the existence of a state of war, the text of which appears on Pages 198-200. Formal notice was at the same time flashed to every American war vessel, naval station, fort, and army post; also to American diplomatic and Consular representatives abroad. Orders were likewise at once issued by the Navy Department to mobilize the naval forces of the United States and all branches of the navy were placed upon a war footing.

Seizure of German Ships

The first act in recognition of a state of war was the seizure by the United States authorities of all German ships that had taken refuge in American ports at the commencement of the war. Preparations to this end were made by the Federal authorities at all ports, and when the news was flashed from Washington at dawn on Friday that the war resolution had been adopted by Congress a detachment of port officials accompanied by a detail of Federal troops instantly took possession of the vessels.

There were in all 91 German-owned vessels in American waters with a gross tonnage of 594,696; twenty-seven of them in the Harbor of New York, six at Boston, three at Baltimore, two at Wilmington, N. C.; two at Philadelphia, three at

San Francisco, two at Pensacola, two at New Orleans, two at Astoria, Ore.; eight at Honolulu, seventeen at Manila, three at Zamboango, and three at Cebu, Philippine Islands; one each at New London, Newport News, Savannah, Charleston, Jacksonville, Portland, Ore.; Seattle, Winslow, Wash.; Hilo, Hawaii; San Juan, P. R.; Pago Pago, Samoa. The seizures were made without incident except in one case, and the crews were interned at the various immigrant stations, where they were treated as newly arrived immigrants. A German gunboat at Manila, the *Cormoran*, was blown up by its officers before the Federal officials took possession, and five members of the crew perished; the remaining 353 men and officers then peacefully accepted internment. The vessels seized were valued at about \$100,000,000. It was found that the machinery had been disabled on each of the ships, except the *Vaterland*, the 54,000-ton German liner at New York. It was estimated that several weeks would be required to make repairs.

The Government announced that the ships were seized for the purpose of protecting them from further injury, and that until a decision could be reached as to their proper disposition Customs guards had been placed on board. A few days later a large numbers of machinists were placed on the ships by Government authorities, and the work of repairs was vigorously begun.

Report of House Committee on Foreign Affairs Reciting German Misdeeds

When the resolution declaring war was reported for passage in the House of Representatives on April 5, the Committee of Foreign Affairs submitted the following exhaustive report, reciting the long catalogue of unfriendly acts that would justify war on the part of the United States:

IT is with the deepest sense of responsibility of the momentous results which will follow the passage of this resolution that your committee reports it to the House, with the recommendation that it be passed.

The conduct of the Imperial German Government toward this Government, its citizens, and its interests has been so discourteous, unjust, cruel, barbarous, and so lacking in honesty and fair dealing that it has constituted a violation of the course of conduct which should obtain between friendly nations.

In addition to this, the German Government is actually making war upon the people and the commerce of this country, and leaves no course open to this Government but to accept its gage of battle, de-

clare that a state of war exists, and wage that war vigorously.

On the 31st day of January, 1917, notice was given by the Imperial German Government to this Government that after the following day—

Germany will meet the illegal measures of her enemies by forcibly preventing, in a zone around Great Britain, France, Italy, and in the Eastern Mediterranean, all navigation, that of neutrals included, from and to England and from and to France, &c. All ships met within that zone will be sunk.

Since that day seven American ships flying the American flag have been sunk and between twenty-five and thirty American lives have been lost as a result of the prosecution of the submarine warfare in accordance with the above declaration. This is war. War waged by the Imperial German Government upon this country and its people.

A brief review of some of the hostile and illegal acts of the German Government toward this Government and its officers and its people is herewith given.

Germany's Conduct at Sea

In the memorial of the Imperial German Government accompanying its proclamation of Feb. 4, 1915, in regard to submarine warfare, that Government declared: "The German Navy has received instructions to abstain from all violence against neutral vessels recognizable as such." In the note of the German Government dated Feb. 16, 1915, in reply to the American note of Feb. 10, it was declared that "It is very far indeed from the intention of the German Government * * * ever to destroy neutral lives and neutral property. * * * The commanders of German submarines have been instructed, as was already stated in the note of the 4th instant, to abstain from violence to American merchant ships when they are recognizable as such."

Nevertheless, the German Government proceeded to carry out its plans of submarine warfare and torpedoed the British passenger steamer *Falaba* on March 27, 1915, when one American life was lost, attacked the American steamer *Cushing* April 28 by airship, and made submarine attacks upon the American tank steamer *Gulflight* May 1, the British passenger steamer *Lusitania* May 7, when

114 American lives were lost, and the American steamer *Nebraskan* on May 25, in all of which over 125 citizens of the United States lost their lives, not to mention hundreds of noncombatants who were lost and hundreds of Americans and noncombatants whose lives were put in jeopardy.

The British mule boat *Armenian* was torpedoed on June 28, as a result of which twenty Americans are reported missing.

On July 8, 1915, in a note to Ambassador Gerard, arguing in defense of its method of warfare and particularly of its submarine commander in the *Lusitania* case, it is stated:

The Imperial Government therefore repeats the assurances that American ships will not be hindered in the prosecution of legitimate shipping and the lives of American citizens on neutral vessels shall not be placed in jeopardy.

In order to exclude any unforeseen dangers to American passenger steamers * * * the German submarines will be instructed to permit the free and safe passage of such passenger steamers when made recognizable by special markings and notified a reasonable time in advance.

Subsequently the following vessels carrying American citizens were attacked by submarines: British liner *Orduna*, July 9; Russian steamer *Leo*, July 9; American steamer *Leelanaw*, July 25; British passenger liner *Arabic*, Aug. 19; British mule ship *Nicosian*, Aug. 19; British steamer *Hesperian*, Sept. 4. In these attacks twenty-three Americans lost their lives, not to mention the large number whose lives were placed in jeopardy.

Following these events, conspicuous by their wantonness and violation of every rule of humanity and maritime warfare, the German Ambassador, by instructions from his Government, on Sept. 1 gave the following assurances to the Government of the United States:

Liners will not be sunk by our submarines without warning and without safety of the lives of noncombatants, provided that the liners do not try to escape or offer resistance.

On Sept. 9, in a reply as to the submarine attack on the *Orduna*, the German Government renewed these assurances in the following language:

The first attack on the *Orduna* by a torpedo

was not in accordance with the existing instructions, which provide that large passenger steamers are to be torpedoed only after previous warning and after the rescuing of passengers and crew. The failure to observe the instructions was based on an error which is at any rate comprehensible and the repetition of which appears to be out of the question, in view of the more explicit instructions issued in the meantime. Moreover, the commanders of the submarines have been reminded that it is their duty to exercise greater care and to observe carefully the orders issued.

The German Government could not more clearly have stated that liners or large passenger steamers would not be torpedoed except upon previous warning and after the passengers and crew had been put in places of safety.

On Nov. 29 the German Government states, in connection with the case of the American vessel William P. Frye:

The German naval forces will sink only such American vessels as are loaded with absolute contraband, when the preconditions provided by the Declaration of London are present. In this the German Government quite shares the view of the American Government that all possible care must be taken for the security of the crew and passengers of a vessel to be sunk. Consequently the persons found on board of a vessel may not be ordered into her lifeboats except when the general conditions—that is to say, the weather, the condition of the sea, and the neighborhood of the coasts—afford absolute certainty that the boats will reach the nearest port.

Following this accumulative series of assurances, however, there seems to have been no abatement in the rigor of submarine warfare, for attacks were made in the Mediterranean upon the American steamer *Communiaw* on Dec. 3, the American steamer *Petrolite* Dec. 5, the Japanese liner *Yasaka Maru* Dec. 21, and the passenger liner *Persia* Dec. 30. In the sinking of the *Persia* out of a total of some 500 passengers and crew only 165 were saved. Among those lost was an American Consul traveling to his post.

On Jan. 7, eight days after the sinking of the *Persia*, the German Government notified the Government of the United States through its Ambassador in Washington as follows:

1. German submarines in the Mediterranean had, from the beginning, orders to conduct cruiser warfare against enemy merchant vessels only in accordance with the general principles of international law, and in particular measures of reprisal, as applied in the war

zone around the British Isles, were to be excluded.

2. German submarines are therefore permitted to destroy enemy merchant vessels in the Mediterranean, i. e., passenger as well as freight ships as far as they do not try to escape or offer resistance—only after passengers and crews have been accorded safety.

German Promises Violated

Clearly the assurances of the German Government that neutral and enemy merchant vessels, passenger as well as freight ships, should not be destroyed except upon the passengers and crew being accorded safety stood as the official position of the Imperial German Government.

On Feb. 16, 1916, the German Ambassador communicated to the Department of State an expression of regret for the loss of American lives on the *Lusitania*, and proposed to pay a suitable indemnity. In the course of this note he said:

Germany has * * * limited her submarine warfare because of her long-standing friendship with the United States and because by the sinking of the *Lusitania*, which caused the death of citizens of the United States, the German retaliation affected neutrals, which was not the intention, as retaliation should be confined to enemy subjects.

On March 1, 1916, the unarmed French passenger steamer *Patria*, carrying a number of American citizens, was attacked without warning. On March 9 the Norwegian bark *Silius*, riding at anchor in Havre Roads, was torpedoed by an unseen submarine and one of the seven Americans on board was injured. On March 16 the Dutch passenger steamer *Tubantia* was sunk in the North Sea by a torpedo. On March 16 the British steamer *Berwindale* was torpedoed without warning off Bantry Island with four Americans on board. On March 24 the British unarmed steamer *Englishman* was, after a chase, torpedoed and sunk by the submarine U-19, as a result of which one American on board perished. On March 24 the unarmed French cross-Channel steamer *Sussex* was torpedoed without warning, several of the twenty-four American passengers being injured. On March 27 the unarmed British liner *Manchester Engineer* was sunk by an explosion without prior warning, with Americans on board, and on March 28 the British steamer *Eagle Point*, carrying a

Hotchkiss gun, which she did not use, was chased, overtaken, and sunk by a torpedo after the persons on board had taken to the boats.

The American note of Feb. 10, 1915, stated that should German vessels of war "destroy on the high seas an American vessel or the lives of American citizens it would be difficult for the Government of the United States to view the act in any other light than an indefensible violation of neutral rights which it would be very hard, indeed, to reconcile with the friendly relations so happily subsisting between the two Governments," and that if such a deplorable situation should arise, "the Government of the United States would be constrained to hold the Imperial Government to a strict accountability for such acts of their naval authorities."

In the American note of May 13, 1915, the Government stated:

The Imperial Government will not expect the Government of the United States to omit any word or act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and in safeguarding their free exercise and enjoyment.

In the note of July 21, 1915, the United States Government said that

Repetition by the commanders of German naval vessels of acts in contravention of those rights must be regarded by the Government of the United States, when they affect American citizens, as deliberately unfriendly.

In a communication of April 18, 1916, the American Government said:

If it is still the purpose of the Imperial Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines without regard to what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue. Unless the Imperial Government should not immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight carrying vessels the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether.

The German Government replied to this communication on May 4, 1916, giving definite assurances that new orders had been issued to the German naval

forces "in accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law." And this agreement was substantially complied with for many months, but finally, on Jan. 31, 1917, notice was given that after the following day

Germany will meet the illegal measures of her enemies by forcibly preventing in a zone around Great Britain, France, Italy, and in the Eastern Mediterranean all navigation, that of neutrals included, from and to England and from and to France, &c. All ships met within that zone will be sunk.

In view of this Government's warning of April 18, 1916, and the Imperial German Government's pledge of May 4 of the same year, the Government of the United States, on Feb. 3, 1917, stated to the Imperial German Government that

in view of this declaration, which withdraws suddenly and without prior intimation the solemn assurance given in the Imperial Government's note of May 4, 1916, this Government has no alternative consistent with the dignity and honor of the United States but to take the course which it explicitly announced in its note of April 18, 1916, it would take in the event that the Imperial Government did not declare and effect an abandonment of the methods of submarine warfare then employed and to which the Imperial Government now purposes again to resort.

The President has, therefore, directed me to announce to your Excellency that all diplomatic relations between the United States and the German Empire are severed, and that the American Ambassador at Berlin will be immediately withdrawn, and, in accordance with such announcement, to deliver to your Excellency your passports.

On Feb. 3 one American ship was sunk, and since that date six American ships flying the American flag have been torpedoed, with a loss of about thirteen American citizens. In addition, fifty or more foreign vessels of both belligerent and neutral nationality with Americans on board have been torpedoed, in most cases without warning, with a consequent loss of several American citizens.

Intrigues in the United States

Since the beginning of the war German officials in the United States have engaged in many improper activities in violation of the laws of the United States and of their obligations as officials in a neutral country. Count von Bernstorff, the German Ambassador, Captain von

Papen, Military Attaché of the embassy, Captain Boy-Ed, Naval Attaché, as well as various Consular officers and other officials, were involved in these activities, which were very widespread.

The following instances are chosen at random from the cases which have come to the knowledge of the Government:

I. By direct instructions received from the Foreign Office in Berlin the German Embassy in this country furnished funds and issued orders to the Indian Independence Committee of the Indian Nationalist Party in the United States. These instructions were usually conveyed to the committee by the military information bureau in New York, (von Igel,) or by the German Consulates in New York and San Francisco.

Dr. Chakrabarty, recently arrested in New York City, received, all in all, according to his own admission, some \$30,000 from von Igel. He claims that the greater portion of this money was used for defraying the expenses of the Indian revolutionary propaganda in this country and, as he says, for educational purposes. While this is in itself true, it is not all that was done by the revolutionists. They have sent representatives to the Far East to stir up trouble in India, and they have attempted to ship arms and ammunition to India. These expeditions have failed. The German Embassy also employed Ernest T. Euphrat to carry instructions and information between Berlin and Washington under an American passport.

II. Officers of interned German warships have violated their word of honor and escaped. In one instance the German Consul at Richmond furnished the money to purchase a boat to enable six warrant officers of the steamer Kronprinz Wilhelm to escape after breaking their parole.

III. Under the supervision of Captain von Papen and Wolf von Igel, Hans von Wedell and, subsequently, Carl Ruroede maintained a regular office for the procurement of fraudulent passports for German reservists. These operations were directed and financed in part by Captain von Papen and Wolf von Igel. Indictments were returned, Carl Ruroede sentenced to the penitentiary, and a num-

ber of German officers fined. Von Wedell escaped and has apparently been drowned at sea. Von Wedell's operations were also known to high officials in Germany. When von Wedell became suspicious that forgeries committed by him on a passport application had become known, he conferred with Captain von Papen and obtained money from him wherewith to make his escape.

IV. James J. F. Archibald, under cover of an American passport and in the pay of the German Government through Ambassador Bernstorff, carried dispatches for Ambassador Dumba and otherwise engaged in unneutral activities.

V. Albert O. Sander, Charles Wunnenberg, and others, German agents in this country, were engaged, among other activities, in sending spies to England, equipped with American passports, for the purpose of securing military information. Several such men have been sent. Sander and Wunnenberg have pleaded guilty to indictments brought against them in New York City, as has George Voux Bacon, one of the men sent abroad by them.

VI. American passports have been counterfeited and counterfeits found on German agents. Baron von Cupenberg, a German agent, when arrested abroad, bore a counterfeit of an American passport issued to Gustav C. Roeder; Irving Guy Ries received an American passport, went to Germany, where the police retained his passports for twenty-four hours. Later a German spy named Carl Paul Julius Hensel was arrested in London with a counterfeit of the Ries passport in his possession.

VII. Prominent officials of the Hamburg-American Line, who, under the direction of Captain Boy-Ed, endeavored to provide German warships at sea with coal and other supplies in violation of the statutes of the United States, have been tried and convicted and sentenced to the penitentiary. Some twelve or more vessels were involved in this plan.

VIII. Under the direction of Captain Boy-Ed and the German Consulate at San Francisco, and in violation of our law, the steamships Sacramento and Mazatlan carried supplies from San

Francisco to German war vessels. The Olsen and Mahoney, which was engaged in a similar enterprise, was detained. The money for these ventures was furnished by Captain Boy-Ed. Indictments have been returned in connection with these matters against a large number of persons.

IX. Werner Horn, a Lieutenant in the German reserve, was furnished funds by Captain Franz von Papen and sent, with dynamite, under orders to blow up the International Bridge at Vanceboro, Me. He was partially successful. He is now under indictment for the unlawful transportation of dynamite on passenger trains and is in jail awaiting trial following the dismissal of his appeal by the Supreme Court.

X. Captain von Papen furnished funds to Albert Kaltschmidt of Detroit, who is involved in a plot to blow up a factory at Walkerville, Canada, and the armory at Windsor, Canada.

Bomb Plots Against Ships

XI. Robert Fay, Walter Scholtz, and Paul Daeche have been convicted and sentenced to the penitentiary and three others are under indictment for conspiracy to prepare bombs and attach them to allied ships leaving New York Harbor. Fay, who was the principal in this scheme, was a German soldier. He testified that he received finances from a German secret agent in Brussels, and told Von Papen of his plans, who advised him that his device was not practicable, but that he should go ahead with it, and if he could make it work he would consider it.

XII. Under the direction of Captain von Papen and Wolf von Igel, Dr. Walter T. Scheele, Captain von Kleist, Captain Wolpert of the Atlas Steamship Company, and Captain Rode of the Hamburg-American Line manufactured incendiary bombs and placed them on board allied vessels. The shells in which the chemicals were placed were made on board the steamship Friedrich der Grosse. Scheele was furnished \$1,000 by von Igel wherewith to become a fugitive from justice.

XIII. Captain Franz Rintelen, a re-

serve officer in the German Navy, came to this country secretly for the purpose of preventing the exportation of munitions of war to the Allies and of getting to Germany needed supplies. He organized and financed Labor's National Peace Council in an effort to bring about an embargo on the shipment of munitions of war, tried to bring about strikes, &c.

XIV. Consul General Bopp, at San Francisco, Vice Consul General von Schaick, Baron George Wilhelm von Brincken, (an employe of the consulate,) Charles C. Crowley, and Mrs. Margaret W. Cornell (secret agents of the German Consulate at San Francisco) have been convicted of conspiracy to send agents into Canada to blow up railroad tunnels and bridges, and to wreck vessels sailing from Pacific Coast ports with war material for Russia and Japan.

XV. Paul Koenig, head of the secret-service work of the Hamburg-American Line, by direction of his superior officers, largely augmented his organization and under the direction of Von Papen, Boy-Ed, and Albert carried on secret work for the German Government. He secured and sent spies to Canada to gather information concerning the Welland Canal, the movements of Canadian troops to England, bribed an employe of a bank for information concerning shipments to the Allies, sent spies to Europe on American passports to secure military information, and was involved with Captain von Papen in plans to place bombs on ships of the Allies leaving New York Harbor, &c. Von Papen, Boy-Ed, and Albert had frequent conferences with Koenig in his office, at theirs, and at outside places. Koenig and certain of his associates are under indictment.

Welland Canal Plot

XVI. Captain von Papen, Captain Hans Tauscher, Wolf von Igel, and a number of German reservists organized an expedition to go into Canada, destroy the Welland Canal, and endeavor to terrorize Canadians in order to delay the sending of troops from Canada to Europe. Indictments have been returned

against these persons. Wolf von Igel furnished Fritzen, one of the conspirators in this case, money on which to flee from New York City. Fritzen is now in jail in New York City.

XVII. With money furnished by official German representatives in this country, a cargo of arms and ammunition was purchased and shipped on board the schooner Annie Larsen. Through the activities of German official representatives in this country and other Germans a number of Indians were procured to form an expedition to go on the steamship Maverick, meet the Annie Larsen, take over her cargo, and endeavor to bring about a revolution in India. This plan involved the sending of a German officer to drill Indian recruits and the entire plan was managed and directed by Captain von Papen, Captain Hans Tauscher, and other official German representatives in this country.

XVIII. Gustav Stahl, a German reservist, made an affidavit which he admitted was false, regarding the armament of the Lusitania, which affidavit was forwarded to the State Department by Ambassador von Bernstorff. He plead guilty to an indictment charging perjury, and was sentenced to the penitentiary. Koenig, herein mentioned, was active in securing this affidavit.

XIX. The German Embassy organized, directed, and financed the Hans Libau Employment Agency, through which extended efforts were made to induce employes of manufacturers engaged in supplying various kinds of material to the Allies to give up their positions in an effort to interfere with the output of such manufacturers. Von Papen indorsed this organization as a military measure, and it was hoped through its propaganda to cripple munition factories.

XX. The German Government has assisted financially a number of newspapers in this country in return for pro-German propaganda.

XXI. Many facts have been secured indicating that Germans have aided and encouraged financially and otherwise the activities of one or the other faction in Mexico, the purpose being to keep the

United States occupied along its borders and to prevent the exportation of munitions of war to the Allies; see, in this connection, the activities of Rintelen, Stallforth, Kopf, the German Consul at Chihuahua; Krum-Hellen, Felix Somerfeld, (Villa's representative at New York,) Carl Heynen, Gustav Steinberg, and many others.

Belgian Relief Ships, Sunk

When the Commission for Relief in Belgium began its work in October, 1914, it received from the German authorities, through the various Governments concerned, definite written assurances that ships engaged in carrying cargoes for the relief of the civil population of Belgium and Northern France should be immune from attack. In order that there may be no room for attacks upon these ships through misunderstanding, each ship is given a safe conduct by the German diplomatic representative in the country from which it sails, and, in addition, bears conspicuously upon its sides markings which have been agreed upon with the German authorities; furthermore, similar markings are painted upon the decks of the ships in order that they may be readily recognized by airplanes.

Upon the rupture of relations with Germany the commission was definitely assured by the German Government that its ships would be immune from attack by following certain prescribed courses and conforming to the arrangements previously made.

Despite these solemn assurances there have been several unwarranted attacks upon ships under charter to the commission.

On March 7 or 8 the Norwegian ship Storstad, carrying 10,000 tons of corn from Buenos Aires to Rotterdam for the commission was sunk in broad daylight by a German submarine despite the conspicuous markings of the commission which the submarine could not help observing. The Storstad was repeatedly shelled without warning and finally torpedoed.

On March 19 the steamships Tunisie and Haelen, under charter to the com-

NAVAL MILITIA MARCHING DOWN FIFTH AVENUE

The First Battalion, New York Naval Militia, on Its Way to the Train to Begin Active Sea Service
in the War

FIRST ARMED AMERICAN STEAMSHIP LEAVING NEW YORK

The Liner St. Louis, With Two Guns Forward and One Aft, Was the First American Merchant Vessel to Carry Arms Through the "Barred" Submarine Zone; She Sailed March 17, 1917.

(Drawing by M. J. Burns. © 1917 by New York Times Co.)

mission, proceeding to the United States under safe conducts and guarantees from the German Minister at The Hague and bearing conspicuous marking of the commission, were attacked without warning by a German submarine outside the danger zone, (56 degrees 15 minutes north, 5 degrees 32 minutes east.) The ships were not sunk, but on the Haelen seven men were killed, including the first and third officers; a port boat was sunk; a hole was made in the port bunker above the water line; and the ships sustained sundry damages to decks and engines.

Indignities to Americans

Various Consular officers have suffered indignities and humiliation at the hands of German frontier authorities. The following are illustrations:

Mr. Pike, Consul at St. Gall, Switzerland, on proceeding to his post with a passport duly indorsed by German officials in New York and Copenhagen, was on Nov. 26, 1916, subjected to great indignities at Warnemünde on the German frontier. Mr. Pike refused to submit to search of his person, the removal of his clothing, or the seizure of his official reports and papers of a private and confidential nature. He was therefore obliged to return to Copenhagen.

Mr. Murphy, the Consul General at Sofia, and his wife, provided with passports from the German legations at The Hague and Copenhagen, were on two occasions stripped and searched and subjected to great humiliation at the same frontier station. No consideration was given them because of their official position.

Such has been the behavior on the part of German officials notwithstanding that Consular officials hold positions of dignity and responsibility under their Government and that during the present war Germany has been placed under deep obligation to American Consular officers by their efforts in the protection of German interests.

The Yarrowdale Prisoners

On Jan. 19 Mr. Gerard telegraphed that the evening papers contained a report that the English steamer Yarrow-

dale had been brought to Swinemunde as prize with 469 prisoners on board, taken from ships captured by German auxiliary cruisers; that among these prisoners were 103 neutrals; and that such of these as had been taken on board enemy ships and had accepted pay on such ships would be held as prisoners of war.

After repeated inquiries Mr. Gerard learned that there were among the Yarrowdale prisoners seventy-two men claiming American citizenship.

On Feb. 4 Mr. Gerard was informed by Count Montgelas of the Foreign Office that the Americans taken on the Yarrowdale would be released immediately on the ground that they could not have known at the time of sailing that it was Germany's intention to treat armed merchantmen as ships of war.

Despite this assurance, the prisoners were not released, but some time prior to Feb. 17 the German Minister for Foreign Affairs told the Spanish Ambassador that the American prisoners from the Yarrowdale would be liberated "in a very short time."

Upon receipt of this information a formal demand was made through the Spanish Ambassador at Berlin for the immediate release of these men. The message sent the Spanish Ambassador was as follows:

If Yarrowdale prisoners have not been released, please make formal demand in the name of the United States for their immediate release. If they are not promptly released and allowed to cross the frontier without further delay, please state to the Foreign Minister that this policy of the Imperial Government, if continued, apparently without the slightest justification, will oblige the Government of the United States to consider what measures it may be necessary to take in order to obtain satisfaction for the continued detention of these innocent American citizens.

On Feb. 25 the American Ambassador at Madrid was informed by the Spanish Foreign Office that the Yarrowdale prisoners had been released on the 16th inst. The foregoing statement appears to have been based on erroneous information. The men finally reached Zurich, Switzerland, on the afternoon of March 11.

Official reports now in the possession of the Department of State indicate that these American sailors were from the moment of their arrival in Germany, on Jan. 3, subjected to the most cruel and heartless treatment. Although the weather was very cold, they were given no suitable clothes, and many of them stood about for hours barefoot in the snow. The food supplied them was utterly inadequate. After one cup of coffee in the morning almost the only article of food given them was boiled frosted cabbage, with mush once a week and beans once a week. One member of the crew states that, without provocation, he was severely kicked in the abdomen by a German officer. He appears still to be suffering severely from this assault. Another sailor is still suffering from a wound caused by shrapnel fired by the Germans at an open boat in which he and his companions had taken refuge after the sinking of the *Georgic*.

All of the men stated that their treatment had been so inhuman that should a submarine be sighted in the course of their voyage home they would prefer to be drowned rather than have any further experience in German prison camps.

It is significant that the inhuman treatment accorded these American sailors occurred a month before the break in relations and while Germany was on every occasion professing the most cordial friendship for the United States.

Other Unfriendly Acts

After the suspension of diplomatic relations the German authorities cut off the telephone at the embassy at Berlin

and suppressed Mr. Gerard's communication by telegraph and post. Mr. Gerard was not even permitted to send to American Consular officers in Germany the instructions he had received for them from the Department of State. Neither was he allowed to receive his mail. Just before he left Berlin the telephonic communication at the embassy was restored and some telegrams and letters were delivered. No apologies were offered, however.

The Government of the United States is in possession of instructions addressed by the German Minister for Foreign Affairs to the German Minister to Mexico concerning a proposed alliance of Germany, Japan, and Mexico to make war on the United States. The text of this document is as follows:

Berlin, Jan. 19, 1917.

On the 1st of February we intend to begin submarine warfare unrestricted. In spite of this it is our intention to endeavor to keep neutral the United States of America.

If this attempt is not successful, we propose an alliance on the following basis with Mexico: That we shall make war together and together make peace. We shall give general financial support, and it is understood that Mexico is to reconquer the lost territory in New Mexico, Texas, and Arizona. The details are left to you for settlement.

You are instructed to inform the President of Mexico of the above in the greatest confidence as soon as it is certain there will be an outbreak of war with the United States, and suggest that the President of Mexico on his own initiative should communicate with Japan suggesting adherence at once to this plan; at the same time offer to mediate between Germany and Japan.

Please call to the attention of the President of Mexico that the employment of ruthless submarine warfare now promises to compel England to make peace in a few months.

(Signed) ZIMMERMANN.

Reception Accorded the President's War Message

PRESIDENT WILSON'S address to Congress in behalf of "a world safe for democracy," followed quickly by the action of Congress in declaring a state of war between the United States and Germany, created a profound sensation throughout the world. It was received by the nations composing

the Entente Alliance with thrilling enthusiasm, being conceded by all to be the pivotal point in the great war. In this country there was no tumult or hysteria, such as ordinarily accompanies a nation's entrance into war, but there was widespread, definite, and very earnest approval, coupled with ardent expressions of

loyalty from all sections and all classes. The apprehension felt in some quarters—so seriously regarded as to be scarcely articulated in the most intimate circles—that there might be disturbances and riots, perhaps civil revolt, among the millions of citizens and alien residents of Teutonic blood, was wholly dispelled within a few hours. There was not a ripple in any of the large German-American centres, not even a protest. The decision of Congress was accepted by the German language press of the United States as regrettable, but this expression in every case was accompanied by a fervent declaration of loyalty to this country. There were arrests in New York, Chicago, St. Louis, and some Western cities—less than one hundred of such cases among the 10,000,000 persons of Teutonic parentage—the arrests in every instance being based on specific charges of unneutral acts and plottings committed prior to the declaration of war.

European Congratulations

Telegrams of congratulation came to President Wilson from the heads of the Governments of the Entente nations, from their leading Ministers, from learned societies and universities; the Mayors of Paris, London, and other large cities in Great Britain, France, and Italy sent telegrams of felicitation to American cities. Neutral nations in some instances sent expressions of approval. Definite action was taken by Cuba, Panama, and China; the latter nation broke off relations with Germany following this action by the United States. The declaration of war by the United States was followed by similar action by the Republics of Cuba and Panama. Brazil broke off relations with Germany a few days later and on April 14 seized all German ships in Brazilian ports. The action of the various nations is given in fuller detail elsewhere.

President of France

President Poincaré of France sent the following cablegram to President Wilson on April 4:

At the moment when, under the generous inspiration of yourself, the great American

Republic, faithful to its ideals and its traditions, is coming forward to defend with the force of arms the cause of justice and of liberty, the people of France are filled with the deepest feelings of brotherly appreciation.

Permit me again to convey to you, Mr. President, in this solemn and grave hour, an assurance of the same sentiments of which I recently gave you evidence, sentiments which, under the present circumstances, have grown in depth and warmth.

I am confident that I voice the thought of all France in expressing to you and to the American Nation the joy and the pride which we feel today as our hearts once again beat in unison with yours.

This war would not have reached its final import had not the United States been led by the enemy himself to take part in it. To every impartial spirit it will be apparent, in the future more than ever in the past, that German imperialism, which desired, prepared, and declared this war, had conceived the mad dream of establishing its hegemony throughout the world. It has succeeded only in bringing about a revolt of the conscience of humanity.

In never-to-be-forgotten language you have made yourself, before the universe, the eloquent interpreter of outraged laws and a menaced civilization.

Honor to you, Mr. President, and to your noble country. I beg you to believe in my devoted friendship.

RAYMOND POINCARÉ.

To this President Wilson replied as follows:

In this trying hour, when the destinies of civilized mankind are in the balance, it has been a source of gratification and joy to me to receive your congratulations upon the step which my country has been constrained to take in opposition to the relentless policy and course of imperialistic Germany.

It is very delightful to us that France, who stood shoulder to shoulder with us of the Western world in our struggle for independence, should now give us such a welcome into the lists of battle as upholders of the freedom and rights of humanity.

We stand as partners of the noble democracies whose aims and acts make for the perpetuation of the rights and freedom of man and for the safeguarding of the true principles of human liberties. In the name of the American people, I salute you and your illustrious countrymen.

Address by Premier Ribot

Premier Ribot, in an address to the Senators of France, referring to the President's speech, said:

What particularly touches us is that the United States has always kept alive that friendship toward us which was born of our blood. We recognize with joy that the

bond of sympathy between the peoples is inspired by ideals which can be cultivated in the heart of democracy. The starry flag is going to float beside the tricolor. Our hands shall join and our hearts shall beat in union.

President Wilson makes it plain to all that the conflict is truly one between the liberty of modern society and the spirit of the domination of military despotism. It is this which causes the President's message to stir our hearts to their depths as a message of deliverance to the whole world. The people who in the eighteenth century made a declaration of rights under the inspiration of the writings of our philosophers, the people who placed Washington and Lincoln among the foremost of its heroes, the people who in the last century liberated the slaves, is well worthy to give the world such an exalted example.

For us, after such death and ruin, such heroic suffering, the words of the President mean renewal of the sentiments which have animated and sustained us throughout this long trial. The powerful and decisive assistance which the United States brings us will be not material aid alone; it will be moral aid, above all, a veritable consolation. As we see the conscience of the whole world stirred in mighty protest against the atrocities of which we are victims, we feel that we are fighting not alone for ourselves and our allies, but for something immortal; that we are striving to establish a new order of things. And so our sacrifices have not been in vain. The blood poured out so generously by the sons of France has been shed in order to spread the ideals of liberty and justice which are necessary for the establishment of concord among nations.

In the name of all the country, the Government of the French Republic addresses to the Government and people of the United States an expression of its gratitude, and its most ardent greetings.

President Wilson's address was placarded on all official billboards throughout France by order of the War Cabinet. Celebrations were held in all parts of the French Republic, and at Paris many notable public functions, at which the American Ambassador was the guest of honor, were attended by the most distinguished men in literature and public life.

The American flag was displayed everywhere in Paris along with the tricolor, and on the fighting line in France the American aviators were allowed to display their colors for the first time. When the 1918 classes were called out the boys buoyantly responded, wearing the Stars and Stripes along with the French colors.

In the famous attack and capture of Vimy Ridge near Lens, by the Canadians early in April, an American was in the front ranks bearing an American flag, and fell wounded.

Message from British Premier

Premier Lloyd George on April 6 sent the following message to the American people:

America has at one bound become a world power in a sense she never was before. She waited until she found a cause worthy of her traditions. The American people held back until they were fully convinced that the fight was not a sordid scrimmage for power and possessions, but an unselfish struggle to overthrow a sinister conspiracy against human liberty and human rights.

Once that conviction was reached, the great Republic of the West has leaped into the arena, and she stands now side by side with the European democracies who, bruised and bleeding after three years of grim conflict, are still fighting the most savage foe that ever menaced the freedom of the world.

The glowing phrases of the President's noble deliverance illumine the horizon and make clearer than ever the goal we are striving to reach.

There are three phrases which will stand out forever in the story of this crusade. The first is that "The world must be safe for democracy." The next, "The menace to peace and freedom lies in the existence of autocratic Governments backed by organized force which is controlled wholly by their will and not by the will of their people," and the crowning phrase is that in which he declares that "A steadfast concert for peace can never be maintained except by the partnership of democratic nations."

These words represent the faith which inspires and sustains our people in the tremendous sacrifices they have made and are still making. They also believe that the unity and peace of mankind can only rest upon democracy, upon the right of those who submit to authority to have a voice in their own government; upon respect for the rights and liberties of nations both great and small, and upon the universal dominion of public right.

To all of these the Prussian military autocracy is an implacable foe.

The Imperial War Cabinet, representative of all the peoples of the British Empire, wish me on their behalf to recognize the chivalry and courage which call the people of the United States to dedicate the whole of their resources to the greatest cause that ever engaged human endeavor.

Words of Mr. Asquith

Former Premier Asquith, in an address to the American people, said:

The people of the United States have been

forced, as the United Kingdom was forced, into a struggle which, in neither case, was of our own seeking. They have realized as we have realized that the choice lay between peace with humiliation and war with honor. There was no middle course, for armed neutrality, as the President points out with irresistible cogency, affords no secure or powerful foothold.

The provocation offered in the two cases was different, but in both the challenge was one which neither nation could refuse to take up without the sacrifice of its self-respect and without a betrayal of the sacred trust which is imposed upon all free peoples, to uphold the defense of liberty and humanity. Never had the fundamental issues which are at stake been stated with more precision or with a greater elevation of thought and language than in the President's address.

The present German warfare, he points out, is a war against all nations, and the animating motives of the Allies, by whose side he invites his fellow-countrymen to range themselves, are not vindictiveness, but vindication—the vindication of those human rights which are the common interest and the natural bond of the whole family of civilized societies.

To this great purpose the American people now dedicate their lives and fortunes—as we have already dedicated ours—conscious that they are listening to and obeying one of those supreme calls which come but rarely in history, but which, when they come, sound in the ears of a community of free men with a note of imperious demand.

King George's Congratulations

King George V. on April 6 cabled President Wilson as follows:

I desire on behalf of the empire to offer my heartfelt congratulations to you on the entry of the United States of America into the war for the great ideals so nobly set forth in your speech to Congress. The moral not less than the material results of this notable declaration are incalculable, and civilization itself will owe much to the decision at which, in the greatest crisis of the world's history, the people of the great Republic have arrived.

GEORGE, R. I.

April 6, 1917.

In reply to the message President Wilson cabled:

To His Majesty George V., King and Emperor:

Your eloquent message comes to me at this critical moment of our national life as proof of the community of sentiment among the free peoples of the world, now striving to defend their ideals, to maintain the blessings of national independence, and to uphold the rights of humanity.

In the name of the American people and

the Government to which they look for guidance I thank you for your inspiring words.

WOODROW WILSON.

Washington, April 8.

Enthusiasm In Italy

At Rome there was great excitement and enormous multitudes went to the American Ambassador's home displaying the Stars and Stripes and singing "The Star-Spangled Banner." President Wilson received the following address from former Premier Luzzatti and sixty-seven other Italian Deputies at Rome:

Your message, with its ideal beauty and its political contents, brings us back to that dawn of civilization when the United States, inspired by Washington, gave to the oppressed peoples of Europe and of the two Americas the fruitful example of their redemption. Your message is not addressed to the United States alone but to all humanity, and awakens the noblest instincts among free nations. Your message is the hymn of freedom.

Italy, who, by toilsome slavery, learned to love a free and a national Government, and who, having experienced the bitterness of evil Governments, longs for the liberation of all peoples groaning under despotic rulers, thanks you and acclaims you and in you acclaims the great Republic of the United States.

The Belgian Premier and Minister of War, Charles De Broqueville, sent the following message by cable to President Wilson:

The Belgian Government decided in August, 1914, to make an unprecedented application to your Excellency. It was an act of faith and hope in the moral grandeur of a republic friendly to Belgium. Our people, small in number but strong in indomitable purpose, had foreseen that in the American people and in you, who are its noblest expression, it would find support for its honor and an avenging arm for its martyrdom. It has clearly distinguished between those groups that have directed the assault against the rights of peoples and those that have deemed it necessary to follow them, moved perhaps by a false understanding of solidarity that had been accepted for other objects than the gratuitous aggression of which civilization was the victim in 1914.

The Royal Government has contracted an unforgettable debt to the generosity of the United States of America. As in 1914, it counts upon her aid to those whose only fault was to have thought like free and honest men and acted rather as the servants of honor than as traders in it. The Belgian Government salutes with joy, emotion, and respectful admiration the decisive act that, through the intermediary of your Excellency, honors the man, the nation, and humanity.

Praise From Petrograd

At Petrograd the news evoked great enthusiasm and street manifestations occurred throughout the city. Professor Milukoff, the Foreign Minister, said: "The ideal side of the war is once more emphasized by the intervention of Amer-

ica. For me it becomes still clearer under these circumstances that without victory there can be no peace."

Michael Rodzianko, President of the Duma, said: "America's intervention on the side of the powers at war with Germany is the best guarantee of an early victory over the Germans."

Parliament Welcomes America's Action

RESOLUTIONS were adopted April 18 in the House of Lords and House of Commons, with only one dissenting vote in the Commons, (an Independent Irish Nationalist member who was angered at the Speaker's ruling,) as follows:

This House desires to express to the Government and people of the United States of America their profound appreciation of the action of their Government in joining the allied powers, and thus defending the high cause of freedom and rights of humanity against the gravest menace by which they ever have been faced.

Bonar Law, in his address, said:

"This is not only the greatest event, but, as I believe, the turning point of the war. The New World has been brought in, or has stepped in, to restore the balance in the Old.

"Being in, the United States has already shown that her enemies must beware of her, and despite the fact that the path immediately before us is more difficult than ever before, I venture to express the hope and belief that a change is coming—that the long night of sorrow and anguish which has desolated the world is drawing to a close.

"The United States," Mr. Bonar Law continued, "possesses resources of all kinds, resources which in the long run are decisive in war, to a greater extent, probably, than any other nation. The quality of her people was shown nearly sixty years ago in a struggle which, in its essentials, was not dissimilar to that which they have now entered. Since then the American people have shown qualities of resource, energy, and readiness to adapt themselves to new situations in the art of peace, and the same qualities will now be directed in no half-hearted way

and with equal success to the art of war. The entrance of the great Republic is a fitting pendant to the revolution which has brought the Russian people, whose courage and endurance we have so much admired and whose sufferings have been so terrible, into the circle of the freed nations of mankind.

"I read the other day a characteristic extract from a German newspaper, in which it was said America was going into the war for nothing. From their point of view the statement is true. America, like the British Empire—I wish to make that plain—is animated by no love of conquest, no greed for territory, no selfish ends. The aims and ideals to which President Wilson has given noble expression in his recent speech are our aims, our ideals also."

Mr. Asquith's Praise

Seconding Bonar Law's resolution, ex-Premier Asquith said:

"It is only right and fitting that this House, the chief representative body of the British Empire, should at the earliest possible opportunity give definite and emphatic expression to the feelings which throughout the length and breadth of the empire have grown day by day in volume and fervor since the memorable decision of the President and Congress of the United States.

"I doubt whether even now the world realizes the full significance of the step America has taken. I do not use language of flattery or exaggeration when I say it is one of the most disinterested acts in history.

"Nor were American interests at home or abroad directly imperiled, least of all that greatest interest of a democratic

community, the maintenance of domestic independence and liberty," Mr. Asquith continued. "What then has enabled the President—after waiting with the patience which Pitt described as the first virtue of statesmanship—to carry with him a united nation into the hazards and horrors of the greatest war in history? It was the constraining force of conscience and humanity.

"What was it that our kinsmen in America realized as the issue in this unexampled conflict? The very things which, if we are worthy of our best traditions, we are bound to indicate—essential conditions of free and honorable development of the nations of the world, humanity, respect for law, consideration for the weak and unprotected, chivalry toward mankind, observance of good faith—these things, which we used to regard as commonplaces of international decency, one after another have been flouted, menaced, trodden under foot as though they were effete superstitions of a bygone creed.

"There was never in the minds of any of us a fear that the moment the issue became apparent and unmistakable the voice of America would not be heard. She has now dedicated herself without hesitation or reserve, heart and soul and strength, to the greatest of causes, to which, stimulated and fortified by her comradeship, we here renew our fealty and devotion."

John Dillon extended greetings to the United States in the name of the Irish Nationalists.

"The Nationalists join most heartily in the welcome to the United States," Mr. Dillon said. "The full meaning of the entry of America into the struggle is difficult to describe. It is not like the entrance of the other allies, but has a more mighty significance to the whole civilized world.

"When the banner of the United States was unfurled every man of Irish blood in the United States was a loyal supporter of the President. I venture to prophesy that when the roll is called for battle the Irish will be there. They will outnumber, in proportion to their popula-

tion, all other races among the soldiers of the Republic.

"The presence of the United States at the peace conference is a sign of hope and an assurance of liberty. Her voice will be heard when the settlement comes, and Ireland knows that on that day she will have a firm and sure friend who will not desert Ireland. To America will fall the blessed task of basing peace upon liberty."

Earl Curzon's Tribute

In opening his speech on the resolution in the House of Lords, Earl Curzon said:

"The case of America entering the war is widely differentiated from that of any of the other allied countries. All of the latter had a direct personal interest in the war, but America's interest is secondary and remote. She had no ambition to gratify. Her people had a constitutional aversion to war and a rooted dislike to be involved in the secular ambitions or the quarrels of the Continent of Europe. If a nation with these hereditary instincts and traditions, after so long a period of hesitation, is yet compelled to draw the sword, there must be some great, overwhelming reason. Yes, there was a reason.

"The entry of America is a great event in moral history for the human race, and it stamps the character of the struggle in which we are engaged. America will not pause or stay until the peace of the world is built upon a sure foundation."

Viscount Bryce said:

"We recognize in the action of the American people their common devotion with ourselves to the same lofty ideals and their common loyalty to the time-honored traditions dating from our and their remote past. And we find their loyal attachment to these ideals the surest bond of unity between ourselves and our kinsfolk beyond the ocean."

April 19 was made American day in London. The Stars and Stripes were unfurled from the Victoria tower of the Houses of Parliament, being the first time in history that any but the British flag had flown there. The American colors were shown and worn everywhere.

Action by Latin-American Nations

Brazil Breaks With Germany

THE entrance of the United States into the war on the side of the Allies changed the entire status of affairs on this continent. The Western Hemisphere, which up to that time, with the exception of Canada, had held aloof from the conflict, was suddenly plunged into the maelstrom, and the various South and Central American States in turn declared themselves.

Brazil severed relations with Germany April 10. The rupture was precipitated by the sinking of the Brazilian steamship *Parana*, torpedoed off the port of Cherbourg, France, by a German submarine without warning. After the severance of relations great excitement prevailed throughout the country, and mass meetings in many cities demanded a declaration of war. All German ships in Brazilian waters, 46 in number, were seized by the Government. The vessels aggregate 240,770 tons, ranging from the Hamburg-American liner *Blücher*, 12,350 tons, formerly in the American transatlantic service, to a vessel of 1,103 tons.

At Rio de Janeiro there were 15 vessels; at Pernambuco, 12; Santos, 5; Bahia, 4; Paraiba, 3; Para, 2; Rio Grande, 2, and at Santa Catharina, Paranagua, and Maranham, 1 each.

Thirty-three of the vessels are more than 4,000 tons each.

Action of Argentina

On April 10 the Argentine Government issued a declaration announcing that it supported the position of the United States in reference to Germany. The declaration was made known to the public through bulletins posted throughout Buenos Aires, and caused a great sensation. Enthusiastic crowds marched through the streets, and the university students organized pro-ally demonstrations.

The declaration was followed by a period of the most intense excitement throughout the country. An influential part of the population were strongly

pacifist and pro-German, but the great majority were pro-American and pro-ally. A serious riot occurred at Buenos Aires on April 14, and the German Consulate and several pro-German newspaper offices were attacked; there were several deaths before the mob was quelled. The situation became more acute when it was learned on the 13th that an Argentine sailing ship, *Monte Protegido*, had been sunk off the European coast by a German submarine, and fresh outbreaks occurred at Buenos Aires.

Chile and Bolivia

Chile issued an official statement on April 10 that she would remain neutral.

Bolivia severed relations with Germany on April 13, and the German Minister and his staff were handed their passports that day at La Paz. The note denounced the attacks of German submarines on neutral vessels as violations of international law and of The Hague conventions. It recalled that the Bolivian Minister to Berlin was on board the Holland-Lloyd liner *Tubantia* when that vessel was sunk in neutral waters a year ago. The note concluded:

"Your Excellency will understand that, although we regret the breach of diplomatic relations between Bolivia and the German Empire, such relations have become insupportable in existing circumstances. In consequence, your Excellency will find herewith passports for yourself and the members of your legation."

The note declared that German subjects and property would enjoy all liberties guaranteed by law, provided that they did not commit any act of delinquency, either collectively or as individuals.

The Paraguayan Government, in reply to the note of the United States, said that it recognized profoundly that Germany's military actions, which are opposed to the principles of the right of neutrals, forced the United States to resort to

arms to re-establish order and rehabilitate those rights.

The Paraguayan Government expressed "its most sincere sympathy with the Government and people of the United States."

In its reply to the United States the Uruguayan Government said that Uruguay did not recognize the right to wage unrestricted submarine warfare, "because it is an attempt against justice, violates neutral rights, and is an insult to humanity. Uruguay recognizes that the decision taken at Washington answers the situation arising from the action of Germany."

The note recalled that Uruguay in due course protested to Germany against her submarine methods, adding that the Government had decided to maintain neutrality, but recognized that the attitude of the United States was just, and expressed to it its sympathy and its sentiments of moral solidarity.

The Peruvian Government in its reply said that Peru deplored the fact that the United States had been compelled to take such action and expressed the hope of a speedy ending of the great war. No reference was made to the neutrality of Peru.

Attitude of Mexico

Mexico's attitude was announced by President Carranza in his inaugural address at Mexico City April 16. He declared that Mexico would maintain "strict and rigorous neutrality," but his message contained no friendly references to the United States; in fact, his attitude was critical and plaintive with reference to this country, and wholly lacking in warmth or any evidence of friendship. The impression it left at Washington was irritating and displeasing.

Costa Rica and Panama were the two Central American States that approved the action of the United States. Costa Rica announced that "it indorsed the course of President Wilson" and "was ready to prove it, if necessary."

Panama's War Declaration

The President of the Republic of Panama, Dr. Ramon Valdez, signed a proclamation April 7 committing Panama un-

reservedly to the assistance of the United States in the defense of the Canal. The President also canceled the exequaturs of all the German Consuls in Panama. The proclamation declares:

Our indisputable duty in this tremendous hour of history is of a common ally, whose interests and existence as well are linked indissolubly with the United States. As the situation creates dangers for our country, it is the duty of the Panaman people to co-operate with all the energies and resources they can command for the protection of the canal and to safeguard national territory.

The attitude of the people was foreseen and interpreted faithfully in a resolution unanimously approved by the National Assembly on Feb. 24, and confirmed by later laws, and the moment has arrived for the Executive to act in accordance with the declarations of the supreme body. I therefore declare that the Panaman Nation will lend emphatic co-operation to the United States against enemies who execute or attempt to execute hostile acts against the territory of the canal, or in any manner affect or tend to affect the common interests.

The Government will adopt adequate measures in accordance with the circumstances. I consider it the patriotic duty of all Panaman citizens to facilitate the military operations which the forces of the United States undertake within the limits of our country. Foreigners, resident or transient, will be obliged to submit to the conditions of this declaration.

It was announced that Germans resident in Panama would be interned if they give any evidence of being involved in plots.

The proclamation was issued after President Valdez had sent a message to President Wilson indorsing the American action in declaring a state of war with Germany "after the United States had given unequivocal proofs of its love of peace and had made efforts to save Western civilization from the horrors of war, and had borne with patience a long series of provocations as irritating as they have been unjustifiable."

Cuba's Prompt Action

President Menocal, on the day that the United States took action, sent a message to Congress asking permission to declare war, declaring that the debt Cuba owes to the United States as well as the principles of justice and humanity demanded that such action be taken.

An extraordinary session of Congress

was held the next afternoon when the following bill was presented:

Reasons of gratitude to the powerful American Nation impose upon us the duty to ally ourselves to it in its patriotic purpose to crush the militarism that has carried such disaster to the whole universe, and we ought not to waste a single moment in taking such action which will exalt us, offering everything that may be necessary to the Star and Stripes, seconded by our own lone star banner, to maintain not only in this continent, but also in the Old World, the practices of liberty, right, and justice.

Whatever effort Cuba shall make to assist the United States of America will be looked upon as the generous action of a grateful people and of a friend who can never forget the sacrifice and effort made by the United States to co-operate in our struggle for independence. Therefore the undersigned representatives present for the consideration of this legislative body this bill:

Article I.—The Executive is authorized to organize and place at the disposition of the United States of America a contingent of 10,000 men, to the end of aiding in its military purposes the said nation in the present European conflict.

Article II.—The Congress of the republic grants in accordance with the provisions of Paragraph 5 of Article XLVII. of the Constitution to Colonel José Estrames y Vega of the liberating army and Congressman Ofer of Havana and to other citizens of the republic who may enlist permission to absent themselves from the territory of the republic and serve in the army of Cuba, to be placed at the disposition of the War Department of the United States of America.

President Menocal in his message said:

Cuba cannot remain neutral in this supreme conflict because the declaration of neutrality would oblige her to treat all the belligerents equally, refusing them with equal rigor any access to her ports and imposing on them the same restrictions and prohibitions, which would be in the present case contrary to public sentiment, to the essence of the pacts and moral obligations, moral rather than legal, which bind us to the United States; and would result, lastly, because of our geographical location, in being the cause of innumerable conflicts, the consequences of which it is easy to predict for a friendly and allied nation, and which would prove an inexcusable weakness and condescension for the attitude of implacable aggression unconditionally proclaimed by the Imperial German Government against the rights of all neutral peoples and against the principles of humanity and justice, which constitute the highest note of modern civilization.

The Congress met on April 7 and the declaration of war was passed by both houses without a dissenting vote, amid scenes of gravity and intense feeling. The war resolution as passed follows:

Article I. Resolved, That from today a state of war is formally declared between the Republic of Cuba and the Imperial Government of Germany, and the President of the Republic is authorized and directed by this resolution to employ all the forces of the nation and the resources of our Government to make war against the Imperial German Government with the object of maintaining our rights, guarding our territory and providing for our security, prevent any acts which may be attempted against us, and defend the navigation of the seas, the liberty of commerce, and the rights of neutrals and international justice.

Article II. The President of the Republic is hereby authorized to use all the land and naval forces in the form he may deem necessary, using existing forces, reorganizing them, or creating new ones, and to dispose of the economic forces of the nation in any way he may deem necessary.

Article III. The President will give account to Congress of the measures adopted in fulfillment of this law, which will be in operation from the moment of its publication in the Official Gazette.

The President immediately signed the measure. On April 8 Count von Verdy du Vernois, the German Minister, received his passports. The German ships in Cuban waters were seized on the night of the 7th; all had been damaged.

On April 11 Speaker Clark laid before the United States Congress, amid applause, a message from Miguel Coyula, Speaker of the Cuban House of Representatives, regarding the Cuban declaration of war against Germany. It read:

The House of Representatives of the Republic of Cuba, in declaring that a state of war exists between this nation and the German Empire, resolved, all members rising to their feet and amid the greatest enthusiasm, to address a message of confraternity to that body announcing the pride felt by the people of Cuba in uniting their modest efforts to those of the great nation contending for the triumph of right and respect for the liberty of small nationalities.

The House also resolved to express the special gratification of the Cuban people in uniting their flag side by side to that of the glorious nation which in days of undying memory sacrificed the blood of her sons to help the people of Cuba to conquer their liberty and independence.

Mobilizing the Army and Navy

MANY weeks before the present crisis had reached the stage of war the United States Government was actively pushing all possible preliminaries for the event. On March 25 President Wilson issued an executive order increasing the enlisted strength of the United States Navy to 87,000 men, in accordance with the emergency authority conferred upon him by the naval service act of Aug. 29, 1916. The next day Secretary Daniels sent a telegram to 2,600 editors throughout the country, stating that new ships and ships in reserve were being fully commissioned as rapidly as possible, and asking that the public be urged to furnish the naval recruits imperatively needed to man these vessels.

On March 26 President Wilson signed an executive order increasing the authorized enlisted strength of the United States Marine Corps to 17,400 men, an increase of 2,419, the limit allowed under the emergency act.

At the Naval Academy 183 new Ensigns were rushed into the navy three months in advance of their time, and were graduated on March 29, at once receiving their assignments on various vessels.

Calling Navy Into Service

When the declaration of a state of war became operative on April 6 Secretary Daniels signed an order at 4:05 o'clock the same afternoon for the mobilization of the navy. One hundred code messages were sent by wireless and telegraph from the office of Admiral W. S. Benson, Chief of Naval Operations, within a few minutes after the signing of the order. The messages set in motion the machinery by which the navy went on a war basis with every ship and shore station, and by which the Naval Militia of all the States, as well as the Naval Reserves and the Coast Guard Service, passed into the control of the Navy Department.

There were about 584 officers and 7,933 enlisted men in the Naval Militia, a total force of 8,517. These assembled at design-

ated points and were assigned to ships to be used in the Coast Patrol Service or on other naval duty. All ships in active commission in the regular navy were ready for duty when the order came. But there were battleships in the reserve fleets, reserve destroyers, and other reserve units that had only nucleus crews, which were now to be fully manned and put into service. Other vessels which had been out of commission were assigned to active duty as rapidly as possible.

There were approximately 361 vessels of the navy completed and fit for service, including 12 first-line battleships, 25 second-line battleships, 9 armored cruisers, 24 other cruisers, 7 monitors, 50 destroyers, 16 coast torpedo vessels, 17 torpedo boats, 44 submarines, 8 tenders to torpedo boats, 28 gunboats, 4 transports, 4 supply ships, a hospital ship, 21 fuel ships, 14 converted yachts, 49 tugs, and 28 minor units. The mobilization order also called into active service about 70,000 enlisted men, as well as over 8,500 members of the Naval Militia, a considerable number of Naval Reserves, and the men in the Coast Guard Service. It put into the regular naval service all new units in process of being purchased as well as those which had been offered for the power boat patrol by yachtsmen and other patriotic citizens along with their volunteer crews.

The total number of men required for the proper mobilization of the navy as it stands is 99,809 regulars and 45,870 reserves. It was estimated that 73,817 regulars and 25,219 reserves were needed for the battleships, scouts, destroyers, submarines, mine force, and training ships. For the Coast Defense forces it was estimated that 10,633 regulars and 17,195 reserves were needed, and for the various shore stations 10,318 regulars and 2,080 reserves.

The order called out those retired officers who had been registered in the department as fit for duty in the event of war to the Naval Reserve force, Naval Militia, examining boards, and bureau

duties, where they in turn released officers on the active list, and enabled the latter to go to sea for fighting duty.

Naval Recruiting Campaign

When the mobilization order came to the navy it still lacked 35,000 men to bring it up to the full authorized strength of 87,000. Recruiting had been carried on in the last few weeks with exceptional energy, but the average daily gain was only about twenty-five men. After the declaration of a state of war the call became more urgent, and large posters on the highways and handbills stuck across the front of taxicabs and other vehicles re-echoed the appeal for men. An increase of enlistments followed at once.

At the end of the first week of April the Naval Reserve recruiting office in New York City was crowded daily, and the daily total of recruits in the country was more than 700. Enlistments for the navy and for the Marine Corps all continued to show marked gains. On April 17 the navy was enrolling nearly 1,000 men a day, and Secretary Daniels announced that he already had 71,696 of the 87,000 men thus far authorized.

Meanwhile the mobilization of a large fleet of "mosquito craft" to patrol the Atlantic Coast and fight U-boats if they invaded American waters was in progress under Secretary Daniels and Admiral Benson, Chief of Naval Operations. Many owners of private yachts donated the use of their craft and crews for this purpose, and other men of wealth began building submarine chasers of a kind that had proved successful in British waters.

More than fifty small boat builders submitted proposals on March 31 for the construction of chasers and patrol boats of the 110-foot and 50-foot types, indicating that the Navy Department would be able to get all the small boats it needed in a comparatively brief time. On that date the coast patrol fleet was organized on an official basis under the Government, and Captain Henry B. Wilson was detached from his post as commander of the superdreadnought Pennsylvania to take charge of the coast "mosquito fleet."

Radio Stations Seized

Seizure of all wireless stations in the United States and its possessions was ordered by President Wilson on April 6, and the enforcement of the order was delegated to the Secretary of the Navy. Accordingly the navy at once took possession of the radio system throughout the country, assuming control of all commercial stations that might be useful to the Government in war time, and suppressing and dismantling the rest, including thousands of amateur wireless plants.

Defensive war zones, guarded by patrol boats, were established around the whole coast line of the United States through an executive order issued by President Wilson on April 5. To prevent surprise attacks against New York and other coast points by German submarines or raiders, this order created a series of local barred zones extending from two to ten miles from the larger harbors in American waters all the way from Maine to California and the Philippine Islands. All vessels are barred from entering these harbors at night, and entrance or exit in daytime must be in accordance with certain rules of pilotage and other matters which the patrol boats are under orders to enforce. The ports at both ends of the Panama Canal are closed each night under the same order.

Contracts for the construction of twenty-four destroyers of thirty-five-knot speed were awarded by the Navy Department on March 24. Ten will be built at the Union Iron Works, San Francisco; six by William Cramp & Sons, Philadelphia, and eight by the Fore River Shipbuilding Company, Quincy, Mass. The contracts will be paid on the basis of cost plus 10 per cent. profit. The average cost will be in the neighborhood of \$1,400,000 for each vessel. The Navy Department awarded the contracts on the day the bids were opened, and Secretary Daniels stated that he was ready to award similar ones for fifty destroyers, all urgently needed, and to pay for them out of the \$115,000,000 emergency fund; but the shipbuilding plants of the country were so overcrowded with other naval work that only three were able to do any-

thing in that direction at the present time. Of the twenty-four destroyers in question fifteen belong to the regular 1917 program and nine to the emergency program. Including these new orders the navy now has under construction a total of fifty-two destroyers, eight of which were authorized in 1914-15 and twenty in 1916.

Secretary Daniels announced on April 11 that Charleston, W. Va., had been selected as the site for the Government armor plate plant, for the construction of which Congress appropriated \$11,000,000.

National Guard Mobilized

The preliminary steps toward mobilizing the National Guard also were well under way before the assembling of Congress in special session. The War Department issued orders on March 25 calling out fourteen National Guard units "for police purposes" in New York, Massachusetts, Vermont, Connecticut, New Jersey, Delaware, Pennsylvania, Maryland, and Virginia, besides the District of Columbia. They were assigned to protect railways, bridges, water systems, and other strategic points. As an example of the promptness with which these State units got into active service it may be noted that every man of the Seventy-first New York Infantry Regiment left New York City under secret orders on April 1.

On March 26 President Wilson called out twenty additional regiments and five separate battalions of National Guard units in eighteen different States, from Ohio to the Pacific Coast. The following day he suspended the muster out of the 22,000 National Guardsmen that still remained in the Federal service from the Mexican border mobilization. Seven more regiments were called into service in the next two days, and by the beginning of April the total under arms was more than 60,000, or over one-third of the 150,000 men in all the National Guard organizations in the country. Then a temporary halt was called, owing to inability to furnish supplies as fast as the men were mustered in.

It was announced that twenty-six training camps for the military training

of civilians would be maintained by the War Department in various parts of the country during the Summer months, with facilities for drilling 25,000 men.

State Governments responded generally to the needs of the hour. New York promptly appropriated \$1,000,000 for defense, Massachusetts the same, New Hampshire \$500,000, and many other States similar amounts. Mobilization of National Guard units throughout New England was especially prompt and rapid. College men in all parts of the country organized student regiments, and in many cases a majority of the whole undergraduate community began drilling. Home defense leagues in cities and towns sprang up from Maine to California, and obtained professional military drill; in New York City the body of this nature created by Police Commissioner Woods numbered nearly 10,000 men, the equivalent of a United States Army division, with a full military organization and a large degree of effectiveness. Mayor Mitchel of New York City organized a Committee on National Defense, under whose leadership nearly all the States of the Union joined in making April 19—the anniversary of the battle of Lexington—a "Wake Up, America!" day.

Patriotic enthusiasm was everywhere in evidence, yet enlistments in the regular army continued to come very slowly. Men of military age awaited the action of Congress, which was in process of determining whether to depend once more upon the volunteer system or to enact a compulsory service law. President Wilson and the Army General Staff strongly favored universal compulsory service for young men, and two bills embodying such a system were introduced in Congress, but they met considerable opposition from the outset. On April 18 the House Military Committee, by a vote of 13 to 8, finally agreed to report the Army General Staff bill with an amendment authorizing the President first to try the volunteer system for raising 500,000 men, and then to use the selective draft if the volunteer method proved unsuccessful. The matter rests there at the present writing. Meanwhile Secretary Baker has announced that men are en-

listing in the regular army at the average rate of 1,434 a day.

Many large banks and commercial houses have undertaken to keep up the salaries of National Guardsmen recruited

from among their employes, as was done at the time of the call to the Mexican border, when one large telephone company alone paid \$284,000 to absent employes.

Organizing for Economic Defense

A NATION-WIDE system of economic war activities developed during the month, nearly all centering about the Council of National Defense, a body consisting officially of the members of the President's Cabinet and its civilian Advisory Commission, a group of picked business men and leaders of industries. The members of the Advisory Commission are: Grosvenor B. Clarkson, Secretary; Julius Rosenwald, Chairman of Committee on Supplies; Bernard M. Baruch, in charge of raw materials; Daniel Willard, transportation; Dr. F. H. Martin, medicine and sanitation; Dr. Hollis Godfrey, science and research; Howard Coffin, munitions, and W. S. Gifford, Director of the Council. Each is working through a board of experts to organize the war activities in his department. Many of these boards were created in April.

The important work of the Food Board was placed under the management of Herbert C. Hoover, the executive head of the Belgian Relief Commission. The task assigned to the Food Board is that of coping with the problems of food shortage, distribution, and waste; price control, the mobilization of the agricultural resources of the country, and the formulating of all necessary measures to keep up the stream of American food supplies to the Allies.

Presidents of the leading railroads of the country met at Washington on April 11 at the call of the Council of Defense and named a board of five men to direct the operations of American railways throughout the war, with Fairfax Harrison of the Southern Railway as Chairman and Daniel Willard, President of the Baltimore & Ohio and Chairman of the Defense Council's Advisory Commission, as an ex-officio member.

The creation of a General Munitions

Board was announced on April 9, headed by Frank A. Scott, a Cleveland manufacturer. This board is charged with supplying the army and navy with munitions and equipment. One of its chief functions will be to decide between the country's military and industrial needs when recruiting invades the factories. Twenty men, fifteen of them army or navy officers, make up the board.

In like manner an Economy Board was organized to mobilize the commercial interests of the country and attend to the equitable distribution of commodities in war time and to keep prices down. Important pioneer work in the direction of economy for the Government was achieved by one of the members of the Advisory Commission, Bernard M. Baruch, who, as Chairman of the Committee on Raw Materials, arranged to get copper, steel, and other metals for the Government at about half the market price, thus saving the nation many millions. The insurance interests of the country placed their valuable records at the service of the Government and laid plans to prevent the destruction of grain and cotton by incendiary fires. A General Medical Board of the Council of National Defense was organized on April 17 by leading physicians from all parts of the country, with Dr. Franklin Martin of Chicago as Chairman, and a score of eminent physicians as members of the Executive Committee, to mobilize the nation's medical resources during the war.

General Goethals's New Task

The Federal Shipping Board, which embodies the Administration's program for building a vast fleet of wooden cargo ships to transport supplies to the Allies and thus defeat the German submarine

campaign, was organized as a \$50,000,000 corporation on April 16. Its avowed purpose is to construct 1,000 ships of 3,000 to 5,000 tons burden within the shortest possible time. Major Gen. George W. Goethals, the engineer who built the Panama Canal, was made General Manager of the enterprise. Congress has authorized the use of \$50,000,000 for the work of this board. Chairman Denman announced that contracts had already been let, and that, barring unforeseen obstacles, by October the shipyards on the Atlantic and Pacific would be turning out the new vessels at the rate of two or three a day, to be leased to private shipping concerns.

Treatment of Germans

The history of America's entrance into the world war would be incomplete without reference to the attitude of the United States Government toward the unnaturalized and naturalized German citizens in this country, the former having become alien enemies by the declaration of war. The war proclamation of President Wilson was followed by proclamations to the same effect by the Mayors of all American cities. Typical of the spirit of these was the following by the Mayor of New York:

TO THE CITIZENS OF NEW YORK

Upon just grounds and after long and patient forbearance, the President and the Congress of the United States have declared that by the act of the autocratic Government which rules in the German Empire war exists between the two countries, and the free people of America are about entering into the great world conflict. Millions of the people of this city were born in the countries engaged in this great war. No part of the earth is without its representatives here.

I enjoin upon you all that you honor the liberty which so many of you have sought in this land and the free self-government of the American democracy, in which we all find our opportunity and individual freedom, by exercising kindly consideration, self-control, and respect to each other and to all others who dwell within our limits; that you, one and all, aid in the preservation of order and in the exercise of calm and deliberate judgment in this time of stress and tension.

There will be some exceptional cases of malign influence and malicious purpose among you, and as to them I advise you all that full and timely preparation has been made adequate to the exigency which exists

for the maintenance of order throughout the City of New York, and for the warning of the ill-disposed I quote the statute of the United States, which is applicable to all residents enjoying the protection of our laws whether they be citizens or not:

Whoever owing allegiance to the United States levies war against them or adheres to their enemies, giving them aid and comfort within the United States or elsewhere, is guilty of treason.

The punishment prescribed by law for the crime of treason is death or, at the discretion of the court, imprisonment for not less than five years and a fine of not less than \$10,000. All officers of the police have been especially instructed to give their prompt and efficacious attention to the enforcement of this law.

JOHN PURROY MITCHEL,
Mayor.

Official proclamations were issued forbidding any "alien enemy" from remaining or residing "within half a mile of any Governmental fort, factory, reservation, base of supplies, or any land used for war purposes." The enforcement of this order, however, was left to the discretion of the United States Marshals, and forbearance was shown. The enemy aliens living or employed about the military points around New York were given six weeks to find new locations, and exceptions to the rule were made where bond could be furnished. Hoboken, N. J., which is almost entirely populated by Germans, being the site of the chief piers of the two great German steamship lines, the Hamburg-American and North German Lloyd, was placed under military guard in the pier districts on April 19; the Mayor at the same time issued a proclamation announcing that aliens residing within half a mile of the piers would not be disturbed if they obeyed the laws.

Nowhere in the country were there reports of any disturbances among the Germans during the first two weeks following the declaration of war, and their general attitude was one of unswerving loyalty to the United States. The 750 officers and men of the German Navy who sought refuge in American waters on the cruisers Kronprinz Wilhelm and Prinz Eitel Friedrich were taken to Georgia on special trains March 27 and placed for safe keeping in stockades at Fort McPherson and Fort Oglethorpe, under guard of the Seventeenth Infantry.

The men from the Wilhelm, numbering more than 400, were assigned to Fort McPherson and those from the Eitel Friedrich to Fort Oglethorpe.

The men were housed in barracks surrounded by a barbed-wire stockade. They

were removed from the League Island Navy Yard at Philadelphia, as their presence at the country's chief navy yard during the tense days preceding our declaration of war was regarded as perilous.

Dr. Zimmermann's Defense of His Mexican Plan

THE German Secretary of Foreign Affairs, Dr. Alfred Zimmermann, made a second statement on March 29 in attempted defense of his unsuccessful plan to create a German-Mexican-Japanese alliance against the United States. His act was subjected to criticism by Hugo Haase, leader of the Socialist minority, who remarked in the Reichstag that the affair had aggravated the situation in America. According to an Amsterdam Reuter dispatch, Dr. Zimmermann replied:

I wrote no letter to General Carranza. I was not so naïve. I merely addressed, by a route that appeared to me to be a safe one, instructions to our representative in Mexico. It is being investigated how these instructions fell into the hands of the American authorities. I instructed the Minister to Mexico, in the event of war with the United States, to propose a German alliance to Mexico, and simultaneously to suggest that Japan join the alliance. I declared expressly that, despite the submarine war, we hoped that America would maintain neutrality.

My instructions were to be carried out only after the United States declared war and a state of war supervened. I believe the instructions were absolutely loyal as regards the United States.

General Carranza would have heard nothing of it up to the present if the United States had not published the instructions which came into its hands in a way which was not unobjectionable. Our behavior contrasts considerably with the behavior of the Washington Government.

President Wilson after our note of Jan. 31, 1917, which avoided all aggressiveness in tone, deemed it proper immediately to break off relations with extraordinary roughness. Our Ambassador no longer had the opportunity to explain or elucidate our attitude orally. The United States Government thus declined to negotiate with us. On the other hand, it addressed itself immediately to all the neutral powers to induce them to join the United States and break with us.

Every unprejudiced person must see in

this the hostile attitude of the American Government, which seemed to consider it right, before being at war with us, to set the entire world against us. It cannot deny us the right to seek allies when it has itself practically declared war on us.

Herr Haase says that it caused great indignation in America. Of course, in the first instance, the affair was employed as an incitement against us. But the storm abated slowly and the calm and sensible politicians, and also the great mass of the American people, saw that there was nothing to object to in these instructions in themselves. I refer especially to the statements of Senator Underwood. Even at times newspapers felt obliged to admit regretfully that not so very much had been made out of this affair.

The Government was reproached for thinking just of Mexico and Japan. First of all, Mexico was a neighboring State to America. If we wanted allies against America, Mexico would be the first to come into consideration. The relations between Mexico and ourselves since the time of Porfirio Diaz have been extremely friendly and trustful. The Mexicans, moreover, are known as good and efficient soldiers.

It can hardly be said that the relations between the United States and Mexico had been friendly and trustful.

But the world knows that antagonism exists between America and Japan. I maintain that these antagonisms are stronger than those which, despite the war, exist between Germany and Japan.

When I also wished to persuade Carranza that Japan should join the alliance there was nothing extraordinary in this. The relations between Japan and Mexico are long existent. The Mexicans and Japanese are of a like race and good relations exist between both countries.

When, further, the Entente press affirms that it is shameful to take away allies, such reproach must have a peculiar effect coming from powers who, like our enemies, made no scruple in taking away from us two powers and peoples with whom we were bound by treaties for more than thirty years. The powers who desire to make pliant an old European country of culture like Greece by unparalleled and violent means cannot raise such a reproach against us.

THE PURCHASE OF THE DANISH WEST INDIES

Secretary Lansing Is Handing a United States Treasury Warrant for \$25,000,000 to Constantin Brun, the Danish Minister. In the Picture, Left to Right: Secretary Daniels, Rear Admiral James H. Oliver, Governor General of the Islands; Mr. Brun, Secretary Lansing, Secretary McAdoo

(Photo Central News Service)

When I thought of this alliance with Mexico and Japan I allowed myself to be guided by the consideration that our brave troops already have to fight against a superior force of enemies, and my duty is, as far as possible, to keep further enemies away

from them. That Mexico and Japan suited that purpose even Herr Haase will not deny.

Thus, I considered it a patriotic duty to release those instructions, and I hold to the standpoint that I acted rightly.

Austria-Hungary Breaks With United States

ON April 8 the Government of Austria-Hungary severed diplomatic relations with the Government of the United States. Baron Erich Zweidinek, who had been Chargé d'Affaires of the Austrian Embassy ever since the recall of Dr. Dumba, former Ambassador, called at the State Department and demanded passports for himself, all his embassy staff, including Ambassador-designate Tarnowski, and all Austrian Consular officers in the United States and its possessions.

As soon as the announcement of the break was received by the Administration orders were given for taking possession of the Austrian merchant vessels that had been self-interned in this country. Secretary Lansing said that this was done as a precautionary measure. There were fourteen ships with a gross tonnage of 67,807. The largest was the *Martha Washington*, 8,312 gross tons, at New York, three others were self-interned at New York, one at Boston, three at New Orleans, one at Pensacola, two at Galveston, one at Newport News, one at Phil-

adelphia, and one at Tampa. The machinery in most of them had been damaged.

The following was the official note handed to the American Chargé d'Affaires at Vienna in the absence of Ambassador Penfield, who had left for America a few days previously:

Since the United States of America has declared that a state of war exists between it and the Imperial German Government, Austria-Hungary, as an ally of the German Empire, has decided to break off diplomatic relations with the United States, and the Imperial and Royal Embassy at Washington has been instructed to inform the Department of State to that effect.

While regretting under these circumstances to see a termination of the personal relations which he has had the honor to hold with the Chargé d'Affaires of the United States of America, the undersigned does not fail to place at the former's disposal herewith the passport for the departure from Austria-Hungary of himself and the other members of the embassy.

At the same time the undersigned avails himself of the opportunity to renew to the Chargé d'Affaires the expression of his most perfect consideration.

(Signed) CZERNIN.

Belgian Relief Work Transferred

BRAND WHITLOCK, the American Minister to Belgium, was ordered to withdraw from Belgian soil by President Wilson on March 24; the President also ordered the departure of all American Consular officers. The withdrawal of the American members of the Belgian Relief Commission, who had been directing the feeding of several millions of destitute Belgian and French civilians, also was necessitated by the war situation. The work of these Americans was taken up by Dutch citizens under direction of the Netherlands Government. Herbert C.

Hoover, the head of the relief commission, continued to direct the work from Rotterdam, but after the American declaration of war it was understood that he would return to America to assume the position of Food Director. In the official announcement of the withdrawal the State Department at Washington very bluntly and sharply put the blame on the Germans, as the following extract from the official statement of March 24 shows:

"Immediately after the break in relations the German authorities in Brussels withdrew from Mr. Whitlock the diplo-

matic privileges and immunities which he had up to that time enjoyed. His courier service to The Hague was stopped. He was denied the privilege of communicating with the Department of State in cipher, and later even in plain language. The members of the relief commission were placed under great restrictions of movements and communications, which hampered the efficient performance of their task.

"In spite of all these difficulties, the Government and the commission were determined to keep the work going till the last possible moment. Now, however, a more serious difficulty has arisen. In the course of the last ten days several of the commission's ships have been attacked without warning by German submarines, in flagrant violation of the solemn engagements of the German Government. Protests addressed by this Government to Berlin through the intermediary of the Spanish Government have not been answered.

"The German Government's disregard

of its written undertakings causes grave concern as to the future of the relief work. In any event, it is felt that the American staff of the commission can no longer serve with advantage in Belgium. Although a verbal promise has been made that the members of the commission would be permitted to leave if they desire, the German Government's observance of its other undertakings has not been such that the department would feel warranted in accepting responsibility for leaving these American citizens in German occupied territory."

Four Belgian relief ships loaded with food bound from America for Rotterdam were sunk by German submarines between March 25 and April 10, and it was feared that all relief measures must be abandoned. On April 17, however, it was announced that eight loaded relief ships had reached Rotterdam between April 6 and 15, indicating that the Germans had concluded to allow the relief service to continue.

Vessels Sunk by Submarines

THE allied nations having ceased to report the detailed results of the German submarine warfare, only general data can be obtained for the most part for the months of March and April.

The Aztec was the chief American ship reported sunk after the destruction of the Memphis, Vigilancia, and Illinois, the three American vessels whose loss brought on the extra session of Congress and the war declaration. The Aztec was an armed merchantman; the sinking was reported on April 2, the day the President delivered his war message. She was attacked by a submarine at night near an island off Brest, without warning, and in a heavy sea. She was a slow-moving freighter of 3,727 tons, loaded with a cargo of foodstuffs, valued at \$500,000, belonging to the Oriental Navigation Company. The vessel's guns were in charge of a naval detachment consisting of a Lieutenant and a crew of 11 gunners; 28 of the men on board, includ-

ing Boatswain's Mate Eopolucci of the United States Naval Guard, perished.

The American Oil steamship Healdton was sunk March 22 in the North Sea by a German submarine, and 21 of her crew, of whom 7 were Americans, perished. The cargo was valued at \$2,150,000; the United States Government War Risk Bureau lost \$499,000 by the sinking of the Healdton, bringing the total losses of the bureau—including \$250,000 on the Illinois—to \$1,583,924; but the premiums in that period amounted to \$3,167,997.

On March 23 the French cruiser Danton was reported as having been torpedoed in the Mediterranean Sea; 296 men were lost, 806 saved. The vessel displaced 18,028 tons.

The unarmed American steamer Misourian, which left Genoa April 4 with 32 Americans in her crew of 53—net tonnage 4,981—was sunk without warning in the Mediterranean. The American

steamer Seward, 3,390 tons, was sunk in the Mediterranean April 7.

On April 5 there came news of the sinking of two Belgian relief ships, the Trevier from New York and the Feistein; the latter was 2,991 tons, the Trevier 3,001. On April 9 the loss of the Belgian relief ship Camilla was sunk with a cargo of foodstuffs, making four relief ships destroyed in five weeks, with 17,000 tons of food.

On April 10 it was reported by the State Department that up to April 3, 1917, German submarines had sunk during the war 686 neutral vessels, including 19 American, and attacked unsuccessfully 79 others, including 8 American. Since the German war zone decree went into effect on Feb. 1 more than one-third of the vessels sunk were neutral, and a large number of other neutral vessels were terrorized into staying in

port. The neutral vessels sunk were as follows:

Norwegian, 410; Swedish, 111; Dutch, 61; Greek, 50; Spanish, 33; American, 19; Peruvian, 1; Argentine, 1; Total, 686.

Neutral vessels attacked and escaped: Norwegian, 32; Swedish, 9; Danish, 5; Greek, 8; Spanish, 2; Argentine, 1; Brazilian, 1; American, 8. Total, 79.

The British Admiralty reported sinkings in the five weeks ended April 1, 1917, to have been 80 vessels of over 1,600 tons each, 41 under 1,600 tons, and 43 smaller vessels. During the week ended April 8, 1917, the sinkings reported by the British Admiralty were: Vessels over 1,600 tons, 16; under 1,600 tons, 2; vessels arriving and sailing from United Kingdom in same period, 4,773. During the week ended April 15 the Admiralty reported the loss of 19 vessels of more than 1,600 tons, 9 less than 1,600, also 12 fishing vessels.

The Wind of Freedom

By JOHN GALSWORTHY

A wind in the world! The dark departs,
The chains now rust that crushed men's flesh and bones;
Feet tread no more the mildewed prison stones,
And slavery is lifted from your hearts.

A wind in the world! O company
Of darkened Russia, watching long in vain,
Now shall you see the cloud of Russia's pain
Go shrinking out across a Summer sky.

A wind in the world—but God shall be
In all the future left no kingly doll,
Decked out with dreadful sceptre, steel, and stole,
But walk the earth, a man in charity.

A wind in the world—and doubts are blown
To dust along, and the old stars come forth,
Stars of a creed to Pilgrim Father's worth—
A field of broken spears and flowers strown.

A wind in the world! Now truancy
From the true self is ended; to her part
Supreme again she moves and from her heart
A great America causes death to tyranny.

A wind in the world—and we have come
Together sea by sea in all the lands.
Vision doth move at last and freedom stands
With brightened wings and smiles and beckons home.

Holland in the Cross-Fire of Submarine Controversy

HOLLAND, more than any other neutral, has felt the effects of the war's cross-fire of trade restriction and destruction of shipping.

The little nation's geographical position exposes it to interference by both warring groups. The drastic means adopted by Great Britain to prevent the Germans from importing foodstuffs and raw material would alone have been sufficient to cause privation, but when to this is added the havoc wrought by the German submarines at the expense of the Netherlands merchant marine the state of affairs becomes still more distressful. Even there the menace does not end. Since the beginning of the war Holland has had to be prepared to defend her neutrality by guarding her land frontier and by keeping the mouth of the Scheldt closed against any attempt to make Antwerp a base of submarine and other naval operations. In addition to the large force concentrated at Antwerp the Germans have recently had five army corps massed on their Dutch frontier. Nor has the problem of dealing with the hundreds of thousands of Belgians who fled into Holland from the invaders been a light one.

In the circumstances it was not practicable or expedient for Holland to follow the example set by the United States when the new submarine campaign began. Nevertheless, while unable to break off relations with Germany, the Netherlands Government lost no time in protesting in the most vigorous manner, as will be seen from the following note, dated Feb. 7, 1917, which was addressed by J. Loudon, the Minister of Foreign Affairs, to the German Minister at The Hague:

I have the honor to acknowledge receipt of the note of Jan. 31 last, A 390, in which your Excellency informed me that the Imperial Government sees itself forced to abolish the restrictions which it has applied until now to its methods of warfare at sea.

This note was accompanied by a memorandum containing details of the naval measures

to be adopted not only in the North Sea, the Channel, and a part of the Atlantic Ocean, but also in the Mediterranean. These measures are summed up in the establishment of two vast maritime zones, in which trade under any flag, neutral or enemy, will be stopped by force of arms, and in which ships will be exposed to destruction.

As far as the North Sea is concerned the zone is outlined in such a way as to leave a free passage for Dutch navigation, but on the other hand in the eastern portion of the Mediterranean the way is entirely barred between Port Said and the track drawn from Gibraltar to Greece, so that the route to the East Indies, which is essential to Holland as a colonial power, is cut.

The Queen's Government has in the course of the war more than once explained how it regards the arbitrary delimitation by the belligerent powers of a part of the sea as a zone reserved for military operations, in which commercial traffic is exposed to danger. Thus the Government protested, in a note, dated Nov. 16, 1914, to the British Minister, against the designation of the North Sea as a military zone in which merchant ships and fishing boats would be at least in danger by observing strictly the indications furnished by the British Admiralty.

Similarly, the Dutch Government protested in a memorandum, dated Feb. 12, 1915, against the proclamation by the German Government of a large portion of the North Sea and the Channel as a zone of war.

In these two cases the Queen's Government pointed out that, according to the law of nations, only the immediate sphere of action of the belligerents' military operations constitutes a military zone in which a belligerent's police power can be exercised. A zone with an area of the whole of the North Sea or of a large part of this sea and the Channel could not, in its opinion, be considered as an immediate sphere of action for operations of war; and in calling such areas military zones a serious blow was struck at the fundamental principle of the freedom of the seas.

That the Netherlands Government protested against both the above-mentioned cases is only a reason more why it is obliged to protest most energetically against the system now instituted by your Excellency's Government, a system which not only extends over much vaster areas but which also suggests premeditated attack on neutral vessels, whatever their cargo or destination, and without distinction as to whether their presence in the aforesaid areas is voluntary or due to circumstances independent of their will.

Even if the Imperial Government had de-

scribed as a blockade the measures which it had just adopted, the merciless destruction of every neutral ship proceeding to or leaving an enemy port would be contrary to the law of nations, which recognizes only the *confiscation* and not the *destruction* of ships trying to break a blockade. Moreover, the term "blockade," ["*blocus*"] in the French original of this document,] which the Imperial Government has rightly avoided using, could evidently not be applied to the immense stretch of sea covered by each of the two zones of military operations indicated in the memorandum which your Excellency has transmitted to me; much less so, since, from the standpoint of international law, a blockade is directed solely against traffic to and from an adversary's ports and in no case against navigation directly between two neutral countries. Now, in the aforesaid zones the Imperial Navy has received orders to destroy all ships it meets without making the least distinction between those proceeding to or leaving an enemy port and those which are on the way between two neutral ports without touching at an enemy port.

Faithful to the principle which it has constantly upheld during this war, the Queen's Government can see in the destruction of neutral vessels by belligerents only a violation of the established law of nations, to say nothing of the wrong against the laws of humanity if such destruction is to take place without any regard for the safety of the people on board.

The responsibility for the destruction of Dutch ships which may eventuate in the zones under discussion and for the loss of human lives which would be involved will fall on the German Government. Its responsibility will be particularly heavy in the cases which are to be foreseen where vessels are forced to enter the danger zone by warships of an adversary exercising the right of visit and search.

To this protest Germany paid no attention. On Feb. 22 seven Dutch steamships sailing from Falmouth, England, were attacked by a German submarine a few hours after they left port. Six of the vessels, the *Noorderdijk*, *Zaandijk*, *Jacatra*, *Bandoeng*, *Gaasterland*, and *Eemland*, representing a total of over 30,000 tons, were sunk—without loss of life. The seventh, the *Menado*, was damaged, but towed back to port. Three, in ballast, were outward bound to America, and the others homeward bound with cargoes consisting mainly of foodstuffs. They had arrived at Falmouth on various dates and had been released by the British authorities at the special request of the Netherlands Government in the belief that the German submarines would

leave the ships unmolested. A storm of indignation swept through Holland, but the German Government refused to accept the blame. Foreign Secretary Zimmermann, replying to a question in the Reichstag on Feb. 28, said:

In the name of the Government I express regret at the accident which occurred a few days ago to Dutch boats. On our part, however, nothing was left undone to prevent it. In no way is the Imperial Government blamable. The Dutch shipowners naturally desired to get their ships out of English ports. Doubtless they were not ready to sail on Feb. 10, up to which date they could have gone with full security.

Then we put before them the dates Feb. 22 and March 17, stating expressly and formally that on the previous date the ships would have only relative security, while positive security could be guaranteed for March 17. The reason for this was that the possibility existed that on the earlier date submarines, being already en route, they might not all receive our message granting safe conduct to the Dutch vessels.

When the Dutch owners, notwithstanding our reiterated warnings, decided in favor of the earlier date, the Minister of Marine did everything in his power to communicate the order to all submarines. But it appears he was not successful, for, although a complete report on the incident has not yet been received, it appears established that the sinkings are attributable to a German submarine.

I can only repeat regrets of the Admiralty that the Dutch merchant marine has lost precious ships. The incident proves how dangerous it is to navigate the prohibited zones, and gives expression to our wish that neutral navigators cease to cross the zone, and remain in their ports. Thus they really serve their own interests and contribute effectively to the desired end that freedom of the seas be rapidly established.

The German Government also tried to appease Dutch anger by offering to replace the seven ships with German freighters. A Dutch Foreign Office statement issued on March 23 explained that the German Government on March 6 offered to pay an indemnity for the loss of members of the crews and to help the owners by facilitating the purchase of German ships after the war. This offer was made "on considerations of humanity and good neighborhood." Further steps led to a reconsideration of the offer by Germany, who then suggested that Holland rent German ships "on reasonable conditions." The Dutch Government rejected the offer, and the owners of the ships that had been sunk in the

circumstances also refused to accept the proposal of indemnification for the crews.

In Great Britain the view was held that, despite the protests made by Holland, that country was accepting "whatever Germany dictates" and was endorsing "Germany's ruthless action by acquiescing in illegal submarine warfare on neutrals," and that, therefore, it was out of the question for Holland to expect facilities or consideration from Great Britain. These words were used in a statement issued in London on March 7 and were inspired by the fact that since the new German submarine campaign had begun Holland had held up practically all its shipping, thereby depriving England of the food supplies normally received from Holland.

The refusal of the authorities at Rotterdam to permit the British merchant steamer *Princess Melita* to enter the harbor because it was armed provided another bone of contention between the British and Dutch Governments. On March 9, however, when the *Princess Melita* put in an appearance for the third time after having thrown its armament overboard, it was permitted to berth. It was supposed that the *Princess Melita* had been sent for the purpose of giving the British Government the excuse to reopen the whole question of armed merchantmen. The Dutch Government, in its Orange Book of October, 1915, had

defined its attitude as one prohibiting all armed merchantmen from entering its ports. The German military menace on the eastern frontier and Great Britain's control of the sea easily accounted for Holland's indecision. Germany wanted armed merchantmen barred altogether, while Great Britain demanded that they should be admitted to Dutch ports in return for the facilities extended to Dutch vessels in avoiding German submarine dangers.

At the end of March the British Government insisted that a certain percentage of Dutch merchant tonnage should carry cargoes to British destinations, and on the Dutch Government refusing it was reported that forty Dutch steamers in British ports were to be confiscated, if they could not be acquired otherwise. Many of these vessels had been detained from six to eight weeks. The holding back of the grain in their holds intensified the food shortage in Holland, where a rule reducing the bread ration went into operation on April 2.

The situation created by Germany's new submarine campaign had thus in the course of a couple of months developed several new issues, with the result that there was also a growth of hostile feeling against Great Britain. America's entry into the war brought a change over the whole aspect of things, but at this writing Holland's attitude is undefined.

Progress of the War

Recording Campaigns on All Fronts and Collateral Events From March 19 Up to and Including April 18, 1917

GERMAN-AMERICAN RELATIONS

On March 21, a few days after the sinking of the American ships *Vigilancia*, *City of Memphis*, and *Illinois* by German submarines, President Wilson issued a proclamation calling Congress in extra session on April 2. On March 24 he ordered the withdrawal from Belgium of Minister Whitlock, all American Consular officials, and American members of the Commission for Relief in Belgium. Mr. Whitlock and most of the relief workers left Brussels for Switzerland on April 2, but a few Americans who were working where the

German Army was in operation, by agreement, remained two weeks to prevent military disclosures.

The State Department formally refused Germany's request to extend the Prussian-American treaties of 1799 and 1828.

President Wilson addressed the Congress on April 2, asking that body to declare that Germany had been making war upon the United States. A resolution recognizing and declaring a state of war was passed by both houses. President Wilson signed it April 6 and at the same time issued a proclamation notifying the world that war

had been begun and warning alien enemies to keep the peace.

Defensive war zones around the coasts of the United States were announced in an executive order.

A \$7,000,000,000 war loan bill providing for a loan of \$3,000,000,000 to the Allies was passed by Congress.

On April 15 President Wilson issued a proclamation to the people setting forth the necessity for the mobilization of all the industrial forces of the nation to help win the war. Another proclamation, issued April 16, warned alien enemies against committing treasonable acts.

The United States destroyer Smith reported that she was attacked by a German submarine on April 17 off the Atlantic Coast. Several American ships were sunk by German submarines.

SUBMARINE BLOCKADE

On March 23 Germany declared a submarine blockade of the Arctic coast of Russia.

The British Admiralty announced that twenty-four British steamers were sunk in the war zone in the week ended March 18, nineteen in the week ended April 8, and nineteen in the week ended April 15. A dispatch from Berlin dated March 26 reported that twenty-five steamships, fourteen sailing vessels, and thirty-seven trawlers had been sunk within a few days. An additional list of thirty-four vessels sunk in March was given out April 1. Seven Italian ships were sunk without warning in the week ended April 15. The Norwegian Legation in London announced that in February and March 105 Norwegian vessels of over 228,000 tons were sunk and 106 persons killed and 222 missing. An official tabulation given out by the United States Government showed 686 neutral vessels, including 18 American, sunk by German submarines from the beginning of the war up to April 3.

Two Danish steamers were sunk outside the barred zone.

American losses for the month included the armed steamer Aztec and the unarmed ships Missourian and Seward. The schooner Marguerite was captured and presumably sunk.

Two British hospital ships, the Asturias and the Gloucester Castle, were sunk. The British steamer Alnwick Castle was torpedoed 320 miles from land. Four boats containing passengers reached Spain with ten dead. Other British losses included the horse transport Canadian and the steamships Crispin, Eptafoles, and Snowden Range.

Three Belgian relief ships, the Camilla, the Trevier, and the Feistein were sunk and two others, the Tunisie and the Haelen, were attacked.

Spain protested against the sinking of the Spanish steamer San Fulgencio without warning and demanded an indemnity. Later the Spanish steamer Tom was sunk, also without warning.

Brazil severed relations with Germany after the sinking of the steamer Parana in which three lives were lost, and seized all German ships in Brazilian ports.

Argentina, on April 10, issued a declaration announcing that the Government supported the position of the United States with reference to Germany. A few days later two Argentine ships, the transport Pamra and the sailing vessel Oriana, were sunk. Germans were ordered from a suburb of Buenos Aires, and German ships in Argentine waters, which were found to be damaged, were placed under guard. Mobs in Argentina destroyed much German property.

Guatemala protested to Germany against the blockade note of Feb. 1.

Cuba announced on April 7 that a state of war existed with Germany, and German ships in Havana Harbor were seized.

Panama announced her support of the United States.

Costa Rica declared her approval of United States course.

Mexico declared neutrality; also Chile; Bolivia severed relations with Germany; Paraguay and Uruguay declared neutrality.

CAMPAIGN IN EASTERN EUROPE

March 23—Russians regain positions near the Beresina River east of Lida.

March 24—Russians prepare to meet huge concentration of Germans on the northern front.

March 27—Germans force Russians back by gas attacks in the Baranovichy region.

April 1—Russians repel repeated Austrian attacks near Kirlibaba.

April 4—Germans defeat the Russians and cross the Stokhod River near Helenin; capture Toboly bridgehead.

April 6—Germans occupy part of Russian trenches east of Plakanen, but are driven out by counterattack.

April 14—Germans bombard Brody.

CAMPAIGN IN WESTERN EUROPE

March 19—Germans retreat over eighty-five-mile front extending from south of Arras to Soissons; French take Ham, Guiscard, and Chauny; British advance slowly; Germans make slight gains at Verdun between Avocourt and Dead Man Hill.

March 20—French occupy Tergnier and reach the outskirts of Roup; ruins of Coucy-le-Chateau destroyed by Germans; French beat off German attacks on the left bank of the Meuse.

March 21—Germans make a stand on the Arras-Cambrai-St. Quentin-La Fère line; French cross the Somme Canal at two

- places, driving the Germans back to Clastres and Montescourt; British occupy forty more villages south and southeast of Péronne.
- March 22—French cross the Ailette River at several points.
- March 23—French force Germans back two miles between St. Quentin and La Fère; Germans inundate the district around La Fère.
- March 24—French take two forts protecting La Fère on the west and drive Germans toward St. Quentin; British occupy Roisel.
- March 25—French drive Germans back to the outskirts of Folembray and Coucy.
- March 26—British capture Lagnicourt, west of Cambrai; French push on in Coucy forest and capture Folembray and La Feuillée.
- March 27—French capture the forest of Coucy; British take Longavesnes, Lieramont, and Equancourt.
- March 28—British press on north of Roisel and capture Villers-Faucon and the heights crowned by Saulcourt; Germans penetrate French first-line trenches west of Maisons-de-Champagne.
- March 29—British capture Neuville Bourjonval.
- March 30—British occupy Ruyalcourt, Fins, and Sorel-le-Grand; French recapture first-line positions west of Maisons-de-Champagne.
- March 31—St. Quentin menaced on three sides as British take Vermand and Marteville; British advance up the Cologne River to within striking distance of the Scheldt, capturing eight villages; French push the Germans back on the Vregny plateau.
- April 1—British capture Savy and Epehy.
- April 2—British drive a wedge into the German positions on the ridge protecting St. Quentin from the west, capturing Holnon, Francilly, and Selency.
- April 3—French storm the heights south and southwest of St. Quentin and capture Dallon, Giffecourt, and Cerizy, and heights south of Urvillers; British occupy Maissemy on the eastern bank of the Omignon River, Ronssoy Wood, and Henin on the Cojeol River.
- April 4—French occupy Grugies, Urvillers, and Moy, south of St. Quentin; British take Metz-en-Couture.
- April 5—Germans attack the French west of Rheims and force them over the Aisne Canal at some places; British capture Ronssoy and Basse-Boulogne east of Péronne.
- April 6—British capture Lempire and advance toward Le Catelet; French retake part of positions lost north of Rheims.
- April 8—British advance on a front of 3,000 yards north of the Bapaume-Cambrai road; Germans shell Rheims and French Government orders the civil population to evacuate the city.
- April 9—British launch offensive on twelve-mile front north and south of Arras, penetrating German positions to a depth of from two to three miles, and capturing many fortified points, including Vimy Ridge.
- April 10—British push forward as far as the outskirts of Monchy-le-Preux and capture Fampoux and its defenses on both sides of the Scarpe River.
- April 11—British capture Monchy-le-Preux and heights dominating the country toward Cambrai.
- April 12—British take Wancourt and Haninel, some positions north of the Scarpe River and drive the Germans from their last footing in the Vimy Ridge; French advance between Coucy and Quincy-Basse.
- April 13—British capture Ancres and the town of Vimy, extending their line of advance from the Scarpe River to Loos, and push on west of Le Catelet; French attack the Germans south of St. Quentin.
- April 14—British take Fayet, Gricourt, and Lievin, the western suburb of Lens.
- April 15—French guns shell St. Quentin; Belgians penetrate Dixmude as far as the second enemy line.
- April 16—French launch an offensive on a twenty-five-mile front between Soissons and Rheims, capturing the German first-line positions and taking over 10,000 prisoners and reach the second German line at six points in Alsace; Germans destroy St. Quentin Canal.
- April 17—French pierce new German line on eleven-mile front from Prunay to Auberville, capturing important heights and support positions from Mount Carnillet to Vaudeincourt.
- April 18—French again smash the Aisne line and capture Chavonne, Chivy, Ostel, and Braye-en-Laonnois, press forward north of Ostel, reach the outskirts of Courtecon, and take Vailly and Conde-sur-Aisne; British take Villers-Guislain, reporting 17,000 prisoners and much booty in three days' fighting, threatening German lines so as to make further withdrawals in Rheims region inevitable.

BALKAN CAMPAIGN

- March 20—French in Macedonia report the capture of Rashtani, Hill 1248, and the Snegoo monastery north of Monastir; British take prisoners at Brest and Poroy, east of Lake Doiran.
- March 21—French driven from heights north-east of Tarnova and Anegovo.
- March 24—Germans take Rumanian frontier ridge between the Solyomtar and Czo-banos Valleys from the Russians.
- April 2—Russians in Rumania repulsed on four-mile front on both sides of the Oituz Valley.
- April 18—Germans burn Braila and Fokshani.

ITALIAN CAMPAIGN

- March 19—Renewal of activity reported;

- Austrian raids repulsed in the Giumella Valley and Lucati sector.
 March 21—Austrians repulsed on Costabella Massif.
 April 17—Intense artillery fire reported on the Julian front; Italians bombard Callano in the Lagarina Valley.
 April 18—Italians shell Rovereto Station and trains on the Sugana Valley Railway.

ASIA MINOR

- March 19—Russians in Persia occupy Harunabad; British cross the Diala River and occupy Bahriz and part of Bakubah.
 March 21—Turkish force near Aden isolated from headquarters; another Arabian chieftain rises against the Turks; Russians cross the Mesopotamian frontier into Turkish territory to join the British.
 March 23—Russians attack the Turks along the Shirwan River.
 March 26—Russians pursue the Turks into Mosul Vilayet.
 March 29—British rout a Turkish army of 20,000 in battle near Gaza.
 March 31—British advance north of Bagdad and occupy Kalaat Felujah, Sheraban, Dely Abbas, and the areas of Deltawah and Sindirjah.
 April 2—Russians occupy Miataque Peitakt and Serpoule and force the Turks toward the Mesopotamian border.
 April 5—Russians occupy Khaninkin and Kasrichirin and get into touch with British patrols.
 April 7—Russians land on Turkish territory on the Black Sea coast east of Samsoun.
 April 12—British capture Turkish territory to a depth of fifteen miles in the region of Gaza.
 April 14—Turks routed in battle north of Bagdad.
 April 16—British drive Turks back to their positions on the Jebel Hamrin hills.

AERIAL RECORD

- Italians bombarded the railway station at Galliano and brought down two Austrian airplanes.
 Russian airplanes set Braila on fire April 1.
 On April 7 large squadrons of British airplanes were sent up over the new German lines on the western front to photograph enemy positions. The greatest air battle of the war followed. Forty-eight German airplanes and ten captive balloons were brought down by the British, who lost twenty-eight of their own machines, but succeeded in taking 1,700 photographs.
 Allied airplanes raided Freiburg April 14. Eleven persons were killed and twenty-seven wounded.
 American Aviator Genet killed in France.

NAVAL RECORD

- The French warship Danton torpedoed in the Mediterranean Sea March 19, and 296 sailors were drowned.
 On March 22 Berlin announced that the Ger-

man raider Möwe had returned to her home port from a second cruise in the Atlantic in which she captured twenty-seven vessels.

England announced an extension of the boundaries of the North Sea danger area, cutting safety lanes off Holland and Denmark.

The French bark Cambronne arrived at Rio Janeiro March 30 carrying the crews of eleven steamers and sailing vessels sunk by the German raider Seeadler in the South Atlantic.

During the night of March 28-29 German warships cruised in the barred zone off the south coast of England and sank the British patrol trawler Mascot.

One German destroyer was sunk and another damaged off the Belgian coast April 8.

The American Line steamship New York struck a mine near the coast of England on April 10, but was only slightly damaged and reached her dock unaided.

The British hospital ship Salta was sunk by a mine in the English Channel.

A German submarine made an unsuccessful attack on the U. S. destroyer Smith on April 17, about 100 miles south of New York.

RUSSIA

The former Czar and Czarina were taken to Tsarskoe Selo. Other high dignitaries of the old régime were imprisoned. The United States extended partial recognition to the new Government on March 21.

The Central Committee and Parliamentary representatives of the Constitutional Democratic Party at Petrograd voted in favor of a republican form of government. A committee was appointed to settle the affairs of Poland and the Provisional Government announced its wish that Poland decide for itself the form of government it desired. Religious freedom was proclaimed April 4 and many other reforms are under consideration, including woman suffrage.

MISCELLANEOUS

Austria-Hungary severed diplomatic relations with the United States on April 7. Austrian ships in American ports were seized.

The German Emperor ordered Chancellor von Bethmann Hollweg to submit to him proposals for the reform of the Prussian electoral law. Strikes in Berlin followed a reduction in bread rations. Thousands of workers left the munitions plants.

Greece presented a note to Italy insisting upon the withdrawal of Italian troops from Epirus to Avlona.

A new Cabinet was formed in France, headed by Alexandre Ribot.

Chinese troops occupied without opposition the German concessions at Tien-tsin and Hankow.

Allied Successes in France

Period from March 18 to April 17, 1917

By J. B. W. Gardiner

Formerly Lieutenant Eleventh United States Cavalry

THE past month has seen the most important developments in the European war since the first months of its progress. These have been principally three, all distinctly hurtful to Germany: The retreat on the western front, which includes the battle of Arras; the operations in the Near East, and, finally, the entrance of the United States on the side of the Allies. All theatres other than those mentioned have been extremely, ominously quiet.

The great German retreat was well under way as the review for April was being written, but it had not progressed to the point where any conclusions were admitted. The German press at the outset confused the entire issue. Its statements may then be ignored.

In the first place the German retreat was not voluntary, but was forced. The battle of the Somme, biting as it did deep into the German lines, produced a wedge which seriously threatened the Noyon salient. Only a little more, and the troops in this salient would have been unable to retire. The Germans saw the threat to this large body of men, so drew back from the danger before it had an opportunity actually to strike them. To this extent the retreat was a strategical move. That the movement was made with a view to shortening the lines and thereby strengthening them may be entirely possible as a subsidiary thought, but it was not the moving factor. The theory that von Hindenburg simply wished to draw the Allies out of the trenches into the open and then defeat them has also been exploded.

The matter of the withdrawal itself is most interesting. It was assumed in many quarters that the line on which the Germans would stand was through Laon, La Fère, St. Quentin, and Cambrai. This

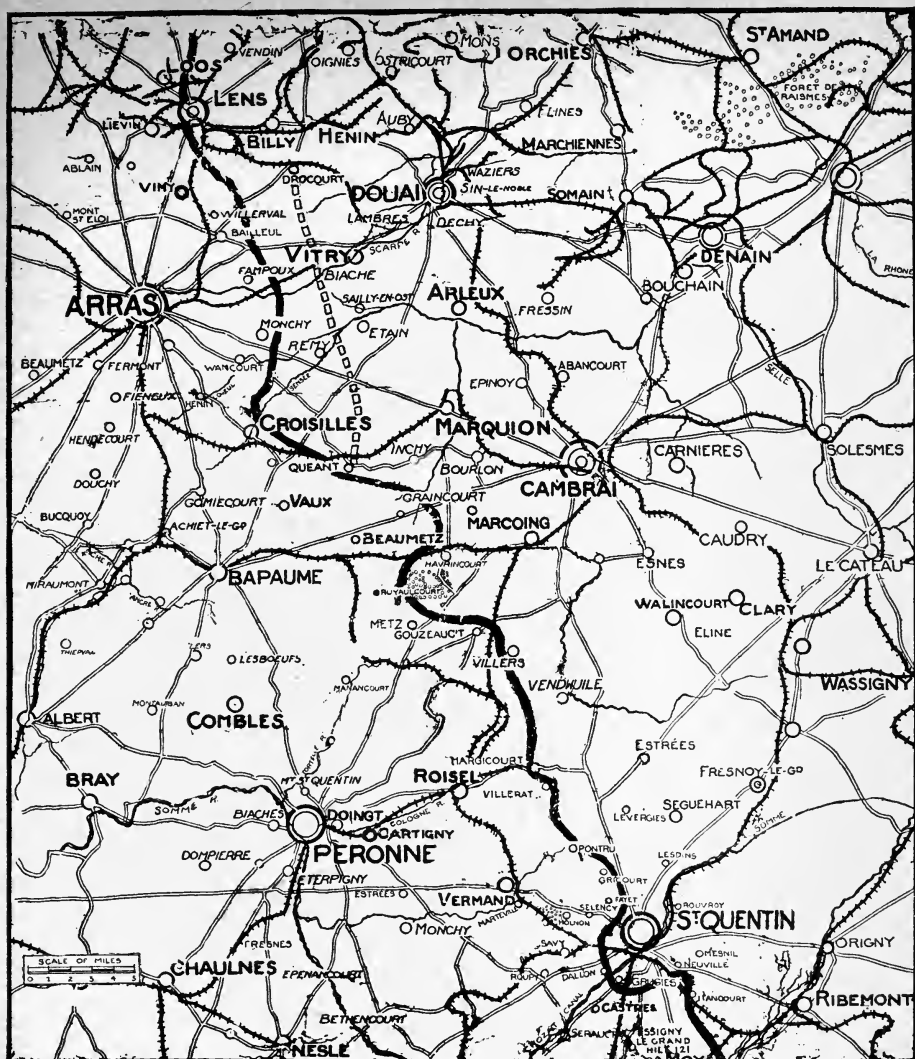

was a perfectly logical conclusion, as it had its basis in the existing railroads connecting these places. In fact, but little has happened since to give rise to any doubt that the German intention was different from that outlined. The distance from Noyon to the new line was very much greater than that from the Bapaume position to Cambrai. Nevertheless, it was the Bapaume line which first gave way.

This would indicate that the German retirement took place ahead of schedule time because of the British pressure along the Ancre, and the way in which the Germans have since been handled by both the British and the French would seem to increase the probability that this was the case. Nevertheless, the preparations for the retreat were thoroughly made and the requisite transport was at hand.

Rapid French Pursuit

The Germans, as they fell back, destroyed all the railroad lines, blew up the roads and roadbeds, and did all else that could in any way hinder the pursuit of the allied armies. That they went beyond this and, in a blind, ruthless orgy of destruction, razed to the ground every building however unadapted it might be to military purposes is beside the point. This is merely another interesting phase of German psychology. But in spite of the fact that the Germans were able to get away with small loss, the French and the British were apparently as prepared to follow as the Germans were to fall back. The French in particular did brilliant work in this respect. The pursuit on the southern part of the line, which was held by the French, was extremely rapid—much more rapid than any one had anticipated.

Not for a moment, it seemed, was con-

BATTLE LINE IN FRANCE, APRIL 18, 1917. THE WHOLE REGION FROM BAPAUME, PERONNE AND NESLE, AS FAR EAST AS THE BLACK LINE, WAS DEVASTATED BY THE GERMANS IN THEIR RECENT RETREAT

tact lost. The French engineers followed the Germans closely, reconstructing and rebuilding, and the French infantry and artillery pressed the situation closely. The pursuit evidently surprised the Germans, who, before they had an opportunity to stop and fight, found their line interfered with, if not actually cut. La Fère seemed to be the point at which the French advance was directed. Without fighting any heavy engagements the French reached and occupied the town

of Tergnier, within two miles of La Fère. This completely eliminated the latter town as a point of German vantage.

Further south, along the Ailette River, the French came to their first stumbling block. This river stands as a guard to the great patches of wood south of the La Fère position, and is known as the lower and upper forests of Coucy and the Woods of St. Gobain. This river was crossed, however, after heavy fighting, and, finally, pushing ahead on the

southern end of the line, the French took the village of Coucy. The lower forests of Coucy were occupied, bringing the French to the edge of the forest of St. Gobain. Here the French came to a halt, as it was evident that they had reached the main defenses of the German line to which von Hindenburg had intended to retreat.

Further north the Germans were not so fortunate in checking the French. From just east of Tergnier, the French fought their way eastward, pivoting their line on the Tergnier position, and pressed the Germans back against the Oise River as far north as the town of Moy. This threw the French well to the east of St. Quentin and in a position to work their way, without meeting any natural obstacles, in rear of the town. This they did, driving due north from Moy until they had reached a point just south of Neuville. Their line then swung westward near the suburbs of St. Quentin, along all the high ground south of the city. This was certainly not in accordance with the German plan, as it brought every means of exit from the city directly under the fire even of the smaller French artillery.

The British Advance

The British, on the other hand, had a much more difficult road to travel. Because of the shorter distance which the Germans had to pass over, their retreat, after the line first began to give way, was much slower, and the pursuit was conducted with constant fighting, mostly of heavy rear-guard character. The British object was to prevent the use of Cambrai in the same way as the French had impaired if not destroyed the usefulness of St. Quentin.

The pivot of the German retreat in the north was a point on the southern tip of Vimy Ridge, a position before which so many French had lost their lives, and which was believed to be practically impregnable. No effort was made against it, the British expending all of their efforts toward reaching the line of the Scheldt River. Here the British gave the best indication of their fighting strength. Each day recorded a new advance of greater or less extent on the

entire front from the Vimy Ridge to St. Quentin, where the British and French joined. The result was more than satisfactory to the British commander.

As this review is being written the British have thrown a loop around St. Quentin on the north and west which brings their lines so near to those of the French that it is impossible for the Germans to keep control or possession of the city much longer. More important still, the British are but a little over a mile from the Scheldt River, with the Germans in between. It seems certain that before these lines appear the Germans will have fallen behind the river, from which the British cannot force them except by a flanking movement, to be made at some time in the future.

While the fighting west of the Scheldt was at its height the British, after a terrific artillery preparation, suddenly launched an attack against the Vimy Ridge, the pivot of the German retirement. Here was the first positive indication that the Germans, in addition to being outgunned and outmanned, were also outgeneraled. The Germans gave out officially that by their retirement they had completely upset the British plan for an attack on the Somme and delayed any other attack indefinitely because of the necessity of reconstructing the transport system. The probabilities were, however, that the British never intended to attack on that section of the front affected by the German retreat. On the contrary, it now seems that the British commander, undoubtedly acquainted with the fact that a retreat was coming, had laid his plans for an attack which would produce the same result on the line north of Arras as the Somme had produced in the south.

In one day's fighting the Canadian troops, who held the centre of the attacking line, swept to the crest of Vimy Ridge and well over it, forcing the Germans down the eastern slope. It was here, too, that for the first time the Germans gave indications of going to pieces. There was a temporary demoralization in their ranks which manifested itself in the fighting, for, almost

immediately following the first attack, the British pushed this new wedge fully five miles into the German lines.

Since these early days the advance has been further extended, but the first blow netted five miles. The Germans were entirely unprepared for any such action as this. The amount and character of booty captured show how completely swept off their feet they were. Nearly 200 guns, some of them of large calibre, an enormous quantity of shell, 15,000 prisoners, loaded wagon trains and transports, all of which there was sufficient time to remove or destroy—these are the things which tell the story much more vividly than the official reports.

As this review is being written, (April 20,) the British are in the streets of the great coal mining centre of Lens, in possession of half of the town and fighting desperately for the other half. The advantage now on this section of the front all lies with the British. All of the high ground overlooking the coal fields and the great plain of Northern France now stretches out before them. Douai, which must now become a point on the new line, is in plain sight, with the Germans everywhere recoiling toward it. It may well be, from the desperate character of the fighting, that the battle of Europe is now being fought.

Turkish Armies in Retreat

In the Near Eastern theatre matters have gone very ill with the Turks. Beaten in every engagement by the British, the resistance offered to the Russians in Persia suddenly gave way, and, without any opposition, the Russians drove for-

ward past the Persian frontiers into Mesopotamia and effected a junction with the British, cutting off in the process a considerable portion of the Turkish Army. This junction means the downfall of the Turkish opposition. Nothing approaching this in importance has happened in this theatre since the beginning of the war. It has been a long time coming, and has been most bitterly fought for, but its importance cannot be overestimated. Turkey is more than weakened. She is in danger of dismemberment even before the war closes. A successful revolution in Arabia, an uprising in Syria, defeats in the Holy Land, the loss of almost all of Armenia, the occupation of a great part of Mesopotamia—all these disasters have shaken Turkish rule in Asia to the very foundations. It is questionable how much longer the Sultan can hold out and keep his followers and his army loyal.

Finally, to complete the list of German disasters for the month, German barbaric cruelty and ruthlessness forced the United States to the admission that a state of war existed with the German Empire. America has a potential force of 15,000,000 men, can put up if need be seventy-five billion of dollars, and has the greatest resources for food and manufacturing of any nation in the world. The navy is nearly as large in itself as that of Germany, and if any one factor were needed to give to the world assurance of the solidity and permanence of democratic rule as opposed to autocracy, the action of this, the most pacific of great democracies, has furnished it.

German Version of the Month's Fighting

March 17 to April 17, 1917

FROM the official German standpoint the events in the western theatre of the war during April differ from the allied reports. The following summary of the month's fighting was compiled exclusively from the official reports issued by the War Office in Berlin and other German sources.

The Germans assert that the retirement at three different points on an eighty-five-mile front from south of Arras to Soissons on the Aisne, which was taking place in the middle of March and leaving a large number of towns and villages in the hands of the British and French, "was part of a definite plan." These strategic movements had been "prepared long ago and were carried out without being disturbed by the enemy, who followed in a hesitating manner." The "protecting troops, by perspicacious and energetic conduct, cast a veil over the abandonment of the positions and the departure of our troops." In the abandoned districts the means of communication useful to the enemy were destroyed.

The Berlin official report of March 22 said that spirited fighting in the district on both sides of the Somme and the Oise had "an issue favorable to us," and the next day's report contained the following:

"French troops, which on both sides of St. Simon had crossed the Somme-Croizat Canal, were repulsed by an attack against and beyond those sectors. The enemy suffered sanguinary losses and lost 230 prisoners, as well as several machine guns and carts.

"Between the Oise and the Aisne during the evening hours engagements developed west and south of Margival. Attacks by strong French forces were repulsed with heavy losses under our fire and by a counterattack."

German View of Retreat

An account of the German retirement

given by a correspondent of the Berliner Tageblatt was as follows:

"Till the last moment the exploding platoons remained in the towns and villages to finish the work of destruction, and then fight their way back the best they could. The general system of retreat was something marvelous. Every detachment knew exactly which way to turn. Every column had its way prescribed, and, despite this gigantic movement of man, beast, and truck, there were no blockades, no congestion anywhere, all arriving exactly at the prescribed hour. Messengers rode about to notify the different commands of the time to start, while at the same time gigantic motor cars distributed enormous quantities of explosives to the pioneer platoons.

"Wherever possible, without attracting the special attention of the natives or the Allies, houses were burned down days before the evacuation. Walls that would not fall were exploded when the Allies were in the heat of an artillery fight, suggesting the tremendous effect of their fire. These preparations took many days, but toward the end heavy fogs in the mornings and cloudy atmosphere in the afternoons permitted the burning of villages without concealment. And to think, the Allies never had the slightest idea of what was going on! They never interfered with the German plans of destruction, and never thought of shelling the German lines of communication, while endless columns marched over them. The last I saw was German machine-gun platoons disappearing among the ruins and German patrols taking what little part was left to await the Allies. Slowly, with enormous losses, the hostile hordes are now feeling their way through the dangers lurking all about them."

Another correspondent's story contains the following:

"The country behind the allied trenches had been covered with a great network of

railways and roads for heavy mortars which would enable them to move divisions and army corps with lightning speed and so concentrate unexpectedly on any weak spot of the German line they might discover while shamming a general attack along the whole front. Day after day German fliers watched the mountains of ammunition and provisions pile up at the British base, to which well-metalled white roads reached out from the trenches like tentacles of some ghastly monster to suck in the whole world for slaughter and destruction. Billions of dollars' worth of material, iron, wood, and cement, and the labor of a vast army was sunk in this ground between the British trenches and the base. All these gigantic preparations were conducted with truly English naïveté, for any other nation would have told itself that fliers watching them day by day would have long ago supplied the German General Staff with very exact data of what was going on.

"Then all of a sudden mysterious movements began on the German side. Soldiers, taking with them their kits and all other belongings, left the trenches and dugouts. The mountains of munitions grew rapidly less by the efforts of many hundreds of huge mortar carriers, of wagons drawn by eight horses, streaming incessantly, day and night, over the groundless roads which nobody now thought of repairing any more.

"Whole villages disappeared over night, their inhabitants being concentrated in a few singled-out towns and places where they were comparatively safe and from where they might easily reach their own people when the time would come. Of bush and trees, nothing was left standing that might serve the Allies as cover. Even the belongings were removed from the houses before the latter were leveled to the ground. Night after night the artillery rolled back in an endless chain, followed by regiment after regiment of silent gray war lords.

"Small troops armed with machine guns remained behind, however, and kept up a sham of trench war. So well did they succeed in deceiving the British that they often drew the British heavy guns to furious bombardments of what

was already a deserted strip of land. Behind their new positions, ten to fifteen kilometers back, the Germans chuckled when they read in the British reports of the explosions of German munition magazines caused by the never-failing British gunfire. They knew only too well that another village had been leveled, another bridge blown up by the astute German pioneers.

"When finally the British hesitatingly felt their way into what were once the German lines, they discovered between the Oise and Arras a lifeless chaos which baffled all their zealous preparation of many months for the deadly blow that would now fall on the air."

A Successful Retirement

An official report on March 25 stated that "the German rear guards engaged with hostile forces near Beaumetz and Roisel and east of the Crozat Canal fell back after inflicting heavy losses, and that a French attack northeast of Soissons was repulsed." Again, on March 27, a French attack on the west bank of the Oise, near La Fère, "failed with heavy losses." "The German retirement continued to be conducted with the greatest success." On March 31, however, "between the road from Péronne to Gouzeaucourt and the lowland of Omignon Brook the English, in engagements in which they suffered heavy losses, advanced their line for a distance of from two to three kilometers."

Heavy fighting took place between Arras and the Aisne on April 1 and 2, "notably between the roads leading from Bapaume to Croiselles and Bapaume to Cambrai, as well as on both banks of the Somme, west of St. Quentin. The British and the French launched strong forces, which, because of the effect of our artillery fire, flowed back several times, and which only after considerable losses, which included fifty prisoners and some machine guns, gained ground because of our troops giving way, as had been ordered."

In the official report of April 9, describing the first day of the battle of Arras, it was stated that the enemy had forced his way into parts of the German positions. On April 10 the report said:

"In stubbornly resisting the superiority of the enemy two of our divisions suffered considerable losses. The British succeeded in penetrating our positions on the roads radiating from Arras, but did not break through."

The Frankfort Gazette stated positively that the German line had not been broken east of Arras and that the attack did not take the General Staff by surprise, but had been provided for in its plans. Heavy losses were admitted, but, said that journal, "the defense of the western front will cost us heavy sacrifices this year, but they will not be in vain."

The impression sought to be created by the German press was that the battle of Arras was an event of "only local importance, though lamentable in its results." "It had, however, been soon brought to a standstill and did not in any way affect the strategic situation. It was part of the plan of the Anglo-French command, foiled in its intentions of delivering a shattering blow on the Somme front, to roll up the new Hindenburg line by assaults on both flanks, at Soissons and Arras. Both attempts failed."

Field Marshal von Hindenburg, in an interview, avowed his confidence in the strength of the German fronts on the west and east, and expressed a conviction that the submarine campaign would not fail.

"Unfounded" Excitement

The official reports continued to speak of attacks repulsed with heavy losses during the succeeding days of the battle of Arras, but on April 13 the military critic of the Berlin Vossische Zeitung wrote that he had received many letters which proved that "the nerves of many readers are beginning to give way." He dwelt on the "unfounded" excitement which, he said, was spreading among those at home, and he warned the public not to judge the situation from single events, but to take events as a whole into consideration.

The German War Office report of April 15 stated:

"On the Arras battlefield, as the result of the removal of our line north of the Scarpe, only minor engagements occurred,

in which the enemy suffered heavy losses. From the Scarpe lowlands to the Arras-Cambrai railway violent fighting occurred yesterday morning. British divisions in heavy masses attacked repeatedly, but were always repulsed with sanguinary losses. In addition to these British sacrifices, a counterthrust by our troops resulted in the capture of 300 prisoners and twenty machine guns."

That the fighting was no longer merely of local importance was indicated in the report issued at the end of the first day of the new French offensive, April 16: "On the Aisne a great French attempt to break through, with a far-distant object, has commenced after a ten days' mass fire. A bitter fight is proceeding on a forty-kilometer front around our foremost positions."

Finally, the report of April 17 says that "one of the greatest battles of the mighty war, and, therefore, also in the world's history, is in progress on the River Aisne." The report continues:

"In the Champagne this morning fighting between Prunay and Auberive developed, the battle line thereby extending from the River Oise into the Champagne. Our troops anticipate with entire confidence the coming heavy fighting.

"A great French attempt to break through yesterday, the object of which was far-reaching, failed. The losses of the enemy were very heavy. More than 2,100 prisoners remained in our hands. Where the enemy at a few places penetrated into our line fighting still continues and fresh enemy attacks are expected.

"On Monday afternoon the French threw fresh masses into the fray and carried out lateral attacks between the Oise and Condé, on the Aisne. The artillery fight which was continued today leveled the positions and produced wide, deep craters, rendering an obstinate defense no longer possible.

"The fighting no longer is against a line but over quite a deep and irregular fortified zone. The battle sways backward and forward around our foremost positions, our object being, if the war material is lost, to spare the lives of our forces and to inflict heavy sanguinary losses and thus decisively weaken the enemy. This was achieved."

United States Rejects German Protocol

WHEN Ambassador Gerard was about to depart from Berlin he was placed under pressure by the German Government to get him to sign a document confirming and enlarging the privileges of German citizens in the United States in case of war between the two countries, as defined in the half-forgotten treaty made with Prussia in 1799. The protocol which Mr. Gerard was asked to sign was an elaboration of Article 23 of the old convention, amounting practically to a new treaty, and requiring not only the approval of the State Department at Washington but also the confirmation of the United States Senate. Mr. Gerard protested against the methods used to get his support for this document, and emphatically declined to have anything to do with it. After some delay he was allowed to depart.

Text of German Protocol

The document was then forwarded by the Berlin authorities—through the Swiss Foreign Office at Berne—to the Swiss Minister at Washington, Dr. Paul Ritter, who handed it to Secretary of State Lansing on Feb. 10, 1917. The text of this communication, and of the agreement which Germany was so anxious to have the United States accept on the eve of war, is as follows:

The American treaty of friendship and commerce of the 11th of July, 1799, provides by Article 23 for the treatment of the subjects or citizens of the two States and their property in the event of war between the two States. This article, which is without question in full force as regards the relations between the German Empire and the United States, requires certain explanations and additions on account of the development of international law. The German Government, therefore, proposes that a special arrangement be now signed, of which the English text is as follows:

Agreement between Germany and the United States of America concerning the treatment of each other's citizens and their private property after the severance of diplomatic relations.

Article One—After the severance of diplomatic relations between Germany and the United States of America, and in the event of the outbreak of war between the two powers, the citizens of either party and their private property in the territory of the other

party shall be treated according to Article 23 of the treaty of amity and commerce between Prussia and the United States of the 11th of July, 1799, with the following explanatory and supplementary clauses:

Article Two—German merchants in the United States and American merchants in Germany shall, so far as the treatment of their persons and property is concerned, be held in every respect on a par with the other persons mentioned in Article 23. They shall, accordingly, even after the period provided for in Article 23 has elapsed, be entitled to remain and continue their profession in the country of their residence. Merchants as well as the other persons mentioned in Article 23 may be excluded from fortified places or other places of military importance.

Article Three—Germans in the United States and Americans in Germany shall be free to leave the country of their residence within the time and by the routes that shall be assured to them by the proper authorities. The persons departing shall be entitled to take along their personal property, including money, valuables, and bank accounts, excepting such property the exportation of which is prohibited according to general provisions.

Article Four—The protection of Germans in the United States and of Americans in Germany and of their property shall be guaranteed in accordance with the laws existing in the countries of either party. They shall be under no other restrictions concerning the enjoyment of their private rights and the judicial enforcement of their rights than neutral residents. They may accordingly not be transferred to concentration camps, nor shall their private property be subject to sequestration or liquidation or other compulsory alienation except in cases that under the existing laws apply also to neutrals. As a general rule, German property in the United States and American property in Germany shall not be subject to sequestration or liquidation or other compulsory alienation under other conditions than neutral property.

Article Five—Patent rights or other protected rights held by Germans in the United States or Americans in Germany shall not be declared void, nor shall the exercise of such rights be impeded, nor shall such rights be transferred to others without the consent of the person entitled thereto, provided that regulations made exclusively in the interests of the States shall apply.

Article Six—Contracts made between Germans and Americans, either before or after the severance of diplomatic relations, also obligations of all kinds between Germans and Americans, shall not be declared canceled, void, or in suspension except under provisions applicable to neutrals. Likewise the citizens of either party shall not be impeded in fulfilling their liabilities arising from such

obligations, either by injunctions or by other provisions, unless these apply to neutrals.

Article Seven—The provisions of the Sixth Hague Convention relative to the treatment of enemy merchant ships at the outbreak of hostilities shall apply to the merchant vessels of either party and their cargo. The aforesaid ships may not be forced to leave port unless at the time they be given a pass recognized as binding by all the enemy sea powers to a home port or a port of an allied country or to another port of the country in which the ship happens to be.

Article Eight—The regulations of Chapter 3 of the Eleventh Hague Convention relative to certain restrictions in the exercise of the right of capture in maritime war shall apply to the Captains, officers, and members of the crews of merchant ships specified in Article 7 and of such merchant ships as may be captured in the course of a possible war.

Article Nine—This agreement shall apply also to the colonies and other foreign possessions of either party.

Text of American Reply

The note in which the United States rejected the foregoing proposition was handed to the Swiss Minister at Washington on March 20, and is printed below in full. It places the refusal on the ground of Germany's own "flagrant violations" of the original treaty, and raises the question whether all the immunities granted by that treaty have not in effect been abrogated by the German sinkings of American merchant ships:

The Secretary of State to the Minister of Switzerland in charge of German interests in America.

Department of State,

Washington, March 20, 1917.

Sir: I beg to acknowledge the receipt of your note of Feb. 10 presenting the proposals of the German Government for an interpretative and supplementary agreement as to Article 23 of the Treaty of 1799.

After due consideration, I have to inform you that the Government of the United States is not disposed to look with favor upon the proposed agreement to alter or supplement the meaning of Article 23 of this treaty.

The position of the Government of the United States, which might under other conditions be different, is due to the repeated violations by Germany of the Treaty of 1828, and the articles of the Treaties of 1785 and 1799 revised by the Treaty of 1828. It is not necessary to narrate in detail these violations, for the attention of the German Government has been called to the circumstances of each instance of violation, but I may here refer to certain of them briefly and in general terms.

Since the sinking of the American ship William P. Frye for the carriage of contraband, there have been perpetrated by the

German naval forces similar unwarranted attacks upon and destruction of numerous American vessels for the reason, as alleged, that they were engaged in transportation of articles of contraband, notwithstanding and in disregard of Article 13 of the Treaty of 1799 that "no such articles (of contraband) carried in the vessels or by the subjects or citizens of either party to the enemies of the other shall be deemed contraband so as to induce confiscation or condemnation and a loss of property to individuals." And that in the case of a vessel stopped for articles of contraband, if the master of the vessel stopped will deliver out the goods supposed to be of contraband nature, he shall be admitted to do it, and the vessel shall not in that case be carried into any port or further detained, but shall be allowed to proceed on her voyage.

In addition to the sinking of American vessels, foreign merchant vessels carrying American citizens and American property have been sunk by German submarines without warning and without any adequate security for the safety of the persons on board or compensation for the destruction of the property by such action, notwithstanding the solemn engagements of Article 15 of the Treaty of 1799, that "all persons belonging to any vessels of war, public or private, who shall molest or insult in any manner whatever the people, vessel, or effects of the other party, shall be responsible in their persons and property for damages and interests, sufficient security for which shall be given by all commanders of private armed vessels before they are commissioned," and notwithstanding the further stipulation of Article 12 of the Treaty of 1785 that "the free intercourse and commerce of the subjects or citizens of the party remaining neutral with the belligerent powers shall not be interrupted."

Disregarding these obligations, the German Government has proclaimed certain zones of the high seas in which it declared without reservation that all ships, including those of neutrals, will be sunk, and in those zones German submarines have in fact, in accordance with this declaration, ruthlessly sunk merchant vessels and jeopardized or destroyed the lives of American citizens on board.

Moreover, since the severance of relations between the United States and Germany certain American citizens in Germany have been prevented from removing from the country. While this is not a violation of the terms of the treaties mentioned, it is a disregard of the reciprocal liberty of intercourse between the two countries in times of peace and cannot be taken otherwise than as an indication of the purpose on the part of the German Government to disregard, in the event of war, the similar liberty of action provided for in Article 23 of the Treaty of 1799—the very article which it is now proposed to interpret and supplement almost wholly in the interests of the large

number of German subjects residing in the United States and enjoying in their persons or property the protection of the United States Government.

This article provides in effect that merchants of either country residing in the other shall be allowed a stated time in which to remain to settle all their affairs and to "depart freely, carrying off all their effects without molestation or hindrance," and women and children, artisans and certain others may continue their respective employments and shall not be molested in their persons or property. It is now proposed by the Imperial Government to enlarge the scope of this article so as to grant to German subjects and German property remaining in the United States in time of war the same treatment in many respects as that enjoyed by neutral subjects and neutral property in the United States.

In view of the clear violations by the German authorities of the plain terms of the treaties in question, solemnly concluded on the mutual understanding that the obligations thereunder would be faithfully kept; in view further of the disregard of the canons of international courtesy and the comity of

nations in the treatment of innocent American citizens in Germany, the Government of the United States cannot perceive any advantage which would flow from further engagements, even though they were merely declaratory of international law, entered into with the Imperial German Government in regard to the meaning of any articles of these treaties or as supplementary to them.

In these circumstances, therefore, the Government of the United States declines to enter into the special protocol proposed by the Imperial Government.

This Government is seriously considering whether or not the Treaty of 1828 and the revised articles of the Treaties of 1785 and 1799 have not been in effect abrogated by the German Government's flagrant violations of their provisions, for it would be manifestly unjust and inequitable to require one party to an agreement to observe its stipulations and to permit the other party to disregard them.

It would appear that the mutuality of the undertaking has been destroyed by the conduct of the German authorities.

Accept, &c.,

ROBERT LANSING.

Your Flag and My Flag

By WILBUR D. NESBIT

[A new national anthem that sprang into favor all over the country in the weeks preceding the declaration of war.]

Your flag and my flag!
 And how it flies today
 In your land and my land
 And half a world away!
 Rose-red and blood-red
 The stripes forever gleam;
 Snow-white and soul-white—
 The good forefathers' dream;
 Sky-blue and true blue, with stars to gleam aright—
 The gloried guidon of the day; a shelter through the night.

Your flag and my flag!
 To every and star and stripe
 The drums beat as hearts beat
 And fifers shrilly pipe!
 Your flag and my flag—
 A blessing in the sky;
 Your hope and my hope—
 It never hid a lie!
 Home land and far land and half the world around,
 Old Glory hears our glad salute and ripples to the sound!

Your flag and my flag!
 And oh, how much it holds—
 Your land and my land—
 Secure within its folds!
 Your heart and my heart
 Beat quicker at the sight;
 Sun-kissed and wind-tossed—
 Red and blue and white.
 The one flag—the great flag—the flag for me and you—
 Glorified all else beside—the red and white and blue!

CURRENT HISTORY CHRONICLED

[PERIOD ENDED APRIL 20, 1917]

WAR COUNCIL AT WASHINGTON

THE heads of the French and British missions to the United States, Arthur James Balfour and René Viviani, are distinguished among the statesmen of their countries by the fact that both have been Prime Ministers. M. Viviani was Premier of France when the war broke out, and was later Minister of Justice under M. Briand. He was also a member of the joint Anglo-French mission to Russia in the weeks before the Russian revolution. Mr. Balfour was Prime Minister after the death of his distinguished uncle, the Marquis of Salisbury, in 1902. He has held office in the coalition War Ministries of Mr. Asquith and Mr. Lloyd George, as First Lord of the Admiralty, and later as Secretary for Foreign Affairs. Mr. Balfour is completely familiar with the two most vital Entente problems, the international question and the submarine question.

The hero of the joint mission is Marshal Joffre, the victor of the Marne, but for whose splendid work at the War Ministry France would have had no adequate army to oppose the German invasion; but for whose consummate strategy General von Kluck would in all likelihood have captured Paris and changed the history of the war. Marshal Joffre has been a great traveler, serving in Tonking, hard by the Philippines; in Western Africa, where he built a section of the railroad which joins the Senegal River to the Upper Niger; in the Sahara, where he first made a name by capturing Timbuktu; in Madagascar, where, under the late General Gallieni, he fortified a great harbor; but this is his first visit to the New World.

* * *

THE SEVEN BILLION DOLLAR LOAN

BOTH houses of Congress passed without a single negative vote—the House on April 14 by 389 to 0, the Senate on April 17 by 84 to 0—a bill to finance the prosecution of the war against Germany. The bill authorizes the issuance

of bonds to the amount of \$5,000,000,000, of which \$3,000,000,000 will be loaned to the nations comprising the Entente Alliance; also the issuance of Treasury certificates for \$2,000,000,000 ultimately to be met by increased taxation.

The proposed bond issue is the largest in the history of the world. Both the bonds and the certificates are to bear 3½ per cent. interest. Bonds heretofore authorized, but not sold, for the acquisition of the Danish West Indies, the construction of an armor plate and nitrate plant, the Panama Canal, the speeding up of the naval program, the Alaskan Railroad, and the Mexican mobilization, authorized at an interest rate of 3 per cent., are convertible into 3½ per cent. bonds.

Under the terms of the bill the President and the Secretary of the Treasury are unhampered in making a loan of \$3,000,000,000 to the Allies. The securities which the President shall purchase are not stipulated. The President is only to acquire "the obligations of foreign Governments" in an amount not to exceed \$3,000,000,000. The obligations of the foreign countries are to be taken at par. Payment of the Treasury certificates will be provided for by new stamp and increased income taxes; also by increased taxes on profits and new customs duties on imports now on the free list.

* * *

THE MILITARY SERVICE BILL

THERE was some hesitancy manifested in Congress over accepting the recommendation of the President for an obligatory army service bill. The Military Committee of the House at the first test vote subordinated the selective draft provision to a call for volunteers. Later, however, the President and Secretary of War renewed their arguments and with such force that it was generally agreed that the opposition had capitulated and that Congress would pass a selective draft bill, operative when the President finds volunteering insufficient, as follows:

First call, eligible men between the ages of 21 and 25; second call, 26 to 32; third call, 33 to 40.

On April 17 it was announced that army enlistments were averaging 1,434 men a day; and that the naval enlisted strength had reached 71,696 of the authorized strength of 87,500.

* * *

THE VIRGIN ISLANDS

ON March 31 the transfer of the Danish West Indies to the United States was finally completed after half a century of effort. The Danish Minister, Mr. Brun, received a Treasury warrant on that day for \$25,000,000 and wireless messages were sent to the Danish and American authorities in the islands to lower the Danish flag and raise the Stars and Stripes. "By giving you this warrant," Secretary Lansing is reported to have said, "I will save you the trouble of transporting forty-eight tons of gold."

The area of the islands is 138 square miles; the population in 1911 was 27,086, of whom large numbers are free negroes engaged in the cultivation of sugar cane. The name, the Virgin Islands, of which St. Croix, St. Thomas, and St. John are the chief, is neither new nor altogether distinctive, since a group of contiguous islets, of which Tortola, Virgin Gorda, Anagada, and Jest-Van-Dykes are the chief, have long borne, and still bear, the title of the British Virgin Islands, while Crab Island, one of the same group, already belongs to the United States. Rear Admiral James H. Oliver, Chief of Naval Intelligence at the Navy Department, assumed the duties of Governor at St. Thomas, having been appointed by Secretary Daniels. He will serve until a permanent Government has been determined upon by Congress, and in the meantime local laws will be administered.

It is noted as an interesting coincidence that Alaska was purchased by the United States from Russia just fifty years and one day before the final transfer of the Danish West Indies, the purchase price having been \$7,200,000, or less than a third of what has now been paid for the

tiny Virgin Islands. Alaska has produced gold valued at more than \$250,000,000, and has paid for itself a hundredfold.

* * *

RELIGIOUS LIBERTY IN RUSSIA

UNDER the imperial rule, with the exception of restraints laid on the Jews, all religions might be freely professed within the Russian Empire, which includes 14,000,000 Mohammedans, about 450,000 Buddhists, and about 300,000 Pagans, largely in Northern Siberia. There are also 11,500,000 Roman Catholics, largely in Poland, and 3,500,000 Lutherans, in the Baltic Provinces. All these confessions have hitherto enjoyed freedom of profession and worship. On two sections of the population restrictions have borne heavily: on the Jews, numbering 5,200,000, and on Dissenters from the Orthodox Church, who, it is estimated, number more than 12,000,000. The restrictions on the Jews were largely a survival of the time when they were subject to Poland; laws were passed confining them to the regions they then occupied, and restricting the numbers who might inhabit Russian towns, study at Russian universities, practice professions, and so forth. All these restrictions have been removed.

A further measure of liberation applies to the Orthodox Church, which was formerly subject to the control of the Emperor. The Emperor, through the Procurator of the Synod, appointed all Archbishops and Bishops, though the Bishops had the privilege of proposing candidates. The new Government will leave the appointment of all Church officials in the hands of the Church, which, as a body, gave its formal adherence to the new order in the opening days of the revolution.

Those who will now enjoy greatly increased religious liberty in Russia are, therefore, in order of numbers, first the Orthodox Church, which wins self-government; next, the Dissenters from the Orthodox Church; and, thirdly, the Jews, to whom all positions and professions in the State are now open on equal terms with all other Russians.

NEW FIGURES IN RUSSIAN LIFE

THE first step in the Russian revolution was taken in 1905, when, on Aug. 6, an elective body of representatives of the people was created, with the name of the State's Duma. On Oct. 17 the Duma was given wider legislative powers; inviolability of the person, freedom of conscience, speech, assembly and association were guaranteed, and the Council of the Empire, transformed into a Legislative Council, was associated with the Duma as an upper house of the Legislature. The First and Second Dumas sat for only a few weeks each; the Third Duma completed its term of five years; the Fourth Duma was elected in November, 1912. In the Third and Fourth Dumas the men who accomplished the Russian revolution gained their administrative training and at the same time won the confidence of the Russian people.

M. V. Rodzianko, now President of the Duma, has attained high distinction as a leader in the liberal movement. Paul Milukoff, Secretary of Foreign Affairs, is the parliamentary leader of the Constitutional Democratic Party, which has fifty-five representatives in the Fourth Duma. He is widely known in the United States. Gutchkoff, the new Minister of War, and Kerensky, the Minister of Justice, are also tested parliamentarians. Prince Lvoff, the new Premier, was already widely known before the revolution as the head of the National Union of Zemstvos, which bear some resemblance to American State Legislatures, and which had formed a close organization among themselves to provide food, clothing and, to a large degree, munitions, for the active army. In this way the whole machinery of the new Russia was already in existence, first in the Duma and then in the Union of Zemstvos.

* * *

RELEASE OF THE SIBERIAN EXILES

THE return of thousands of political exiles from Siberia was one of the most dramatic aspects of the Russian revolution. This great act of liberation restored to Russia many of her ablest and most devoted men and women, who had worked, in their own way, for the

ends which the revolution accomplished. Among these exiles, Catharine Breshkovskaya, who has spent the greater part of a long life in exile, and who has recently been enthusiastically fêted at the capital, is, perhaps, the most picturesque figure. Vera Zassulitch, whose activities date back to the days of the Terrorists who assassinated Alexander II. on the eve of his granting Russia a Constitution in 1881, is also universally known, in part from the writings of "Stepniak," the historian of the earlier revolutionists, a close friend of William Morris and of Prince Peter Kropotkin. Kropotkin also has returned to Russia after a long exile, passed for the most part in England, but including visits to the United States and France; as a philosophical biologist he gained universal recognition, laying particular stress on the principle of co-operation throughout nature.

* * *

DIFFICULTIES IN RUSSIA'S PATH

THAT serious obstacles lie in the path of the new Government in Russia was indicated by the imprisonment of the editor of the Socialist newspaper Pravda, "Truth," for lending himself to pro-German intrigue, counseling the soldiers to throw down their arms, to make peace without delay, and to enter on the "social revolution," which would bring them unimagined prosperity. The new intrigue set on foot in April by Germany, of which the German Socialist Deputy Scheidemann is the instrument, to involve Russian Socialists in peace negotiations at Copenhagen, further shows that the agents of the Kaiser, the instant that they saw that intrigue through the Russian Court was blocked by the revolution, turned their attention to the Russian Socialists. It is a second revelation of the same danger of which the Provisional Government is acutely conscious. Peasant risings in Samara, demanding immediate division of all land, are symptoms of a similar menace. A partial satisfaction of this demand will be reached by the distribution of the imperial domain, consisting of more than a million square miles, an area equal to the United Kingdom, France, Spain, Holland,

Belgium, Denmark, Austria and Hungary; but there will still remain the menace of the Extremists, possibly reinforced by returned Siberian exiles, many of whom are philosophical anarchists.

* * *

THE KAISER AND THE GERMAN EMPIRE

ACCORDING to the Constitution of the German Empire, dated April 16, 1871, the supreme direction of the military and political affairs of the empire is vested in the King of Prussia, who, as German Emperor, "represents the empire internationally," and can declare war if defensive, and make peace, as well as enter into treaties with other nations, and appoint and receive Ambassadors. But when war is not merely defensive the Kaiser must have the consent of the Bundesrat, or Federal Council. In this Federal Council of sixty-one members the Kingdom of Prussia has seventeen members; the Kingdoms of Bavaria, Saxony, and Württemberg have together fourteen, six Grand Duchies have eleven, five Duchies have six, seven Principalities have seven, three free towns—Lübeck, Bremen, Hamburg—have one each, Alsace-Lorraine has three.

In the Reichstag, of 397 Deputies, Prussia has 236. In sharp contrast with the Prussian system, the Deputies are elected by universal manhood suffrage, with the result that, in the present Reichstag, there are 107 Socialists, ninety-one Centrists, ninety Liberals and Radicals, forty-four Conservatives, twenty-seven members of the German Party, eighteen Poles, and twenty Independents.

In the army Prussia greatly outweighs all the rest of the empire, providing sixteen of the twenty-five army corps, as against three for Bavaria, two for Saxony, one for Württemberg, two for Alsace-Lorraine, while there is also one corps of Prussian Guards. Under the Constitution of 1871, the whole of the land forces of the empire form a united army, under the orders of the Emperor, whom all troops are bound by the Constitution to obey conditionally. The Emperor is, therefore, responsible for every order given to any part of the German Army.

THE CONSTITUTION AND GOVERNMENT OF PRUSSIA

KAISER WILHELM, as King of Prussia, has given an undertaking to reform the Prussian Constitution at the end of the war. Under the present fundamental laws, the whole of the executive and much of the legislative authority is vested in the King, who appoints all Ministers by royal decree. The King's power in the executive department is, therefore, absolute. He also possesses the power of veto over all legislation.

The Herrenhaus, the upper house of the Legislature, is closely identified with the King, since Princes of the royal family and of two other branches of the Hohenzollerns are members, as are the heads of sixteen princely families and of the nobility formed by the King, with a number of life peers chosen by the King, who may further nominate an unlimited number of members for life, or for shorter periods. The King thus has it in his power to insure a majority for any measure he may wish passed in the Herrenhaus. The lower house has 443 members, elected indirectly, as follows: The indirect electors are divided into three classes: The first consists of all electors who pay the highest taxes, to the amount of one-third of the whole; the second, of those who pay the next highest amount, down to the limits of the second one-third; the third, of all who pay the lowest taxes. The indirect electors choose electors, who choose the representatives.

Under this system, which secures control to a wealthy minority, there were elected, in 1913, 202 Conservatives, 216 Centrists, Liberals and Progressives, 10 Socialists, and 15 others.

* * *

A WORLD SHORTAGE OF WHEAT

PRESIDENT WILSON, in his proclamation of April 16, drew attention to the fact that the United States will in the coming year be called upon not only to feed its own people and army, but also to make very large contributions to the feeding of England, France, and Italy; Russia, as a great wheat growing country, being probably able to feed itself. It is estimated that, in part owing

to the destruction by frost of large areas of Winter wheat, the United States will this year produce less wheat than in average years by at least 26,000,000 bushels, though a part of this may be made up by Spring sowing over the frost-killed areas. The whole of Canada's coming supply of wheat has already been bought by the British Government, Canada having produced in 1915 336,258,000 bushels of wheat, one-fifth of which came into the United States.

Certain causes have contributed to bring about this world-wide wheat shortage, such as the large amount of wheat and other foods destroyed by German submarines, the lack of tonnage to bring wheat to England from Australia, the unwillingness of the Argentine Republic to sell wheat to England, the closing of the Black Sea route, by which Russia's vast surplus normally reaches the rest of the world, the destruction of immense quantities of wheat during the devastation of Rumania. France faces a deficit of 127,000,000 bushels of wheat in the coming year, in part due to the lack of field labor, while the aggregate deficit of the Entente Allies for the coming year has been placed at from 190,000,000 to 216,000,000 bushels.

Two ways of meeting this deficit have been suggested, besides wider cultivation—the saving of the large percentage of wheat lost in turning it into white flour, and the cessation of brewing and distilling, thus turning millions of bushels into bread instead of liquor.

* * *

NIGHT PLOWING IN ENGLAND

EXTRAORDINARY measures have been adopted in England to meet the threatened shortage of food resulting from the submarine warfare on commerce. Two of the most picturesque of these new methods are the universal application of Sunday labor and the hastening of work on the farms by supplementing day labor by night shifts. Powerful motor tractors have taken the place of the older steam plows, already largely used in England; and these new motor-tractor plows are provided with acetylene headlights such as are used on automo-

biles at night. On one farm a motor tractor working continuously for five days and four nights plowed a tract of forty-two acres, about equal to one-sixteenth of a square mile. To cover the same tract with a horse plow would, it is estimated, have taken fifty-six days, more than ten times as long; while the motor tractor plow, working only eight hours a day, would have taken twelve days to complete the work. On the darkest nights two acetylene lamps are used; on moonlight nights no artificial light is needed. The plow cuts four furrows at once, like the American "gang plow," and the men work in five-hour shifts, with an interval of an hour between two shifts for oiling and adjusting the tractor.

* * *

BRITISH WAR PENSIONS

THE schedule of the new War Pension Grants of the British Government are as follows, the rate being the maximum weekly allowance:

Disabled soldier, including children's allowance	\$18.75
Widow with children.....	9.37½
Parent or guardian.....	3.75
Other dependents	1.25

It is estimated that the annual charge on the pension account in 1918-19 will be \$125,000,000. The following are the allowances for the children of a totally disabled man:

First child	\$1.25
Second child	1.12½
Third child80
For each child after the third.....	.62½

These payments are to be continued beyond the age of 16 in the case of apprentices receiving not more than nominal wages, or of children being educated at secondary schools, and may be granted or continued between the ages of 16 and 21 in the case of a child incapable through mental or physical infirmity of earning a living, provided the infirmity existed before the child attained the age of 16. Provision is also made for an alternative compensation to make up the deficit subject to a maximum of \$12.50 a week, plus half of any earnings prior to the war between \$12.50 and \$25 a week.

In the case of slight injuries a gratuity averaging from \$500 to \$1,000 is granted

in place of a pension. Widows are to be given half what would have been awarded to their deceased husbands had they been disabled in the highest degree. In the case of a private soldier this means \$3.87 a week. Allowances to widows are:

For the first child.....	\$1.25
For the second child.....	1.12½
For the third child.....	.90
For each child after the third.....	.62½

The widow of a private with 8 children will get \$9.80 a week. "Unmarried wives" with dependent children are to get \$2.50 a week and children's allowances. If the unmarried wife has no dependent children she is to get \$2.50 a week for the period of the war and twelve months afterward. It is provided that a parent shall receive up to the amount of pre-war dependents of one or more sons within a total of \$3.75 a week.

GERMAN RULE IN RUMANIA

A DISPATCH from Jassy, the temporary capital of Rumania, reveals the first news of Rumanian affairs that has been permitted to leak out since the occupation of that country by the Germans. The dispatch is dated March 28, 1917, and says that in all parts of Rumania women, old and young, have been arrested on the pretext of being related to members of the Government. Elderly magistrates and doctors are also among those who have been seized and imprisoned. The majority are being sent to Bulgaria and Turkey. Among those arrested is the mother of the Prime Minister. The situation in the country districts, where the population is kept in a state of terror by robberies, fires, and incessant requisitions, systematically carried out, is worse than that in the towns.

A dispatch from Zurich dated March 26 says that approximately 1,100 Rumanians of Transylvania have been sentenced by Austro-Hungarian courts-martial to terms of penal servitude varying from thirty years to three years. The entire property of more than 600 Rumanians of Transylvania has been confiscated by the Hungarian Government. Practically all these victims of Hungarian persecution were Rumanians of position and education.

Among those condemned to death and

executed was a priest, Father David Pope; the former sub-prefect of Kronstadt, M. Constantine Bojta; M. Yovan Koman, a professor; M. Romulus Kristelgan, headmaster of the school at Kronstadt; M. Pompilius Dan, a private tutor; Dr. Zacharius Mountean, advocate; M. Victor Pope, chemist; Father Koman Baka, a priest, and Dr. Nicholas Hamzea, physician—all of Kronstadt. Among other victims condemned to death and executed were practically all the principal Rumanian Intellectuals of Klausenburg.

VAST QUANTITIES OF SUPPLIES

H. W. FORSTER, official Secretary of the British War Office, in moving the war estimates made some interesting statements to Parliament regarding the prodigious operations in equipping an army. As an illustration, he said, at the beginning of the war it was difficult to obtain horseshoes, which were procured from Canada and the United States, hence village blacksmiths were organized to make hand-made shoes. This output, at first, was 50,000 pairs a month; it is now 1,500,000. To illustrate the scale upon which supplies were required, he states that the War Office had to provide:

Gas helmets	25,000,000
Sand bags for the Allies.....	250,000,000
Khaki cloth, yards.....	105,000,000
Flannel, yards	115,000,000

The khaki cloth and flannel together measured 111,000 miles, enough to go four and a half times around the earth at the Equator. Another interesting statement was that the typhoid fever cases were fifteen times higher among those who had not been inoculated than among the inoculated, and the death ratio seventy times higher among those not inoculated.

FIGHTING A BILLION ENEMIES

OMITTING China, which is giving every indication of an intention to enter the war on the side of the Allies, the Central Powers, with a population of 157,878,000, are at war with fourteen nations totaling a population of 1,003,681,000. This vast number is divided as follows:

ENTENTE-AMERICAN ALLIES

Country.	Area (Sq. Miles.)	Population.
United States	3,627,557	101,740,000
Philippines	115,026	8,643,000
Great Britain	121,316	46,407,000
British possessions	12,660,460	388,036,000
France	207,129	39,700,000
French colonies ...	3,998,713	49,725,000
Russia	8,361,708	174,100,000
Finland	144,249	3,197,000
Italy	110,688	35,598,000
Italian colonies	458,162	1,450,000
Japan, including For- mosa and Chosen...	245,641	72,818,000
Belgium	11,373	7,658,000
Belgian Congo	913,127	20,000,000
Portugal	35,499	5,958,000
Portuguese colonies.	808,107	9,280,000
Rumania	53,934	7,508,000
Serbia	33,107	4,622,000
Montenegro	5,475	435,000
Cuba	45,881	2,469,000
Panama	32,330	337,000
Brazil	3,292,000	24,000,000

Total 34,282,082 1,003,681,000

CENTRAL POWERS

Germany	209,793	68,059,000
German colonies	1,026,022	12,287,000
Austria-Hungary	261,023	51,505,000
Turkey	682,239	21,274,000
Bulgaria	44,056	4,753,000

Total 2,223,133 157,878,000

* * *

THE \$5,000,000,000 bond issue authorized by Congress in April amounts to about one-tenth of the national income of the United States last year, as is shown by the following statistics of the financial strength of the country:

Annual national income.....	\$50,000,000,000
Total bank resources.....	35,000,000,000
Individual deposits	24,000,000,000
Cash held by the banks.....	2,500,000,000
Total gold stock in the country.	3,000,000,000
Available additional commercial credits on basis of present cash holdings	6,000,000,000

A BRITISH WAR MUSEUM

A COMMITTEE has been formed by authority of Parliament to establish a national war museum. The idea is to reconstruct for future generations the story of the British share in the war. The chief categories of exhibits will be relics and records. There will be separate departments to illustrate the work of the sailors, soldiers, and munition workers. The nucleus of these collections is already in the hands of the Admiralty,

the War Office, and the Ministry of Munitions. The aim will be to include examples of the following:

1. Material used by the British forces—guns, rifles, bayonets, trench weapons, tanks, submarines, &c.
2. Trophies captured from the enemy.
3. Souvenirs found on the battlefield.
4. New inventions employed in munition works at home.
5. Literature of the war—books, trench magazines, &c.
6. Maps of the war.
7. Music of the war—trench tunes, marching songs, &c.
8. Art of the war, including trench drawings.
9. Placards issued by the Government for recruiting, economy, &c.
10. Medals and decorations.
11. Autograph letters by distinguished actors in the war.
12. Civilian souvenirs, such as "flag-day" relics.

* * *

THE effect of the entry of the United States on the side of the Allies is shown by the following changes in foreign exchanges as quoted on April 12: Sterling, 4.76%, against 4.73 9-16 low in 1916, and 4.50 low in 1915; Francs, 5.70%, against 6.08½ low in 1916, 6.02 low in 1915. Italian lire rose 24 points in the week ending April 12, 1917. Rubles rose 20 points.

* * *

THE FOREIGN-BORN POPULATION OF THE UNITED STATES

THE number of citizens of foreign birth in the United States in 1917 is 14,500,000, while 20,500,000 native Americans have either a foreign-born father or a foreign-born mother, and 14,000,000 had both parents born abroad. Of the total 100,000,000 population of the United States 54,000,000 are of native white ancestry. Since the foundation of the Government the total immigration to the United States from Great Britain has been 4,000,000; from Germany, 6,000,000; from Ireland, 4,000,000; from Scandinavia, 2,000,000. Up to 1890, before the heavy influx began from Russia and Italy, the total immigration to the United States was 15,689,000, of

which one-third was German. After 1890, of the 17,000,000 immigrants only 1,023,000 were Germans.

The following tables compiled by the Geographic Magazine convey an idea of the distribution of the larger groups of foreign-born citizens:

CANADIANS

Massachusetts	300,000
Michigan	190,000
New York	125,000
Maine	75,000
New Hampshire	55,000
Illinois	50,000
California	50,000
Total in United States	1,164,000

ITALIANS

New York	470,000
Pennsylvania	190,000
New Jersey	115,000
Massachusetts	90,000
Illinois	75,000
California	60,000
Connecticut	55,000
Ohio	40,000
Total in United States	1,335,000

AUSTRO-HUNGARIANS

Pennsylvania	375,000
New York	360,000
Illinois	200,000
Ohio	160,000
New Jersey	100,000
Wisconsin	40,000
Minnesota	38,000
Michigan	38,000
Connecticut	37,000
Total in United States	1,680,000

ENGLISH, SCOTCH, WELSH

New York	195,000
Pennsylvania	170,000
Massachusetts	125,000
Illinois	90,000
New Jersey	65,000
California	60,000
Ohio	60,000
Michigan	55,000
Total in United States	1,145,000

GERMANS

New York	430,000
Illinois	325,000
Wisconsin	235,000
Pennsylvania	210,000
Ohio	190,000
Michigan	125,000
New Jersey	115,000
Minnesota	95,000
Iowa	85,000
Missouri	80,000
California	75,000
Indiana	70,000
Nebraska	70,000
Texas	60,000
Maryland	50,000
Kansas	45,000
Total in United States	2,640,000

RUSSIANS AND FINNS

New York	560,000
Pennsylvania	260,000
Illinois	150,000
Massachusetts	130,000
New Jersey	95,000
Michigan	70,000
Connecticut	55,000
Ohio	55,000
Minnesota	40,000
Wisconsin	35,000
North Dakota	35,000
Total in United States	1,669,000

IRISH

New York	370,000
Massachusetts	225,000
Pennsylvania	160,000
Illinois	90,000
New Jersey	85,000
Connecticut	55,000
California	50,000
Ohio	40,000
Rhode Island	35,000
Missouri	30,000
Total in United States	1,330,000

SCANDINAVIANS

Minnesota	240,000
Illinois	165,000
Wisconsin	95,000
New York	90,000
Washington	70,000
Iowa	70,000
North Dakota	70,000
California	50,000
Massachusetts	50,000
Michigan	37,000
Nebraska	37,000
South Dakota	35,000
Total in United States	1,209,000

In the omitted States the number of foreign-born citizens in the foregoing classifications is fairly proportional, ranging from 30,000 in the more populous States to 4,000 or 5,000 in the Southern and smaller States. The foreign-born seem to prefer urban life, as 23,000,000 out of 35,000,000 live in cities. Only one-fifth of the population of New York and Chicago is of native white ancestry. Less than a third of the populations of Boston, Cleveland, Pittsburgh, Detroit, Buffalo, San Francisco, Milwaukee, Newark, Minneapolis, Jersey City, Providence, St. Paul, Worcester, Scranton, Paterson, Fall River, Lowell, Cambridge, and Bridgeport are of native ancestry.

Though the foreign-born constitute one-seventh of the nation, nearly one-fourth of the arm-bearing strength of the country is represented in this class.

The Battle of Arras

Scenes of Infernal Splendor on the First Day of the New British Offensive

By Philip Gibbs

[Published by arrangement with The London Chronicle]

At dawn on Easter Monday, April 9, 1917, the British armies began a tremendous offensive on a wide front between Lens and St. Quentin, including Vimy Ridge, that great, grim hill which dominates the plain of Douai and the coal fields of Lens and the German positions around Arras. Philip Gibbs has depicted the terrors of that first day's fighting in the following memorable description:

TODAY began another titanic conflict which the world will hold its breath to watch because of all that hangs upon it. I have seen the fury of this beginning and all the sky on fire with it, the most tragic and frightful sight that men have ever seen, with infernal splendor beyond words. The bombardment which went before the infantry assault lasted several days, and reached a great height yesterday. When coming from the south I saw it for the first time. Those of us who knew what would happen today—the beginning of another series of battles, greater perhaps than the struggle of the Somme—found ourselves yesterday filled with tense, restless emotion. Some of us smiled with a kind of tragic irony because it was Easter Sunday. In the little village behind the battle lines the bells of the French churches were ringing gladly because the Lord had risen, and on the altar steps priests were reciting splendid words of faith—"Resurrexi et adhuc et cum sum, Alleluia."

The earth was glad yesterday. For the first time this year the sun had a touch of warmth in it—although patches of snow still stayed white under the shelter of banks—and the sky was blue and the light glinted on wet tree trunks and in furrows of new plowed earth.

As I went up the road to the battle lines, I passed a battalion of British

troops, who are fighting today, standing in a hollow square with bowed heads while the chaplain conducted the Easter service. It was Easter Sunday, but no truce of God. I went to a field outside Arras and looked into the ruins of the cathedral city. The cathedral itself stood clear in the sunlight, with a deep black shadow where its roof and aisles had been. Beyond was a ragged pinnacle of stone, once the glorious Town Hall, and the French barracks and all the broken streets going out to the Cambrai road. It was hell in Arras, though Easter Sunday. The enemy was flinging high explosives into the city, and clouds of shrapnel burst above black and green. All around the country, too, his shells were exploding in a scattered, aimless way. From the British side there was a great bombardment all along Vimy Ridge, above Neuville St. Vaast and sweeping around St. Nicholas and Blangy, two suburbs of Arras, and then southwest of the city on the ridge above the road to Cambrai. It was one continuous roar of death, and all the batteries were firing steadily. I watched the shells burst, and some of them were monsters, rising in great, lingering clouds above the German lines.

There was one figure in this landscape of war who made some officers about me laugh. He was a French plowman who upholds the traditions of war. Zola saw him in 1870. I have seen him on the edge of another battlefield, and here he was again, driving a pair of sturdy horses and his plow across the sloping field, not a furlong away from a village where German shells were raising a rosy cloud of brick dust. So he gave praise to the Lord on Easter morning and prepared for the harvests which shall be gathered after the war.

Scenes Behind the Front

All behind the front of battle there was great traffic. All that modern warfare means in organization and in preparation for the enormous operation was here in movement. I had just come from the British outpost lines down south, from the silence of that great desert which the enemy has left in the wake of his retreat east of Bapaume and Péronne, and from that open warfare with village fighting, where small bodies of British infantry and cavalry have been clearing the countryside of rearguard posts. Here round about Arras was concentration for the old form of battle, the attack upon intrenched positions, fortified hills, and great natural fortresses defended by masses as before the battles of the Somme.

For miles on the way in front were great camps, great stores, and restless activity. Everywhere supply columns of food for men and guns moved forward in an endless tide. Transport mules passed in long trails, field batteries went up to add to the mass of metal ready to pour fire upon the German lines. It was a vast circus of the world's great war, and everything that belongs to the machinery of killing streamed on and on; columns of ambulances for the rescue, for that other side of the business, came in procession, followed by an army of stretcher bearers—more than I have ever seen before—marching cheerily as though in a pageant. In some of the ambulances were army nurses, and the men marching on the roads waved their hands to them, and they laughed and waved back. There were greetings which made one's heart go soft awhile. In the fields by the roadside men were resting, lying on the wet earth between two spells of long marching, or encamped in rest—the same kind of men whom I saw on July 1 of last year, some of them the same men, clean shaven, gray eyed, so young and so splendid to see. Some of them sat between their stacked rifles writing letters home, and the tide of traffic passed them and flowed on to the edge of the battlefields where today they are fighting.

I went up in the darkness, long before

light broke today, to see the opening of the battle. The roads were quiet until I drew near to Arras, and then onward there was the traffic of marching men going up to the fighting lines.

In the darkness there were hundreds of little red lights, the glow of cigarette ends. Outside one camp a battalion was marching away, and on the bank above them the band was playing them out with fifes and drums. On each side of me as I passed by the men were densely massed, and they were whistling and singing and calling out jests and gibes—wonderful lads that they are. Away before them were the fires of death, to which they were going very steadily, with a tune on their lips, carrying rifles and shovels and iron rations, while the rain played a tattoo on their steel hats.

I went to a place a little outside of Arras on the west side. It was not quite dark because there was a kind of suffused light from the hidden moon so I could see the black mass of the cathedral city, the storm centre of this battle, and away behind me, to the left, the tall broken towers of Mount St. Eloi, white and ghostly, looking across to Vimy Ridge. The bombardment was now in full blast. All the British batteries, too many to count, were firing, a thousand gun flashes winking and blinking from hollows and hiding places.

All their shells were rushing through the sky as though flocks of great birds were in flight, and all were bursting over the German positions with long flames which rent the darkness and waved sword blades of quivering light along the ridges. The earth opened and great pools of red fire gushed out. Star shells burst magnificently, pouring down a golden rain.

Mines were exploded east and west of Arras and in the wide sweep from Vimy Ridge to Blangy southward, and voluminous clouds, all bright with the glory of infernal fire, rolled up to the sky. The wind blew strongly across, beating back the noise of the guns, but the air was all filled with the deep roar and slamming knocks of single heavies and the drumfire of the field guns.

The first attack was at 5:30. A few

minutes before 5:30 the guns almost ceased fire, so that there was a strange, solemn hush. We waited and our pulses beat faster than the second hands.

"They're away!" said a voice by my side. The bombardment broke out again with new and enormous effects of fire and sound. The enemy was shelling Arras heavily, and black shrapnel and high explosives came over from his lines, but the British gunfire was twenty times as great.

Around the whole sweep of his lines green lights rose. They were signals of distress and his men were calling for help. It was dawn now, but clouded and stormswept. A few airmen came out with the wind tearing at their wings, but they could see nothing in the mist and driven rain.

I went down to the outer ramparts of Arras. The eastern suburb of Blangy seemed already in British hands. On the higher ground beyond the British were fighting forward. I saw two waves of infantry advancing against the enemy's trenches. Protected by the barrage of field guns, they went in a slow, leisurely way, not hurried, although the enemy's shrapnel was searching for them.

"Grand fellows," said an officer lying next to me on the wet slope. "Oh, topping!"

Fifteen minutes afterward some men came back. They were British wounded and German prisoners. I met the first of these walking wounded. Afterward they were met on the roadside by medical officers who patched them up there and then before they were taken to the field hospitals in the ambulances.

From these men wounded by shrapnel and machine gun bullets I heard the first news of the progress. They were bloody and exhausted, but they claimed success. * * *

Advance of Four Miles

The British swept the Germans out of Arras and went on stolidly through the enemy's trench system to Feuchy, in the marshes below the River Scarpe, four

miles east of Arras. The enemy was afraid of an attack, and in the night had withdrawn all but rearguard posts to trenches further back, where he resisted fiercely.

The enemy's trench system south of Arras was enormously strong, but the British bombardment had pounded it, and the infantry went through without much loss to the reserve support trench, and then on to a chain of posts in front of Harvest trench, which was strongly held, and, after heavy fighting with bombs and bayonets, to Observatory Ridge, from which for two years and a half the enemy looked down, directing the fire of his batteries against the French and British positions.

South of Tilloy there were two formidable positions, called the Harp and Telegraph Hill, the former being a fortress of trenches shaped like an Irish harp, the latter rising to a high mound. These were taken with the help of tanks, which advanced upon them in their leisurely way, climbed up the banks and over the parapets, sitting for a while to rest, and then waddling forward again, shaking machine gun bullets from their steel flanks and pouring a deadly fire into the enemy's position, and so mastering the ground.

North of the Scarpe—that is, north-east of Arras—the whole system of trenches was taken as far as the Maison Blanche Wood, and north again along Vimy Ridge the Canadians achieved a heroic success by gaining this high, dominating ground, which was the scene of some of the fiercest French battles in the first part of the war and which is a great wall defending Douai.

It was reckoned up to noon today that over 3,000 prisoners had been taken. They were streaming down to the prisoners' camps and to the British who pass them on the roads they are the best proof of a victorious day. After the retreat from Bapaume and Péronne, this news should be a thunderbolt in Germany, tearing the scales from the blind and raising anew a cry for peace.

Seven Days' Fighting at Arras

THE well-kept secret of where the British proposed to make a new thrust in the Spring was suddenly disclosed on the morning of Easter Monday, April 9. It was an offensive along a front of forty-five miles, having for its immediate objective Lens at one end and St. Quentin at the other. This is the struggle which has become known as the battle of Arras, although at the end of seven days' fighting the scene has shifted considerably to the east of the city which has given its name to the battle. The Hindenburg line, on which the Germans were relying when they fell back from the Somme, was pierced within a week, leaving them in the awkward position of having to form a new defensive line without adequate preparation.

The bombardment of the German positions during the four days preceding the opening of the offensive on April 9 was as intense and as sustained as the artillery fire before and during the other great battles on the western front. Eyewitnesses even declare that it has been more concentrated and destructive than at the Somme and Verdun. The British guns were very numerous, of great calibre, and supplied with such vast quantities of ammunition that their "curtains of fire" were terrible realities.

Fierce Aerial Fighting

The battle of Arras has eclipsed all previous battles in aerial operations. During the four days before the battle began British airplanes literally swarmed in the sky, and the fighting in the air was on far the largest scale up to date. The German aviators were outnumbered many times over. Throughout the battle the British airplanes were constantly active despite the most unfavorable weather conditions, with snow, sleet, bitterly cold wind, and rain. The whole week's fighting was carried out, not in pleasant April sunshine, but in wintry weather which added its own gloom to the horrors of war.

The principal object of the aviators was to photograph the enemy's new positions, and, incidentally, to bombard strategic points behind the German front.

Other squadrons, protecting those whose business was reconnoitring and observation, also went up for fighting purposes only. Duels, skirmishes, and engagements of all kinds took place between the British and German airplanes for the mastery of the air. In the numerous fights that ensued, the British, according to their own reports, had twenty-eight machines missing, most of them shot down behind the enemy's lines. According to the German reports, the number of British airplanes destroyed was forty-four. On the other hand, the Germans lost fifteen airplanes and ten balloons, while the British drove to the ground thirty-one additional machines, which, according to Sir Douglas Haig's report on April 7, "must have been totally destroyed." That the British Flying Corps achieved its purpose was indicated by the statement that large tracts of the enemy's country for many miles in the rear had been photographed, over 1,700 photographs having been taken behind the lines.

The bombarding squadrons also were successful. Seventeen raids were carried out, and over eight tons of bombs were dropped on enemy aerodromes, ammunition depots, and railroads. The air fighting was wholly over enemy territory, and in one instance the British airmen penetrated fifty miles behind the German lines. The British established beyond question their supremacy in the air by reason of the much larger number of machines at their disposal and the greater dash and resourcefulness of their aviators.

Beginning of British Offensive

The British opened the battle on April 9 with a terrific offensive on a twelve-mile front north and south of Arras, penetrating the German positions to a depth of from two to three miles and capturing many important fortified points, including the famous Vimy Ridge, where the Canadians led the attack. In this first onset nearly 6,000 prisoners, mostly Bavarians, Württembergers, and Hamburgers, were taken, as well as large quantities of artillery and war material.

The line of advance extended from Givenchy-en-Gohelle, southwest of Lens, to Henin-sur-Cojeul, (the village of Henin on the Cojeul River,) southeast of Arras. All the fighting was against dominating positions on high ground, some of which had been held by the Germans for two years and were protected by wide belts of barbed wire.

The capture of Vimy Ridge was particularly important, because it protects the French coal fields lying to the eastward. Along the greater part of the front the advance of the British infantry was strenuously opposed. Near Arras the Germans made a determined stand. The famous redoubt known as the Harp was captured with virtually the whole German battalion defending it. Several "tanks" figured in this operation. Along the railroad running through the valley of the Scarpe the British made good progress, while on the Lens branch of the line they captured Maison Blanche Wood.

The first day of the battle ended with the British having accomplished their most successful day's work on the western front since the beginning of the war. The attack had hit the hinge of the recent German retreat from Arras to the Aisne and upset the plans of the German General Staff, who had expected the offensive to be renewed in the valley of the Somme. The capture of Vimy shifted the pivot of the whole German retreat and placed the enemy in a position of danger.

The second day of the battle, April 10, saw the British, despite heavy snowstorms and bitterly cold weather, continuing their advance along the greater part of the twelve-mile front from Givenchy to Henin, capturing many more prisoners and guns, with quantities of all kinds of war material. The infantry pushed forward as far as the outskirts of Monchy-le-Preux, five miles east of Arras, capturing a height protecting Monchy and threatening the entire German line south of the Arras-Cambrai road. Monchy was for a while the central point of interest in the whole world war.

Further north the British captured defenses on both sides of the Scarpe River.

They also took the remaining positions on the northern end of Vimy Ridge, thus clearing it entirely of the enemy, and progressed in the direction of Cambrai and St. Quentin. The northern pivot of the Hindenburg line was now turned. The artillery support for the British infantry attacks was so thorough that casualties were proportionately light. The British artillery also made a record for long-range firing. Aided by information from the aviators, the gunners were able to concentrate their fire on German reinforcements ten miles away and so prevent them from helping to counterattack.

The prisoners, who numbered 11,000 at the end of the second day, were penned up behind barbed wire fences till they could be sent rearward. British troops waiting their turn to go up to the front congregated outside the fences and chatted amicably with those Germans who could speak English, and gave them chocolate and cigarettes. One observer says that all animosity between the soldiers disappeared the moment they were no longer trying to kill one another.

Unusually cold weather for the time of year, with a heavy fall of snow, greatly impeded operations on the third day, April 11. Nevertheless, the British kept on pushing forward and captured the village and heights of Monchy-le-Preux and the neighboring hamlet of La Bergère. Cavalry and a "tank" contributed to the capture of Monchy, one of the key positions between the Scarpe and Sensée Rivers, which the Germans had strongly organized. Fierce fighting took place in the village streets. The Germans fired from the windows and rooftops of houses, and made every effort to hold this vital position. The British made satisfactory progress at other points. They repelled two vigorous counterattacks and pressed forward down the eastern slopes of Vimy Ridge. The chief result at the end of the third day was that the British had been able to consolidate their gains and move forward their artillery.

Germans Beaten Off

On the fourth day of the battle, April 12, the British made substantial progress east of Arras, capturing the villages of

COUNCIL OF NATIONAL DEFENSE AND ITS ADVISORY BOARD

This Council, Which Is Mobilizing the Nation's Resources, Consists of the Cabinet and a Civilian Advisory Board. Seated, Left to Right: Secretaries Houston, Daniels, Baker, Lane, and Wilson; Standing, Left to Right: Grosvenor B. Clarkson, Secretary; Julius Rosenwald, Chairman of Committee on Supplies; Bernard M. Baruch, in Charge of Raw Materials; Daniel Willard, Transportation; Dr. F. H. Martin, Medicine and Sanitation; Dr. Hollis Godfrey, Science and Research; Howard Coffin, Munitions, and W. S. Gifford, Director of the Council.

Wancourt and Heninel to the southeast, some positions north of the Scarpe River, and driving the Germans from their last foothold on Vimy Ridge to the northeast. The work of straightening the new line was continued by clearing the enemy out of a number of "pockets." Monchy remained the central point of the battle. There the British attack and the German defense converged. The German troops were ordered to stop the British advance at all costs, and it was not until large numbers of British field batteries were brought into play that the Germans were definitely beaten off.

On the fifth day, April 13, a new turn was given to the battle of Arras. By a sudden sweep northward from their new positions east of the city the British drove the Germans back on a twelve-mile front, capturing six villages and seriously threatening the important coal-mining centre of Lens. This new line of advance extended from the Scarpe River to Loos, north of Lens. The town of Vimy was captured, as well as Ancre, which, with Lieven, protects Lens from the southwest. The depth of the advance was about a mile. Sir Douglas Haig's bulletin at the end of the day's fighting reported that the number of guns captured during the five days' operations had reached 166, and the aggregate prisoners 13,000. But the most significant statement by the British Commander in Chief was that the British were "astride" the Hindenburg line, which the Germans had believed impregnable.

The Germans were now forced to fall back in the direction of an emergency auxiliary line from Drocourt to Quéant, endeavoring at the same time to complete the new defensive positions on which they were compelled to rely once the Hindenburg line failed them. On April 13 the British also attacked on a wide front west of Le Catelet, from Metz-en-Couture, south of the Bapaume-Cambrai railroad, to north of Hargicourt, a distance of about nine miles.

On the French section of the front during the first five days of the battle there was no attempt at an offensive, the chief business of the French being to keep the Germans occupied while the British were making their great thrust

at the Hindenburg line between Lens and St. Quentin. The French maintained a constant artillery fire between the Somme and the Aisne until the sixth day of the British drive. Then they launched a fierce offensive south of St. Quentin and, despite the desperate resistance by the Germans, succeeded in carrying several lines of trenches between the Somme and the railroad running from St. Quentin to the Oise. This was followed by a vigorous attack in co-operation with the British, who were advancing on the city from the northwest.

The battle of Arras had by the sixth day, April 14, really become the battle of Lens and St. Quentin. The Germans had now brought up large reinforcements to prevent the rolling up of the Hindenburg line, but the British pushed forward unchecked toward both Lens and St. Quentin. In the morning the town of Lievin, southwest of and adjoining Lens, was captured, with considerable quantities of war material. In the afternoon the British seized Cité St. Pierre, northwest of Lens, and advanced along the whole front from the Scarpe River to the south of Loos, and reached points two to three miles east of Vimy Ridge. South of the Scarpe attacks and counterattacks alternated all day. The British made further progress on a wide front north and south of the Bapaume-Cambrai road. At the southern end of the front the British fought their way forward south and east to within a few hundred yards of St. Quentin and carried the village of Fayet at the point of the bayonet. The French to the south of St. Quentin bombarded the German positions in front of the city and between the city and the Oise. At the end of the day's fighting the fall of both Lens and St. Quentin was imminent.

The battle raged with undiminished fury throughout the night and all next day, April 15, when between 4 and 5 in the morning the first British troops entered Lens. The occupation of the district around Lens marked the recovery for France of the country's most valuable coal fields. At the other end of the forty-five-mile line the British had practically won their way into the suburbs of St. Quentin, with the Germans making a stubborn last stand in the city itself.

The Canadians' Achievement On Vimy Ridge

TO the Canadians was given the honor of leading the attack on Vimy Ridge, where last year the French lost thousands of men in an attempt to hold that dominating height. Once before the British gained the crest of the ridge only to have to abandon it under a tremendous concentration of German guns. Throughout the Winter the Canadians held a footing on the ridge below the German lines, but early in the first day of the battle of Arras the Canadians were on top looking down on the plain of Douai. They carried the position with comparatively little fighting and few casualties, pushing from one line to the other in a rapid, methodical manner.

An observer who saw the Canadians set off at dawn to attack the German positions describes them as having gone away cheering and laughing through the mud, which made them look like scarecrows. They followed closely and warily the barrage of the British guns, the most concentrated artillery fire ever seen, and at the end of an hour had taken the first German trenches, including the whole front line system of defense above Neuville St. Vaast, by La Folie Farm and La Folie Wood, and up by Thelus, where they began to encounter serious resistance.

The Germans were intrenched in long, deep tunnels, but when the Canadians once reached the position with fixed bayonets the Germans were glad to surrender and escape from the British artillery fire that had been directed on them. Most of the Germans in the dugouts were made prisoner without even a show of fight. On Vimy Ridge alone the Canadians took more than 2,000 prisoners. By 3 o'clock in the afternoon the Canadians had occupied the whole of Vimy Ridge with the exception of a strongly fortified elevation on the left of Hill 145. Artillery fire which blew the barbed wire entanglements to pieces made the Canadian advance easier. One report described the top of the ridge as having been literally blown off by the

British big guns. Another dispatch, that of The Associated Press staff correspondent, dated April 10, says:

The Canadians did not for a moment underestimate the seriousness of the task before them in taking Vimy. They knew that the artillery had paved the way to success, but were frankly surprised when they saw what the guns had actually done. They found hundreds of Germans holding up their hands over the bodies of their fallen comrades and begging for something to eat. These men said they had been cut off for days from all supplies by the steadiness of the artillery fire. They could not retire, and no relief supply columns from the rear ever reached the neighborhood of where the shells had been falling in continuous showers.

Some of the stronger redoubts, manned by machine-gun detachments, in which were found men of the highest morale in the German Army, resisted for several hours. But, closing around them during the night, the Canadians silenced all resistance.

According to The Toronto Mail and Empire correspondent, Canadian artillery, as well as infantry, helped to take Vimy Ridge. On April 10 he wrote:

The Canadian artillery has played the strongest part which it has yet been called upon to do. The full story will probably show that the Canadian gunners, who have frequently earned special commendation in the final tests before proceeding to France, paved and maintained the way for the storming of the position, which, though much coveted, has hitherto been regarded as almost impregnable.

The military importance of this ridge has made it the centre of fierce struggles during the past two years, the Germans, the French, and the British all having heavy casualties at various times. This time, however, there is reason to believe that the Canadian losses will be moderate.

The capture of 2,000 prisoners by the Canadians is not surprising, as the whole ridge was honeycombed with dugouts, in which the Germans sheltered themselves.

Up to the present moment the great offensive had been held up just at the point below the Canadian lines, which fact caused Vimy Ridge to be styled the "hinge" of the enemy's retreat from the Somme, and the Canadians have been very impatient for the "hinge" to move. I also understand that Canadian cavalry enjoyed more scope in this action.

Anglo-Canadians are rejoicing at the good news, and Sir Robert Borden has sent a congratulatory message to General Byng, who commands the Canadian forces. The

entire press rings with the exploits of the Canadians, as it did at the battle of Ypres, but with more jubilation.

Further light is thrown on the work of the Canadians by the London correspondent of The Canadian Associated Press:

"Before midday one Canadian cage had 500 prisoners," said an informant reaching London today. "One of the first things which happened before daylight was the blowing up of an enemy ammunition dump on Vimy Ridge. The shock was momentarily paralyzing locally, but was a mere incident to what followed. The Canadians waited in the dark, with a cold rain pelting and a bitter wind driving over the desolate ground. The artillery had been pounding away for days, and every shell we sent over had its own particular spot to fall on, for the British airplanes had done wonderful scouting work in preparation for this.

"The scouting work and the artillery fire which followed made possible the results already achieved by our infantry. Our heavy guns were first brought there three days after Christmas. They were put in position in the morning and began firing the same afternoon. They have gone on ever since, so there is some idea of what is meant by artillery preparation.

"There is not the least doubt the results have given every satisfaction, not merely in a spectacular sense, which the mere civilian is able to appreciate, but in the more technical military sense. Competent sober estimates had reckoned that the Canadian divisions could not advance without losing a third of their strength, but this estimate has been entirely falsified. The casualty lists are heavy, but less heavy than any competent estimate imagined. The air service and artillery made this possible."

The Canadian press is able to vouch for the interesting fact that General Byng in the earlier stages of the war, and before he assumed the Canadian command, was in command of the English troops who were then holding the Vimy Ridge line.

At Vimy Ridge for the first time in history the Stars and Stripes appeared on a European battlefield. The story is told in an unofficial dispatch received at Ottawa from the Canadian Army Headquarters in Europe:

To a young Texan who came to Ontario to enlist and who is now lying wounded in the hospital belongs the honor of first carrying

the American flag into battle in the European war, into which the United States, as a belligerent, has just entered. He went up to the assault at Thelus carrying the Stars and Stripes on his bayonet and fell thus.

As soon as King George learned of the first day's fighting he sent the following message to Sir Douglas Haig:

The whole empire will rejoice at the news of yesterday's successful operations. Canada will be proud that the taking of the coveted Vimy Ridge has fallen to the lot of her troops. I heartily congratulate you and all who have taken part in this splendid achievement.

Hill 145 was the only position that gave the Canadians serious trouble. It was an earthen fortress of the first importance, with many underground galleries and concrete emplacements for machine guns. Although isolated on three sides from the German lines, the enemy was difficult to dislodge, and it was not until the night that the Canadians after heavy and costly fighting succeeded in occupying it. The Germans hurried up reinforcements in an attempt to recapture a hill known to the British as the Pimple so as to have a vantage point to retake Hill 145. But the Canadians, on Thursday morning, (April 12,) suddenly launched an attack, and, in spite of fierce machine-gun fire from the German positions, made themselves masters of the hill and occupied the woods through which the Germans delivered their counterattacks.

Thus already in the first week of the great British offensive the Canadians have established their place as an important factor in the battle of Arras, which is still in progress. They took nearly 4,000 prisoners and large quantities of guns and material during their exploits on Vimy Ridge, and have justified their choice for the vital task assigned to them. As the casualty lists indicate, not a few of the men in the Canadian regiments are citizens of the United States who went to Canada to enlist.

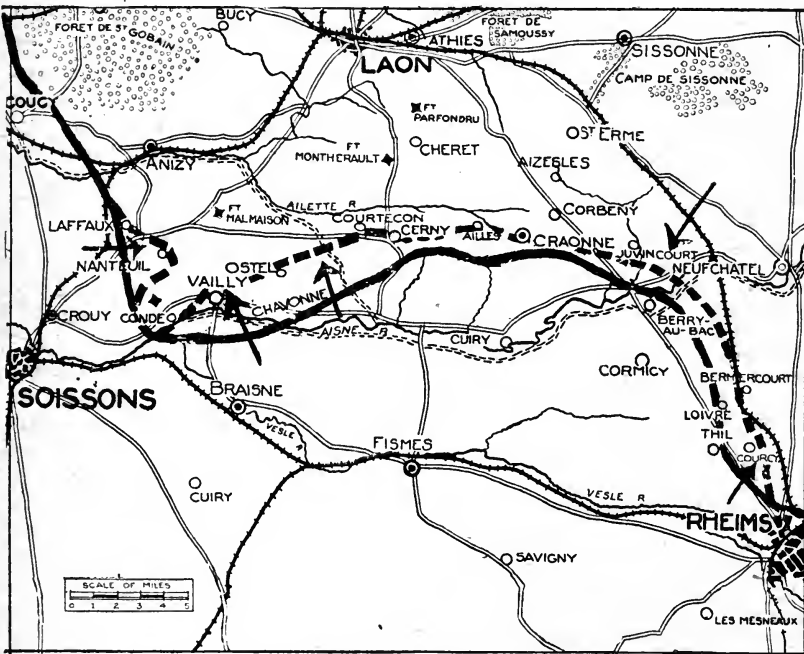

Great French Offensive Near Rheims

THE French on April 17 launched a new offensive which was regarded as the beginning of the most important advance they had made since the war began. For more than thirty months the historic City of Rheims had been a target for German guns, and the beautiful City of Soissons had been likewise in serious peril. The French line ran south from Arras, where it joined the British, to a

along a front of nearly forty miles. The advance on both sides of Rheims made that city a salient full of danger for the Germans, with a probability that they would be forced to withdraw much further from its neighborhood.

In the fighting, which was very bitter along the whole front from Flanders to Alsace, it was estimated that 4,000,000 men were engaged, 2,500,000 Allies and

MAP OF THE FRENCH LINE ON THE AISNE FRONT, APRIL 19, 1917

point on the River Oise near Compiègne, and then ran eastward, passing Soissons, Rheims, and Verdun, to a point almost opposite Metz, and about forty miles west of that famous German fortified city; at that point it ran due south again, to St. Mihiel, and then due west, crossing the Moselle near the German border. The blow struck on April 17 was on an eleven-mile stretch east of Rheims, and on the front between Rheims and Soissons. The French troops proved irresistible, advancing from one to two miles

1,500,000 Germans. It was reported that in the battles of April 14, 15, 16, and 17 over 35,000 German prisoners had been taken by British and French together, and that the German casualties exceeded 150,000; more than 200 guns were captured and an immense amount of booty; fully 800 square miles of French territory were released.

These events seemed on the 20th to be only preliminary to even greater conflicts, perhaps the most critical of the war.

Naval Power in the Present War

By Lieutenant Charles C. Gill

United States Navy

V.—The Submarine

This article is the fifth in a series contributed to CURRENT HISTORY MAGAZINE by Lieutenant Gill of the superdreadnought Oklahoma—with the sanction of the United States Naval Department—for the purpose of deducing the lessons furnished by the naval events of the European war.

SINCE the outbreak of hostilities the submarine has been a conspicuous naval weapon, and German science has developed it with characteristic energy, system, and thoroughness. Early in the war the more powerful allied navies practically swept the seas of all enemy merchant ships and contained the battle fleets of the Central Powers within comparatively narrow limits. Beyond these limits, except for a few raids on commerce by surface cruisers, the naval activities of both Germany and Austria have been restricted to the use of submarines.

Considering the disadvantages inherent in underwater navigation, the results attained have been truly astonishing. In the first days of the war one small German submarine sank three British armored cruisers in less than one hour; since then German and Austrian submarines are estimated to have sunk 230,000 tons* of naval vessels and 3,600,000 tons* of merchant shipping. On Oct. 7, 1916, the U-53 appeared in Newport Harbor, exchanged official calls, read the daily papers, sent dispatches, and departed a few hours after her arrival. The next day a submarine destroyed off Nantucket four British traders and one Dutch trader. A few months ago peaceful Funchal was suddenly bombarded by a German submarine.

The underwater mine layer has become an accomplished fact—it is disturbing to think of this huge mechanical fish secretly threading the ocean high-

ways, laying its engines of destruction. In addition to all these, Captain König has smilingly introduced to us the Deutschland, a successful underwater blockade runner.

With this evidence of accomplishments it is not surprising that the submarine has seized upon the imagination. Nor has Germany, in furthering her ends, failed to take full advantage of the mystery surrounding underwater attack. It has been part of the German war plan to prepare and circulate submarine propaganda designed to strengthen hopes at home, and at the same time break down morale in enemy countries. This has resulted in a somewhat confused perspective; but it is important that the United States should search out the facts, reason to logical conclusions, and take the true measure of the U-boat.

Arm of the Weaker Combatant

The outstanding characteristic of the submarine, as the name indicates, is its ability to navigate below the surface of the water. This enables it to evade the enemy, to make a surprise attack, and to escape by hiding. These faculties are manifestly suitable for the weaker belligerent to use against the stronger enemy. Navies that dominate, that have power to seek and destroy in the open, are not dependent upon abilities to evade and to hide. It is for this reason that allied submarines have found their chief opportunity to strike in sea areas controlled by the fleets of the Central Powers, the Baltic, Dardanelles, and other waters close to Teutonic bases, while German submarines have been active in all other ocean areas within the cruising radius of their U-boats. Since the Allies control practically all the high seas, the

*Even the approximate accuracy of these figures is questionable, because of conflicting reports and the difficulty in determining whether a ship was sunk by a mine or by a torpedo in the instances where neither was seen.

field of the U-boat has been large, while the activities of allied submarines have been confined to the relatively narrow coastal waters controlled by Germany, Austria, and Turkey.

Without depreciating the utility of the submarine, it may be truly said that if the Allies had not possessed a single one they would still, in all probability, have been able to enjoy the incalculable advantages that surface control of the seas has given them. The German submarines, moreover, have not proved effective against enemy battle fleets; and in order to facilitate their commerce-destroying operations they have found it necessary, because of inherent weaknesses, to adopt methods in violation of the laws of civilized warfare. Before going deeper into the uses and limitations of the submarine it might be well to touch briefly upon some of the rules governing its legitimate employment.

Rules of International Law

The purpose of rules regulating ocean-borne intercourse in times of peace and governing both belligerent and neutral conduct in time of war is to carry out practically the principles of the freedom of the seas, and it need hardly be added that these principles are identical with those grounding all rules of right conduct at sea and on shore; namely, principles of liberty, justice, and humanity.

As weapons and other conditions change, new situations arise which may require modifications in these rules; but both in time of peace and in time of war reason calls for a general concurrence of Governments before a modified or new rule can become operative; and any belligerent instituting methods in violation of previously established regulations assumes the burden of proof to show that new conditions compel new rules in order to carry out the never-changing principles of the freedom of the seas.

There is little room for confusion of thought on this point. Unfortunately, however, it is the experience of wartime practice that military necessity and the doctrine of "might makes right" twist these rules into a bewildering tangle. One belligerent breaks a rule and

attempts to justify his conduct. The enemy, as a matter of policy, turns a deaf ear to the arguments in justification, and, seeing only the broken rule, proceeds to retaliate by breaking another rule on the ground that military necessity forces him to resort to this act of reprisal. And so one act of reprisal leads to another until unconscionable degrees of lawlessness are reached.

It has been suggested as a possible solution obviating the difficulties of drawing up a set of good working rules to govern naval operations against commerce that one sweeping sanction of immunity might suffice by which all trade ships would be allowed to carry on their peaceful pursuits unmolested in time of war as in time of peace. The objection, however, to such a rule is, that when the world is divided between nations at peace and nations at war, this rule would satisfy peoples at peace and one side of the belligerents, but the other belligerents would find it discriminatory and would oppose it as an infringement upon their rights to use the seas in accordance with principles of equity and freedom.

To deny belligerents, moreover, their right to use the seas for suppressing enemy commerce and imposing economic pressure in order to hasten the settlement of their differences, would deprive the world of what is generally looked upon, when conducted according to the rules of civilized warfare, as a humane method of re-establishing conditions of peace. It may be added that those who aim at a world peace secured by a concert of power may reasonably assert that, while the freedom of the seas is a foundation principle on which to make a world peace secure, naval power, by instituting blockades, may at times prove a humane and effective means of compelling recalcitrant Governments to observe the provisions of this peace.

Certain Established Rules

During a war, the maritime interests of belligerents and neutrals are bound to conflict; and it is impossible to give either of them unlicensed use of the seas without restricting the freedom of the other. Hence a compromise is necessary,

and so long as nations recognize a state of war as involving conditions subject to law in which both belligerents and neutrals have rights, it is manifest that rules are required to define and guarantee these rights. It will not be attempted here to examine closely the many rules drawn to govern naval warfare, some of which were still subjects of controversy when the present war began; but, as an aid to the memory, a few of the recognized and established regulations affecting the use of the submarine will be briefly outlined:

1. A blockade to be binding must be effective; that is, it must be maintained by a force sufficient to render ingress to or egress from the enemy coast line dangerous.

2. A blockade must not bar access to neutral ports or coasts.

3. During the continuance of a state of blockade no vessels are allowed to enter or leave the blockaded place without consent of the blockading authority.

4. The prohibition of contraband trade with the attendant adjudging of penalties is a belligerent right. This right can only be exercised upon the high seas and the territorial waters of the belligerents and in accordance with the rules and usages of international law. (Contraband of war may be defined as articles destined for the enemy and capable of use as an assistance to the enemy in carrying on war either ashore or afloat.)

5. Lawfully commissioned public vessels of a belligerent nation may exercise the right of visiting and searching merchant ships upon the high seas, whatever be the ship, the cargo, or the destination. If the examination of ship's papers and search show fraud, contraband, an offense in respect of blockade, or enemy service, the vessel may be seized. Force may be used to overcome either resistance or flight, but condemnation follows forcible resistance alone. In exercising these rights belligerents must conform to the rules and usages of international law.

6. When a vessel in action surrenders, (usually indicated by hauling down the national flag or showing the white flag of truce,) firing must cease on the part of the victor. To continue an attack after knowledge of surrender, or to sink a vessel after submission, is a violation of the rules of civilized warfare only permissible in cases of treachery or renewal of the action.

7. Absolute contraband, including guns, ammunition, and the like, is liable to capture on the high seas or in the territorial waters of the belligerents if it is shown to be destined to territory belonging to or occupied by the enemy, or to the armed forces of the

enemy. It is immaterial whether the carriage of the goods is direct or entails transshipment or a subsequent transport by land. Also there must be a trial and judgment of a prize court of the captor having proper jurisdiction in regard to the goods involved, whether destroyed or not.

Policy of "War Areas"

At the beginning of the war Great Britain might have taken advantage of the well-established case of our legal blockade of the Confederate States. A summary of the steps by which this civil war blockade was made legally effective will be found in the article, "American Tactics in the Present War," in *CURRENT HISTORY MAGAZINE* for November, 1916.

Instead of proclaiming a legal blockade of Germany, Great Britain in an Admiralty order, Nov. 2, 1914, announced military areas in the North Sea, trusting to British command of the sea, which at that time seemed undisputed. This was an unfortunate move, for the possibilities of the submarine were not considered; and Germany was able to retaliate by declaring all waters about Great Britain and Ireland a "war zone," beginning Feb. 18, 1915.

Great Britain at once realized her mistake, and by an Order in Council proclaimed a blockade of Germany, March 1, 1915. But the harm had been done, and the pernicious war area had been evolved. On Jan. 27, 1917, the British Admiralty announced that the area in the North Sea had been enlarged. This was modified Feb. 13, 1917. On Jan. 31, 1917, Germany sent to the neutral nations the "barred zone" note announcing unrestricted submarine warfare beginning on Feb. 1, 1917.

Armed Merchantmen

Merchantmen have the right to arm for defense. A merchantman may repel an attack by any enemy ship, but only a man-of-war can attack men-of-war.

According to international law the character of a ship is determined by her employment; and it is an established right of merchant vessels that they may carry arms—for defense only—without necessarily altering their status before the law as traders engaged in legitimate

peaceful pursuits. This right is well established by precedent, and although prolific of complications, it has on the whole operated to sustain the principles of freedom of the seas. Its usefulness was conspicuous in the days of piracy; and the "long toms" on board our clipper ships proved strong arguments in suppressing lawlessness.

In the heat of war, moreover, belligerents are inclined to infringe the privileges of noncombatants, and experience has shown that the right of merchant vessels to arm for defense has tended to prevent belligerents from unlawful interference with peaceful traffic. The belligerent right to stop, visit, search, and capture merchantmen is a high sovereign power, and it seems reasonable to require that the vessels authorized to exercise it should possess potential strength. It would be a somewhat absurd condition, inviting abuse and irregularity, if rules were so framed as to permit a fast enemy motor boat, manned by three or four men armed with rifles, to stop, search, and capture an ocean liner, without allowing the liner to attempt lawfully either flight or resistance. On the other hand, a motor boat, submarine, or any other duly commissioned and authorized man-of-war has the right to employ force to overcome resistance or to prevent flight; and the merchantman has no redress for damage sustained during attempted flight or resistance. In the majority of cases, it is obvious that prudence will influence merchantmen to surrender promptly in the face of a respectably powerful man-of-war rather than forfeit immunity by attempting flight or resistance.

If an armed merchantman of a neutral country on friendly terms with the warring nations should resist by force a belligerent man-of-war, the neutral Government must properly discountenance the act as incompatible with the relations of amity existing between the two countries. If, however, neutral rights are violated to an intolerable degree a state of armed neutrality may supplant the relations of amity, and under these unusual conditions a Government has the right and may be in duty bound to pre-

serve its neutrality by using such force as the circumstances may require; but in this delicate situation care must be exercised that force is used only in defense of neutral rights.

Blockades and Submarines

From the beginning of the war submarines have helped to prevent a close blockade of the coasts of the Central Powers, and the inability on the part of the allied navies to institute a coast line blockade strictly in accordance with the established rules of international law has led to what is generally known as a distant blockade. The so-called Orders in Council regulating this distant blockade have lengthened the contraband lists and extended the doctrine of ultimate destination until Germany's commerce with non-contiguous countries has been practically cut off.

As the effectiveness of the blockade increased, military necessity demanded that Germany do something to counteract it. The only weapon her navy could use was the submarine. Underwater attack against the blockading battle fleets met with little success; but the unscrupulous use of the submarine as a commerce destroyer brought better results. The vigorous protest of neutrals against the violation of their rights caused Germany, for a time, to make an effort to comply with the rules and usages of international law; but this effort proved ineffectual. The vulnerability of the submarine, with the increasing efficacy of the ways and means developed to safeguard merchantmen from its attack, presented to the German Government the alternative either of suffering a curtailment of submarine effectiveness or of abandoning lawful methods. Germany's decision to take the latter course was announced to the world by official notification that within a war zone embracing large areas of the high seas her submarines would sink all ships, neutral or belligerent, without warning. It was further announced that a weekly neutral steamer here and there would be spared, provided Germany's orders respecting cargo and behavior were carefully observed.

In tracing the developments leading to

this decision it is interesting to follow the various measures of retaliation adopted by both sides and to note the part taken, either directly or indirectly, by the submarine; the creation of danger zones, the indiscriminate use of mines and torpedoes, the lengthened contraband lists—all the various successive moves by which the belligerents, actuated by the policy of military necessity, have trespassed more and more upon the rights of neutrals and noncombatants. But in spite of the scientific triumph of the modern U-boat, and notwithstanding the toll of shipping sacrificed, a careful study of all sides of the question seems to lead to the conclusion that in the end the submarine will not vindicate the expectations of those who hail it as a decisive factor of modern war. The submarine may be able to prevent a close blockade by the enemy; but it does not seem to be able either to break the grip of a distant blockade or to establish an effective submarine blockade as a countermeasure.

The Submarine's Limitations

Submarines are of many different types and sizes, which may be divided into two general classes: the smaller coast-defense submarine of moderate cruising capacities, and the larger seagoing submarine with greater fighting and cruising abilities. The first-mentioned class comprises the five-hundred-ton to eight-hundred-ton submarines, and includes the familiar E, F, G, H, K, and L boats of our navy. Germany uses these types chiefly in the North Sea, Baltic Sea, and other home waters. The other and more modern class includes the larger U-boats operating on the high seas.

The most recent of Germany's large submarines may be described as the fighting consorts of the *Deutschland*. Although little is known positively about them, the following approximate characteristics may be attributed: tonnage, 2,000; Diesel engines of 6,000 to 8,000 horse power, giving a surface speed of 18 to 20 knots and a submerged speed of 12 to 14 knots; a cruising radius at most economical speed of about 7,000 miles; and an armament of one or two small calibre (three inch or four inch)

guns in addition to about sixteen torpedoes.

These are formidable craft, capable of doing much damage, especially if operating from a secret base supplied and provisioned by ships like the *Deutschland*. But they have difficulties to overcome. The problems of submarine navigation have not all been satisfactorily solved. When submerged the speed is slow, making it necessary to rise to the surface in order to overtake even moderately fast freighters. It is then that the trader's guns for defense become dangerous.

Moreover, the distance the submarine can go below the surface on a stretch is still comparatively short, probably 150 miles for the newest U-boats is an overestimate. When the limit is reached the submarine either has to remain stopped or come to the surface to recharge her batteries. If the submarine is forced to keep below the surface, besides having a reduced speed, she cannot use her guns and therefore has to draw upon her limited supply of expensive torpedoes. Nor is it an altogether easy matter to manoeuvre a submarine by periscope so as to score a hit on an alert merchantman.

Advantages of Armed Ships

Suppose a submarine on the edge of the war zone, either stopped or cruising slowly on the surface looking for merchantmen. Smoke is sighted, say, at twenty-five or thirty thousand yards. The submarine would probably manoeuvre to get in the path of the quarry and then submerge at a range of about fifteen to twenty thousand yards before there were likelihood of her being sighted by the supposedly armed trader. If the merchantman should come straight on, to destroy her is comparatively easy; but if, instead of this, a zigzag, irregular course should be steered, the submarine would have to estimate the changes through her periscope and manoeuvre to keep ahead of the merchantman, with consequently more likelihood of being discovered and less likelihood of getting near enough for a sure shot. If the periscope should be seen by the trading vessel, she would probably open fire and turn away. Shots

splashing in front of a submarine's periscope would hamper her manoeuvring abilities and the chances of getting a hit in a stern-on target steering a zigzag course would, unless close aboard, hardly be worth expending a torpedo. To catch the trader, unless a slow one, the submarine would have to come to the surface and risk destruction by gun fire.

All these limitations contribute to make the submarine vulnerable and less effective. Although nets, aircraft, and the lighter submarine chasers will not be as competent against seagoing submarines as against the smaller coast submarines, both because of the greater size of the former and because of the rougher weather and sea conditions to be contended with, still they may do some good while more effectual methods are being developed. Undoubtedly the United States Navy will be of great help in solving this problem—but it would be improper at this time to discuss our navy's share in the game.

Until means of neutralizing the submarines are found they will take great toll from merchantmen. It is folly not to realize that they are destroying many vessels, and not to acknowledge that merchantmen run risks, especially under conditions of poor visibility at night, in fog, and in mist. Early dawn is also a critical time for the trader. But it is probable, as schemes of co-operation are developed between the submarine-hunting navies and the shipping they are trying to safeguard, that these dangers will be lessened.

Future of the Submarine

The question of the future of underwater craft is conjectural, but it is possible to make some tentative deductions from the trend along which development has so far proceeded.

The submarine is always asking for a greater cruising radius, more speed, better habitability, and more power. It is also reported that new designs call for an increased number of torpedoes, together with guns and armor protection for surface fighting. There is perhaps a new type of submarine under construction or possibly already afloat, some idea of

which might be had by conceiving a sort of submersible monitor of about 4,000 to 6,000 tons displacement, carrying a turret mounting two six-inch guns so attached to the hull as to present when firing only armor-protected parts above the water. A division of these submersible monitors, accompanied by a few Deutschlands fitted as troop-carrying and supply ships, might set out from a blockaded coast, steam to distant parts, and there seize, fortify, and hold with considerable tenacity an advance base from which to operate against commerce. Such an expedition might do a lot of damage unless met and defeated by the determined measures of an equally enterprising adversary.

The evolution of the submarine appears to be toward the submersible battleship; but the consensus of naval opinion at present seems to be that a super-submersible capable of navigating under the water and also strong enough to fight battleships on the surface involves an almost prohibitive cost, which would be out of proportion to the advantages gained. By increasing the tonnage of the submarine its mechanical difficulties are aggravated. On the other hand, the large tonnage of the surface battleship is like a reserve of wealth, which may be expended in any desirable way; if underwater attack is a serious menace to the battleship some of this tonnage can be drawn upon to supply suitable protection, such as a series of outer and inner bottoms so constructed and subdivided as to make the ship practically nonsinkable; or, if attack from the air is dangerous, reserve tonnage may be drawn upon for aero defense—and so on. In estimating the value of the submarine in wars to come it would appear safe, therefore, to assume that in future struggles for control of the seas the rôle of the submarine will always be secondary to that of surface ships.

Summary of Results

In making a brief survey of the naval activities of the war it is seen that the submarine has been of no great value to the superior navies controlling the seas, but has been practically the only effective

naval weapon of the inferior fleets. When used against the enemy battle squadrons it has influenced strategy and tactics and scored a few minor successes in sinking some of the older men-of-war, but generally speaking has produced no very important results. When used against merchant ships the submarine has been unable to attain effectiveness while complying with the rules and usages of international law, but by resorting to unscrupulous methods it has become a dangerous commerce destroyer; and the suppression of this evil must be one of the tasks of the navies at war with Germany.

The war has shown that the chief tactical value of the submarine is for defense, to hold the enemy at a distance. The fleet submarine has also demonstrated an offensive value which may be useful in attaining a tactical advantage. In addition,

it is not to be denied that the submarine has raised havoc with both neutral and belligerent commerce. But the submarine blockade has not proved effective, and the lawless methods of the U-boat have aroused a worldwide condemnation. The reactive effect of Germany's submarine war on commerce may easily prove so damaging as to more than counterbalance any temporary advantage gained.

It may be inferred, therefore, that the United States needs submarines both to help defend her coasts and to operate as a tactical subdivision of the fleet. A lesson also learned is that, although the submarine is not now, and probably never will be, a dominating factor in naval warfare, it should be squarely faced as a serious menace which to combat successfully under certain circumstances might demand our utmost ingenuity and energy.

Secret U-Boat Orders to German Newspapers

THE following document, which is believed to be authentic, indicates the method used by the German Government to obtain unanimous press support for the present submarine campaign:

General Command, Seventh Army Corps,
Dept. 11d., No. 1149.

Münster, February, 1917.

No. 545: NOTICE

TO NEWSPAPER AND EDITORIAL OFFICES, &C.
CONFIDENTIAL. NOT TO BE COPIED.
SECRET.

Newspapers are requested to act on the following advice when discussing unlimited "U" boat war:

1. Opinions regarding the usefulness of the measures and of the time chosen, after the decision has been made, would have the effect of weakness and lack of harmony, would encourage the enemy, and perhaps induce wavering neutrals to come in.

2. For the beginning of the concluding struggle absolute internal unison is essential. The determined approval of the entire people must ring out from the press.

3. It is a question, not of a movement of desperation—all the factors have been carefully weighed after conscientious technical naval preparation—but of the best and only means to a speedy, victorious ending of the war.

4. Toward America it is advisable to use the outward forms of friendliness. Unfriendliness would increase the danger of America coming in—the breaking off of diplomatic relations, even active participation, hangs in the balance. The attitude of the press must not increase this danger.

5. The navy, fully conscious of its power, enters into this new section of the war with firm confidence in the result. It is recommended that the phase be called unlimited, not ruthless, "U" boat war.

6. Material, personnel, and appliances are being increased and approved continually; trained reserves are ready.

7. England's references to the perfection of her means of defense, which are intended to reassure the English people, are refuted by the good results of the last months.

8. Each result is now much more important, because the enemy's Mercantile Marine is already weakened, the material used up. Much colored personnel.

9. The psychological influence should not be underestimated. Fear amongst the enemy and neutrals leads to difficulties with the crews, and may induce neutrals to keep ships in harbor.

10. "U" boat war is now exclusively a part of the combined method of waging war, therefore a purely military matter.

A Submarine Torpedo: What It Is and How It Works

N EARLY all the belligerent powers are now manufacturing their own torpedoes, and the type of all is the same, differing only in details. A glance at the Whitehead torpedo, which is manufactured at Fiume, Austria, and which has long been the only one in use, will give a clear idea of the working of these engines of destruction. After being fired from a tube in the side of a torpedo boat or submarine, the torpedo travels under its own power until this is spent, or until it strikes an object and explodes. The vessel launching it must stop its engines in order to get any accuracy of aim.

In its external appearance the torpedo is a spindle-shaped tube of sheet steel furnished with a "tail" that gives no clue to the wonderful mechanism inside it. The most powerful type in use measures 21 inches in diameter and about 20 feet long. It weighs 3,000 pounds. The cost of a torpedo is upward of \$1 a pound; even for one of medium size \$2,000 is a moderate price.

The torpedo contains its own motive power, which is compressed air. It is divided into compartments which screw into each other, and which may here be examined in the order in which they are placed.

The "charge cone" at the apex is filled with an explosive—usually moist guncotton—in which is placed a tube of dry guncotton furnished with a fulminating cap preceded by a plunger. When the plunger strikes a solid object it explodes the charge. The earlier model of torpedo contained fifteen or twenty pounds of guncotton, but the largest today contain more than 225 pounds of this or some other powerful explosive.

Behind the charge cone is the compressed-air chamber, with a capacity varying from 12,000 to 20,000 cubic inches and in direct communication with the motor. The air in it is usually compressed to 150 atmospheres. The machine

chamber contains the motor which operates the screws and the auxiliary motor that controls the depth rudder. While the other compartments of the torpedo are water tight, the machine chamber is

LOADED TORPEDO TUBE

pierced with holes through which it is filled with sea water, thus keeping the motor cool. The rear cone, also called the rear float, contains a considerable quantity of ordinary air. Here is found the gyroscope—whose function is to keep the torpedo going straight in its original direction—with its auxiliary motor, the screw shafts, and a compartment for gearing.

The screws turn in opposite directions, the force being transmitted through two concentric shafts. These shafts are hollow; it is through their tubes that the compressed air escapes on emerging from the motor, producing the bubbles that betray the track of the torpedo on the surface of the water. This track, visible to the naked eye at 800 or 1,000 yards, can scarcely be seen 100 yards away if the sea is rough. The "tail" is formed by a frame, inside of which the screws and rudders move.

As the torpedo propels itself and guides itself by its own power, the firing of it has no other object than to launch it in the water in the right direction. The process differs according as the torpedo is fired from the surface or under water. Both methods are used in torpedo

boats and battleships. To fire the torpedo from the surface a cannon tube is used, charged with one-half to two-thirds of a pound of powder. This tube is usually installed on the deck, mounted on a truck that permits it to be aimed like an ordinary gun.

Firing under water is the only method that can be used by submarines. Every navy maintains secrecy regarding its apparatus for this purpose, but the machinery all belongs to one of two types—(1) a shuttle tube manipulated inside the ship, with the muzzle fitted into the hull; (2) a cradle fixed in the water at the side of the ship and containing the torpedo, which goes forth under the propulsion of its own screw after this has been started from the interior of the vessel. The Armstrong tube, which is

FIRING THE TORPEDO

represented in the accompanying diagrams, belongs to the former class.

The effects of a charge of 200 pounds of guncotton exploding against the side of a vessel are likely to vary according to the point struck, the depth below the surface, and the strength of the hull. The best torpedoes travel to a distance of six miles, with a speed of about twenty-five knots; by limiting the range to two or three miles a speed of thirty-five knots can be obtained, or about twenty yards a second. Within 500 or 1,000 yards there is a chance of hitting the target; at 2,000 yards the chances are meagre, and beyond 3,000 yards the probable lateral deviation is more than 150 meters.

British Foreign Policies and the Present War

By Thomas G. Frothingham

1878

"A free outlet for the undeveloped resources of Russia would have given England the trade of the world. England should have given Constantinople to Russia."

THE above was the comment of the writer's father on the terms of the Congress of Berlin, (1878.)

My father was of an old firm of Mediterranean merchants. This great sea from ancient days has been the pulsating heart of the commerce of the world, and in the seventies its merchants were wise beyond their generation.

These words have proved prophetic—and the results of England's mistake are far-reaching. Her conduct, which led to the Congress of Berlin, made Germany a dominating power in Europe and maintained the Turkish Empire. Both were intended to be buffers against imaginary Russian encroachments—and both are now vindictively fighting against England.

The Past in a New Light

England had emerged from her period of stress through the first half of the eighteenth century with the strongest national life of all the nations. From the adventurers of the Elizabethan times, through the stern assertion of the nation by Cromwell, and from the seafaring colonists of England, there had sprung a national growth unique in history. There were lapses under the indolent Stuarts, but the trend had been toward maritime and colonial supremacy. The last half of the eighteenth century saw England with the dominion of the seas and enlarged colonial possessions.

England strained her resources in the Napoleonic wars, but it is doubtful if her course was altogether wise. She came out of these wars with an apparent increase of prestige and power on the sea. But all her influence had been thrown to

revive the empires of Europe. Of these Prussia, Austria, and Russia were destined to have an evil effect on England's future, Prussia and Austria as enemies and Russia as an imaginary foe, against whom England has wasted her energies for a hundred years.

After the downfall of Napoleon there was for England a long time of great prosperity and increased power. England seemed to have gained all her ends, and, with her established command of the seas and consequent control of commerce, she seemed assured of the commercial supremacy of the world.

Unfounded Suspicion of Russia

But after the war of 1828-29 between Turkey and Russia, which resulted in the independence of Greece, (announced by Turkey in 1830,) there grew up in the British mind a great suspicion of Russia and hostility against Russian occupation of Constantinople. A more false position would have been hard for England to find. As the commercial clearing house of the world and the great common carrier, she would have been assured of Russia's trade, and the development of Russia would have opened great markets for English goods—but all England could see was the bogey of military Russia.

This unreasoning opposition to Russia became a mania with the English, and the resultant harm to England can only be measured by the present war.

It is hard to justify the attitude of the men who controlled the destinies of England. Instead of realizing that the opening of the Dardanelles to Russia meant a flood of wealth to England, Russia was pictured as an avalanche ready to overwhelm British interests in the Near and Far East.

All this was entirely at variance with the characteristics of the Slav. Yet the

"Eastern question" in British eyes became a question of anything to serve as a barrier against Russia. The relations between England and the French Empire became very cordial, and these two powers in the Crimean war (1854) saved the Turkish Empire from the onslaught of Nicholas I. of Russia and maintained Turkish rule over the outlet from the Black Sea.

In view of the lesson that England has received and her recent views, as given out by Balfour, it is really pathetic to realize that England went to war in 1854 to prevent the independence of Serbia, Bosnia, and Bulgaria, the provisional occupation of Constantinople, and a Russian protectorate of the Christians of the Greek Church in the Turkish Empire! Yet such is the fact—and shutting up Russia in the Black Sea was actually regarded as a British triumph! The result of the war was to leave Russia crippled and constricted behind the barriers of the Dardanelles. All her vast commercial possibilities were lost to England. From this time on it was a repetition of the same story. All England's efforts were concentrated on trying to hem in Russia.

British Politics to Blame

No great democratic nation with the vitality of England would have been so blind to its real interests if there had not been some factor that befogged the public mind. This is found in the machinery of English politics. Members of Parliament are not elected for any definite term of office. The only limitation to the life of a Parliament is the seven-year provision of the Septennial act of 1716. Consequently, a Government is not placed in power for any term of office, nor is it dependent on representatives elected at stated times. On the contrary, the Ministry has tenure of office as long as it can command a majority of Parliament. This makes any Government a target for the Opposition, and the result has been a constant effort to raise a "question" on which the Ministry in office might be defeated. This system has led to the manufacture of issues, to the rise and fall of Ministers from artificially pumped up

"questions," and this accounts for the long tenure in office of such "statesmen" as Palmerston, Russell, Disraeli, and Salisbury. Almost all of England's mistakes in the Victorian period are branded with the names of these men—and all were acclaimed as victories at the time.

A constant stream of useless issues attracted the attention of the British public, and kept England from seeing the real stakes in the great game she was playing—her supremacy of the world through control of the sea and unrestricted commerce. If it had not been for the constant bickering over what were then considered the important politics of Parliament, the public mind of England would surely have grasped Great Britain's real interests abroad, of which the most important was freeing commerce for England's profit.

The "Eastern question" became a distorted fetich, to which were sacrificed England's treasures gained through her greatest era. Palmerston, Russell, Disraeli, and Salisbury were the high priests of this cult, and by catchwords and incantations deluded their followers to disaster.

German Growth Stimulated

With Russia shut in as a result of the Crimean war, there followed the most mistaken period of English history. The projects of Louis Napoleon were given full headway—and the aggrandizement of Prussia was unrestrained.

England encouraged Denmark to the breaking point in the Schleswig-Holstein question in 1864—and then left Denmark to lose both provinces, which were acquired by Prussia after the war of 1866.

All this greatly strengthened Prussia. A look at the map will show that these provinces made possible the great double naval base connected by the Kiel Canal, which has proved of such great value to Germany in the present war. Lord John Russell presided over this inexcusable foreign policy,* which made Prussia a

*Black is the ingratitude of mankind! There is no statue of Lord Russell, the great benefactor, the true founder of the German Navy, standing Unter den Linden in Berlin.—Lord Redesdale.

dangerous power in Europe, with a military equipment perfected in the war of 1866. Louis Napoleon dragged unprepared France into fighting this well-armed antagonist—and the victorious war of 1870 created a united Germany.

The impetus of the united strength of Germany evolved from the war of 1870 has never been understood by outside nations. For Germans the war of 1870 has been their text and their inspiration. The next generation of Germans modeled the life of Germany, military, civic, commercial, scientific, and social, on the efficiency of the war of 1870. This is the key to united Germany, and the fact that its States are united should not be any longer doubted.

Nor is it reasonable to think of Germany as merely ruled by a military caste. On the contrary, Germany has made itself a remorseless machine with a full belief in the efficiency of such a system. But the whole mechanism is interlocked with militarism, and if her armies fail to win victory, faith in the structure will disappear. Then there will be a new order in Germany.

With all this great potential national life, Germany emerged from the war of 1870 poor in financial resources. Germany had practically spent in advance the indemnity exacted from France. The French Nation made a wonderful revival from this tax and became prosperous at once, but Germany was hard pressed for funds for her development.

In the meantime Russia had recovered her strength, and the new revolt of the Balkan Slavs (1875-76) had again aroused her to action. The fearful toll of massacre taken by Turkey from Bulgaria caused a great sensation in England, but the Disraeli Government, in power at the time, set against this the "ambitions" of Russia, and England resumed her task as watchdog of the Turkish Empire in Constantinople.

Britain's Greatest Mistake

It is comment enough on the intelligence of British politics at the time to note that the overturn in Parliament, resulting in placing the Disraeli Ministry in power, came from "the question of university education in Ireland." From

this petty issue Disraeli and Salisbury were evolved as England's representatives in the Congress of Berlin, (1878,) the greatest of all England's mistakes in her history.

In the Russo-Turkish war, Russia had broken down the obstinate resistance of the Turks. Her victorious army was advancing on Constantinople, and it was evident at the end of 1877 that the Turks would not be able to save the city. With this victorious advance of the Russians came great alarm in misguided England, and there was a cry to save Constantinople. This was the outbreak of the "jingo" policy. The atrocities in Bulgaria were forgotten, and all who said that Turkey was not England's ward were ignored.

Disraeli fanned these fires to the utmost. Early in 1878 the neutral British Ambassador was recalled from Constantinople and a strong pro-Turk was substituted. The British fleet was ordered to the Dardanelles and a war credit of £6,000,000 was asked of Parliament.

In the meantime Turkey had sued for peace, (Agreement of Adrianople, Jan. 31, 1878,) but England maintained her hostile attitude, and in the Peace of San Stefano (March 3, 1878) Russia did not make the occupation of Constantinople a condition. Serbia, Montenegro, and Rumania were freed from Turkey. Bulgaria remained tributary to the Porte, but received a Christian Prince.

These terms were unsatisfactory to England, and she still threatened war, having made a secret treaty (June 4) to protect Turkey against Russian conquest. For this England was to receive Cyprus, (occupied July 11, 1878.) Germany was secured as a mediator, and the representatives of the powers met at the Congress of Berlin, (June 13-July 13,) under the Presidency of Prince Bismarck—an ominous choice to preside over the settlement of Great Britain's destinies!

Errors of Berlin Congress

By the terms of the treaties drawn up at the Congress of Berlin the Balkan States received less territory than in the Peace of San Stefano. Russia was left still cut off from the Dardanelles. Ger-

HUNTING U-BOATS IN THE MEDITERRANEAN

A French Dirigible Watching for Submarines That Are Under Water, and Calling Destroyers by Wireless

A French Naval Seaplane Which Can Rise Into the Air and Destroy Submarines by Means of Special Bombs

(French Official War Record)

many, under the leadership of the great Bismarck, had become a dominant power. England had assumed guardianship of Turkey, and received Cyprus—a mess of pottage for the fairest inheritance in the world!

Yet all this was proclaimed as a British triumph.* Disraeli and Salisbury were pictured as conquerors. The fact that Germany and Austria made their alliance the next year (1879) was not noticed.

From this time on England and Germany drew closer together. English money was loaned to Germany for her pressing financial needs, and while England imagined she was building up a barrier against Russia, Bismarck was using these resources to build up an organized foreign trade. Before England realized her error much of her trade, even in her own colonies, had been taken away by Germany. Even in the late eighties British "statesmen" had not waked to the true situation—and at this time Salisbury ceded Heligoland to Germany!

This last disastrous gift to Germany was a fitting culmination of Salisbury's career. The fortified island and the Bight of Heligoland have given Germany a naval base that has done incalculable harm to England.

Beginning of Antagonism

In the nineties the commercial expansion of Germany, at the expense of England's foreign trade, began to alienate the English from Germany. The British merchants began to realize that English trade was the greatest sufferer from German competition, but this feeling was slow to spread through the nation. The Kaiser's indiscreet letter to Kruger at the time of the Jameson raid in South Africa was the thing that aroused British hostility to Germany. Great Britain at last awoke to the fact that Germany was not a "friendly nation."[†]

There was an immediate change in feeling toward the United States. The

bitterness over the Venezuela matter disappeared, and Great Britain chose the United States for a friend—a choice she should have made long before.

This change of heart on the part of Britain was strikingly shown in the Spanish-American war at Manila Bay, where the German fleet was threatening our fleet under Admiral Dewey, (1898.) The British Admiral intimated to the German Admiral that, in case of hostilities, the British would take the part of the Americans. From that time Great Britain and Germany drew further apart and open enmity replaced friendship.

Yet even then England did not see the light in regard to Russia. The next phase was the Russian "threat" in the Far East. This was the period that followed "Russia at the Gates of Herat." Again Russia was painted as an avalanche ready to overwhelm the British possessions. Tibet, Afghanistan, and Persia were made so important that all other interests were forgotten, and England was ready to make use of any possible means to do harm to Russia.

The occasion for another British mistake grew out of the Russian lease in Manchuria. Port Arthur was thought a great military base, with a huge Russian army collecting for sinister designs. Consequently England largely financed the Japanese in their war against Russia—with the same obsession of trying to gain another buffer against Russia's imaginary military plans.

Then the curtain was drawn aside and revealed actual conditions—instead of the imaginary ones—and the war showed that Russia's "military preparations" had consisted in having no "great army" in the East, but in building the great open warm-water port of Dalny to let out her trade. This port was destroyed by Japan's victory—to England's immediate loss of trade. England has now realized that, in again cramping Russia, she has created another rival in the East, which has already hurt her trade and influence.

Created the War Situation

So it has continued to the present war. England is now confronted with a situation of her own making. She is clean of

*A volcanic triumph such as has rarely, if ever, been equaled in diplomacy.—Lord Redesdale.

†So called by Salisbury at the time of the cession of Heligoland.

blame in bringing on the war by any wrong acts or by any breach of faith. The events have shown plainly enough that the war is the act of Germany, and that her brutal invasion of France through Belgium had been planned for years in advance. Nothing can remove this stain from Germany, but the unnatural conditions that inexorably brought on the war were made by England.

England has shut in Russia—to England's own great loss. Her policies have made Germany a dominating power, and she has maintained the Turkish Empire. Both Germany and the Turkish Empire are now her deadly foes. She has built up Japan into a military power, and Japan is, at the best for England, only a half-hearted ally and a disturbing influence in Britain's Eastern colonies.

These disastrous results of British policies in the Victorian days of power and opportunity must be faced and no longer ignored. Great Britain is paying a fearful price for the mistakes of the era that should have sealed her dominion, and the nation is now fighting desperately to correct those mistakes.

Our sympathies and our friendship should be with Great Britain in this struggle. There are ties of kinship, and England has lately shown a most friendly feeling toward the United States. We should also remember that England stands for democracy against the autocracy of Germany. On the other hand, the unthinking comment that "England is fighting our war" only blurs the issue and arouses prejudice against Great Britain in many parts of our country. The truth is that England is fighting her own war—not ours. American friendship should be given to England, not demanded as a payment.

There is another very grave aspect of the question. Russia is now one of the Entente Allies, but it is evident that Great Britain, from her conduct toward Russia, has no hold on Russia from any point of view. How can there be any real feeling of friendliness for England in Russia?

France, with the exception of the misguided episode of Louis Napoleon, has

held a different course. France has shown a friendly feeling for Russia, and formed an early alliance with her. Consequently the feeling of Russia for France is a very different thing. France has played a chivalrous part in the great drama, and the strange religious spirit of Russia recognizes this. The only safety for the structure of the Entente Allies is through France. England must do the best she can to remedy her past mistakes, but France is the keystone of the allied arch.

The writer was brought up in a belief in France as the most serious nation on earth, and taught that in any crisis the spirit of France would rise to the occasion. This has proved more than true in the present war. The whole nation gave itself to the task of repelling the invader with a devotion so intense that it was silent. And it is only by degrees that this silent, unselfish strength has been appreciated in America. The wrongs of Belgium won a ready response from our country, but it has taken a longer time to realize the magnificent response of France in her ordeal. There was no propaganda or group of writers to urge the cause of France. Her glory has been told by her deeds, not by her words—and there is no measure to the admiration that Americans should give to France.

America in the War

Since writing the above the United States has been forced into this war by the hostility of Germany. Our position is very different from that of any other nation involved. The conditions that have brought on the war were not in any way made by us. We have not committed any hostile act. We have preserved a strict neutrality—and we have attempted to bring about peace between the warring groups. Our President has stated our aims and objects so plainly that there is no trace of selfishness in our entering the war.

After long patience we have been driven into a declaration of war by repeated hostile acts of Germany. These acts have been not only Germany's brutal defiance of humanity on the seas, but Ger-

many's proved attempts to incite Japan and Mexico to war with us, to disrupt our country and take away its territory. The Zimmermann note would be held a cause of war by any nation on earth. If ever a country was justified in entering a war, the United States is justified and in the right—and we should have faith that this right will prevail.

So clear is this, that it seems it must influence the German Nation. Already it is apparent that the President's wise distinction between the German people and the German autocracy is having an effect on the German public mind. The

sudden promises of future reforms, even by the Kaiser himself, seem to indicate this, and to give grounds for hope that the German people may throw down the evil structure they have built, and that a new Germany may offer peace and good-will to the world.

If this comes, the lesson of the results of artificial conditions in Europe must be remembered—that harsh and oppressive terms are not lasting, and that permanent conditions will never be found with religions ruled by hostile religions, nations dominated by other nations, races ruled by alien races.

Aerial Fighting on the French Front

Lord Northcliffe visited the western front in February and wrote of the splendid achievements of the allied flying corps, which counts many Americans among its membership:

Very rarely do the Germans venture over our lines, and one has to be very far forward nowadays to get a good view of a fight between the Allies and the enemy in the air. I have had that good fortune several times. Air fighting in 1914 bears as much resemblance to air fighting in 1917 as an old steam automobile to a six-cylinder of today. There is a perpetual match in speeding up between the enemy and the Allies. Four or five miles an hour extra pace means everything. It is not the increase of engine power to over 200 horse power that has brought about the change so much as the wonderful progress of the art of flying itself, and it is just here that the Anglo-Saxon and the Frenchman beat the slower-minded German. It is just this reason why the German soldiers' letters are so full of complaint about the overcautious German airman.

When Pégoud invented looping the loop people asked, "Why? What is the use of it?" Pégoud was a very considerable inventor as well as a flier, is the answer. Looping the loop is a useful manoeuvre, and it has been succeeded by that extraordinary development, the nose dive, in which the airman seems to fall like a stone for thousands of feet, till the spectator's hair rises from his head in horror. Suddenly the machine flattens out, scoots away, and you find that it is only a trick after all. I talked with one of our wounded boys—he was just 19—who had fallen 8,000 feet owing to his rudder wire connection being shot through. By a miracle his machine straightened itself out automatically within a hundred yards of the ground, and the boy is alive and will fly again. I asked him his sensations; he is probably the only man in the world alive who has fallen 8,000 feet—more than ten times the height of the Woolworth Building, New York City, 750 feet. He said that for a long time—what seemed like hours—he knew that he was falling, and falling at a tremendous speed, and then he lost consciousness, as in a dream, and found himself being picked out of the wreck of his machine by people who thought that he was dead.

At the beginning of an air fight there is manoeuvring for position and feinting as in boxing. There are, as a rule, two men in each machine—a pilot and an observer—except in the smaller types, in which the wings are clipped down to nothing to get extra speed and climbing power. Knowledge of engine and plane power, quickness of decision, and accuracy of shooting with the Lewis gun are essential to the pilot. His observer is provided with some form of pistol, and often with bombs.

The rival planes, like giant hawks, hover around, above, or below each other, till one more expert or more daring than the other manoeuvres his opponent into a position from which he has either got to fight or flee. The knockout blow is usually a sudden descent on the enemy, accompanied by accurate machine-gun fire. Sometimes it becomes a duel with Browning pistols, in which the men are so close that they can see each other's eyes. The thing is over before you realize it. One machine is off and away, and the other whirls and crashes down, down, down to earth.

Rasputin, Nemesis of the Czar

An Amazing Career Which Bore Directly on the Russian Revolution

THE extraordinary career of the charlatan priest, Rasputin, with his baneful influence at the Court of the Czar, was one of the contributing factors which made the Russian revolution such an instant success. The story of this impostor would be unbelievable if it were not vouched for by trustworthy witnesses. The full record of his criminal career, however, will not be unveiled until the war has ended and the new Government consents that the documents be published.

A trustworthy Russian, whose reliability is vouched for by the conservative London Post, related a brief history of Rasputin's abominable career to the editor, which was printed as follows in March, 1917:

Gregory (Grishka, pronounced Greeshka) Rasputin, aged 44 this year, was a native of Siberia, a common mujik of the village of Pokrovsky, in the district of Tjumen, in the Province of Tobolsk. Like his father, (who is still alive,) he was employed as a fisherman. Uneducated in every sense, he was, in the English sense, illiterate, though before his death he could write a labored and woefully ungrammatical scrawl. His speech to the end remained that of his class. His manners were disgusting even for a mujik; probably he exaggerated his shocking habits in order to emphasize his importance in society. As a young man he was reputed a drunkard, a thief, and a general rascal in his native village; a "shameless one" he was called, even by his fellow-mujiks. Indeed, the local tribunals still hold in solution, so to speak, two criminal charges against him of theft and of perjury, which were stopped by administrative order. For boon companion in his early days he had another drunkard and disorderly person, a small working market gardener, who is now a Bishop of the Pravoslavny Church.

"Rasputin" appears to be really a nickname; the man's real name was Novikh, and "Rasputin" (which may be Englished as "Ne'er-do-weel son") was tacked on to it by his fellow-villagers for good and sufficient reasons. The whole name sounds to Russian ears very much as to English ears would sound "Jacky Ne'er-doweelson Jones," or something else equally common sounding, plus the special nickname so thoroughly earned of "Rasputin." "Grishka" (the contemptuous diminutive of Gregory) is the name for him that has been on every Russian's lips for many years past, and figures in lampoons which were secretly circulated—for "Rasputin" could be neither printed without incurring very heavy penalties nor safely spoken aloud in society without risking some form of reprisals.

Russian "Holy Men"

It must be remembered that Russia, like India, is full of "holy men," and in Russia a proportion of these are arrant rascals, wandering up and down the land, leading a "gospel life" on endless pilgrimages to holy places, collecting money for nonexistent charities; a lazy, sensual life of secret self-indulgence in the most appalling vices, veiled by some striking outward acts of severe asceticism, such as going barefoot or half naked in snow and frost, or carrying massive fetters visibly about their persons.

Grishka, then, went on pilgrimage from holy place to holy place, and collected considerable sums of money for his own use. He built himself a good house in his village, bought a fish pond, and stood drink to his fellow-villagers, and endeavored to ingratiate himself with all men, but very particularly with all women, especially innocent girls who were also young and pretty. He had a wife several years older than himself, and at the time

of his death a boy and two girls, all three grown up, declared themselves from their likeness to him to be obviously his own children. In the big, new eleven-roomed house, built out of fraudulent "collectings" from pious millions on his pilgrimages, Grishka gave his wife three rooms, reserving the others for as many selected young women, his "disciples" and "devotees," or, in plain English, his mistresses. Here were practiced abominations, over which—as not infrequently is the case in Russia—was thrown a pseudo-religious cloak, in accordance with the sect-teaching of such immoral "holy men."

Abnormal Power Over Women

It was in this period of his life that Rasputin discovered his almost miraculous power over women. Doubtless, like the ordinary libertine, he had the gift of knowing instinctively the likely victim. Yet even allowing for this, one can only stand aghast at a power which seemed to have a compelling influence over the whole sex, from Princesses to peasants. Fathers and brothers in his village complained to the authorities about his many seductions of girls, and on many occasions he was severely beaten. He nearly got into serious trouble in the course of his pilgrimages for seducing nuns, and frequently was ignominiously kicked out of monasteries of the better class for his misbehavior. Nevertheless his reputation as a "Saint" was growing, and increased especially after visits to the capital, where he had found powerful protectors.

From this point onward his career, so far as it was associated with this power over women, became almost incredible. It is a fact that ladies bearing ancient historic names, wives and daughters of the great, began to seek Grishka out in his far-away Siberian village. He removed his court to Tjumen, some sixty miles away, and practiced his religious exercises, and taught that there was in him a portion of the Divine, with whom all that would be saved must be one in the flesh and in the spirit. Such methods of corruption are common enough in Russia; it was not in kind but in degree that Rasputin's practice of them was so astonishing. The creature was invited to dine

with the great—possessors of historic titles and high places in the world—who watched him eat with the fingers of both hands, like a primeval beast. Those fingers were often licked clean by hysterical devotees sitting beside him, guests of great historic houses and themselves of high rank or title, to whom the animal would hold out his hands with a curt command like that of an ancient Roman to his lowest slaves.

This part of the man's story sounds incredible, but it is true. There were even genuinely honest women who feared the creature, and in that fear suppressed a natural curiosity. They resolutely avoided all chances of meeting the man, who was making and unmaking Ministers of State and high dignitaries of the Pravoslavny Church; making and marring the fortunes of hundreds directly and of millions indirectly. As for men, his followers were of two classes. They were either those who gladly mortified the flesh in his "religious" exercises, or they belonged to the large class of place hunters and favor seekers.

The fascination of the man lay altogether in his eyes. Otherwise he looked simply a common mujik, with no beauty to distinguish him; a sturdy rogue, overgrown with a forest of dirty, unkempt hair, dirty in person (dirt is holiness in some countries) and disgusting in habits. His language oscillated between the stock-in-trade odds and ends of Scripture and mystic writ and the foulest vocabulary of Russian, which of all white men's tongues is the most powerful in the expression of love and affection and of abominable abuse. But the eyes of this satyr were remarkable—cold, steely gray, with that very rare power of expanding and contracting the pupils at will, regardless of the amount of light present. He possessed without doubt the very strong, natural hypnotic powers which seem always to go with that peculiarity. It was this that in the first place differentiated Grishka Rasputin from the hundreds of other "holy" rascals of erotic type known to history and in daily life in that unfathomable land of Russia.

In the rest of his wonderful career Rasputin was indebted to several aiding

circumstances, among them, as is now universally believed, the guiding hand of Germany. Grishka was the "obscure influence hostile to Russia" referred to in identical language by the United Nobility of Russia, the State Council, the State Duma, the United Zemstvos' organization; language, in fact, composing the single cry of the whole nation, which, save for three brief days soon after his death, dared not mention the dread name aloud. The high authorities sternly forbade, and the nation obeyed.

Into this story of the public status of Rasputin, as distinct from his personal character, there would enter, were it fully displayed, the question of his support by the Pravoslavny Church in Russia, the most powerful instrument of State governance. And with that would also have to be related the incidents leading up to the authority which Rasputin came to acquire with the Empress, through his pretensions—possibly backed by his hypnotic powers—to wield a miraculous influence over the life and well-being of the Grand Duke Alexis, the heir to the Russian throne. It will be enough to say that—however it came about—on several occasions when Rasputin was sent away or absented himself in ostentatious pique at some disfavor some ill did occur to the boy. And thus it was that Rasputin was given rooms at the palace at Tsarskoe Selo in the apartments occupied by Mme. Virubova, favorite Lady in Waiting to the Empress, and his personal safety was in charge of the special corps known as the "Palace Police," who are responsible for the safety of the sovereign.

Protected at Tsarskoe Selo

To the Empress, Rasputin was a saint, a divine agent, a miraculous guide. No stories about him were ever listened to; they were slanders due to jealousy of his exalted position, inventions of enemies, not of the saint himself but of the dynasty, and the like. Hence that influence which made and unmade Ministers of State and Bishops of the Pravoslavny Church, and dispensed patronage to thousands from highest to quite little people. A lady of birth is credited with having

been the mainspring of this venal conspiracy; but Rasputin himself, with all the shrewdness of the mujik, was unsparring of his enemies. Kokovtsov, Premier Minister of Russia, once succeeded in getting him banished from the Court; he returned, and Kokovtsov was dismissed with remarkable suddenness. The Adjunct Minister of the Interior, who controls the police of the empire, Dzhunkovsky, incurred his enmity, (knocked him down, it is said, for unparalleled impudence by word and gesture,) and Dzhunkovsky had to go. Samarin, barely appointed Procurator of the Holy Synod, showed plain intentions of cleansing the Pravoslavny Church from these malign influences and filthy practices, but was dismissed before he had time to act. Stürmer's was perhaps the worst of Rasputin's appointments, and it immediately led to rebellion throughout Turkestan.

The Murder on the Moika

From this appointment of Stürmer dates the belief that Rasputin was manipulated from and in the interest of Berlin. But, like other "holy" rascals in Russia, he took from all and sundry and for every kind of service. Getting military appointments and exemptions from war service was a fruitful source of income to Rasputin. Frequently he would play the kindly benefactor, doing deeds of charity by assisting poor supplicants, and dipping heavily only into the pockets of the rich. In fact, there was neither limit nor bottom to the wickedness which he contrived to execute in every walk of life. Every man in Russia would gladly have seen Rasputin butchered any time these five years past, and many would have done the deed with their own hands if they could have come at him through the protective cordon (the same as for the sovereign) of the "Palace Police." In the end he was assassinated with their own hands by men of such rank as has not for over a hundred years in Russia taken an active part in like bloody deeds. Not since the murder of the Emperor Paul have persons of their rank who assassinated Rasputin thus imbrued their hands in blood.

Color was given to the story of Ras-

putin's assassination being a political murder by the presence at it of a member of the Right Party in the Duma, who took a leading part in the disposal of the corpse. He has been credited with engineering the affair, and in consequence has won an unprecedented popularity throughout Russia. Rasputin was invited on the night of Dec. 17 (30) by a gentleman in an automobile—a private car—who brought a note, said to be in the hand of a lady devotee of Grishka, and took him to the house on the Moyka of the young Prince Y., Count S. E. There a distinguished party was assembled. Y., it ought to be remarked, is heir to the richest patrimony in Russia. It is said that he can ride behind horses from end to end of European Russia and sleep on his own land every night. There were present, among others, the Grand Duke D. P. and two sons of the Grand Duke, who married the Emperor's sister. In the company, as has been said, was the Duma member whose activity at the front with his feeding points and other organizations has made his name a household word throughout the empire.

About 6 in the morning, when most of the party had dispersed and Rasputin was almost certainly beastly drunk, according to his later habit, a number of shots were fired in the house, and Rasputin was brought out bleeding, in volumes indicative of his alcoholized state, and put into a motor. Whether or not he was then dead seems uncertain; he certainly had mortal wounds in the side of his head and trunk. He was driven off some way and flung over a bridge. The Grand Dukes appear to have gone home, and Prince Y., having reported the whole affair to the Minister of Justice, attempted later to leave by train for the Caucasus or some other of his estates, but was stopped at the station. An abandoned motor soaking in blood was found miles out of town; it belonged to a Grand Duke.

Rasputin's Body Discovered

The entire police and detective force of the capital was afoot and raked through all the houses of ill-fame, gypsy singers' haunts, and, in fact, every con-

ceivable place else, until the finding of a bloodstained golosh brought them to a deserted part of one of Petrograd's smaller rivers. The ice, of course, was several feet thick, but it is the custom in Russia to cut openings where water is obtained and linen is rinsed by laundresses. Divers went down and found nothing; eventually the body was picked out near the bank. Orders had been given to break up the ice if necessary all the way to Kronstadt, but the body must be found. When it was discovered it was secretly interred at Tsarskoe Selo.

The Emperor meanwhile had arrived in haste from the front. For three days extremely guarded references to an "interesting murder" appeared in the press: alongside were printed seemingly inconsequent biographical notes about the chief actors in the tragedy. Officially, however, nothing whatever was allowed to appear beyond the statement of death ("ended his life," not said how!) and the fact that the body had been found. After these three days not even the most distant references were any longer possible. The Grand Duke D. P. took upon himself the whole responsibility, and Grand Dukes are above the law. Under these circumstances the officials found that murder was committed, but that "the evidence was insufficient," and so on.

The Grave of Rasputin

A correspondent of The Associated Press visited Tsarskoe Selo on March 27 and had an opportunity to see Rasputin's grave, from which the body had been removed and burned by the revolutionists. He found the spot on the edge of a ravine beyond a desolate and roadless plain covered with deep snow. His narrative continues:

"The grave is surrounded by an unfinished log chapel, which adherents of the monk, with the monetary assistance of the former Empress, planned to raise over Rasputin's remains. Beside the chapel nave are half a dozen tiny cells for pilgrims, and near the end is the ten-foot hole from which the revolutionaries disinterred the body.

"The chapel was filled with soldiers,

some of whom were inscribing ribald remarks on the log walls. One of the inscriptions reads: 'Here lay Rasputin; foulest of men, the shame of the Romanoff dynasty, the shame of the Russian Church.'

"As the correspondent was reading the inscriptions he heard loud shouts. Looking down into the grave, he saw a little brown Siberian soldier on his haunches, doing the Russian squat dance. The soldiers told the correspondent that Countess Hendrikoff, at the request of the former Empress, had offered a large sum to the guards if they would have the grave covered so as to prevent its further desecration.

"The superstitious belief that the health, and even the life, of Grand Duke Alexis, the young heir apparent, depended on the presence of Rasputin is explained in the following extraordinary manner by the Russky Slovo:

"Rasputin, according to the newspaper, stated in confidences to friends at convivial moments that he was able to fortify this superstition with the help of Mme. Virubova, lady in waiting to the Empress, and M. Badmaef, Court physi-

cian, until the Empress was absolutely convinced that the life of her son depended on the monk. Whenever Rasputin was absent for any length of time from the Court Mme. Virubova, according to the monk's story as given by the newspaper, obtained poisonous powders from the physician and contrived to place them in food brought to Alexis. The result was that during Rasputin's absences the delicate health of the young heir apparent grew steadily worse, until Rasputin was summoned back to the Court, when the powders were stopped and Alexis became immediately better.

"Rasputin always announced that forty days after his death Alexis would fall ill. This prophecy came true with startling accuracy, being caused, the newspaper declares, by Mme. Virubova administering another powder to the little Grand Duke in the hope of continuing the tradition of Rasputin's influence over the imperial family and preparing the way for a successor to him."

Mme. Virubova was placed under arrest by the Revolutionary Government early in April and confined at the Fortress of St. Peter and St. Paul.

Russia's First Month of Freedom

THE record of the Russian Provisional Government in the first month showed steady and consistent progress along the path it had struck out on its sudden accession to power after the overthrow of the old régime. On the one hand, it went ahead rapidly with the work of introducing internal reforms and cleaning out the abuses of the old system; on the other, it set itself sternly to the task of bringing the organization of its military strength to the highest possible point of efficiency for the vigorous prosecution of the war against the Central Powers.

The ability of the men in control of the Government was partly explained in a statement made by the Minister of Justice, Kerensky, to an American correspondent. "Our aim is," he said, "to use talent wherever we can find it." The

Russians themselves never doubted their capacity for self-government once they were given the chance. "We knew what we could do," Premier Lvoff declared on March 21. "We have gone ahead and done it, and now, a week after the revolution began, the whole country is in smooth running order. The bureaucratic obstacle is gone, the new Russia is before us. The future is so brilliant I hardly dare to look into it."

As the days succeeded it became more and more apparent that public opinion in Russia was overwhelmingly in favor of a republican form of government similar to that of the United States, with perhaps a greater measure of local autonomy. The sentiment in the large cities was republican from the very start. Not only were the extreme radicals in favor of a republic, but even the Constitutional

Democratic Party, of which Milukoff is the leader. The Central Committee and the Parliamentary representatives of this party, at Petrograd, voted in favor of a republican form of government; and meetings of peasant communities also declared themselves unanimously for a republic.

On March 21 the Government ordered that the ex-Czar and Czarina be imprisoned in Tsarskoe Selo. The same day Dr. Milukoff, the Foreign Minister, stated that nothing stood in the way of a new commercial treaty between Russia and the United States, now that Russia was on the point of granting full and equal rights to the Jews.

Recognized by the United States

The next day, the American Ambassador, David R. Francis, accompanied by his entire staff, went to the Marinsky Palace to convey the formal recognition by the United States of the new Russian Government. America was thus the first country to welcome Russia into the family of free nations. Addressing the Council of Ministers, Ambassador Francis said:

I have the honor, as the Ambassador and representative of the Government of the United States accredited to Russia, to state, in accordance with instructions, that the Government of the United States has recognized the new Government of Russia, and I, as Ambassador of the United States, will be pleased to continue intercourse with Russia through the medium of the new Government.

May the cordial relations existing between the two countries continue to obtain. May they prove mutually satisfactory and beneficial.

Professor Milukoff, Foreign Minister, replied for the Council of Ministers, saying:

Permit me, in the name of the Provisional Government, to answer the act of recognition by the United States. You have been able to follow for yourself the events which have established the new order of affairs for free Russia. I have been more than once in your country and may bear witness that the ideals which are represented by the Provisional Government are the same as underlie the existence of your own country. I hope that this great change which has come to Russia will do much to bring us closer together than we have ever been before.

I must tell your Excellency that during the last few days I have received many congratulations from prominent men in your country,

assuring me that the public opinion of the United States is in sympathy with us. Permit me to thank you. We are proud to be recognized first by a country whose ideals we cherish.

On March 23 Great Britain, France, and Italy also extended formal recognition of the Russian Provisional Government through their Ambassadors at Petrograd.

Former Czar a Prisoner

The former Czar Nicholas's arrival at Tsarskoe Selo the day after his arrest, in the custody of four members of the Duma, caused no stir. The crowd that had gathered at the station looked on silently, and even the residents of the Court village, whose livelihood depended upon the imperial patronage, remained cold and unmoved. Nicholas was turned over to the Tsarskoe Selo commander and taken to the Alexandrovsky Palace, where a strict guard was established. He and his wife are being kept under close surveillance. He is allowed to walk in the garden only twice daily and only in the presence of the palace commander, Kotzebue. For many days he was in close attendance on his son, who was very ill with measles. He took some recreation by shoveling snow. He wept occasionally, but was quite submissive. At church he was the first to kneel when a prayer was offered up for the new Government.

Along with Nicholas and Alexandra there were 200 other inmates, courtiers, and adherents of the old régime, who were held prisoner in the palace. These were subsequently transferred to the Fortress of St. Peter and St. Paul in consequence of alleged plotting against the new Government, and the former Czar and Czarina were thus isolated.

Meanwhile the cleansing process was prosecuted with energy. Every day members of the Secret Police, the Black Hundreds, and spies were put out of harm's way. Up to March 25, 4,000 had been arrested and imprisoned in Petrograd alone. It was these elements that had created the counter-revolution in 1905, and their elimination freed the Government from a source of danger to the

stability of the new-won liberty and the effective prosecution of the war.

Reform Measures

Simultaneously with the internal reforms the War Office began vigorously pushing the work of military reorganization under the leadership of War Minister Gutzkov, and introduced measures of radical reform. Among those contemplated was the concentration of the supreme direction of the army in a war council consisting of the Ministers of War, Marine, and Foreign Affairs, who would be in constant touch with the Ministers of Railways and Agriculture, the last to give special advice and information in the matter of food supplies.

The Russian War Office renewed its youth. Under the old régime new ideas, dictated by the obvious necessities of the war and the bitter experience of all the Allies, had fallen for the most part on stony soil. Intrigue, inertia, and a score of other deadening influences presented insuperable barriers to effective reform. Now all the reserves of youth and intelligence have been enlisted, and reforms long overdue have been put into effect.

The removal of Grand Duke Nicholas from the post of Commander in Chief of the Russian armies was officially confirmed on March 28, and General M. V. Alexieff, Chief of the General Staff, was appointed his successor. All members of the imperial family and all officers friendly to the autocracy were likewise removed from army posts, and all the Grand Dukes were forbidden to leave the military district of Petrograd.

New Oath of Office

On March 28 all the Ministers of the Provisional Government took the following oath of office in the Senate:

In the capacity of a member of the Provisional Government created by the will of the people and at the instance of the Duma, I promise and swear before Almighty God and my conscience to serve faithfully and justly the people of the Russian State, sacredly guarding its liberty, rights, honor, and dignity, inviolably observing in all my acts and orders civil liberty and civic equality, and in all measures intrusted to me, suppressing any attempts, direct or indirect, toward the restoration of the old régime.

I swear to apply all my intelligence and

strength completely to fulfill all the obligations assumed by the Provisional Government before the eyes of the people. I swear to take all measures for the convocation of the Constituent Assembly in the shortest possible time on the basis of universal, direct, equal, and secret suffrage, to transfer to the hands of the Assembly all the authority provisionally exercised by me in conjunction with other members of the Government, and to bow before the people's will as expressed by that Assembly concerning the form of government and the fundamental laws of the Russian State.

May God help me in the fulfillment of this oath.

One of the most-hated features of the old bureaucratic Government was its system of raising revenue. The burden fell most heavily upon the peasants, who were taxed to the starvation point. As the Russian population is largely agricultural, the prosperity of the country depended chiefly upon the welfare of the peasants. Consequently, their oppression greatly retarded Russia's normal development. The new Government began to grapple with this problem at once.

Important Financial Program

Tereshchenko, the Minister of Finance, outlined his financial program on March 29 as follows:

The country is full of capital, which has grown out of the increased industrial activity since the beginning of the war, and my plan is to institute immediately a new system of taxes based on war profits. Since 1915 all industrial enterprises of the country have shown most remarkable increases in earnings and have issued millions of new shares. It is only proper that the Government should have a more adequate share in these profits.

In the past, revenues have been obtained only in a casual manner by the Ministry of Finance, and, although they far exceeded the financial loss to the Government occasioned by the suspension of the liquor traffic, they have not been properly or thoroughly applied to the resources of the country, which ought to contribute largely to the expenses of carrying on the war.

This new revenue will enable the country to meet at least the accumulating interest on outstanding loans. Russia will have to depend, of course, upon foreign loans, and, judging by the sympathy and support with which the new Government has been greeted by its allies and in the United States, there should be no difficulty in arranging a basis for a continuance of financial assistance abroad.

A not inconsiderable item of expense was saved by the elimination of the

"pocket money," so to speak, that the imperial family formerly drew from the State revenues. This amounted to no less than \$20,000,000 annually. On March 30 the Provisional Government, in compliance with a demand made by the Council of Workmen's and Soldiers' Deputies, through the Socialist Cabinet member, Chkheidze, confiscated all the imperial lands and monasteries, which yield an annual revenue of 25,000,000 rubles. Three days before the Grand Dukes and Royal Princes had, of their own accord, given up their crown lands and other official property to the Government.

Despite the war, the economic organization of the country proceeded apace. The growth of the trade-union movement took on tremendous proportions. An eight-hour day was introduced in Petrograd, and a central board of arbitration appointed to settle trade disputes. The eight-hour day was also introduced in other cities and throughout the country. The fever of organization spread even to the peasants. They formed a council of peasants' Deputies modeled after the Council of Workmen and Soldiers.

Not to Claim Constantinople

That free Russia has no desire to annex Constantinople was the inference drawn from a statement made by the very influential Minister of Justice, Kerensky, that the Dardanelles should be "internationalized." This view was further strengthened in the declaration of Premier Lvoff on April 10:

"The new Government considers it its duty to make known to the world that the object of free Russia is not to dominate other nations and forcibly take away their territory. The object of independent Russia is a permanent peace and the rights of all nations to determine their own destiny."

On April 7 Kerensky declared that if the German people would follow the example of Russia and overthrow their monarch, "we offer the possibility of preliminary negotiations." He added, however: "We are not going to assist in making a separate peace." Kerensky's statement was in accord with an appeal adopted on March 28, at a meeting of

workmen's and soldiers' Deputies, addressed to the laborers of all countries, but mentioning especially the Central Powers, "to throw off the yoke of autocratic rule as the Russian people have overthrown the imperial autocrat and refuse to serve longer as an instrument in the hands of Kings, capitalists, and bankers."

A party of Russian radicals who arrived at Stockholm from Switzerland on April 13 were said to be planning a peace congress in Stockholm, and to have won the support of German radicals and some French Socialists. Lenin, a prominent Russian Socialist, who had lived in Switzerland, was their leader. The fact that their mission was synchronous with the German Socialist majority leader Scheidemann's alleged departure for Stockholm to meet envoys of the Russian Government, and that the Russian radicals were permitted to pass through Germany from Switzerland, was taken to mean that the plan had the backing of the German Government.

Poland and Finland Free

In its policy toward dependent nationalities the new Government announced that Poland was to receive complete independence with the right to determine its own form of government and its relation, if any, to Russia. The Polish Deputies thereupon surrendered their seats in the Duma. On March 29 the Provisional Government appointed a committee with Alexander Lednitsky, a Pole, as Chairman, to make the necessary arrangements for the separation of Poland from Russia and to determine the relation of the State to the Roman Catholic Church.

In Finland the Governor, Sein, was removed. On March 21 a manifesto was issued by the new Government completely restoring the Finnish Constitution and annulling all edicts and administrative rules and regulations. A liberal was appointed Governor, and the Finnish Diet was convened. On April 13 M. Kerensky, the Russian Minister of Justice, was present at the meeting of the Diet, and in a speech greeting the "free Finnish people" in the name of the Provisional Russian Government declared that Russia

would do everything in its power to make it certain that Finland should remain free forever.

The Speaker of the Diet, M. Talman, requested M. Kerensky to inform the Russian people of the Diet's gratitude for the fraternal greeting. He said that henceforth a complete agreement, on the basis of reciprocal confidence, would prevail between the two peoples.

To the Armenians, Kerensky expressed himself in favor of an autonomous Government for them under Russia's protection. The promised emancipation of the Jews became an accomplished fact on March 25, when, according to advices received at the Russian Embassy at Washington, absolute equality of the Jews was proclaimed by the new Government. Jews are permitted to reside wherever they please, they have access to all posts in the navy and army, and are unrestricted as to educational advantages and the owning of property. A number of Jews were made officers in the army, says a cable dispatch of April 12, the first city claiming that distinction being Odessa, and 250 Jewish students entered the military officers' school. On March 27 it was announced, according to telegrams to Russian correspondents at Copenhagen, that the Jewish advocates, Grusenbergl and Winawer, were appointed members of the Russian Senate and of the Supreme Court. They were the first Jews who ever obtained a seat in a Russian tribunal.

On April 4 full religious liberty was proclaimed and all laws discriminating against any creed or religion repealed. Premier Lvoff promised a delegation of women on April 4 that women would be given the right to vote.

Return of Siberian Exiles

One of the most dramatic and picturesque events of the revolution was the return of the political exiles and prisoners from Siberia. A full hundred thousand of them were released, and their progress from the prisons, mines, and convict settlements across Siberia to Russia was one grand triumphal march. Everywhere they were met by wildly cheering crowds, fêted by reception committees, and called

upon to deliver speeches. So great was their haste to leave that many of them did not even wait to change their prison garb or have their chains struck off.

The most celebrated of the ex-exiles were two women, Catharine Breshkovskaya and Marie Spiridonova. Catharine Breshkovskaya is known as the grandmother of the revolution. She has grown old in Siberian prisons and exile. Forty-four years of her life were spent there. Escaping once, she braved the Russian authorities again, and, though by that time an old woman, she fought dauntlessly side by side with the younger generation in the new movement that led to the unsuccessful uprising in 1905. Again she was thrust into exile. When she reached Petrograd from Siberia the 1st of April, she was met at the railroad depot by a military band and representatives of the Government and carried through the streets. A similar reception was given her in Moscow on April 5. Here the soldiers and the reception committee carried her out into the street on their shoulders.

Equally popular was Marie Spiridonova, who, though still young, suffered a martyrdom perhaps even greater than Breshkovskaya's. She was tortured with a refinement of cruelty that is unprintable. One of the lesser harms done her was the disfiguring of her face for life. The two bureaucratic agents who inflicted the torture were later assassinated by revolutionists.

Signs of Unrest

The Council of Workmen's and Soldiers' Delegates, after a prolonged session at Petrograd, adopted a resolution on April 16 affirming the necessity of its continuing to exercise influence and control over the Russian Provisional Government, and appealing to the whole democracy of Russia to rally around the council as the only organization capable of counteracting any reactionary move.

The resolution at the same time appealed to democracy to support the Provisional Government so long as it continued to develop the conquests of the revolution and abstained from any aspirations for territorial expansion.

On the same day a dispatch from Tash-

kent, Asiatic Russia, announced that General Alexei Kuropatkin, Governor General of Turkestan, his assistant, General Yerofeiff, and General Sivers, Chief of Staff, had been arrested by the Council of Soldiers' Delegates. General Buroff, commanding the First Siberian Brigade, and General Tsuomillen, commanding the local brigade, also were placed under arrest and confined to a guardroom. The officers are charged with distributing arms to Russians in various districts for defense against natives in the event of an attack. This action was held to be of a provocatory character. The Cossack guards of General Kuropatkin appeared at the meeting of the Soldiers' Delegates and announced that they would not defend him.

General Kuropatkin was in chief command of the Russian forces in Manchuria in the Russo-Japanese war and was for a while Commander in Chief of the Russian northern armies in the present war.

The news from Petrograd up to April 20, at which date this record closes, indicated a gradual subsidence of unrest and a tendency among the workingmen to recognize the authority of the Provisional Government. Industries which had been closed since the outbreak were being reopened, the soldiers were becoming more amenable to discipline, and there were indications that the moderates would be able to keep the radical revolutionists in check; but the feeling of general unrest had by no means yet disappeared.

Warning of Russia's Revolution

Paul Milukoff's Address

THE following document, read in the Duma by Professor Milukoff on Feb. 28, a week before the outbreak of the revolution, contained a warning that has become historic in the light of what followed:

We are nearing a point in our conduct of the war when the supreme effort of the nation will be required in order to secure victory. We are at a moment of crisis in the great war. The military resources of the enemy are nearing exhaustion; his morale is getting lower; and just at the moment when we ought to develop the highest power of resistance and endurance, we are beginning to see the consequences of the inactivity of our Government in organizing the nation for the supreme effort.

We might be told that the Government alone is not responsible for the faults of our machinery of war; that our past, our whole history, are the causes of our backwardness. To this I say most emphatically, No. The Government and the Government alone is responsible for it. The Government concentrated all its efforts on the internal war. At a moment when the whole nation is straining to get ahead and demands of the Government a clear road to victory, the Government is drawing it back. The nation is united in its supreme effort against the external foe; but the Government returns to the old internal war in order to insure its own safety.

Every day voices from all parts of the country are reaching us, addressed to the Duma. The people in the provinces tell us: "Act boldly and act instantly; the country is with you." These voices enable me, even in the present dark state of affairs, to retain my hope, to refrain from any pessimism, and I warn you not to be led into pessimism. In England and France the people have found themselves; the same may already be said about Russia.

When the nation finds that, in spite of all its sacrifices, its destinies are being endangered by a clique of incompetent and corrupt rulers, then the people become a nation of citizens; they become determined to take their case into their own hands. Gentlemen, we are approaching that point. In everything we see around us, we hear the echo of the patriotic anxiety which fills our own hearts. It is in this alarm and not in silence and reconciliation that I see a promise of salvation for the country. You know well that I can say no more from this tribune. You know that this alarm is well-founded, and you know that the Duma alone is not in a position to remove the causes of this alarm; but I firmly believe in the active patriotism of the nation.

I believe that the people will not allow its forces to be flouted in the present critical struggle, and I believe that when once the popular idea that Russia cannot conquer with the present Government ripens in the mind of the nation, the nation will triumph in spite of the Government.

German Raiders in the Atlantic

Twenty-six Merchant Ships Captured by the Möwe in a Second Expedition

THE German auxiliary cruiser Möwe, (Seagull,) commanded by Count zu Dohna-Schlodien—the same sea raider that had captured the Appam and fourteen other merchant ships a year before—stole out through the Kiel Canal and the North Sea late in November, 1916, and added a still more destructive chapter to its record. The British Admiralty got the first inkling of the depredator on Dec. 2 and sent out a general warning on Dec. 8, but, though several vessels were known to be missing, the operations of the raider continued to be shrouded in mystery.

The true state of affairs came to the public on Jan. 16, 1917, when the captured Japanese steamer Hudson Maru landed at Pernambuco, Brazil, with 287 men taken from six ships that had been sunk at various points between the Azores and the Brazilian coast. On Dec. 31 the captured British steamer Yarrowdale had arrived at Swinemünde, Germany, with 469 prisoners taken from one Norwegian and seven British ships in the South Atlantic, but the German Government did not announce the fact until Jan. 19. Even then the name of the sea raider remained in doubt. Finally, on March 22 a Berlin dispatch announced the recent return of the Möwe from a second successful raid among enemy shipping. The Möwe herself had brought in 593 prisoners, including fifty-seven Americans from the crew of the British horse transport Esmeraldas.

The total number of ships sunk or taken as prizes by the Möwe on this raid was at least twenty-six, aggregating 125,000 tonnage, and carrying to the bottom many millions of dollars' worth of foodstuffs, munitions, and general cargo. The property loss was estimated at between \$15,000,000 and \$20,000,000. The total number of prisoners landed by the Möwe and the two prize ships not sunk was 1,389. A few lives were reported

lost. Fifty-nine of the men on the Yarrowdale were American sailors, some of whom had been employed on armed British merchantmen. These the German Government was inclined to hold as war prisoners, on the ground that all armed ships are warships; but this threatened cause of international controversy disappeared when the Americans were released on March 9 and returned by way of Switzerland. They filed charges to the effect that they had been roughly treated and half starved in Germany.

List of the Victims

The vessels reported captured by the Möwe were the following:

Voltaire, British steamer, with crew of 93 men, sunk on Nov. 21.

Pallbjörb, Norwegian steamer, bound from America to France with a cargo of food.

Mount Temple, British steamer with 7.5-centimeter gun, 9,792 tons gross, with provisions, parcels, and horses.

Duchess of Cornwall, British sailing ship of 152 tons, with fish.

King George, British steamer of 3,852 tons gross, with explosives, provisions, and parcels.

Cambrian Range, British steamer of 4,200 tons gross, with wheat and parcels.

Georgic, British steamer with 12-centimeter gun, 10,000 tons gross, with wheat, meat, and horses.

Yarrowdale, British steamer of 4,600 tons gross, with ammunition, provisions, and war materials.

St. Theodore, British steamer of 5,000 tons gross, with coal.

Dramatist, British steamer of 5,400 tons gross, with ammunition and fruit.

Nantes, French sailing ship of 2,600 tons gross, with saltpeter.

Ansières, French sailing ship of 3,100 tons gross, with wheat.

Hudson Maru, Japanese steamer of 3,800 tons gross, with parcels.

Radnorshire, British steamer, with 12-centimeter gun, 4,300 tons gross, with coffee and cocoa.

Minieh, British steamer of 3,800 tons gross, (listed at 2,890 tons gross,) with coal.

Netherby Hall, British steamer of 4,400 tons gross, with rice and parcels.

Jean, Canadian sailing ship of 2,115 tons gross, with sugar.

Staut, Norwegian sailing ship of 1,200 tons gross, with whale oil.

Brecknockshire, British steamer, with 12-centimeter gun, of 8,400 tons gross, with coal.

French Prince, British steamer of 4,800 tons gross, with coal.

Katherine, British steamer of 2,900 tons gross, with wheat.

Rhodanthe, British steamer of 3,000 tons gross, in ballast.

Esmeraldas, British steamer of 4,680 tons gross, in ballast.

Otaki, British steamer of 7,400 tons gross, (listed at 9,575 tons gross,) with 12-centimeter guns, in ballast.

Demeterton, British steamer with 7.5-centimeter guns, 6,048 tons gross, with food.

Governor, British steamer, with 12-centimeter guns, of 5,500 tons gross, in ballast.

"The Möwe is a finely masked cruiser of 12,000 tons," said one of the released neutral sailors. "It is impossible to discover anything unusual about her before the rail drops down and the guns are uncovered. The Möwe is also carrying sails, which prevent any view of the deck. The cruiser is quite new and armed with four big guns and two smaller ones. She has four torpedo tubes."

German Official Statement

The following official statement was issued at Berlin under date of Jan. 19, 1917:

The English steamer Yarrowdale, of 4,600 tons, was brought into harbor on Dec. 31 as a prize by a prize crew of sixteen men. She had aboard 469 prisoners, namely, the crews of one Norwegian and seven English ships which were captured by one of our auxiliary cruisers in the Atlantic Ocean.

The cargoes of the captured vessels consisted principally of war material for our enemies from America and foodstuffs, including 6,000 tons of wheat, 2,000 tons of flour, and 1,900 horses. The Yarrowdale had on board 117 motor lorries, one motor car, 6,300 cases of rifle cartridges, 30,000 rolls of barbed wire, and 3,300 tons of steel bars, besides a large quantity of meat, bacon, and sausages.

Of the vessels sunk three of the British were armed. Among the crews of the captured vessels are 103 subjects of neutral States, who, as well as enemy subjects, have been removed as prisoners of war in so far as they had taken pay on armed enemy vessels. The commander of the prize crew is Deputy Officer Badewitz.

The bringing in of the Yarrowdale has been kept secret up to this time for military reasons, which, in view of the British Admiralty statement of Jan. 17, were no longer operative.

When Lieutenant Badewitz was asked how he succeeded in bringing the Yarrowdale through the North Atlantic and the North Sea with a crew of only sixteen men and with more than 400 prisoners on board, he replied:

"For such an action you need only to exercise coolness and determined, blunt carelessness, especially if you have to deal with Englishmen. In addition you need to have a handful of smart boys like mine who have their hearts in the right place and revolvers in their pockets. Then you can fetch the devil from his own house. The discipline was first-rate. Whenever the order to go below was issued, the whole crowd of prisoners hurried to the lower decks, running like hares."

Lieutenant Badewitz said he and his officers never left the bridge of the Yarrowdale, and all preparations had been made to sink the ship at a moment's notice from the bridge. All on board, he said, knew that the vessel would be sunk in case of a mutiny. Explosive charges had been placed in the hold, with electric connections that would enable the vessel to be sent to the bottom by touching a button, and this would have been done rather than allow the vessel to be captured by British patrols.

Life on the Moewe

The crew of the Norwegian steamer Pallbjörb gave this interesting account of their experiences:

"One day at the end of November the Pallbjörb saw a large steamer approaching. The stranger changed her course and began manoeuvring in such a manner that the Norwegian thought the crew must have gone mad. Suddenly the vessel came toward the Norwegian steamer and when a few yards away let down her bulwarks, disclosing four large guns. At the same time a German flag was hoisted and an order given to the Pallbjörb to stop. Thirty naval officers and sailors then boarded the Pallbjörb, seized 500 boxes of food, and then sank her. The Captain protested, saying his ship did not carry contraband; but the German officers declared that they disregarded the contraband regulations.

"On board the Möwe was the crew of

ninety-three from the British steamer *Voltaire*, which was sunk on Nov. 21. On Dec. 6 a Newfoundland trawler was stopped and sunk while on a journey to Gibraltar with fish. The same evening the C. P. R. liner *Mount Temple*, with a cargo of 750 horses and 5,000 tons of merchandise, was stopped by seven shots. The steward and one sailor were killed, and another sailor had both his legs smashed. The crew, numbering 107, were taken on board. The *Mount Temple* was finally sunk by bombs, the horses struggling for life in the icy water.

"In the evening of Dec. 10 the large White Star liner *Georgic*, having on board 1,200 horses, was brought to a halt by shots. Great panic prevailed on board and fifty of the men jumped into the water without their clothes on, but only one of them was drowned. The vessel was then blown up by bombs. Hundreds of horses, swimming toward the *Möwe*, made desperate efforts to clamber on board, but the German sailors, standing with loaded revolvers, killed them as they reached the ship.

"On Dec. 11 the British steamer *Yarrowdale* was encountered. As there were already 500 men on board the *Möwe*, the Captain decided that his latest capture must go to Germany with his prisoners. For a whole day after leaving the *Möwe* the *Yarrowdale* was in communication with her by wireless. The *Yarrowdale* at last got the order to go northward, and the ship then made for the south coast of Iceland, Norway, the Cattegat, &c., and was compelled by storm to anchor near Hveen Island, in the sound, where a German patrol ship appeared. It was at this spot that two British sailors attempted to escape, but they were discovered. They offered violent resistance, and bit and scratched the enemy. The next day the *Yarrowdale* anchored in Swedish waters and a Swedish destroyer appeared. The 500 prisoners were commanded to go below. The Swedish officer came on board, but failed to find anything suspicious. Meanwhile the Germans stood with their revolvers leveled against the prisoners in the hold.

While the *Möwe* was still busy it was known that one or more auxiliary raiders

were at work in the same region. The captured British steamer *St. Theodore* was said to have been fitted out with guns from the *Möwe*, and there were rumors of a German raider named the *Venetia* assisting in the work of destruction. A circumstantial account of the sinking of the *Venetia* by the British cruiser *Glasgow* on Jan. 25 was told by an officer of that warship.

Exploits of the Seeadler

More tangible, however, was the news brought to Rio Janeiro on March 20 by the French bark *Cambronne*. A new raider, the *Seeadler*, (*Sea Eagle*), was at work in the South Atlantic and had already sunk eleven vessels. The *Cambronne*, one of the *Seeadler's* victims, brought 277 men from the crews of other captured vessels in addition to her own crew of twenty-two. She had encountered the raider on March 7 at a point two-thirds of the way across to the African coast, and had been commanded, after receiving the refugees on board, to proceed to Brazil, a voyage of twenty-two days.

The *Seeadler* had left Germany on Dec. 22, escorted by a submarine. The commander declared to his prisoners that the German Emperor and the Crown Prince alone knew of the expedition. The vessel's guns and two gasoline launches had been concealed in the hold while she was running the British blockade. On sighting a merchantman the raider would first hoist the Norwegian flag, which would be replaced by a German flag when her prey was within reach of her guns. The commander presented to the Captain of each ship he sank an engraved certificate setting forth the circumstances in which it had been destroyed. The prisoners all said they were well treated aboard and no loss of life had occurred. Five were Americans. The ships sunk, as reported by the American Consul General at Rio de Janeiro, were the British steamers *Lady Island*, *Gladys*, *Royal Hongar*, and sailing vessels *Pintors*, *British Yeoman*, *Terse*; Italian vessel *Buenos Aires*, and French vessels *Charles Gounod*, *Antoine*, *Rochefaucauld*, and *Dupliex*, all between January and March in the neighborhood of Madeira and Cape Verde Islands.

Democratic Progress in Germany

THE news of the Russian revolution was hardly known in Berlin before the Imperial Chancellor, von Bethmann Hollweg, appeared before the Prussian Diet, on March 14, and delivered a speech which startled the empire from end to end, (see CURRENT HISTORY MAGAZINE, April, 1917, Page 37.) "Woe to the statesman who cannot read the signs of the times!" were his words of warning. After the Chancellor's speech declaring that there must be reforms, the debate became tempestuous, the Socialists seizing the opportunity to attack Junkerism and demand the abolition of the Herrenhaus, the Prussian House of Lords. "We are no longer serfs," said Deputy Leinert, a Socialist, "whom the King can buy and sell or order to bleed and die at the word of command." Amid cheers Leinert spoke of the coming time when Junkerism would be swept off the earth. The speech of another Socialist, Adolf Hoffmann, provoked so much commotion that it was cut short, but before he was silenced he made the following remarks:

We shall refuse to vote for the budget. Chancellor von Bethmann Hollweg is merely the fig leaf of military absolutism. Militarism bears the responsibility for the bloodshed in Europe, and only when militarism and despotism are removed will the people breathe freely. Force of arms will not lead to a decision and peace. Distress, desperation, and general collapse will do it.

When both enemies are equally strong the threat of crushing is sheer nonsense. Germany, despite many successes, has not conquered. The German peace proposal with its tone of victory was bound to cause vexation and distrust. She should have communicated her peace terms and thereby dissipated her enemies' distrust.

The revolution in Russia should be a warning to our rulers. The German submarine warfare is opposed to the laws of humanity and international law.

The floodgates of democratic agitation were now open. Philipp Scheidemann, leader of the majority of the Socialist Party in the Reichstag, which had stood behind the Government since the beginning of the war, came out in an article in *Vorwärts* on March 19 with the bold statement, "The whole world sees among

our enemies more or less developed forms of democracy, and in us it sees only Prussians." There was a stormy scene in the Reichstag on March 22, when the Socialist Deputy Kunert charged the Kaiser and the Imperial Chancellor with having been the originators of the war. Another sign of which way the wind was blowing was the election to fill the seat in the lower house of the Prussian Diet which had been vacated by Liebknecht. Dr. Franz Mehring, a member of the anti-war Socialist minority, who at one time had been placed under "preventive arrest," was easily elected, though opposed by a representative of the Socialist majority. The ever-growing scarcity of food was a constant contributor to the popular discontent, and when it was announced that after April 15 the bread ration was to be reduced by one-fourth, it seemed that the breaking point would soon be reached.

But the Junkers, the Prussian Herrenhaus, were not to be easily moved even by the most solemn warnings. They declared against reform of the three-class system of voting for the Diet and all proposals whatever for increasing popular rights. The language of the noblemen who spoke on March 28 was reminiscent of the old days of the divine right of Kings. "My highest war aim," said Count von Roon, "is to maintain the Crown and the monarchy as high as the heavens." Others asserted they would stand by the "good old Prussia." That the power of the Junkers was still very great was shown by the fact that their opposition induced von Bethmann Hollweg to decide that political reform must be postponed till after the war. This decision he announced in the Reichstag on March 29, and instantly there were outbursts of indignation, not only by the Socialists, who are leading the fight for German democracy, but also by such moderates as the National Liberals. The Socialist leader Georg Ledebour made a historic speech, in which he said:

Kerensky [the new Russian Minister of

Justice and a Socialist] is now the most powerful man in Russia, yet he was lately only the leader of a small faction. We are few in the Reichstag, but behind us stands the industrial revolutionary population, true to democratic principles.

We regard a republic as a coming inevitable development in Germany. History is now marching with seven-league boots. The German people, indeed, shows incredible patience. The Reichstag must have the right to a voice in the conclusion of alliances, peace treaties, and declarations of war. The Imperial Chancellor must be dismissed when the Reichstag demands it.

The speech was interrupted by shouts of "High Treason!" Gustav Noske, another Socialist, referred to the "deplorable events" at Hamburg, Magdeburg, and elsewhere, indicating that there had been food riots, the reports of which had been suppressed by the censorship. References to the Russian revolution were frequent, and more than one speaker reminded von Bethmann Hollweg of his words, "Woe to the statesman who cannot read the signs of the times." Finally, despite the Government's intention to postpone reform questions till after the war, the Reichstag adopted by 227 votes against 33 a resolution appointing a committee of twenty-eight members to consider the whole subject of constitutional reform.

The Kaiser, who had kept silent during all this agitation, was roused by President Wilson's message and the declaration of war which followed it, to come out openly in favor of reform. On April 7 it was announced that he had ordered the Imperial Chancellor to submit to him certain proposals for the reform of the Prussian electoral law, to be discussed and put into effect after the conclusion of peace. The text of the Kaiser's order follows:

Never before have the German people proved to be so firm as in this war. The knowledge that the Fatherland is fighting in bitter self-defense has exercised a wonderful reconciling power, and, despite all sacrifices on the battlefield and severe privations at home, their determination has remained imperturbable to stake their last for the victorious issue.

The national and social spirit have understood each other and become united, and have given us steadfast strength. Both of them realized what was built up in long years of peace and amid many internal struggles. This

was certainly worth fighting for. Brightly before my eyes stand the achievements of the entire nation in battle and distress. The events of this struggle for the existence of the empire introduce, with high solemnity, a new time.

It falls to you as the responsible Chancellor of the German Empire and First Minister of my Government in Prussia to assist in obtaining the fulfillment of the demands of this hour by right means and at the right time, and in this spirit shape our political life in order to make room for the free and joyful co-operation of all the members of our people.

The principles which you have developed in this respect have, as you know, my approval.

I feel conscious of remaining thereby on the road which my grandfather, the founder of the empire, as King of Prussia with military organization and as German Emperor with social reform, typically fulfilled as his monarchical obligations, thereby creating conditions by which the German people, in united and wrathful perseverance, will overcome this sanguinary time. The maintenance of the fighting force as a real people's army and the promotion of the social uplift of the people in all its classes was, from the beginning of my reign, my aim.

In this endeavor, while holding a just balance between the people and the monarchy to serve the welfare of the whole, I am resolved to begin building up our internal political, economic, and social life as soon as the war situation permits.

While millions of our fellow-countrymen are in the field, the conflict of opinions behind the front, which is unavoidable in such a far-reaching change of constitution, must be postponed in the highest interests of the Fatherland until the time of the homecoming of our warriors and when they themselves are able to join in the counsel and the voting on the progress of the new order.

Specifying the reforms that were necessary the Kaiser said:

Reform of the Prussian Diet and liberation of our entire inner political life are especially dear to my heart. For the reform of the electoral law of the lower house preparatory work already had been begun at my request at the outbreak of the war.

I charge you now to submit to me definite proposals of the Ministry of State, so that upon the return of our warriors this work, which is fundamental for the internal formation of Prussia, be carried out by legislation. In view of the gigantic deeds of the entire people there is, in my opinion, no more room in Prussia for election by the classes.

The bill will have to provide further for direct and secret election of Deputies. The merits of the upper house and its lasting significance for the State no King of Prussia will misjudge. The upper house will be better able to do justice to the gigantic demands of the coming time if it unites in its midst in more extended and more proportional

manner than hitherto from various classes and vocations of people men who are respected by their fellow-citizens.

The election of the twenty-eight mem-

bers to the Committee on Reforms was fixed for April 24, the date on which the Reichstag was to resume its sittings after the Easter recess.

Reply to the Dardanelles Report

THE report of the Special Parliamentary Commission on the Dardanelles Expedition, which had criticised Lord Kitchener, former Premier Asquith, and Mr. Churchill, First Lord of the Admiralty, was the subject of a vigorous attack in Parliament on March 28, 1917. Speeches were made by Mr. Asquith and Mr. Churchill, in which the fairness of the report was challenged and its political use severely rebuked. Mr. Asquith paid a glowing tribute to Lord Kitchener, who had been represented as "a solitary, taciturn autocrat," who took no counsel with any one and insisted on having everything his own way. This Mr. Asquith denied. Lord Kitchener was, indeed, a masterful man and a formidable personality, but the fact was that at the outbreak of war all the General Staff went to France and no soldiers of experience were left in the country. The Government, therefore, in all military matters was bound to defer to Lord Kitchener's unrivaled authority, and no man ever had a heavier burden to carry. Mr. Asquith also revealed the fact that, at the outbreak of war, Lord Kitchener was the only man he ever thought of asking to become Secretary of State for War.

Mr. Asquith, in replying to the criticism that there had been a delay of three weeks in sending reinforcements, said that the delay had been due, not to any vacillation or hesitation, but to two main considerations—first, that the Russian position was so bad at the time that Lord Kitchener feared the Germans might withdraw divisions from the eastern and send them to the western front, and, second, that both the British and French headquarters were putting the strongest pressure on him to dispatch the Twentieth Division to France. Those were "grave and weighty reasons," said Mr.

Asquith, and, he added, "it is so easy to be wise after the event." He held that the Commissioners had not given sufficient weight to these considerations when they passed their censure.

He dealt at some length with the criticisms of the report on his own neglect to summon a War Council between March 19 and May 14. His answer to this was that he had been in daily and hourly consultation with Lord Kitchener and Mr. Churchill, and that the operations were in the hands of the naval men on the spot. But there had been no fewer than thirteen meetings of the Cabinet in that period, and at several the Dardanelles operations had been discussed at length. As for the rôle of the experts at the War Council, Mr. Asquith declared that he had never known them to show the least reluctance to give their opinion, whether invited or uninvited, and though Lord Fisher was known to be averse to the Dardanelles operations, it was not on the ground that they were impracticable, but that his preference was for a different operation in a totally different sphere. Lord Fisher, said Mr. Asquith, was in a minority of one, but he explicitly agreed to undertake the naval operations.

According to Mr. Churchill, everybody on the War Council knew of Lord Fisher's objections, but knew also that they were not objections based on the impracticability of "forcing" the Dardanelles—a very different thing from "rushing" the Dardanelles, which no one ever contemplated. Lord Fisher, insisted Mr. Churchill, never objected to carrying out the operations until the Admiral on the spot changed his mind and advised that the naval attack should not be proceeded with. Mr. Churchill did not conceal his own desire to press the attack with the navy alone, but he was overruled, and then the fatal delays took place.

Toward the close of his speech Mr. Churchill intimated that if naval reinforcements had been furnished the result might have been different, as the Turkish ammunition was about exhausted at the time of the retirement. He likewise affirmed, in a detailed review of the proceedings of the War Council, that the plans for a purely naval attack had received the considered approval of all the naval authorities, including the Admirals on the spot, Sir Henry Jackson, Admiral Oliver, and the French Naval Staff, and that Lord Fisher himself had agreed to carry it out. He contended that this naval attempt to force the Dardanelles was not a rash enterprise foisted upon an unwilling Admiralty, but was the plan of the naval experts themselves.

Mr. Asquith by no means conceded that the expedition was a failure. On the contrary, he asserted that "it absolutely saved the position of Russia in the Caucasus; it prevented for months the defection of Bulgaria to the Central Powers; it kept at least 300,000 Turks immobile; and, what is more important, it cut off and annihilated a corps d'élite, the whole flower of the Turkish Army. The Turks have never recovered to this moment from the blow, inflicted upon them,

and it is certainly one of the contributory causes of the favorable developments which we have happily witnessed in the events in Egypt, Mesopotamia, and Persia."

Mr. Churchill, in his defense of the expedition, asked: "What was gained, not what might have been gained, by the naval attack? Was ever any demonstration in the history of the world more potent? The relief to the Grand Duke in the Caucasus was instantaneous. The whole attitude of Bulgaria was changed for the time in our favor. Greece had almost joined us. Lastly, there was Italy. During the progress of the naval attack those negotiations were begun which finally, in the hands of Mr. Asquith, who dealt for all the Allies, culminated in Italy's entrance into the war at the moment when her entrance was most needed and before she could be discouraged by the defeats of the Russians in Galicia, which began a few weeks later. These are the results of failure. Think what might have been the consequences of success. It is a torment to dwell upon them and to think how near was the naval attack to success. Was there even really a reasonably fair chance of its succeeding if it had been persevered in and pushed on?"

Writing War History in France

A contributor to *Le Temps* of Paris has placed on record the measures which self-conscious France is taking to aid the future historian. The article is here translated for *CURRENT HISTORY MAGAZINE*.

INSTINCTIVELY we are watching ourselves live in these heroic days. We feel, indeed, that the passionate curiosity of future centuries will be concentrated upon our acts and movements; we have become conscious of the consideration and respect which coming generations will lavish upon the men and things of today. We are secretly flattered by the thought, and, without going so far as to strike a pose before the painters of history, we are beginning discreetly to prepare their palettes and brushes.

We throw furtive glances in the direc-

tion of the mirror that reflects our silhouettes, and try negligently to straighten our cravats. "We men of the middle ages," cries a foreseeing hero of a mediaeval operetta. "We witnesses of the great world cataclysm," already some of our contemporaries are thinking. And, flying the altruistic flag, they are working conscientiously for posterity. The explorers of the past, who later shall undertake a voyage around the great war, will bless the enlightened zeal of these men. They will find themselves in the presence of a fabulously rich mine of documents. We have recently mentioned

the interesting project of Messrs. Honnorat and Alexandre Varenne, intended to bring together in one place complete collections of the newspapers and reviews that have appeared during the war. This plan, formulated after thirty months of war, might seem purely platonic: is it not too late to collect and classify all the fugitive papers scattered in the blast of the tempest? Not at all.

In the first year of the great conflict a wide-awake Minister of Public Instruction asked all the Mayors in France to gather carefully all printed documents relating to the war. He begged them particularly to "collect the newspapers," and explained the exceptional interest attaching to these "mirrors in which are reflected the successive moods of the nation" and the necessity of preserving "the least manifestations of public spirit and the slightest traces of emotion or serenity, as the case may be, with which the people receive administrative measures, or other war news, whether from France or from abroad. * * * At so important a time in our national history this country has assumed an attitude too profoundly honorable for one to neglect preserving proofs of it taken from life, day by day, which posterity must needs accept. On this score it is really desirable to save the whole contemporary product from oblivion."

A series of circulars developed and or-

ganized this noble undertaking. Not only are all our Mayors collecting the local newspapers, the public and private posters, the social and religious documents, the industrial pamphlets, the cartoons, postcards, and photographs of the war period, but in the smallest village of France the representative of the Institute has been invited to take notes methodically of all the events he witnesses. He is to gather up and preserve the "oral tradition" which, in our country districts, is usually the sole depository of the past. He will thus perpetuate remarks, anecdotes, and significant examples and traits, which will constitute an incomparable documentary treasury for those who shall wish to study the soul of France as it is today.

At this moment thousands of attentive pens, under these official orders, are blackening little pieces of paper measuring—our organizers think of everything—"fifteen centimeters by ten." France is an immense classification cabinet, in which these slips of paper are being tirelessly placed on file. They will form an admirable Golden Book of the mind and conscience of our nation.

There is a certain grandeur in this order for the mobilization of a nation's memory. Who will dare henceforth to speak of our lack of foresight? We are leaving nothing to chance. Our papers are in order. History may enter: she will find us waiting for her.

A Song of Sunrise

[On the Morning of the Russian Revolution]

By GEORGE E. WOODBERRY

To those who drink the golden mist
Whereon the world's horizons rest,
Who teach the peoples to resist
The terrors of the human breast—
By burning stake and prison camp
They lead the march of man divine,
Above whose head the sacred lamp
Of liberty doth blaze and shine;
O'er blood and tears and nameless woe
They hail far off the dawning light;
Through faith in them the nations go,
Sun-smitten in the deepest night—
Honor to them from East to West
Be on the shouting earth today!
Holy their memory! Sweet their rest!
Who fill the skies with freedom's ray!

Arab Revolt Against Turkish Rule

Proclamation of the Ulema of Mecca Denouncing the "Janissaries" at Constantinople

THE Ulema of Mecca, the orthodox religious authorities in the holy city of the Moslems, has sent out a proclamation to the faithful which is reproduced herewith as one of the documents of the war. It marks yet another step in the growing revolt in Arabia, which threatens to deprive the Turkish Empire permanently of that historic realm and of the holy cities of Islam. The revolt began in June, 1916, with the rising of El Husein ibn Ali, the Grand Sherif of Mecca, against the rule of the Young Turks on account of their German alliance. He proclaimed Arabia's independence on June 27. In the next two months he and his followers captured all the principal cities on the Red Sea littoral and began to administer a region—desert, oases, and towns—of 24,000 square miles with a population of 3,000,000. Since then he has ruled an increasing section of Arabia under the title of King of the Hedjaz.

Early in September the French and British Governments dispatched a delegation of French Moslems to the Grand Sherif of Mecca for the purpose of congratulating him on his deliverance from Turkey, and of conveying to him a substantial sum of money to aid his revolt. To cover the expense of the expedition the French Minister of Foreign Affairs asked the Chamber of Deputies on Sept. 29, 1916, for 3,500,000 francs, at the same time disclosing the fact that the French Government had furnished a vessel to enable the British and French Moslems to resume their pilgrimages to Mecca by way of Jedda. Thousands of pilgrims took advantage of this free service, those in October alone numbering 30,000. Among these was Si Kaddor ben Ghabbit, the Moroccan adviser of the Sultan of Turkey. He found a new, hygienic Mecca, free of the assassins and robbers of former years, and declared on his return that the new Kingdom of Arabia was destined to revive the Mos-

lem world in all its former glory and power.

Since then the movement has spread to the interior of Arabia, and has been marked by extensive defections of native tribes from Turkish rule. Peace has been made between two powerful leaders of rival tribes, Emir Arab ar Rawleh, from near Damascus, and Hakim ibn Mahid-Hakim, Emir of the great Anzeh tribe in the vicinity of Aleppo. These two chiefs, formerly enemies, have united and agreed to raise a large troop of horsemen to fight the Turks. The importance of this step is indicated by the fact that the Anzeh and Shamr tribes together are said to number 4,000,000 souls.

It is also asserted that the Sheik Khazai Khan has sent a deputation to the Sherif—otherwise Suleiman I., King of the Hedjaz—announcing his co-operation in the revolt and his readiness to respond to a call for men and money. Thus a large portion of the Mohammedan world, which refused to respond to the Sultan's call for a holy war against the Entente, is now actively lining up against Turkey and the Central Powers.

On Dec. 2, 1916, the United States Government received the following communication from the new kingdom, whose capital is Mecca. It was signed by Fuad el Khatib, Acting Secretary for Foreign Affairs:

In the name of justice and international law we enter a solemn protest to the civilized world against the band of Unionists and affiliates which inflicted all manner of cruelty on the women and children of the innocent population of Alawali and is now repeating its elaborate acts of cruelty even at Medina by sentencing the harmless people and those of Alawali that are still alive to death by hanging and to forced labor.

The echo of these atrocities has been brought to the men in charge of our Army of the West, whose vanguard is in touch with the enemy, by a delegation, comprising every class of the people, that came to them to appeal to the Arabian Government for

protection against such inhuman, heinous crimes.

The Arabian Government, which has shown every regard for the Turkish prisoners of El Taif, including the Vali, commanders, officers, and soldiers, in spite of the misdeeds committed by them and of their setting fire to the houses of Princes, notables, and inhabitants after plundering them, draws your attention to the matter so as to protect itself from blame for any retaliation it may be compelled to apply.

Orthodox Protest from Mecca

A long and important "Proclamation to the Faithful," issued by the Ulema or high priesthood of Mecca, reached the outside world in March, 1917. It adds religious sanction to the rebellion of the holy places against the rule of the Turkish Sultan at Constantinople. The text in English is as follows:

We, the elders and lawyers of the House of God, are among those whom God has permitted to serve the faith and defend its truths. The world and its treasures, in comparison with truth, are not worth the wing of an insect, for there is no other purpose for man in this life except to prepare for eternity.

The Moslem soul rejoices in beholding the Grand "Kaaba" in the first streak of dawn and in the shadow of evening, and he is sanctified by dwelling in the land blessed by the Prophet of God, (the peace of God be upon him.) Can such a man allow his faith to be scorned or see evil befall the things that are holy? Even so it is with us who dwell in this holy place.

We have discerned the hearts of the usurpers of Osman's empire. We have learned their evil purpose with regard to our faith, we have beheld their crimes and wickedness in this our holy land, and our faith has shown us the path of salvation, and in its name we have acted according to our duty to ourselves and the Moslems of the world.

Every Moslem who would consider this matter should seek its cause and ascertain the nature of evil against which we rose in arms, when we found words were of no avail.

As for us, we are absolutely certain that the secret committee of the Young Turk Party has notoriously disobeyed God. No words stayed their hand from crime, and no opposition prevented the evil consequences of their actions. Let no one think that we speak vain things. There stand the facts and events which every man by inquiry can ascertain for himself. We shall bring forth these facts and lay them before the Mohammedan world when necessity demands. Now we content ourselves with begging those of our brethren who oppose us to send some reliable person or persons to Constantinople, the capital of the Unionists, and there witness personally, as we have ourselves witnessed, Moslem women employed by the Government and ex-

posed in public places unveiled before men of strange nations. What do our true Moslem brethren who oppose us in haste think of this matter, an example of an evil that will greatly injure us if it increases and of which we publicly complain?

Would the obedience of people who do such a thing, (and it is the least of their crimes against Islam and Moslems,) be a true obedience or would it be disobedience to God? Never, by the God of the "Kaaba," never. To obey them is to disobey God. Far from it that any of the faithful should consent to this.

We endeavored to please God and avoid a rebellion so long as it was possible. We rebelled in order to please God, and He gave us victory and stood by us in support of His law and religion, and in accordance with a wisdom known to Him which would lead to the uplifting of this people. Every Moslem heart in the Ottoman Empire, even among the Turks in Anatolia and among the members of the Turkish royal family in the palaces, prays God for our success, and God always answers the prayers of the oppressed and the righteous. There is no doubt about it, that if the inhabitants of those countries which the Unionists have lost through their alliance with Germany in this war had revolted against those oppressors, just as we did, they would have no more been regarded as belligerents and would thus have saved their countries for themselves. But if things should continue as they are, no territory will remain for this empire.

If you keep this in mind and remember what the Indian paper *Mashrek* wrote on Sept. 12 and 19 on the subject of the disqualification of Beni Osman to be the Khalifas of Islam, you will understand that we have risen in order to avert these dangers and to put the Islamic rule on a firm foundation of true civilization according to the noble dictates of our religion. If our revolution were only to preserve the integrity of our country and to save it from what has befallen other Islamic countries, it is enough, and we are amply justified.

We call the attention of those who oppose us to the necessity of saving the other countries from the calamities into which their inhabitants have fallen and to deliver them from the destruction and ruin into which those criminal hands are dragging them, if any true religious enthusiasm is left at all. We have done what we ought to do. We have cleansed our country from the germs of atheism and evil. The best course for those Moslems who still side with and defend this notorious gang of Unionists, is to submit to the will of God before their tongues, hands, and feet give witness against them.

It is a great mistake to suppose that in rising against this party we are rising against a legitimate Khalifa possessing all the legal or, at least, some of the conditions qualifying him to be such.

What does the Mohammedan world say of

the Beni Osman who pretend to be Khalifas of Islam, while for many years they were like puppets in the hands of the Janissaries; tossed about, dethroned, and killed by them, in a manner contrary to the laws and doctrines established in the books of religion on the accession and dethronement of Khalifas—which facts are recorded in their history? History is now repeating itself. To those Janissaries, grandsons have appeared in these days who are repeating the acts enacted in the days of Abdul Aziz, Murad, and Abdul Hamid. The murder of Yussuf Izzedin, the Turkish heir apparent, is too recent to be forgotten.

Those who oppose us and side with the Beni Osman should do one of two things: (1) Consider the Janissaries and their grandsons as the final authority on the question of the Khalifat, which we do not think any reasonable man would do, because it is against the laws of religion; or (2) consider those Janissaries and their grandsons as void of authority on the Khalifat question, in which case we should ask them, "What is the Khalifat and what are its conditions?"

Therefore, it remains for those who oppose us to repent, to come to their senses and

unite with us in appealing to the Moslem world to use all effective measures for the strengthening of Islam and the restoring of its glory.

We want those who are present here to tell you who are far away that we shall confess before Almighty God, on the last day, that today we do not know of any Moslem ruler more righteous and fearing God than the son of His Prophet who is now on the throne of the Arab country. We do not know any one more zealous than he in religion, more observant of the law of God in words and deeds, and more capable of managing our affairs in such a way as would please God. The people of the Holy Land have proclaimed him their King simply because, in so doing, they would be serving their religion and country.

As to the question of the Khalifat, in spite of all that is known of the deplorable condition in which it is situated at the present moment, we have not interfered with it at all and it will remain as it is pending the final decision of the whole Mohammedan world.

Salams to all who hear what is said and believe the good in it. May God lead us all into the path of right.

Proclamation to the People of Bagdad

FOLLOWING is the official English text of the proclamation issued by General Sir Stanley Maude to the people of Bagdad Vilayet, when he captured the historic city on March 11, 1917:

1. In the name of my King, and in the name of the peoples over whom he rules, I address you as follows:

2. Our military operations have as their object the defeat of the enemy and the driving of him from these territories. In order to complete this task I am charged with absolute and supreme control of all regions in which British troops operate; but our armies do not come into your cities and lands as conquerors or enemies, but as liberators.

3. Since the days of Halaka your city and your lands have been subject to the tyranny of strangers, your palaces have fallen into ruins, your gardens have sunk in desolation, and your forefathers and yourselves have groaned in bondage. Your sons have been carried off to wars not of your seeking, your wealth has been stripped from you by unjust men, and squandered in distant places.

4. Since the days of Midhat, the Turks have talked of reforms, yet do not the ruins and wastes of today testify the vanity of those promises?

5. It is the wish not only of my King and his peoples, but it is also the wish of the

great nations with whom he is in alliance, that you should prosper even as in the past, when your lands were fertile, when your ancestors gave to the world literature, science, and art, and when Bagdad City was one of the wonders of the world.

6. Between your people and the dominions of my King there has been a close bond of interest. For 200 years have the merchants of Bagdad and Great Britain traded together in mutual profit and friendship. On the other hand, the Germans and Turks, who have despoiled you and yours, have for twenty years made Bagdad a centre of power from which to assail the power of the British and the allies of the British in Persia and Arabia. Therefore, the British Government cannot remain indifferent as to what takes place in your country now or in the future, for in duty to the interests of the British people and their allies, the British Government cannot risk that being done in Bagdad again which has been done by the Turks and Germans during the war.

7. But you people of Bagdad, whose commercial prosperity and whose safety from oppression and invasion must ever be a matter of the closest concern to the British Government, are not to understand that it is the wish of the British Government to impose upon you alien institutions. It is the hope of the British Government that the aspirations of your philosophers and writers shall be realized, and that once again the people of Bagdad shall flourish, enjoying

their wealth and substance under institutions which are in consonance with their sacred laws and their racial ideals. In Hejaz the Arabs have expelled the Turks and Germans who oppressed them and proclaimed the Sherif Hussein as their King, and his Lordship rules in independence and freedom, and is the ally of the nations who are fighting against the power of Turkey and Germany; so, indeed, are the noble Arabs, the Lords of Koweit, Nejd, and Asir.

8. Many noble Arabs have perished in the cause of Arab freedom, at the hands of those alien rulers, the Turks, who oppressed them. It is the determination of the Government of Great Britain and the great powers allied to Great Britain, that these noble Arabs shall not have suffered in vain. It is the hope and desire of the British people and the nations in alliance with them that the Arab race may rise once more to greatness

and renown among the peoples of the earth, and that it shall bind itself together to this end in unity and concord.

9. O people of Bagdad, remember that for twenty-six generations you have suffered under strange tyrants who have ever endeavored to set one Arab house against another in order that they might profit by your dissensions. This policy is abhorrent to Great Britain and her allies, for there can be neither peace nor prosperity where there is enmity and misgovernment. Therefore, I am commanded to invite you, through your nobles and elders and representatives, to participate in the management of your civil affairs in collaboration with the political representatives of Great Britain who accompany the British Army, so that you may be united with your kinsmen in north, east, south, and west in realizing the aspirations of your race.

Italy's Military Progress in 1916

An Official Summary

THE report of the Italian Supreme Command for the period of September to December, 1916, contains this birdseye view of the actual results of the whole year's operations, under date of Dec. 26:

Looking back on the year which is drawing to its close, the Italian Army has reason for legitimate satisfaction and pride in all the efforts made, the difficulties overcome, and the victories achieved.

The development of its military power was effected in the Winter of 1915-16, thanks to the wonderful work of reorganization and production, in which the whole nation participated. In the Spring we sustained in the Trentino the powerful, long-prepared Austrian offensive, which the enemy with insolent effrontery styled a punitive expedition against our country. But after the first successes, which were due to the preponderance of material means collected, above all in artillery, the proposed invasion was quickly stopped and the enemy was counterattacked and forced to retire in haste into the mountains, leaving on the Alpine slopes the flower of his army and paying bitterly the price for his fallacious enterprise not only here but also on the plains of Galicia.

Our army did not rest after its wonderful effort. While maintaining a vigorous pressure on the Trentino front, in order to gain better positions and to deceive the enemy as to our intentions, a rapid retransfer of strong forces to the Julian front was made. In the first days of August began that irresistible offensive which, in two days only, caused the fall of the very strong fortress of Gorizia and

of the formidable system of defenses on the Carso to the west of the Vallone. Doberdò, San Michele, Sabotino—names recalling sanguinary struggles and slaughter—ceased to be for the Austro-Hungarian Army the symbols of a resistance vaunted insuperable, and became the emblems of brilliant Italian victories. The enemy's boastful assertions of having inexorably arrested our invasion on the front selected and desired by himself were refuted at one stroke.

From that day our advance on the Carso was developed constantly and irresistibly. It was interrupted by pauses indispensable for the preparation of the mechanical means of destruction without which the bravest attacks would lead only to the vain sacrifice of precious human lives.

Our constant and full success on the Julian front is witnessed by 42,000 prisoners, 60 guns, 200 machine guns, and the rich booty taken between the beginning of August and December.

Also on the rest of the front our indefatigable troops roused the admiration of all who saw them for their extraordinary efforts to overcome not only the forces of the enemy but also the difficulties of nature.

The coming year is looked forward to by our army with serenity and confidence. Our soldiers are supported by the unanimous approval of the nation, by faith in themselves and in the justice of their cause. They face willingly their hard and perilous life, under the guidance of their beloved sovereign, who from the first day of the war with a rare constancy has shared their fortunes. Our army is waiting in perfect readiness to renew the effort which will carry it to the fulfillment of the unfailing destiny of our people.

Military Operations of the War

By Major Edwin W. Dayton

Inspector General, National Guard, State of New York; Secretary, New York Army and Navy Club.

Major Dayton has long had the official recognition of the United States War Department as an authority on strategy and tactics. He is one of the experts who have chronicled the present war for *The Army and Navy Journal*. The article here presented is the third in a series which Major Dayton is writing for *CURRENT HISTORY MAGAZINE*, covering in a rapid and authoritative narrative all the military events of importance since the beginning of the great European conflict.

III.—The Great Battle of Ypres

IN the previous articles we have reviewed events of the Summer and early Autumn of 1914 in Belgium and France. Having followed the progress of the invading German armies across Belgium and down into the heart of France, we saw their scouts almost in the environs of Paris before the tide of war turned. Defeated on the Marne, the Germans retreated to the fortified lines above the Aisne, where they succeeded in halting the pursuit of French and British armies eager to keep up the drive. By the middle of October the manoeuvres by which each sought to win the control of the Channel coasts had resulted in a mutual extension of the battle lines until they confronted each other all the way from Westende, south of Ostend, through Belgium and France to the Swiss frontier. That situation was destined to continue for long and bloody years despite frequent efforts on both sides to break through.

In October and November the Germans made an enormous effort to smash a way through to Calais, and some of the hardest fighting of the whole war developed. The Allies, believing that Antwerp could hold out, had hoped to keep the Germans back of the Scheldt until the concentration of a strong Franco-British force between Ghent and Antwerp would provide the means for turning the German right flank and cutting the northern communications of the armies further south. The plan failed when Antwerp fell, and the French then endeavored to execute a flanking

manoeuvre by crossing the Lys and the Scheldt between Lille and Ghent.

La Bassée and Arras were important points south of Lille which were essential to the success of General Joffre's strategy. Both sides hurried every man who could be spared from the Aisne up to the northern battlefield, and new armies from home gave greatly needed reinforcement. As the campaign progressed, the turning movement was repulsed and the Allies found themselves involved in a desperate struggle to prevent the Germans from turning their flank and winning a way to the Channel ports.

First Battle of Ypres

A great battle opened on Oct. 12, 1914, and lasted until Nov. 20, on a front of about forty miles between Lille and the mouth of the Yser. The struggle reached its climax before Ypres, and the battle bears the name of that town. The casualties, Belgian, British, French, and German, probably exceeded 350,000.

General Foch's Tenth French Army had failed to turn the German right flank, and General French had successfully moved the whole British force from the Aisne to its new northern position. On Oct. 12 British divisions had crossed the Aire-Bethune canal and were systematically driving back the dismounted German cavalymen, who contested stubbornly every foot of the way. By the 17th General French's men reached the village of Herlies, in the hills between La Bassée and Armentières, and Aubers, another village in the same sector, was

taken—French cavalrymen captured Fromelles. On the 18th, British attacks upon La Bassée failed. The Second Royal Irish captured Le Pilly, where they were surrounded and killed or captured almost to a man.

About this time strong German reinforcements reached the scene, and the British, under General Smith-Dorrien, relinquished the offensive, although they, too, were reinforced by the arrival of the

British brigades and batteries. Meanwhile Pulteney's (third) corps on the left was likewise heavily engaged in a series of battles along the River Lys, nearer to Armentières.

Late in October several new German corps came up in front of Ypres, and General Rawlinson led the British Seventh Division of veteran regular troops in an advance upon Menin, an important point southeast of Ypres. He met heavy resistance on the front and was strongly attacked on the left flank, but succeeded in regaining his original positions, although with severe losses. The arrival of General Haig's (first) corps rescued the famous Seventh Division from threatened destruction.

British in Grave Peril

General Haig's corps, just from the Aisne, was assigned by General French to a position north of the left flank of the Seventh Division. On Oct. 21, in a series of terrific attacks, some of the Germans penetrated the lines of the Twenty-first Brigade and found cover in woods behind the position. For several days after this the officers of the Second Yorkshire Regiment kept each alternate man facing the opposite direction to reply to rifle fire coming from both front and rear. On Oct. 22 and again on the 24th and 25th German storming columns smashed their way through the thin British lines, but were eventually held by reserves skillfully employed at critical moments.

As the British struggled to hold the sectors about Ypres the gallant Belgians held on successfully to their intrenched positions along Ypres Canal and the Yser River. On Oct. 29 the Germans made a tremendous attack upon the re-entering angles of the British salient in front of Ypres, on the north at Bixschoote, and on the south between Zandevoorde and Hollebeke. The head of the salient was at the crossroads at Gheluvelt, five miles east of Ypres, on the Ypres-Menin road, and early in the day the Germans forced one of the British divisions out of its trenches in this sector.

On the morning of the 30th the German artillery fire became unbearable and

MARSHAL SIR JOHN FRENCH

first native Indian contingent, the Lahore Division, under General Watkis. Smith-Dorrien's corps of about 37,500 men had lost 10,000 men in August, 10,000 in September, and 5,000 up to the middle of October. Although the losses were in part replaced by drafts of fresh men, the corps was well-nigh exhausted by continual fighting, and suffered severely in the next few days, when the Germans attacked fiercely near Neuve Chapelle and Givenchy.

Between Oct. 12 and 29 Smith-Dorrien's (second) corps suffered additional casualties of 360 officers and 8,200 men. On the 29th they were temporarily relieved by Indian troops stiffened by

many of the British trenches had to be abandoned. Sometimes a whole troop would be buried alive by the storm of high explosive shells, which fairly churned the earth along the British lines. Sir Douglas Haig was determined to hold the critical salient head at Gheluvelt, although the angle had grown even sharper when regiments north of the village were forced to fall back a mile to the ridge of Klein Zillebeke.

One after the other, regiments whose names have been part of British history for centuries were sent in to stop the Teuton rush along the Ypres-Menin road. The German Emperor urged the attack and had assured his officers that a victory at Ypres would end the war. There can be little question that it would have meant at least the destruction of the British expeditionary army then in France. In addition to the reverses north of Gheluvelt, General Haig's men on the south were driven out of Hollebeke and down on St. Eloi. Supports coming up were soon heavily engaged about Messines.

On Oct. 31, in early morning attacks along the centre of the battle line, two British brigades were driven back and the Coldstream Guards practically destroyed. The entire division in this sector was driven back to the woods beyond Hooge, and this retreat uncovered the flank of the Seventh Division. The Royal Scots Fusiliers, attempting to hold their trenches in the face of overwhelming forces, were completely cut off and annihilated. This battalion had brought over a thousand men to Flanders and mustered seventy when this day's work was done.

General Moussy's battalions from the Ninth French Corps rendered great aid at a critical moment near Klein Zillebeke, and later the French Sixteenth Corps gave greatly needed reinforcement.

Crisis of the Battle

Sir John French has since said that the crisis of the whole campaign was in the middle of the afternoon on this last day of October. The whole British

line had suffered terribly and was undoubtedly very near the breaking point.* Threatened disaster was averted by a magnificent charge by the Second Worcesters supported by the Second Oxford Light Infantry and the field artillery. This counterattack destroyed the German initiative along the line of direct attack on the highway, and by nightfall the British had regained several of the lost positions.

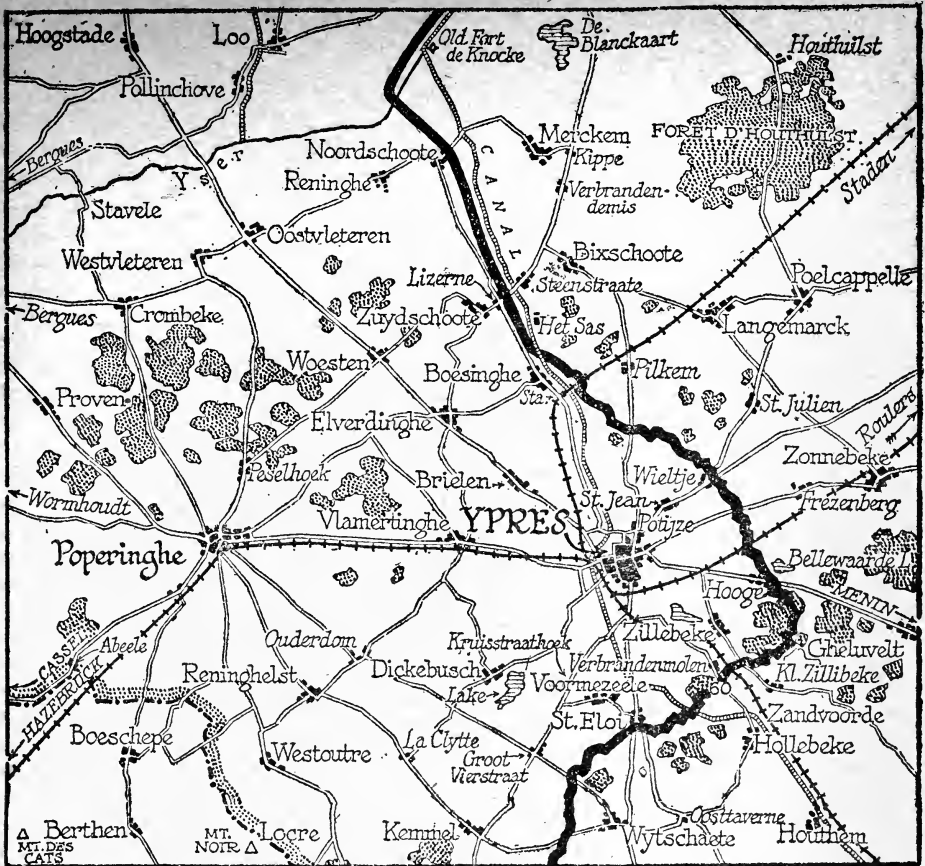

On Sunday, Nov. 1, considerable British and French reinforcements arrived, but a strong German assault won Hollebeke and Messines, which enabled the German gunners to shell Ypres. Wyt-schaete, too, was taken, but recaptured later. The Germans held Messines against continuous counterattacks. In the fighting up to this time the Seventh Division had been reduced from 400 officers and 12,000 men to about 3,000.

On Nov. 6, after a period of heavy artillery attacks, the German infantry attacked the Klein Zillebeke positions, and it required the utmost courage of both British and French to stem the rush. Generals Bulfin and Moussy were the commanders on this hard-fought field, where the honors fell to the British Household Cavalry. The day was won by the First and Second Life Guards and the Blues.

On Nov. 11 the First and Fourth Brigades of the Prussian Guards attacked under the eye of the Emperor and pierced the British lines on the Menin road at several places, but failed to drive the attack home.

While the British had been struggling through these long weeks to hold Ypres, General Dubois with the French Ninth Corps had performed prodigies of valor between Zonnebeke and Bixschoote. Helped by territorial divisions and de Mitry's Second Cavalry Corps, Dubois held Bixschoote against the most violent attacks of great German forces. Regi-

* It is related that the loss of Ypres seemed so imminent that the breech-blocks had actually been taken from the heavy guns to disable them before falling into German hands. Some of the field guns were being moved back from the town.

SCENE OF CLIMAX OF THE BATTLE OF YPRES. THE BLACK LINE INDICATES THE BATTLE FRONT AS IT REMAINED FOR TWO AND A HALF YEARS AFTERWARD

ment after regiment was hurled to destruction in the effort to win this place, which covered the British forces to the south. The Germans renewed their efforts against the British positions on Nov. 12 and again on the 17th, but by the 20th large French reinforcements came up, and as the Winter storms began the German assaults died down.

This great battle was distinguished by the heroic courage and magnificent professional skill of the finest troops the combatants possessed. New organizations, such as the London Scottish, won undying fame beside the most highly trained professional soldiers of the regular regiments. The Germans employed in the neighborhood of a million men to win the war in this their last great offensive on the western front, and among

that great host were included at least six corps of their first-line troops. Sir Henry Rawlinson's famous Seventh Division of British regulars held the salient in the line against odds estimated at 8 to 1. When finally withdrawn at the end of the battle this division had 44 officers left out of 400.

Battle of Neuve Chapelle

On Dec. 14, 1914, a combined attack by Scotch and French regiments was made upon positions southwest of Wytshate and some small gains made. Earlier in this month the French under Maud'huy carried a fortified château at Vermelles, south of the Bethune-La Bassée Canal, and about the middle of December the Lahore Division of the Indian Army and the Meerut Division of

the same service won temporary successes, but later suffered dangerous reverses in the region of Neuve Chapelle, three miles northwest of La Bassée, and near Festubert, about the same distance west of that point.

A severe battle raged on Dec. 20 about Givenchy, a village in front of Festubert, where both Indian brigades and British regiments were soundly beaten. Sir John French sent strong reinforcements into the firing line, and on the 21st some of the lost ground was retaken. At noon on the 22d Sir Douglas Haig took command in the danger zone, and on that night and the following day the British position was re-established in the various places where the Indian troops had proved unable to withstand the evening's assaults. In the earlier stages of this battle the British forces showed less efficiency and stamina than on any other field in the war. The staff arrangements seem to have been imperfectly planned, and severe losses were due to poor leadership. Disaster threatened at Givenchy until Haig took command and, with British and French troops, saved the day.

The Winter of 1914-15

When the battles near La Bassée ended, the campaign in the north quieted down. To the south in the Argonne the Crown Prince was very active, and a number of minor battles were fought. The French held their own splendidly in this domain of minor tactics, where there was—and, indeed, has continued ever since—inconstant skirmishing which frequently developed into combats of considerable importance. General Sarrail at Verdun held his own, and did more, for gradually his intrenched positions were enlarged on the east front of the fortress in the direction of Metz.

The War in Serbia

Recalling the complete defeat of Austria's first invasion of Serbia in August, we will proceed to a further consideration of this theatre of the war. Austria lost 40,000 men killed and wounded, and 50 guns, in the first attempt at a punitive expedition into the region which had been the cause of the outbreak of the

war. The Russian campaign on the east had necessitated pulling every available soldier out of the Balkans for use on the frontiers of Poland and Galicia, and the Serbs undertook an attack aimed at Serajevo, the capital of Bosnia. On Sept. 14 the frontier position at Vishegrad was captured, and a force which had crossed the Save at night took the town of Semlin on Sept. 6 and silenced batteries which had been bombarding Belgrade.

The Austrians gathered a new army along the Drina, and early in September crossed that river, but on the arrival of Serbian reinforcements were defeated and driven back. The battle continued for ten days, but by the 17th the Austrian attack was definitely repulsed.

Meanwhile the Serbs were unable to make much progress in their attempt on Serajevo, and by the end of October the Austrians resumed the attack, with Nish, to which the Serbian Court had retired, as the main objective. An Austrian army of about 300,000 men invaded Serbia in November and a hard-fought campaign followed among the mountain ridges of the interior, to which Crown Prince Alexander and General Putnik retired.

Early in December the Austrian commander, confident that his invasion was to be an easy victory, sent several corps back to assist in the effort against Russia in the Carpathians. The aged King Peter joined his army. On Dec. 3 and 4 a heavy battle was fought among the ridges of Rudnik and Maljen, and at Ushitza. By the morning of the 6th the Serbs had won a complete and astonishing victory. The Austrians were a routed and broken remnant of an army, hotly pursued all the way to the border by the hardy Serbian veterans. Forty thousand Austrian prisoners were taken, and their casualties were very heavy.

The Serbs recaptured the capital at Belgrade on Dec. 14-15, and the second Austrian attempt to invade the land had ended in complete and disastrous defeat.

The War in Africa

Within the period of Germany's commercial expansion which followed the victories of 1870 a wonderful scheme of foreign colonization had been developed

on the coasts of China, in Polynesia, and especially in Africa. In the Dark Continent vast regions became German colonies or protectorates, and of course this expansion was regarded most jealously by the other European nations, whose arms were already elbow deep in the African grab bag. Germany built roads and railroads, and had apparently started a movement which would in time have made great returns for the large sums spent in development.

On the Atlantic side, Togoland was located above the north shores of the Gulf of Guinea, while the much larger Cameroon lay on the east coast of the same gulf. Southwest Africa was an enormous territory west of the old Boer republic, now absorbed into British South Africa. On the Indian Ocean German East Africa was another huge protectorate whose northern frontier nearly touched the equator, while the southern border touched Mozambique well below the tenth parallel. This colony contained Mount Kilimanjaro, which was first surveyed by the German explorer von der Decken, and the greater part of Lake Victoria Nyanza. There are several good ports on the seacoast, and this colony was one with great possibilities both in mining and agriculture.

Early in August, 1914, a British cruiser captured Lome, the port of Togoland, and the small German garrison retreated into the interior. French and British expeditions invaded the colony from the Gold Coast and Dahomey, and by Aug. 27, after very little fighting, all Togoland had passed into possession of the Allies.

Late in August, Cameroon was invaded by a British column, which met a reverse on the 30th in an attack upon the forts on the Benue River. The British commander and a number of other officers were killed, and nearly half of the native force under their command was lost. Another column, which entered Cameroon from Calabar, after some initial successes was completely routed at Nsanapong in a night attack. The losses here were heavy. On Sept. 27 a mixed Anglo-French force captured the German port at Duala and another

coast town called Bonaberi. British warships from the mouth of the Cameroon River rendered great assistance. By October the Germans had been driven back into the wild interior and the Allies were in complete control of the coast and the rivers.

General Botha's Achievement

In the important colony of German Southwest Africa the Governor abandoned the coast stations early in August, 1914, and concentrated his defense in the interior at Windhoek. When the Parliament of British South Africa met on Sept. 8 skirmishing was in progress along the frontier, and General Botha announced a policy of active aggression against the Germans in the west. Fighting occurred at several places along the Orange River, and on Sept. 18 a British naval expedition captured the seaport at Suderitz Bay. In this colony the Germans had between 5,000 and 10,000 men, with considerable artillery. General Botha raised in the British colonies about 7,000 men, and by the end of September skirmishing was in progress at a number of frontier points. At Sandfontein a small British column was trapped, and after a hard fight the survivors surrendered.

Early in October a rebellion occurred in the northwest section of Cape Province, led by Colonel Maritz, who commanded the British forces in the region, but who had fought on the Boer side in the South African war. Martial law was declared in the British colonies, and in several engagements Maritz, who had a force of about 2,000 men, was completely defeated and driven out of the colony.

A much more serious rebellion developed in the old Orange Free State and the Western Transvaal under such renowned veterans of the Boer war as Generals de Wet and Beyers, assisted by a number of other veteran leaders in South African wars. At Pretoria the burghers rallied to the loyal Botha, who soon raised an army of more than 30,000 fighting men. On Oct. 27 Botha defeated and dispersed the rebels under Beyers and Kemp south of the town of Rustenberg. The defeated forces rallied, and at Lichtenburg defeated a force under

Colonel Alberts, which attempted to cut off the retreat, but after several reverses this section of the rebel army was finally defeated and dispersed by Colonel van der Venter on Nov. 8 at Sandfontein, sixty miles from Pretoria. Another part of the force defeated at Rustenberg had taken refuge in the Orange Free State, led by Beyers and Kemp, who were finally defeated near the junction of the Vaal and the Vet and dispersed toward the wild interior.

The old-time genius of South African fighting had deserted de Wet, and his campaign was short. On Nov. 7, at Doornberg, his force of about 2,000 defeated a Union column under Col. Cronje, and de Wet's son was killed. By Nov. 11 General Botha, having cleared up the Transvaal, began to close in on de Wet's forces and administered a severe defeat to them. After further reverses de Wet and a few faithful adherents were captured on Dec. 1 at Waterberg, a hundred miles west of Mafeking. By the end of December, after a number of engagements with scattered commandoes, the rebellion was practically stamped out. Beyers was drowned while attempting to swim the Vaal. De Wet and Muller were prisoners, and Kemp had escaped into German territory.

German East Africa

In East Africa the Germans had an army which numbered close to ten thousand, of whom perhaps 30 per cent. were white. In British East Africa and Uganda the British forces all told seem not to have exceeded 1,500. On Aug. 13, 1914, a British cruiser bombarded Dar-es-Salam and destroyed the harbor works, and on Lake Nyassa a British steamer attacked German vessels. In September several small battles were fought along the frontier between the German colony and Rhodesia to the south as well as on the frontier to the north bordering British East Africa. Important British reinforcements arrived from India with artillery in time to prevent a German attack upon the British railway from the sea at Mombasa across the colony to Lake Victoria Nyanza. In seven or eight engagements on the coast and along the northern frontier the Ger-

mans were uniformly beaten, and by October their campaign had run its course with only a few minor points occupied on the British side of the line.

The British were content to maintain a successful defense while awaiting further reinforcements promised from India for November. This new expeditionary force arrived on the East African coast on Nov. 1 and proceeded to attack the German port of Tanga, the terminus of the Maschi Railway. An attempt to storm the defenses on Nov. 4 met with a disastrous repulse, in which the British lost 800 men, and the expeditionary army withdrew to the north, where it became an army of observation along the frontier for the next few months.

The Japanese in China

Japan, having declared war upon Germany late in August, 1914, proceeded to capture Germany's well-fortified position at Tsing-tao on the China coast. The Japanese Army, with a peace strength of 250,000 and a war strength of 1,000,000, was, so to speak, at the door of this German post hopelessly remote from European assistance. The powerful Japanese Navy controlled the eastern sea and had doubled in strength since the Russian war. Several British warships co-operated in the attack upon Tsing-tao. The German garrison numbered 5,000 men, occupying an intrenched camp and modernized Brialmont forts with concrete and steel construction. Under naval convoy a strong Japanese force landed, and by the end of September had advanced along the peninsula to a point where their artillery dominated the German forts. A small British force from Wei-hai-Wei landed and co-operated with the Japanese in the reduction of the German fortifications. General Kamio, the Japanese commander, had a heavy siege train of 140 guns, including some 11-inch howitzers, which quite outclassed in range and weight anything possessed by the Germans. The Japanese warships joined in the bombardment, and fort after fort was crushed by heavy shell fire from both land and sea. The Germans finally surrendered on Nov. 10, 1914.

IN THE PATH OF THE GERMAN RETREAT

German Vandalism During the Retreat in France

SINCE November the German military authorities had been preparing to withdraw from the most seriously threatened portions of their lines in France, and on Friday, March 16, 1917, the preparations were complete. The last batteries on the long front between Arras and Soissons were withdrawn that night, though rear guards remained in the trenches, making a show of activity until the following night, when they too withdrew, marching swiftly and silently into the darkness toward the north.

At 8:30 in the evening the last troops left Noyon. The inhabitants were fiercely ordered to remain in their cellars on pain of bombardment. On the morning of Sunday, the 18th, when they timidly emerged there was not a German to be seen. A few moments later a French cavalry patrol trotted cautiously to the edge of the town and was greeted with weeping and cheers by the inhabitants. After two and a half years of exile and slavery they were again in France!

The conduct of the German Army in retreat revealed the fact that it was under orders to devastate the abandoned territory, and the thoroughness with which it acted on these orders has left one of the most sensational records of "frightfulness" in the annals of the great war.

French Note of Protest

The French Government at once charged its representatives in all neutral countries to enter a protest against these "acts of barbarism and devastation." The text of this note, signed by Premier Ribot, is as follows:

The Government of the republic is now gathering the elements of protest which it intends sending to neutral Governments against acts of barbarism and devastation committed by the Germans in French territory which they are evacuating while retreating. At this time I ask you to make known to the Government to which you are accredited that we intend to denounce before

universal judgment the unqualifiable acts indulged in by the German authorities. No motive demanded by military necessities can justify the systematic devastation of public monuments, artistic and historical, as well as public property, accompanied by violence against persons. Cities and villages in their entirety have been pillaged, burned, and destroyed; private homes stripped of all furniture, which the enemy has carried off; fruit trees have been torn up or rendered useless for future production; streams and wells have been poisoned. The inhabitants, relatively few in number, who have not been removed have been left with a minimum of rations, while the enemy seized stocks supplied by the neutral revictualing commission which were destined for the civil population.

You will point out that this concerns not acts destined to hinder the operations of our armies, but of devastation having no connection with this object and having for its purpose the ruin for years to come of one of the most fertile regions of France.

The civilized world can only revolt against this conduct on the part of a nation which wanted to impose its culture on it, but which reveals itself once again as quite close to barbarism still, and, in a rage of disappointed ambition, tramples on the most sacred rights of humanity.

Pillage and Destruction

At the same time the French Government charged that safes had been robbed, notably at Péronne, where a branch of the Bank of France was pillaged and large amounts of stocks and bonds were taken by the departing troops. Press dispatches also stated that securities to the amount of \$3,600,000 were taken from the banks in Noyon. Premier Ribot, who is also Foreign Minister, instructed the representatives of France in neutral countries to warn bankers against having anything to do with these stolen securities, declaring that France and the Allies would not recognize as valid any transaction based upon negotiable paper which the Germans had seized in violation of The Hague Convention.

The region evacuated by the Germans was approximately forty miles long and twenty-five deep, or a total of 1,000

square miles, containing between 350 and 400 towns and villages, and a population of nearly 200,000 before the war. This whole section of the fairest lands in France is described by all eyewitnesses as a vast wreck, a heartrending chaos of burned villages and farms, blasted roads and bridges, felled fruit trees, polluted wells, and looted homes. Philip Gibbs, the war correspondent, wrote on March 21:

"The Germans have spared nothing on the way of their retreat. They have destroyed every village in their abandonment with systematic and detailed destruction. Not only in Bapaume and Péronne have they blown up or burned all the houses which were untouched by shellfire, but in scores of villages they laid waste the cottages of poor peasants and all their little farms and all their orchards. At Bethonvillers this morning, to name only one village out of many, I saw how each house was marked with a white cross before it was gutted with fire. The cross of Christ was used to mark the work of the devil, for truly it has been the devil's work.

"Even if we grant that the destruction of houses in the wake of retreat is the recognized cruelty of war there are other things I have seen which are not pardonable, even under that damnable code of morality. In Bapaume and Péronne, in Roye and Nesle and Lianecourt, and all these places over a wide area the German soldiers not only blew out the fronts of houses, but with picks and axes smashed mirrors and furniture and picture frames. As a friend of mine said, a cheapjack would not give fourpence for anything left in Péronne, and that is strictly true also of Bapaume. There is nothing but filth in those two towns. Family portraits have been kicked into the gutters. Black bonnets of old women who once lived in those houses lie about the rubbish heaps and by some strange pitiful freak these are almost the only signs left of the inhabitants who lived here before the Germans wrecked their houses.

"The ruins of houses are bad to see when done deliberately, even when shell-

fire spared them in the war zone, but worse than that is the ruin of women and children and living flesh. I saw that ruin today in Roye and Nesle. I was at first rejoiced to see how the first inhabitants were liberated after being so long in hostile lines. I approached them with a queer sense of excitement, eager to stop with them, but instantly when I saw those women and children in the streets and staring at me out of windows I was struck with the chill of horror. The women's faces were dead faces, shallow and masklike and branded with the memory of great agonies. The children were white and thin, so thin that the cheekbones protruded and many of them seemed to me idiot children. Hunger and fear had been with them too long."

Wells Polluted by Order

Outside of the ruined cities, not only were all the bridges and cross roads blown up with mines—a legitimate military measure to hinder pursuit—but cottages and farmhouses that were once the homes of nearly 100,000 peasant farmers were rendered uninhabitable by means of specially prepared bombs. Written orders were captured which directed the blowing up of all houses, wells, and cellars, except those occupied by rearguards, and these were to be made uninhabitable upon leaving. Farming implements were gathered in heaps and burned, peasants' carts were hacked to pieces, all the spokes of the wheels being cut out, in some cases with infinite labor. Fruit trees everywhere were sawed off near the ground, or, if time pressed, were girdled so as to insure their death. Wherever a house was spared it was rendered filthy.

Every well also was rendered useless by pollution, so that the homeless people were compelled to get all their drinking water in barrels from outside the looted region. This pollution of the wells was also done under German official orders, as demonstrated by a written order found on the battlefield, dated March 14. It was addressed to the Second Squadron, Sixth German Cuirassiers,

Thirty-eighth Division, and gave instructions to this end.

The wife of the village doctor at Nesle, who had housed the German regimental staff, protested to a German Lieutenant against the willful destruction of her furniture. He appeared to regret what his men were doing, but said:

"I cannot do otherwise. It is by command."

A number of German doctors who lodged for months in one of the finest mansions of Roye summoned the aged mistress of the house on the morning of March 16 and said: "We are going to give Roye back to the French. We hope they will like it." They then went through the house, firing revolvers at the mirrors and smashing furniture in the drawing-room and bedrooms. In many other houses the same scene was repeated, and pictures, clocks, and family papers were carried away.

In Péronne a famous avenue of shade trees was left prostrate, and scarcely a house was undamaged. Not a living human being remained. Péronne was a dead town, like Bapaume, like Ypres, like all the villages in the wake of the German retreat. The first correspondents who penetrated through the chaos to the Grande Place found a large board hung upon a shattered wall and bearing the ironic words: "Nicht ärgern, nur wundern." (Do not be annoyed, only be astonished.) It was the greeting of the departing Germans to the incoming Britons.

Coucy Castle, one of the most splendid remaining relics of the thirteenth century, was utterly blasted from the face of the earth. Nothing is left but a great pile of massive crumpled masonry and pulverized rock of what was one of the strongest and most historic castles of Europe.

So enraged were the French at this act of destruction that they refused to bombard the ruins, where the Germans had intrenched machine gunners. Instead infantry, unsupported by artillery, charged over a plain swept by German machine gun fire and wrenched the sacred spot from the enemy.

Before they left, the Germans boasted to the French inhabitants that thirty tons of explosives were used to destroy the castle. Pieces of its ancient masonry were spread over 10,000 square yards. Not a vestige remains of the great tower which Cardinal Mazarin's engineers vainly tried to blow up in the seventeenth century. Coucy Castle had been set aside as a historical museum.

Pitiful Streams of Fugitives

A correspondent who accompanied the French Army in its advance from Noyon, Chauny, and Tergnier, on March 21, wrote that the path of the retreating Germans was marked with the smoke of burning farms for fifteen miles. Along the road back from Tergnier and Noyon poured an unending stream of refugees from these blazing farms and villages. Nearly all were women—pitiful in their destitution, a few scant pieces of clothing saved and strapped on their backs, or pushing baby carriages, or wheelbarrows with tiny tots tucked therein. Younger children clung to their skirts or themselves toddled along under the weight of bundles.

"Their stories were all alike. For weeks before the retreat started the Germans herded all inhabitants before them from village to village. When the final movement came for the Germans to leave they sacked the houses. The soldiers carried off everything eatable and burned the villages before the eyes of the refugees. Then they departed, leaving the villagers homeless and foodless.

"A few hours later, when the Germans believed the French troops had arrived, they began shelling the villages they had pillaged and left, despite their knowledge of thousands of innocent civil inhabitants still there. Seven thousand women and children suffered this experience at Chauny alone. The village was under bombardment at the moment I arrived. The French Red Cross crews, with their litters, who had pushed forward afoot, were carrying off women and children wounded during the shell fire.

"The German retreat has been marked by insensate destruction. Aside from

the burning of farms and villages, the blowing up of church doors and altars and the like, the wanton destruction was carried to such an extent that I walked through twenty miles of farms and fields where every orchard tree had either been hewn down or—if the French arrived before this job of destruction could be completed—the trees were sufficiently hacked to insure their death.

"The Germans stripped every village of all metal. They tore tin gutters and plumbing from all houses, took off the metal roofs; pilfered the churches of clocks and bells. Not one escaped—from the cathedral at Noyon to the humblest of wayside churches.

"At Noyon, owing to the concentration of 10,000 women and children, the Germans promised to leave the American commission sufficient supplies to feed the refugees. Nevertheless, departing patrols sacked the American commission storehouses, carrying off all eatables. Then they dynamited the building and finally diverted water from the canal into the village. Part of the city was flooded and ruined in this fashion. The population of Noyon said they had not eaten a scrap of meat in eighteen months."

Took Away Many Captives

In leaving the evacuated territory the Germans carried with them all the able-bodied men and boys above 16 years, and all women and girls older than 15 years who were able to work. A French official communication mentions the taking of fifty women and girls from Noyon. On Feb. 17 they had removed 423 from Nesle. While taking away the fit population throughout the evacuated region, the invaders sent back hundreds of the aged and infirm from St. Quentin and other towns behind their new lines.

"Many of these French boys and old men," says an Associated Press correspondent, "had been compelled to work in the German trenches, where they said they also met many Belgians and Russians, the latter, of course, being prisoners of war. It was asserted that one of the reasons for the wholesale deportation of Belgians was the necessity for

this labor in constructing the new positions to which the Germans have fallen back. The Germans wished to spare the soldiers from this work and so employed these unwilling civilians and prisoners."

Village Priest's Narrative

In the ruined village of Voyennes, not far from the now demolished Fortress of Ham, a priest told of the spiritual agonies through which his people had passed, culminating in the sacking of their homes by the departing enemy.

"We could get no news for months except lies," he said. "We knew nothing of what was happening. Starvation crept closer upon us. We were surrounded by the fires of hell for fifty hours at a time. The roar of guns swept around us week after week, and month after month, and the sky blazed around us. We were afraid of the temper of the German officers.

"After the defeat on the Marne and after the battles of the Somme Germany was like a wounded tiger, fierce, desperate, cruel. Secretly, although our people kept brave faces, they feared what would happen if the Germans were forced to retreat. At last that happened, and after all we had endured the day of terror was hard to bear.

"From all the villages around, one by one, the people were driven out, the young women and men as old as 60 were taken away to work for Germany, and the orderly destruction began which ended with the cutting down of our little orchards and ruin everywhere.

"The commandant before that was a good man and a gentleman, afraid of God and his conscience. He said: 'I do not approve of these things; the world will have a right to call us barbarians.' He asked for forgiveness because he had to obey orders, and I gave it to him.

"An order came to take away all the bells of churches and all metal work. I had already put my church bells in the loft, and I showed them to him and said, 'There they are.' He was very sorry. This man was the only good German officer I have met, and it was because he had been fifteen years in America, and had married an American wife and es-

caped from the spell of his country's philosophy. Then he went away.

"Last Sunday a week ago, at this very house, when our people all were in their houses under strict orders and already the country was on fire with burning villages, a group of soldiers came outside there with cans of petroleum, which they put into the church. Then they set fire to it and watched my church burn in a great bonfire. That night the Germans went away through Voyennes, and early in the morning, up in my attic, looking through a pair of glasses, I saw four horsemen ride in. They were English soldiers, and our people rushed out to them. Our agony had ended."

Ambassador Sharp's Report

The full extent of this German ruthlessness was confirmed by Ambassador Sharp in a report made to the Washington Government after a journey of 100 miles through the devastated territory. The State Department made public the following summary of the document:

"A telegram from the American Ambassador at Paris, dated April 1, states that upon the invitation of the French Government he visited on March 31 many of the French towns recently retaken in the invaded territory. He was accompanied by one of the Military Attachés to the embassy. He found that the various reports circulated in France, which have appeared in American newspapers, in regard to the deplorable condition were in no way exaggerated.

"In the larger towns of Roye, Ham, and particularly in the attractive and thriving town of Chauny, destruction was complete. In many of the other smaller villages scarcely a house remains with roof intact. Throughout the reconquered territory there reigns a scene of desolation, and this is not only true where German military operations might possibly excuse destruction in the blow-

ing up of bridges, telegraphic and telephonic connections, railway lines, and the blocking of highways by felling trees which protected the German retreat, but towns were totally destroyed for no apparent military reasons.

"Fruit trees had either been cut down or exploded so as to ruin them completely; private houses along the country highway, including some of the most beautiful châteaux of great value, were completely gutted by explosives systematically planted or by fire. Blackened walls of what must have been manufacturing plants were to be seen in many towns, the salvage of which would scarcely pay for their removal. Agricultural implements in farms were destroyed, churches and cathedrals were reduced to a mass of ruins by fire or by explosives.

"At the town of Ham the mother of six children told him that her husband and two daughters, one 18 and the other 15 years of age, had been carried away by the Germans at the time of the evacuation. Upon remonstrating she had been told that as an alternative she might find their bodies in the canal in the rear of her house. She stated that out of the town's total population several hundred people had been compelled to accompany the Germans, nearly half of whom were girls and women over 15 years of age. A large number of French people, it is believed, in the evacuated towns and surrounding country were compelled to go with the Germans from the fact that few are now to be found there.

"He inspected on the trip more than 100 miles in the invaded territory and left with the conviction that never before in the history of the world had there been such a thorough destruction wrought by either a vanquished or victorious army."

[Continued on next page]

with the French lines was most interesting. There was a definite space of shell-marked cleavage between the former French lines and the first German outposts. After that came the German first-line trench and a marvelous system of communicating trenches back to their second, third, fourth, fifth, sixth, to the twentieth line of formidable defense, known as the Hindenburg line.

Their main lines were of solid concrete. I would have sworn they were impregnable had I not such vivid proof of what happened to similar German trenches on the Somme after the battering of French artillery. Their communication trenches were a marvel of ingenuity—line after line of them running across the main lines and so connected that reinforcements or supplies could be rushed from half a dozen places to almost every main position. Between this and between every defensive trench line there is nothing but one unbroken mass of barbed wire. As far as the eye could see for a distance of miles after I entered what was German territory until a week ago there was one unending vista of rusted wire entanglements. There was something psychological about it. On the French side there are also complete systems of defensive lines that stretch all the way back to Paris, but they are not so visible—there are great open stretches of country between. On the German side it seemed that everything they did was to perfect a defense; that they realized a long time ago that an offensive on that front was impossible, and that against a French offensive they could only prepare to go back yard by yard as best they could.

Barbed Wire Ten Miles Deep

For a distance of probably ten miles this barrier of barbed wire extends in solid formation. Then come stretches of free country to where probably the tenth or eleventh defense line appears, and so on. It is behind this main area of entanglements that the systematic devastation begins. Leading directly back from what was the French front, the Germans only committed such destruction as any retreating army might do to keep off rearguard

attacks. Every road was blown to pieces—now, however, all filled and planked—every telegraph pole prone on the ground, and every rod of railway destroyed.

Beyond all this, however, lies Germany's everlasting shame and disgrace. Acts that had not the slightest military value were committed on every hand. The whole country lies waste and desolate beyond description, and not a German living today or in years to come can ever be clever or brilliant or logical or false enough to tell the reason why and have the world believe him. Ten thousand inhabitants of the country who were left behind are living witnesses that they existed these past years in a bondage worse than galley slaves. And if the testimony is not enough, let the German placards upon the remaining dead walls of these corpses of cities bear them out:

That every person above the age of twelve should always salute officers by politely removing their hats and bowing as they passed or suffer the penalty of imprisonment.

That they should live how and where their masters pleased, that their women should cook for them and wait upon them and serve them in any way desired.

That they might only walk certain streets at certain hours.

That they were forbidden to possess either money or food except at the German will.

The penalty in all these cases was death.

Lived Only by Outside Aid

I asked the same question a dozen times throughout the trip, how the civil population managed to live at all. Every time I received the same answer, which was:

"We would have starved except for the food sent by the American Relief Committee."

In reply to a question concerning the kinds of food received, I was shown empty tins that had contained American crackers and canned goods. When I asked what sort of meat, I received the invariable response:

"The Americans sent lots of things, but everything like that the Germans took for themselves."

This naturally led to questions concerning how the German soldiery fared,

and the unanimous response was that neither officers nor men fed any too well; that the pinch of hunger now afflicting the entire empire has fastened itself as well on the army.

As we approached the ruined villages * * * we saw what ghastly hand had been at work. The solid brick and stone walls of the houses were only shells concealing charred ruins. Not only one village is like that, nor a dozen, but every single one of the hundreds that have been liberated has been put to fire and sword, old men, old women, cripples, and children left to await the arrival of their own soldiery to care for them; their able-bodied men taken into bondage months ago, their young women and girls herded along with the retreating army to a slavery no one dares to think about without seeing red. And at every village the same message was left behind for the French soldiers when they arrived. Translated, it reads like this:

"You see what we have done here. Well, this is what is going to happen all the way back to the French frontier."

Is it any wonder that the French soldier telling me this said between clenched teeth:

"There is only one answer to that, my friend. Let them get down on their knees and pray when the French Army crosses the Rhine. We will be taking no prisoners on that day."

The Countryside Devastated

The aspect of the villages is sad enough, but the countryside is worse. I have seen so much of artillery destruction during this war that I confess I have been rather sated with ruins. A destroyed church, a house ripped clean to its foundations, is only another example of what I have seen dozens of times before. But a countryside that has so little left of it as that one I passed through is a sight that made me want to cry and fight at the same time. It has already been reported how orchards have been destroyed. I rather expected that this had happened just along the roads by which the army retreated. But with field glasses I could see far in on either side of every road for miles and miles; every

farm is burned, fields destroyed, every garden and every bush uprooted, every tree sawed off close to the bottom. It was a terrible sight, and seemed almost worse than the destruction of men. Those thousands of trees prone upon the earth, their branches waving in the wind, seemed undergoing death agonies before our eyes.

Everything gave its share to the blood lust of hate. Churches gave their organs for their copper, also the brass rails of their altars, even crucifixes upon ruined walls were stripped down and torn asunder.

We passed through the remnant of a place called Porquéricourt. An old woman came to a broken doorway. We stopped to talk with her. She smiled at sight of the French uniforms of our officers. She lived on a farm a mile away. The Germans had passed in the night and burned it so that she had come to Porquéricourt to hide in the cellar of a friend. Her husband and brother, both old men, had been killed by the Germans during the retreat, her two sons led off to slavery the year before. One of them had come back, but had been seized again only a few weeks before.

Her three daughters had been with her at the farm the night that the Germans retreated. They had fled with her to the house of her friend, from where they saw their own home of a lifetime in flames. The girls were 19, 21, and 24 years old. The Germans had found them in Porquéricourt and had taken them away. That was eight days before. She had heard nothing of them since. All other young women had likewise vanished that night when the Germans went away.

She told her story simply in a low, unflinching voice. But she sundered as she spoke of her daughters.

Cemetery Left Intact

We left just at nightfall. On the outskirts we came upon the only thing I can now remember in all that scene on all that day which the Germans did not destroy as they fled. It was a cemetery built by themselves for their soldier dead. It was magnificently made, upon a magnificent site, overlooking a great valley. The graveyards I have seen behind the

with the French lines was most interesting. There was a definite space of shell-marked cleavage between the former French lines and the first German outposts. After that came the German first-line trench and a marvelous system of communicating trenches back to their second, third, fourth, fifth, sixth, to the twentieth line of formidable defense, known as the Hindenburg line.

Their main lines were of solid concrete. I would have sworn they were impregnable had I not such vivid proof of what happened to similar German trenches on the Somme after the battering of French artillery. I asked the same question a dozen times throughout the trip, how the civil population managed to live at all. Every time I received the same answer, which was:

"We would have starved except for the food sent by the American Relief Committee."

In reply to a question concerning the kinds of food received, I was shown empty tins that had contained American crackers and canned goods. When I asked what sort of meat, I received the invariable response:

"The Americans sent lots of things, but everything like that the Germans took for themselves."

This naturally led to questions concerning how the German soldiery fared,

and the unanimous response was that neither officers nor men fed any too well; that the pinch of hunger now afflicting the entire empire has fastened itself as well on the army.

As we approached the ruined villages * * * we saw what ghastly hand had been at work. The solid brick and stone walls of the houses were only shells concealing charred ruins. Not only one village is like that, nor a dozen, but every single one of the hundreds that have been liberated has been put to fire and sword, old men, old women, cripples, and children left to await the arrival of their own soldiery to care for them; their able-bodied men taken into bondage months ago, their young women and girls herded along with the retreating army to a slavery no one dares to think about without seeing red. And at every village the same message was left behind for the French soldiers when they arrived. Translated, it reads like this:

"You see what we have done here. Well, this is what is going to happen all the way back to the French frontier."

Is it any wonder that the French soldier telling me this said between clenched teeth:

"There is only one answer to that, my friend. Let them get down on their knees and pray when the French Army crosses the Rhine. We will be taking no prisoners on that day."

The Countryside Devastated

The aspect of the villages is sad enough, but the countryside is worse. I have seen so much of artillery destruction during this war that I confess I have been rather sated with ruins. A destroyed church, a house ripped clean to its foundations, is only another example of what I have seen dozens of times before. But a countryside that has so little left of it as that one I passed through is a sight that made me want to cry and fight at the same time. It has already been reported how orchards have been destroyed. I rather expected that this had happened just along the roads by which the army retreated. But with field glasses I could see far in on either side of every road for miles and miles; every

farm is burned, fields destroyed, every garden and every bush uprooted, every tree sawed off close to the bottom. It was a terrible sight, and seemed almost worse than the destruction of men. Those thousands of trees prone upon the earth, their branches waving in the wind, seemed undergoing death agonies before our eyes.

Everything gave its share to the blood lust of hate. Churches gave their organs for their copper, also the brass rails of their altars, even crucifixes upon ruined walls were stripped down and torn asunder.

We passed through the remnant of a place called Porquéricourt. An old woman came to a broken doorway. We stopped to talk with her. She smiled at sight of the French uniforms of our officers. She lived on a farm a mile away. The Germans had passed in the night and burned it so that she had come to Porquéricourt to hide in the cellar of a friend. Her husband and brother, both old men, had been killed by the Germans during the retreat, her two sons led off to slavery the year before. One of them had come back, but had been seized again only a few weeks before.

Her three daughters had been with her at the farm the night that the Germans retreated. They had fled with her to the house of her friend, from where they saw their own home of a lifetime in flames. The girls were 19, 21, and 24 years old. The Germans had found them in Porquéricourt and had taken them away. That was eight days before. She had heard nothing of them since. All other young women had likewise vanished that night when the Germans went away.

She told her story simply in a low, unflinching voice. But she sundered as she spoke of her daughters.

Cemetery Left Intact

We left just at nightfall. On the outskirts we came upon the only thing I can now remember in all that scene on all that day which the Germans did not destroy as they fled. It was a cemetery built by themselves for their soldier dead. It was magnificently made, upon a magnificent site, overlooking a great valley. The graveyards I have seen behind the

allied lines cannot compare with it. Instead of wooden crosses and painted names and dates it contained monuments and crosses of engraved marble, done in all the heavy but splendid style of modern Teuton art. The place was organized and carried out with all the perfection of detail and display in which Germany has proved herself. The monuments bore sonorous and lofty mottoes. On one, beneath a helmeted statue in white, was the inscription that there lay a Prince of the house of Mecklenburg, who had died for his country, and on either side, likewise marble, rested all that was mortal of simple German soldiers.

I walked down another path, and before a gigantic marble block I halted in surprise. The inscription read: "Here lie French warriors," and over the next grave was the inscription: "Here rests the body of a brave Frenchman." I asked myself what was I to think of these people who should show such respect to French dead and place them in the same place as their own. I knew the French did that in their graveyards, but here I was in a German graveyard, and I had been hating Germans all day. I had failed to find anything about them that was good or could be admired, but here in this graveyard, perhaps, after all I had found some of that spirit of Heine, Goethe, and Schiller.

I voiced my thought to a French Lieutenant who accompanied me. We were

standing by a large monument in the centre of the graveyard. It was a noble figure of a woman in a long robe. In one hand she carried a tablet, and from the other stretched out a wreath. I read the inscription on the tablet: "Friend and enemy in death united."

Silently we walked out of the place and stood in the road. A long line of motor camions was passing. I looked into the rear ends as they lumbered along. From them the faces of old women, crippled old men, and children peered out at us, all looking white and frightened in the dark. A miserable pile of bedding and a hamper of broken crockery and kitchenware was strapped outside one of them. From another dangled an old and broken baby buggy. Inside I could see a mother with her child at her breast. My companion said:

"They are inhabitants who can no longer remain; their homes are gone. We cannot feed them there; we are sending them to Paris."

He laughed bitterly and pointed back to the statue that loomed white through the darkness. He repeated the inscription on the tablet:

"Friend and enemy in death united." He said: "They had the nerve to put that up in France—but it's quite true."

I understood and I believed him. In death the Frenchman and the German may be united, but that is the only way it is ever likely to happen.

Military Results of Germany's Move

GENERAL VON HINDENBURG was present in person behind the old front in France as late as March 10 and arranged the details for the withdrawal to the new line of fortified defenses, which had been in preparation for months. The orders for devastation of the abandoned territory came through him. Judged purely from the viewpoint of military strategy, what are the advantages of the new situation for Germany?

The plans and preliminary stages of the retirement were successfully con-

cealed from the Allies for days and weeks, so that all the heavy guns were removed safely to their new positions and all the main bodies of troops and their supplies were out of danger when the move became known. The Germans, however, miscalculated as to the speed with which the enemy would be able to pursue the rearguards. The fact that they left five days' food with some of the inhabitants seems to give a measure of the time they had allowed for the arrival of French or British troops through the chaos they had cre-

ated. As a matter of fact the French, especially, performed marvels of swift engineering work, throwing temporary bridges over streams, building pathways around deep craters at crossroads, and deflecting their march through fields where necessary, almost with the speed of an ordinary march. Time after time they came upon the heels of the German rearguards before they were expected. Thus the military purpose of the desolation was a failure.

What the Germans Abandoned

All those who have looked upon the impregnable positions abandoned by the Germans, especially at Péronne, with Mont St. Quentin on its flank, agree that no new line can equal it in strength. Only dire necessity could have caused the evacuation of the vast barbed wire fortifications and marsh protection at that point. A British correspondent thus describes the abandoned defenses:

"Everywhere outside Bapaume and Péronne and Chaulnes and all those deserted places near the front lines one ugly thing stares one in the face—German barbed wire. It is heavier and stronger stuff than the British or French wire, with great crosspieces of iron. They used amazing quantities of it in great wide belts in the three lines of defense before these trench systems and in all sorts of odd places, by bridges and roads and villages, even far behind the trenches, to prevent any sudden rush of hostile infantry or to tear British cavalry to pieces should they break their lines and get through.

"The German trenches are deeply dug, and along the whole line from which they have now retreated they are provided with great concreted and timbered dug-outs leading into an elaborate system of tunneled galleries, perfectly proof from shell fire, and similar to those which I

described often enough in the Somme battlefields. But in addition to these trench systems, they made behind their lines a series of strong posts, cunningly concealed and commanding a wide field of fire, with dominating observation over the British side of the country."

The Hindenburg Line

A high military official at Berlin explained on March 20 that the new positions which the German Army was taking up were built with the aid of every possible device developed in two and a half years of trench warfare.

"The old positions," he said, "were the result of the breaking off of the unfinished offensive toward Paris. Many portions of our positions were held only with the greatest difficulty. The trenches were difficult to maintain and the artillery observation points, so important in this kind of warfare, were few. The new positions are laid out in the best possible locations, with the finest observation points and deep concrete shelters for the battery positions. While the enemy is coming up to them he will be in the greatest possible difficulties himself in the devastated battlefield."

To this a British correspondent, who has talked with German prisoners, replies that the people may be deceived by such statements, but not the German soldiers at the front. "They know they have left the strongest positions ever made in warfare by years of labor, and already the fictitious strength of the famous 'Hindenburg line,' called by the Germans themselves the 'Siegfried line,' has been exposed in its reality to the men who have to hold it."

The new German line has already been pierced at several points by both the British and French Armies in the first month of its fiery ordeal.

French Heroes of the Air

Daring Deeds at the Front

Victor Forbin recently contributed to Les Annales of Paris this romantic yet authentic sketch of the deeds of French military aviators

[Translated for CURRENT HISTORY MAGAZINE]

Mastery of the air over the trench lines in France is as necessary for victory as the capture of territory. During the months of the Somme battle the Allies succeeded in gaining almost complete control of the air, and their artillery fire was correspondingly successful, while that of the Germans was blinded. The Germans, however, reported the destruction of 1,002 enemy aircraft between the beginning of the war and Jan. 1, 1917. French military records show that 417 German machines were shot down in the year 1916, besides twenty-nine captive balloons. All figures aside, the fact remains that the Allies have long held a large degree of aerial supremacy, and in the opening days of the new Spring offensive, when their whole air fleet was mobilized to photograph the German positions, they came off with 1,700 photographs. It was a victory, even though it cost from a dozen to a score of airplanes and their brave crews every day until the task was accomplished. The article here presented gives an idea of the perilous nature of the task of these men.

THIS hasty sketch will deal only with the aviators who have won the honor of personal mention in the War Office bulletins. It would be impossible to speak of all our

of those aviators who have shot down a minimum of five enemy machines—airplanes, dirigibles, or captive balloons, [which the Germans call Drachen and the French sausages.] In the ranks of our "fifth arm" these laureates form a clearly defined group—they are called the "Aces of the War Office bulletins."

Philologists will be grateful to us for noting that this expressive word had been adopted by the sporting argot even before the war. In the boat-racing world the word "ace" was applied to oarsmen who pulled single shells. According to our esteemed contemporary, Sporting, it was during the Olympic games of 1908, held in London, that the term was applied for the first time in its present sense. M. Spitzer, who took part in these tournaments as trainer of a team, heard French runners cry, as they left the field where the American champions had just stupefied them with their swiftness, "Why, they're all aces!"

The team that counted such trumps among its cards was bound to win. And the word found favor. In all sports the champions became "aces."

It is indispensable to note that the official communiqué takes account only of enemy machines whose destruction is beyond question, whether they fall within our lines or have been seen to fall in flames within the enemy's lines. Our score sheets, therefore, are sincere, while

LIEUTENANT GUYNEMER
WHO HAS SHOT DOWN MORE THAN THIRTY
GERMAN AIRCRAFT

(© International Film Service)

heroes of the air, both because they are too numerous and because the censor would forbid our printing most of their names. It should be remembered that the press is allowed to print only the names

those of Germany are erroneous. To illustrate this difference we will compare the record of our "Prince of aces," Lieutenant George Guynemer, with that of the most brilliant of the German aviators, Captain Boelcke, who was killed on Oct. 28, 1916, probably by a French or British aviator, although his compatriots, who had dubbed him "The Invincible," assert that he was the victim of an accident.

The communiqué credits Guynemer (in February, 1917) with the destruction of only thirty machines, though he has certainly shot down thirty-four, of which four fell so far from our lines that it was impossible to get material proof of their destruction. If it were permissible to add to these figures those of enemy machines which he put to flight after having visibly damaged them, the record of Guynemer would exceed forty.

Rival Records Compared

Boelcke is officially credited with forty machines, but the editor of *La Guerre Aérienne*, Jacques Mortane, has revealed several gross errors in the record of the celebrated aviator. For example, the German official communication of April 30, 1916, gives him his fortieth machine, whereas the pilot who steered it—the marshal of the camp, Viallet—returned safe and sound to his aerodrome. On March 19 and 20 of that year the German War Office bulletins credited Boelcke with three machines, designating the points in the French lines where they fell. Now, a French communiqué states clearly that in the course of that same month of March only one French airplane was shot down within our lines. Another fact must not be forgotten: Among the forty victories attributed officially to Boelcke eleven have not been mentioned in any bulletin. They are therefore open to suspicion.

At the moment of writing this article the "Aces of the War Office bulletins" number twenty-five, a figure which the coming days will modify, for there are numerous aviators with four victories to their credit who are watching impatiently for their fifth machine, a certificate

of public fame. Here is the list of the laureates up to Feb. 5, 1917:

Second Lieutenant Guynemer, 30 machines; Second Lieutenant Nungesser, 21; Lieutenant Heurteaux, 19; Adjutant Dorme, 17; Second Lieutenant Navarre, 12; Lieutenant Deullin, 10; Sergeant Chainat, 9; Second Lieutenants Chaput, Tarascon, Under Officer Sauvage, 8; Under Officer Viallet, 7; de la Tour, Lufbery, Sayaret, Flachaire, Jailler, Loste, de Bonnefoy, Bloch, Vitalis, Martin, Delorme, Gastin, Hauss, Madon, 5.

This list includes only the "aces" who are living and in active service. We will complete it with the names of Adjutant Maxime Lenoir, who was made prisoner when he shot down his eleventh machine; Second Lieutenant de Rochefort, who died of wounds after bringing down his sixth enemy; the deeply mourned Pégoud, who died on the field of honor after his sixth airplane; and Second Lieutenant Gilbert, who had scored five aerial victories when he was interned in Switzerland.

A comparison of this list with that of the German "aces" leads to some interesting observations. For example, one of the Germans, Kandulski, received the honor of mention by the War Office for one isolated victory. True, it was one of importance; the victim was Pégoud, whom Sergeant Ronserail avenged a few days later by bringing down Kandulski. Of the sixteen German aviators cited in the Berlin bulletins nine were killed in the year 1916, while the French phalanx lost only three units in that year.

Laureates of the Air

Space is lacking here to sketch the biographies of our francs-tireurs of the air, but a few lines may be given to note their status before the war. Of the twenty-five names on the list just given, the great majority were unknown, even in the sporting world, during the first ten months of the war. A few exceptions may be cited from memory: Second Lieutenant Jean Chaput had distinguished himself in the races of the Racing Club of France; Camp Marshal

Vitalis was a champion in pigeon-shooting contests; Second Lieutenant Nungesser had participated in boxing matches in America, after having taken lessons of Descamps, the instructor of Carpentier.

Sporting men are numerous in the phalanx of "aces." To the three names just mentioned we may add those of Adjutant Bloch, amateur football player; Sergeant Chainat, noted as a pugilist, and Adjutant Lufbery, an American expert in baseball, the national sport of his country.

All the arms—infantry, cavalry, artillery—have representatives on our list, and men of the most diverse social classes fraternize there—professional army officers, civil engineers, mechanicians. The standing of those laureates of the air is dazzling; they have heroism and glory by the armful. Let us glance, to begin with, at the laurels of the "ace of aces," Guynemer, whom the councils of revision had removed from the army, and who had to ask five separate times for admission into the aviation corps—and was admitted then only through official protection. To baptize his stripes as a Corporal he shot down his first German airplane on July 19, 1915, destroyed two others in the next six days, and then in a single battle sent three enemy machines crashing to earth!

Guynemer has to his credit whole series of deeds that are epoch-making. In three weeks—from the 4th to the 23d of September, 1916—he added to his score seven machines, four of which figured in the official announcements. Indeed, Sept. 23 was a red-letter day in his eventful life, for on that day he attacked a squadron of enemy aircraft, drove one machine to earth, and set two others on fire in less than three minutes. Then a bursting shell damaged his machine, and he took a slide of 10,000 feet without receiving a scratch!

Two months later he added two fine double feats to his score. On Nov. 10 he shot down two aircraft; on the 23d, in an hour and a half, he found time to destroy two others at different points on the front, and to inflict serious damage upon a third.

Nungesser's Dramatic Record

The career of Nungesser is no less remarkable. Serving in a regiment of hussars, he conducted himself so valiantly that he won the Military Medal two weeks after the opening of the campaign. Then he entered the aviation corps and took part in numerous bombing expeditions. Finally he specialized in the pursuit of enemy machines, and on Nov. 28, 1915, made a brilliant début by bringing down a German airplane. The next month, while trying a new machine, he came crashing to the ground; with a fractured leg, a broken jaw, and a hole in his palate, he could say good-bye to aviation, if he survived at all. But he did survive, refused to be laid on the shelf, and begged to be allowed to take part in the defense of Verdun. He could no longer walk, except painfully, with the aid of canes. Now mark the intrepid work of the cripple! Think of his achievements in April, 1916. What a fine lesson in energy and endurance!

On April 1 Nungesser rejoined his squadron; on the 2d he burned a German "sausage"; on the 3d he attacked and brought down an airplane; on the 4th he attacked and shot down a double-motor machine with four passengers; on the 25th he brought down a machine that fell on the trenches near Verdun; on the 27th he accepted battle with six airplanes, shot down one of them, and put the others to flight.

In nine months—from April to December, 1916—he destroyed twenty enemy aircraft, which brought his total score of victories to twenty-one.

One of the most brilliant careers in the world of military aviation is that of Adjutant Dorme, whose comrades call him the Unbreakable, so impervious does he seem to the enemy's bullets. He began, however, with a fall that almost cost him his life. But he recovered and arrived at the front on July 6, 1916. On the 9th he shot down his first airplane, and his second on the 28th. In the following month he destroyed six and received the honors of public mention. By the end of Septem-

ber his official score had reached ten, and in October thirteen. But in reality he had, in those four months, put twenty-six enemy aircraft out of action.

Sub-Lieutenant Navarre, with his four aircraft brought down in eight hours, (April 4, 1916,) established a record which no one has thus far taken away from him. During that same month of April his record was increased by eight more official victories.

Chaput's Amazing Escape

Another record, less brilliant, perhaps, but certainly more sensational, and at the same time more scientific, belongs to Second Lieutenant Jean Chaput. As an engineer in the Ecole Supérieure d'Electricité, Chaput had just won his brevet as pilot at Nieuport when the war broke out. Thrown into aviation as a soldier-pilot, he was twice wounded in combats with the dreaded Fokkers, but soon got his revenge by shooting down his first Boche in June, 1915. Other victories succeeded this beginning. On March 18, 1916, above Montzéville, he joined battle with a machine much better armed and more powerful than his own. Suddenly, after an exchange of shots, the German dashed down upon him in order to crush him.

We learn from a friend of the aviator that a few days earlier, in talking with comrades, he had foreseen the case in which he might be forced to approach an enemy in order to "get inside of him," as the familiar phrase has it. He had declared that he would escape alive from such a dangerous approach. He had his plan. This plan, elaborated by the engineer, was put into practice by the aviator.

Putting his motor at full speed, Chaput threw himself into the meeting with the German, and then, at the moment of approach, moved his levers and manoeuvred his machine in such a manner that his screw tore into the enemy's fuselage, cutting off the rear end. The German pilot fell whirling with his machine, which burst into flame, while his passenger went crashing into the ground nearly two miles below. The conqueror got back to earth by volplaning on his

seriously damaged machine, and landed without injury, amid the cheers of hundreds of poilus who had witnessed his dazzling achievement.

The next month Chaput was attacked by a Fokker and brought it down with the fourth ball from his machine gun, whose bands jammed at that point. He burned a "sausage" at Douaumont, and then, in the space of five days, added four airplanes (two in the same day) to his score. He had just finished off his ninth official machine when a fight near Verdun almost put an end to his career. With his thigh fractured and a bullet through his shoulder, he yet had the superhuman courage to fly more than twenty-five miles in order to alight near an ambulance, where he knew he would find a skilled surgeon.

This sang froid, remarkable in a young man of 22 years grievously wounded, had its reward; a very rapid recovery soon enabled him to see the day when he could again fall upon the Boches.

Another Stirring Episode

We are sorry not to be able to give a few lines to each of our "aces"—to Adjutant Tarascon who, in spite of his artificial foot, has become one of the most dreaded chasers of the Boches; to Sergeant Sauvage, whose nineteen years have won him the sobriquet of the "Benjamin of the Aces"; to Adjutant Lufbery, the former chauffeur and American citizen who has carved a place for himself among the "aces" of France. But we may be allowed to close this too long article with a final anecdote.

A marshal of the aviation camp, Georges Flachaire, an electric engineer like Jean Chaput, is one of the most recent recruits to the glorious phalanx—his sixth enemy machine dates from Nov. 23 last. His comrades consider him a fine pilot. With Chaput he represents the scientific type of aviator.

Defying bad weather one day he departed on the chase, hiding himself in a sea of clouds to foil the vigilant scouts of the enemy, and emerged after an hour of flight to inspect the horizon. * * * (Censored) * * * When he came out

of it he perceived a peaceful village, and, convinced that he was over our lines, chose a meadow for his landing place. Maledictions! He discovers suddenly that he is in a cantonment of German artillery. Amid a volley of musketry he resumes his flight, foils the German gunners by executing those unforeseen pirouettes that are familiar to the scientific acrobat, takes refuge in the clouds amid a storm of shrapnel shells, and, after a flight by compass, rejoins his squadron.

Told by a French Artist

Henry Farré, the French "painter of aviators," in addition to making wonderful pictures of battles in the clouds, can tell good stories in connection with them. *Les Annales* prints the following account of a night bombardment, which M. Farré gathered from the heroes themselves, "Sergeant G. and Lieutenant de L.," who accomplished this perilous circuit. He puts the narrative into the mouth of the Lieutenant:

"Once outside the environs of Verdun, the departure was made in a normal way. The objective of our bombardment was at a considerable distance behind the lines. Ceaseless attacks were transforming the ground into one vast brazier. Verdun was burning. The smoke obscured the sky with great clouds, amid which the moon seemed to be playing hide-and-seek, too often hiding from our view the meanderings of the Meuse, which served as our guide. Nothing was lacking for our reception; everything was offered us in profusion—searchlights, shells, and incendiary bombs.

"In the midst of this cannonade our motor stops, then goes on, then stops again, and goes on more freely. I peer, I grope, for we dare not think of lighting our lamps, and it is impossible to learn what is the matter with the motor. The pilot turns and questions me. 'Ah, worse luck!' I shout; 'we must throw our bombs first, and then we'll turn back.' The machine was sinking with the diminishing speed of the motor. 'Certainly,' I was saying to myself, without thinking of the danger, 'the

bombardment will be all the more effective at close range.'

"We were at an elevation of 800 meters; the shells were bursting far above us, and the searchlights were seeking us still higher up. At last our bombs fall and we veer for the homeward course. Oh, anguish! Is the motor going to fail us completely? No; it is going again. We are thirty miles from Verdun; at this altitude we could never get there by planing. The pilot makes desperate efforts to keep the machine horizontal and thus prolong the descent.

"A ray of hope! The motor seems to have more force. I consult the altimeter; we are at 1,000 meters. Around us the shells accompany us, but we pay no attention to them, for we prefer anything rather than K. K. bread in a German prison. We are ascending a little. God be praised! We shall arrive, we are up 1,200 meters; but it is the maximum. I am beginning to wear out; my efforts are less and less effective; we are descending again.

"Verdun, which we see always in flames, is still far distant. We fall swiftly to 800 meters, then 600. We are doomed—it is K. K. bread this time without a doubt—we are right over the Boche lines—we distinctly hear the tac-tac of the machine guns and the irregular reports of the rifles. Shall we reach our lines? The altimeter shows 400. Verdun is now about three miles away.

"'Courage!' I cry to the pilot. 'We can get back; in any event, if we die, it will be among our own people. See—the flames of Verdun! If only we can glide as far as that!'

"We land at last, the motor, meanwhile, having stopped entirely. We have come down on the auxiliary ground, with the two front wheels dished, a few guy wires wrenched, and a few cracks in the machine. That is all the harm done, while we, in each other's arms, let the German sheels fall unheeded around us.

"'We've had a mighty close view of K. K. bread,' I remark; 'come, let us telephone our friends; they must be worried.'"

The Zeppelin Raids and Their Effect On England

By Charles Stiénon

French Author and Publicist

[By arrangement with the Revue Bleue, Paris; translated for CURRENT HISTORY MAGAZINE.]

ON the fast express to Spain I recently met an Englishman of rank. In the course of conversation we came to discuss the frequent Zeppelin raids on England. I asked him what effect they would have on the people of Great Britain. "Oh, excellent! They arouse such anger that the enlistments increase by leaps and bounds on the days following." Our adversaries have committed few psychological errors comparable to this one, which promises to furnish a curious problem for the historians of the great war.

It is important to note at the outset that the Zeppelins were created to wage war—and that they have not done it. The military use of the enemy dirigibles has been almost nil. In August, 1914, these airships were far from the perfection which they have since attained. One can scarcely place to their credit any real military service except the bombardment of Antwerp. Since that moment they have never accomplished a more difficult exploit nor rendered a more valuable service to the German cause. Is this owing to their vulnerable nature, and to the effective guard of swift airplanes and anti-aircraft guns on our front? Probably. The German General Staff has always seen the deception which the non-utilization of these national monsters would produce in Germany. For the people of the belligerent nations see the war only on its external side. "Tanks," 420's, trains with blind windows, will stimulate their imagination on the romantic side more than many another element with a less extraordinary outer aspect but greater real importance.

From that moment our enemies con-

ceived the idea of using their Zeppelins for a "moral" purpose—and one less dangerous. It was, however, to an airplane that the honor was given of attacking Dover on Christmas Day, 1914, a raid without success. On that occasion our allies were able to realize the manifest insufficiency of their anti-aircraft defenses. Almost everywhere they had installed special guns whose mediocrity became evident.

First Zeppelin Raid

Three weeks afterward, on Jan. 19, 1915, Zeppelins for the first time flew over the soil of the British Isles. At Yarmouth they threw nine bombs, killing only nine persons. This raid, which could have no military aim, provoked a just indignation. In the United States a prominent newspaper asked whether it was "insanity or despair." At that time Germany had not yet generalized its system of terrorism. The effect in England was great. This first raid produced an immediate increase in voluntary recruiting. On Feb. 21 an airplane flew over Colchester, destroying a few houses, but without injuring anybody. At Brainerd two soldiers found an unexploded bomb on the ground and, though the fuse was burning, they picked it up and threw it into a pond.

On April 14 a raid on the northeast coast, with no victims. Two days later an airplane threw bombs on the fields of Kent. It killed a crow and uprooted an apple tree. On April 30 and May 3 and 10 new incursions, absolutely ineffective. A curious fact, however, was observed. The siren sounded to warn the inhabitants actually attracted the enemy aircraft.

Meanwhile our adversaries did not con-

ceal the fact that London was their real objective, and that their operations thus far had been mere scouting expeditions. Yet the English technical services appeared not to be giving adequate attention to the city's defenses.

On May 17 a Zeppelin, after wandering leisurely over Ramsgate and Dover, was attacked by an English air squadron from Dunkerque, which succeeded in damaging it.

On May 31, 1915, at 10:23 P. M., the capital of the British Empire received its first bombs; the authorities had not even been warned. Six persons were killed in the East End. Public anger rose swiftly. Suspected German shops were demolished by the mob that gathered in the streets and committed mild depredations.

After that the Government forbade detailed accounts of the German raids. This policy of absolute secrecy, however, was an error, for the public immediately lost all confidence in the official bulletins, and believed, on the contrary, the most improbable tales. The happy and usual result of all censorships! Thus five deaths were announced one day when there were really twenty-four, a fact which was soon known and gave rise to exaggerations. In February, 1916, the press was again allowed to speak; the British censors thus gave proof of sound sense.

Fighting the Air Monsters

Meanwhile an extraordinary exploit had occurred to prove that it was possible to fight the Zeppelin. An aviator of 22 years, Second Lieut. Warneford, destroyed one of the great aircraft with six bombs on June 7, 1915. The hero received the Victoria Cross and the Legion of Honor, but was killed a few days later—on the 17th—in a stupid accident.

An attack of two airships on June 15 caused the death of fourteen persons and the wounding of thirteen. On Aug. 9, fourteen more deaths and fourteen wounded. One of these Zeppelins, which had already been damaged by shells, was destroyed near Dunkerque by an airplane attack. On Aug. 12, six dead and twenty-three wounded. The people, by coming out into the streets and gathering

in groups in public places, helped to cause these murderous results.

All accounts of these events agree in describing the English communities as very calm in the face of danger, and intensely interested. They regularly imagined that the enemy was hit by the anti-aircraft shrapnel, whose explosions in the sky produce curious optical illusions. "We must terrorize the English," say the German commentators. Yet fear is the last sentiment that our allies seem to have experienced. Recruiting was increased and more people rallied to the munition factories. Fear? "The eyes of the children whose laughter I hear in the playground as I write are the best answer to this threat." Thus wrote one witness.

The next raid, Aug. 17, killed ten persons and wounded thirty-six. From that time there began to be manifested, especially in *The Times*, a feeling that the Government was doing nothing against these enemy raids, and was, moreover, concealing the truth. When German airships reappeared over London on Sept. 7 and 8, the unrest became more marked. Several houses were destroyed and the guns obtained no result. The destruction and losses were important.

London Organizes Defenses

A veritable campaign was started on the spot to demand the measures indispensable to the safety of the capital. Admiral Sir Percy Scott, a retired artilleryman, was intrusted with the defense; but before he could obtain results, on Oct. 13 a new raid on London killed 56 persons and wounded 113. The guns and airplanes went into action, but accomplished nothing. Of course the enemy represented these expeditions as having a purely military object and as producing great results.

British opinion then began to demand reprisals, and the attitude of the people became more clearly characteristic. The Englishman's house has always been his castle. He regarded these raids as a new sort of violation of the rights of private domicile. The people were not afraid—far from that!—for their curiosity was often the cause of

deaths; but where the French people adopted an attitude of irony and skepticism in a like situation, the English took the matter more seriously.

The enemy airships continued their attacks, the details of which need not be continued here. In the night of Jan. 31, 1916, the invaders killed 59 more people and wounded 101. It would be wearisome to prolong this harrowing enumeration; but there is proof that on the day when our allies went seriously to work on the problem they obtained incontestable advantages over the pirates of the air.

In the first months of the war several Zeppelins had been shot down with ease. But times had changed. The first, rather slow machines, flying at a low altitude, had soon been succeeded by super-Zeppelins, veritable Titans of the air, which flew at great heights. Against them the guns of small calibre were powerless, while the heavy pieces could not be used effectively save during the few moments when the dirigible descended to hurl its bombs. A special means of pursuit was needed, which could follow the Zeppelins, Parsevals, and Schütte-Lanz dirigibles at great heights, and it existed in the airplane. This invention has been developed by the war to an unhopèd-for degree of perfection.

After long and sometimes mortal experiences the English aviators were ready to chase the monster—in the early Summer of 1916. Add to this the fact that a special make of incendiary fuse-bombs—we cannot say more—facilitated the work to an extraordinary degree. The anti-aircraft guns also were increased in number, and the most painstaking precautions were adopted to defeat the adversary. And they were needed to overcome these air monsters, 227 meters long, bristling with cannons and machine guns, and carrying more than fifty bombs.

From May to July the enemy refrained from further attacks, but in July and August the raids multiplied, causing serious losses. On several occasions the hostile aircraft were pursued in vain by airplanes.

Great Raid of Sept. 2

One might be tempted to see in the raid of Aug. 24, 1916, a scouting operation preliminary to the great attack of Sept. 2. On the latter night thirteen dirigibles flew over English soil, and three reached London. The city had been warned, and the whole population was on foot awaiting the new spectacle. The necessary precautions had been taken to minimize the probable losses. The sky was divided into a certain number of sectors, swept by dozens of searchlights. There was a sound of distant cannonading, bombs burst in the sky, a Zeppelin emerged from the darkness—and suddenly all the searchlights were extinguished and the guns ceased fire!

A few seconds passed, and then suddenly a formidable mass of flame illumined the heavens and was seen falling swiftly, until the colossal conflagration came crashing to earth. What had happened? At the arrival of the Zeppelin the aviators had dashed to the pursuit. One of these, Lieutenant Robinson, after rising about 2,700 meters, saw the airship. At that moment, to avoid hindering or wounding him, the guns and searchlights paused. The dirigible was emitting torrents of smoke. It rose and then descended at great speed. Lieutenant Robinson rose 680 meters higher and charged at full speed against the enemy. At the right distance he fired his fuse-bombs and destroyed the Zeppelin, which, as seen later, was of the Schütte-Lanz type. The brave aviator, 21 years old, received the Victoria Cross, the supreme honor. Only the charred bodies of Captain Wilhelm Schramm and his Zeppelin crew of fifteen men were found. A military burial was accorded them.

Thus, after two years of war, our allies succeeded in defending their soil. One can understand what fury seized Germany when she saw her beautiful air cruisers destroyed by British guns and airplanes. This failure called for vengeance, and, on Dec. 24, twelve Zeppelins came across the North Sea to hover over England. Their reception was still

hotter than before. The first machine was brought crashing to earth with its crew in Essex. Lieutenants Sowrey and Brandon, following the tactics of their friend Robinson, had shot it down. This brought them the D. S. O., (Distinguished Service Order.) The second machine was hit by the artillery and came gently to earth on the Essex coast. The crew of twenty men destroyed it and surrendered to a British constable. The ten other airships had achieved the considerable result of killing 30 persons and wounding 110, most of them in London.

Invaders Suffer Heavily

On Oct. 1 came a new attack by ten airships, one of them reaching London, and the scene of Sept. 2 was repeated. Lieutenant Tempest, now also a D. S. O., shot down his Zeppelin while the crowds sang "God Save the King." The enemy craft fell to destruction in two pieces, with its chief, Captain Mathy, one of the most noted of the German aviation officers. In an interview a short time before he had ridiculed the English aviators. These experiences cooled the German ardor somewhat in regard to air raids.

It is extremely probable that the General Staff at Berlin had no desire to continue such costly experiences. But public opinion would not have tolerated this confession of defeat. So on Nov. 27 a new raid carefully avoided London, which was too well defended, and turned its bombs and shells against the north-east coast of Great Britain. One Zeppelin was demolished in a few seconds, and another was seriously damaged while flying over the Midlands; it succeeded, however, in repairing these injuries and reaching the sea. Nine miles from the shore, overtaken by four airplanes and a gunboat that shelled it, it plunged into the waves. Lieutenants Palling, Cadbury, and Fane were rewarded for this exploit. In the course of the same day an enemy airplane succeeded in attacking London. A few hours later French aviators shot down a machine carrying two officers with large-scale maps of the British metrop-

olis. Thus was the aggressor punished. Since then the German General Staff has renounced these "reconnoissances," which it found decidedly too far from being satisfactory.

German Errors of Psychology

The psychological errors of Germany can no longer be counted. Before the war she had expected internal revolts in the Entente countries, defections that have never materialized. She did not foresee entirely the support that the colonies have given to France, nor the organization of Britain's military power, nor the efforts of the British dominions. She has sought to establish her superiority over other nations by means of certain processes, of which the least one can say is that they have totally failed. The Germans have never deceived themselves more completely than on the subject of their magnificent air fleet. They believed that in war they would enjoy entire superiority in bombarding and air scouting. Since then they have had to acknowledge that these were illusions. Still, the German people, not being able to admit that their idol, Count Zeppelin, was self-deluded, thought to utilize the "genial creations of the inventor" as instruments of moral strategy. Colonel Feyler, in an imposing study, has shown all the labors which the General Staff lavished in magnifying his successes and in presenting them in such fashion as to influence the spirit of the German people.

The Central Empires knew how firmly the English held to their independence, and how much the inviolability of their soil was a question of honor with them. Hence followed this reasoning, from which, be it noted, all humanity is absent: "We wish to strike England; we cannot do it better than by striking her homes." This logic is correct, and the exasperation of the English has answered "Touched!" to the German boot. But the Berlin General Staff had formulated a second axiom, much more debatable than the other: "When the English, who have never been invaded, shall see the enemy in their country, they will be so agitated that the moral effect will be the depres-

sion of the nation; the more so, since we risk nothing."

Here the psychological sense of Germany was faulty. The raids not only failed to produce the expected moral effect, but proved to be the lash that woke the sleeping horse.

When Englishmen saw their women, children, and old men disemboweled by German bombs, they enlisted to fight the Germans all the more angrily as they saw more clearly what their enemies were capable of doing. Besides, the final clause in the German theory also proved itself inexact, since from September to

December, 1916, five Zeppelins were shot down.

The influence of this German mistake upon British recruiting can scarcely be exaggerated. We owe the British armies in France partly to our adversaries. Thus at Charleroi Marshal French had about five divisions in August, 1914. One year later he had forty-one divisions, divided into three armies; and on Jan. 1, 1916, Marshal Sir Douglas Haig had two million men! Does Germany know how many of these soldiers took up arms because of the indignation aroused in their hearts by the Zeppelin murders?

List of Zeppelin Raids Against England

THE total number of Zeppelin raids over the British Isles since the beginning of the war, according to the best available data, is forty-one, including the belated attempt of March 16, 1917, which was apparently organized after the death of Count Zeppelin to prove that the German hopes once based upon his invention still lived. For several months the raids had been discontinued, owing to the increasing frequency with which the balloons had been destroyed in October and November.

On Aug. 22, 1916, Major Baird, representative of the Aerial Board in the House of Commons, announced that there had been thirty-four raids on England, in ten of which no casualties were suffered, while in the remainder the number of killed was 334 civilians and 50 military men. In the next three months five of the great aircraft were destroyed in England alone, two of them on Nov. 28 during the raid on the mid-land counties. At the end of November an authoritative list showed that a total of thirty-eight German Zeppelins had been lost on all fronts since the beginning of the war, seven of which fell in England and four in the North Sea. Then one of the raiders of March 16-17 was shot down in France. Many of the earlier ones were destroyed by allied aviators in France and by bombs dropped on Zeppelin sheds in Belgium.

The list of recorded raids on England is as follows:

1915

- Jan. 19, 20—Yarmouth, Cromer, Sheringham, King's Lynn.
- April 14, 15—Blyth, Bedlington, Morpeath, Cramlington, Wallsend, Hebburn.
- April 15, 16—Maldon, Heybridge, Southwold, Lowestoft, Burnham, Yarmouth.
- April 29, 30—Ipswich, Bury St. Edmunds, Whitton.
- May 9, 10—Southend, Westcliffe, Mouth of the Thames.
- May 16, 17—Ramsgate, Folkestone.
- May 31, June 1—London.
- June 4, 5—Mouth of the Humber, Harwich.
- June 6, 7—Hull, Grimsby.
- June 15, 16—Shields, Elswick-on-Tyne.
- Aug. 9, 10—London, Mouth of the Thames, Harwich, Humber.
- Aug. 12, 13—Harwich.
- Aug. 17, 18—London, Woodbridge, Ipswich.
- Sept. 7, 8—London.
- Sept. 8, 9—London, Norwich, Middlesborough.
- Sept. 11, 12—London.
- Sept. 13, 14—Southend.
- Oct. 13, 14—London and suburbs, Ipswich.

1916

- Jan. 31, Feb. 1—Liverpool, Birkenhead, Manchester, Sheffield, Nottingham, Birmingham, Humber, Yarmouth.
- March 5, 6—Hull.
- March 31, April 1—London, Enfield, Waltham Abbey, Stowmarket, Lowestoft, Cambridge, Humber.
- April 1, 2—Mouth of Tees, Middlesborough, Sunderland.
- April 2, 3—London, Edinburgh, Newcastle.
- April 3, 4—Great Yarmouth.
- April 5, 8—Whitby, Hull, Leeds.
- April 24, 25—Cambridge, Norwich, Lincoln, Winterton, Ipswich, Norwich, Harwich.

April 25, 26—London, Colchester, Ramsgate.
 May 2, 3—Middlesboro, Stockton, Sunderland, Hartlepool, Mouth of Tees, Firth of Forth.
 July 28, 29—Lincoln, Grimsby, Immingham, Hull, Norwich.
 July 31, Aug. 1—London, Mouth of Thames, eastern counties.
 Aug. 2, 3—London, Harwich, Norwich, Lowestoft, Winterton.
 Aug. 8, 9—Mouth of Tyne, Sunderland, Hartlepool, Middlesborough, Whitby, Hull, Grimsby, Mouth of Humber, King's Lynn, eastern counties.
 Aug. 24—London.
 Aug. 24, 25—London, Harwich, Folkestone, Dover.
 Sept. 2, 3—London, Yarmouth, Harwich, southeastern counties, Humber.
 Sept. 23, 24—London, Humber, central counties, (Nottingham, Sheffield.)
 Sept. 25, 26—Portsmouth, fortified places at the mouth of the Thames, York, Leeds, Lincoln, Derby.
 Oct. 1, 2—London, Humber.
 Oct. 9, 10—Near London.
 Nov. 27, 28—Midland counties.
 1917.
 March 16, 17—Coast of Kent.

As a pendant to the foregoing article comes the following from the Bulletin des Armées:

The death of Count Zeppelin on March 8 has not diminished the blind faith of the German people in his apparatus. On March 11 the Cologne Gazette said: "We will soon prove to the English that the work of our immortal Zeppelin still

lives." This threat was carried into effect: In the night of March 16-17 an air raid was attempted on the English coast. According to the British war bulletins the enemy threw bombs on the northeast corner of the County of Kent. The explosives did no material damage.

A few hours later three Zeppelins were sighted in France, undoubtedly the same ones that had bombarded the English coast. About 4 o'clock in the morning they passed over Rouen; two of them regained the German lines. The third flew over the neighborhood of Paris and then turned north. About 5:30 it was passing over Compiègne at a height of 3,500 yards, when it was hit by a shell from our anti-aircraft batteries. It instantly burst into flame, remained a few minutes in the air, and then crashed to earth at the corner of the Rue de Paris and the Boulevard Gambetta. It struck a garden wall and broke in two.

Before falling the men had thrown out their bombs, which fell in the fields; most of them did not burst. There was no victim among the people, no damage to property where the airship fell. The crew of fifteen men had been burned to death—except a few who had thrown themselves overboard and had been killed in the fall. Once more a Zeppelin raid had ended in a bloody reverse.

Terrible Realities of War

A Gunner's Story

A British artillery officer on the Somme wrote this impressive description after traversing the scene of a successful advance:

FOUR villages on our immediate front fell—two of them after desperate and bloody fighting, the other two with comparative ease. When we first arrived there we looked on the remains of ruined villages and a field of desolation and ugliness as far as the eye could see.

On arriving at our old observation point we made our way over to the old Hun stronghold. We started our journey down our old trenches, but these, though now empty, were in a filthy condition—we had recently had a lot of rain—and as

the enemy had now no direct observation on us we left these and proceeded across the open. The ground here was completely pitted with shell holes of all sizes. Hardly a square inch of ground that had not been disturbed. One literally stepped out of one into another, (many of them filled with water from the previous night's rain.) It was here that one saw the grim realities of war—the human remains lying among the wreckage of the battlefield; khaki or gray clad forms wherever one turned one's head, some un-

mercifully torn and shattered beyond recognition, others like waxwork figures in attitudes which showed their last set purpose before they were struck down. Others might well have been only sleeping, though their mud-begrimed faces told the truth, and all that ghastly color of the rain-sodden yellow clay on which they lay.

The whole place was nauseating. The smell of powder and stench of putrefaction pervaded everything. The atmosphere was too still and heavy for those foul smells to disperse. Our troops were then well beyond the village, but the Hun gave it no rest, and shells were still dropping all about the place.

From here we made our way to the spot where some two weeks before I had seen through my glasses our men held up by machine-gun fire. Some infantry had now established themselves there, and a few men were standing by the entrance drinking tea from a dixie. The roof, which was some four or five feet thick and made of reinforced concrete, showed signs of our fire, but had been but little damaged, though all around had been broken and smashed. Four dead Germans lay just outside among the wreckage, a fifth on a stretcher was uttering most awful groans, and, though attended by our men, was beyond all human aid, and was soon to be numbered with his lifeless comrades, while a sixth sat by nursing an arm he had recently had dressed, looking a picture of abject misery, as he gazed vacantly on that fearful field in front of him.

Inside the dugout showed signs of its previous occupation. The German litter had not as yet been cleared away—an old waterproof sheet, a blanket or two, and one or two old Hun coats lay among the rubbish. Two or three officers lay curled

up in odd corners trying to get a little rest, while a few orderlies and telephonists squatted about the place among their instruments and the tangle of wires with which they are always surrounded. The men spoke in subdued tones, and a stillness pervaded the chamber, which was interrupted only by a small kitten, which wandered about playfully toying with everything that came within its reach—wires, bits of surgical dressing, and old beef tins. Having obtained what information we required here, we set out toward our new front line away in front of the village.

I have seen villages that have been smashed beyond recognition, but this one surpassed all. It was literally razed to the ground. Not a wall was left standing. It was impossible to try to locate one's position by roads and buildings. They simply didn't exist. It was one huge rubbish heap, one mass of wreckage—broken masonry and brickwork and shattered and charred timber. We made our way along a newly trodden track through the debris—it evidently followed what was once a sunken road, for the wreckage was piled up high on either side of us, affording us a little shelter from occasional shells which were being indiscriminately dropped about the place. Turning a sudden corner, we came upon a sight I shall never forget. The stench became overpowering. Along the track in front of us lay, not one, but scores of gray-clad figures. I think they must have been caught unexpectedly in our artillery barrage, but I did not stop to examine the nature of their wounds. The spectacle was too horrible. We left the sunken track at this point, and went forward across the open. Such was the state of this Hun stronghold on the day following its fall.

Amazing Effects of Shell Shock On Soldiers' Nerves

By W. R. Houston, A. M., M. D.

Professor of Clinical Medicine in the University of Georgia

Dr. Houston, an eminent neurologist, spent several months in French war hospitals studying the effects of shell shock upon the nervous systems of wounded soldiers. The results of his observations have been condensed by him into this noteworthy article.

THE beautiful City of Lyons, lying at the confluence of the Rhone and Saone, has been made the "Hospital City of France." More than thirty-five thousand sick and wounded are cared for there. A thousand of these are assigned to the Neurological Centre and housed in the handsome buildings of the Nouvelle Lycée, the new boys' college at the entrance to the park. In each of the twenty medical districts into which France is divided there is a similar hospital for men who have suffered damage to the nervous system. The Centre Neurologique at Lyons is, however, the largest of these centres, and for certain reasons the most interesting.

To the neurologist, the care and study of this unprecedented wealth of material is of high value in broadening and refining his knowledge of the function and structure of the nervous system; yet of still greater interest and offering still greater possibilities for the enlargement of our comprehension of the nature of nervous diseases are those cases, comprising more than two-thirds of the patients in the institution, who are grouped under the name of the hysterical.

When the entire manhood of a nation is mustered into battle, it follows that the nervously frail, the men of unstable equilibrium, must go, too. The shocks and sudden emotional strains of civil life have made a certain number hysterical. It might be expected that under the stress of warfare many would break. The number of such cases arising in the course of war is far greater than in time of peace, but, after all, they form but a small fraction of the total number of nervous cases in the neurological centres.

We have considered them, however, less because of their intrinsic interest than for comparison with another class of cases—the commotionnés, that very large and novel group of cases, comprising several thousand admissions to the neurological hospitals of France, which the French physicians named cerebral commotion, the English shell shock.

In the accounts of the great bombardments we have all read of men who were found dead in the trenches, unwounded. Death had resulted from air concussion in the zone contiguous to the exploding shell. The concussion is more intense and the danger greater if the shell explodes in a closed space, as in the deep chambered trenches of the western front.

Countless Internal Wounds

Most of our commotion cases were injured in the trenches. Often they were hurled some distance, dashed against a wall, and buried alive. If an examination is made of the bodies of these dead, or of those who have survived a few days before death, it is found that there has taken place an intimate tearing of the finer structures throughout the body. The lungs are torn; there are abundant hemorrhages in the pleura and stomach. The blood vessels in the brain are ruptured, and minute hemorrhages are found throughout.

Many are killed outright, but most survive. Even these survivors bleed in many cases from the ears, the lungs, the stomach, the bladder, and bowels. There are sometimes hemorrhages into the retina and under the conjunctivae. The normally clear cerebro-spinal fluid is found blood tinged. Even after blood is no longer found the fluid is often discov-

ered to be under high pressure, the white cells and globulins that indicate damage to the meninges continue to be found in it for months.

The patients seldom regain memory of the beginning of their accidents. At most they recall the whistling sound that preceded the arrival of the shell. In certain cases there will be found only a more or less transient clouding of consciousness, or a very painful sensation of having been beaten on the head. Usually the patient is unable to walk, and as he is carried on the stretcher every movement is painful. The limbs are inert, the head drops on the shoulder. Even when sitting he collapses if not supported. Any movements made are maladroit and imprecise. The sphincters are relaxed; almost all arrive at the aid stations soiled with excrements. Later they may have retention, but in the beginning the contrary is the rule.

The facial expression is typical—comparable to that seen in the cerebral type of infantile paralysis—the corners of the mouth droop, the tongue is paretic, the lids droop, and the eyeballs are without motion. The pupils are dilated, almost always unequal.

In all cases is found the sign of Babinski—irritation of the foot sole, provoking an obvious and prompt elevation of the great toe and a fanlike spreading of the other toes—an unequivocal indication of damage to the motor pathways leading from the brain; and, as further indication of this damage, the tendinous reflexes are generally strongly exaggerated. Kernig's sign of cortical irritation is present.

In cases of moderate severity we observe a rapid retrocession of symptoms. Within twenty-four hours the mental cloudiness tends to disappear, the expression of the face changes, the strabismus diminishes and disappears, the reflexes approach normal.

In severe cases, however, and sometimes from milder ones, there develop a series of most bizarre clinical pictures. It is the general nervous system that is most often and most strikingly affected. As the patient emerges from his clouding of consciousness, he seems to be in a

state of confusion. His memory is weakened. He has lost in power of voluntary attention. He has hallucinations. These psychopathic states may persist for days or months, and are accompanied almost always by persistent nightmares of fire and battle that startle and disturb the rest.

It is at this stage extraordinarily difficult to disentangle symptoms that are due to gross organic injury from those that would be reckoned hysterical. Very frequently there are convulsive attacks that seem frankly similar to that described above; occasionally a case that resembles true Jacksonian epilepsy.

Sight and Hearing Affected

There is often deafness associated with injury to the ears; again, deafness is present with ears apparently normal. Sometimes the deafness is associated with vertigo such as suggests damage to the inner ear.

As to the sight, we encounter every degree of disability, from slight cloudiness of vision and narrowing of the visual field to complete blindness. In a considerable number of cases these troubles are due to damage done the retina. In a larger number, however, so far as examination can determine, they are purely subjective. These troubles of sight and hearing are almost never isolated. They are found associated with an assemblage of other symptoms referable to the nervous system.

Much more frequent than the troubles of the special senses are the paralyses—paralysis of a single member, of both legs, or of a lateral half of the body. Some of these paralyses are obviously due to hemorrhage within the brain, others are a flaccid paralysis with loss of sensation. In all the characteristics that are accessible to investigation most resemble hysterical paralysis, and the greater number are associated with contracture of the muscles.

The foot will be drawn into the position of a clubfoot and firmly fixed there. The hand is tightly clenched, and the wrist and elbow bent. The contracted muscles of half the body may draw the trunk and head to one side. The neck may be fixed

as a wry neck. A very frequent deformity is the bent back. A peculiar circumstance is the violent fit of coughing that is induced by any attempt to straighten the bent back, either in bed or against the wall.

The vocal cords may be paralyzed and the tongue incapable of being protruded, so that the patient is entirely mute, unable to make the slightest sound, to whistle or to blow, or even to imitate the movements of the lips in speech. His breathing muscles are contracted so that he cannot draw a long breath. In milder cases there is a stammering to the degree of almost complete unintelligibility.

A muscular trouble, often of the most striking and startling sort, is the shaking and trembling. This may be a fine tremor, such as we have in Graves's disease, and Graves's disease is a complication that is superadded to the picture in a large percentage of cases, or a very coarse, irregular shaking and jerking of the head, arms, legs, in contortions that make walking or any co-ordinated movement nearly or quite impossible.

Pitiful Motion Pictures

A remarkable series of moving pictures, which are already to be seen in this country, was made of these patients at Lyons. Large groups illustrating each of the contractures and paralyses were marched past the camera, but the most striking groups were the tremblers and the bent backs, and when, as constantly happens, many physicians come to see the astonishing and almost incredible cases that are found in this neurological hospital, the profound pity that these patients excite is inevitably mixed with laughter at the sight of the poor fellows with wildly inco-ordinate movements, struggling to maintain their balance as they totter across the stage of the exhibition hall or shuffle along with feet in constant motion, like a novice at skating, and the back bent forward from the hips almost at right angles.

Upon these troubles of movement there are always superimposed troubles of sensibility. In the paralyses with contraction, and especially in the flaccid paralyses, all the modes of sensibility, superficial and deep, including the sensibility to

electric currents and the sensibility of the bones to vibration, are affected, and often to an extreme degree. Some of the patients have inflicted burns on themselves accidentally without knowing it. In others the joints can be twisted to an extreme degree without causing the least pain or sensation.

In opposition to these anaesthesias or hypoaesthesias there is found extreme sensitiveness to pain. Sometimes the patient cannot endure the least touch or the least movement of the limbs.

Purely Physical Causes

Are these patients hysterical in the sense of any of the theories of hysteria that we have mentioned—these deaf, these mutes, these palsied, trembling men with agonized or deadened members? Was it a mental picture or a buried idea or a suggestion from the physician that developed these phenomena?

In the language of Dr. Sollier, the eminent neurologist who is at the head of the hospital at Lyons:

In the true commotion case, we find ourselves in the presence of hysteria in the raw, of the elementary hysteria, in which the physical element is absolutely preponderant, whereas, in the ordinary traumatic hysteria, the somatic phenomena and the psychological phenomena are almost on the same level, and in the commonplace hysteria of civil practice the psychologic element tends to take dominant importance.

When we envisage the similarity of the pictures presented by ordinary hysteria and the nervous phenomena that result from shell shock, we are forced to conclude that their nature is identical. Shell shock thus demonstrates to us that hysteria may be provoked by causes purely physical, and we are led to conclude that the purely psychological theories are inexact, since they do not apply to all the cases. Since it is undeniable, on the other hand, that hysteria can be provoked by emotional and moral causes, we must conclude that there exists an entire gamut of forces—physical, mechanical, organic, and psychic—that may lead to the same clinical results.

Such are the views that are upheld by Dr. Sollier, who in numerous forcible publications had sustained before the war his physiological theory of hysteria. In his treatise on hysteria, published in 1914, he maintained that hysteria was essentially a sleep of portions of the brain, a dulling or numbing (*engourdissement*) of certain cerebral centres;

that the disassociation of personality resulted from the unequal wakefulness of different portions of the brain; that the attacks were disorderly expressions of a sudden movement toward reawakening.

We must remember that a thought is not, for the individual that harbors it at least, a disembodied concept, but that with every thought there must be a physical change, a movement of matter and energy in the molecular structure of brain cells. Modern psychology concerns itself more and more with the attempt to conceive the physical processes in the brain that accompany thought. Especially in the study of the emotions (and it is the emotional side of ideation with which we are chiefly concerned in hysteria) has emphasis been laid on its physical aspect.

Our American psychologist, William James, lent his astute support to the view that emotion was rather the conscious appreciation of a series of physical changes that resulted from the presence of an idea; that we felt fear because the heart stood still, the hair stood on end, the knees shook at sight of the ghost, rather than that the emotion of fear brought about these physical changes.

We are obliged, if the facts of the development of our commotion cases have been faithfully observed and accurately recorded, to shift from the formerly conventional viewpoint of the essential nature of hysteria and to place the emphasis on its physical and its physiological aspects.

Dr. Babinski and his followers, with their rather narrow definition of hysteria as a malady provoked by suggestion and curable by persuasion, have been led to assert that these grand hysterias of shell shock are not hysteria, and to erect a new and heretofore unheard of classification in which to place them, so far will the attachment of a scientist to a favorite theory carry him. The cases that we see in the military hospitals of France were not produced by suggestion, nor are they amenable to persuasion.

These theoretical considerations, however, are by no means without their practical importance. Even before the earliest publication, in 1895, of his views, Dr.

Sollier contended that by his so-called method of cerebral reawakening he was able to cure by physical and mechanical means many hysterical conditions that proved refractory to suggestion, and it was largely these therapeutic successes that led to the crystallization and development of his idea of hysteria.

Sollier's Method of Cure

Dr. Sollier is a large and vigorous man both morally and physically, a man whom one would fancy inclined by temperament to snatch his patients back to health rather than coax them back. His evident kindness and goodness to his men, however, give them courage to endure without question the rigors of the physical treatment to which they are submitted. The central idea of his treatment is that the cerebral centres must be awakened from their dormant state by physical measures addressed to the parts of the body corresponding to the cerebral involvement.

The treatment of one case, for instance, consisted in cold douches and showers for a general effect, but more particularly in twisting and manipulating the joints of the paralyzed limbs until pain, and even very severe pain, was induced. If bending the finger joints produces no pain, the wrist is manipulated; if the wrist is without sensation, the shoulder is manipulated. Sensibility returns to the anaesthetic areas through the pathway of pain induced in neighboring regions that are more sensitive.

In another case the treatment was to place the hands over the eyes, whereupon the patient would promptly fall into a hypnotic state and go through all the phases of the grand attack. As his struggles began to subside and he was sinking into a quiet sleep, he was ordered to wake up, to awaken his shoulders, awaken his back, awaken his limbs, awaken all over. He is regarded when apparently awake as a *vigilambule*, one who, while apparently awake, has large portions of his brain cortex asleep, and who for this reason is so easily and by such slight transition thrown into complete hypnotic slumber.

In addition to these treatments carried

out by the attending physicians, and by trained masseurs working under their direction, an interesting and indeed most inspiring part of the work for the restoration of these men is the systematic motor re-education carried out by the men themselves. Every morning from 8 until 9 o'clock, and again of an afternoon from 2 until 3, in the quadrangle of the Lycée the men are gathered at the sound of the bugle for drill.

Patients Treated in Groups

They are grouped in squads according to their several disabilities. The club-footed squad, the hemi-contracted squads, the contractures of the left arm, the contractures of the right arm, and so on. Each squad has its non-commissioned officer, who is himself convalescing from the same disorder, and the whole battalion is under the command of a Sergeant, who is partially recovered from severe organic and functional disturbances.

The apparatus employed in the exercises is of the simplest—a manual of arms carried out with a wooden pole, some board platforms for the exercises to be taken lying down, a few weights and pulleys. The intention is to bring the defective muscles into play through the unconscious influence of limitation; to strengthen the muscles which oppose those that are contracted; to give tone to the physique as well as to the morale of the men.

A physician passes from group to group encouraging and instructing the leaders, calling attention to stragglers that may be failing of the efforts demanded of them. The cheerful atmosphere of this scene, the sharp cries of command making a not unpleasing discord of sound; the emulation of the soldiers to attain the progress that they see others have made—all gives one the feeling that these men are cordially enlisted in the effort to overcome the handicaps under which they labor, and a large part of the success of the treatment in this institution is to be attributed to this community of effort.

It is too early to say whether the views which Dr. Sollier has advanced as to the nature of hysteria, his so-called physiological theory, will be generally accepted.

It is certain that his effort to place the emphasis on the physical and physiological aspects of this trouble has been tremendously favored by the large group of cases that have come to observation through the accidents of war.

When I first walked through his ward and looked with astonishment at the array of nervous phenomena presented, I began to wonder: Is this the result of the traditionally excitable and nervous French temperament? Would Englishmen or Germans or Russians exhibit such astonishing bizarreries of nervous function? I learned on asking the physicians of the Lyons hospitals, who were neurologists by profession, that in years of practice at the Salpêtrière, the famous Paris hospital for nervous diseases, they had only rarely encountered cases comparable to hundreds that we had in our hospital. I learned from consulting the literature that Englishmen and Germans were suffering the same nervous accidents as the French.

Some Unsolved Questions

It would be difficult, if not impossible, for Dr. Sollier to prove that the sufferer from shell shock, as he emerged broken and bleeding from unconsciousness, might not, in his awakening intelligence, develop hysterical symptoms on a psychological basis, and that this elementary hysteria of molecular vibration might not have interwoven with it as a psychic state ideas associated with terror and dread, the most powerful of human emotions. His opponents, moreover, will ask him to explain the rarity of these commotional states in the numerous wounded that received physical injuries from projectiles that have exploded near them, patients exposed to the same displacements of air, and the same physical conditions—an embarrassing question to the partisan of the organic theory.

Some of the commotionnés tell us that they had often had large shells burst near them without experiencing anything more than the disturbance legitimate to such circumstances, a disturbance easily mastered and quite transient. Furthermore, as Dr. Sollier has himself pointed out, it is most unwise to return the pa-

tient when apparently quite cured to the firing line. The first explosion in his neighborhood will bring back a return of the old symptoms, sometimes with added violence, so that the recrudescence is apparently due less to the physical reopening of an old wound than to the representation of remembered conditions.

Dr. Sollier's conceptions, however, gain valuable support from the success of his treatments when applied to the commotion cases, even though they be very severe, provided the patient is fortunate enough to be taken in hand early.

Sergeant B., for example, a robust and muscular man of 25, was in Fort Douaumont during a bombardment. He was thrown many yards by the explosion of a large shell; consciousness was lost for some time. At the first-aid station he had difficulty in breathing, and consciousness was only gradually restored. He was brought back at once to Lyons, where he was found to be in a state of general rigidity and hyperaesthesia. Even small movements of his limbs were painful. His heart was moderately dilated, pulse rather rapid, fibrillary tremor of the hands, slight goitre, and exophthalmus. When the treatments, which consisted in forced movements of his limbs, were undertaken, he would gradually become stuporous, cry out with pain, and at the close of the séance would almost lose consciousness and would dissolve into tears.

However, after a month of such treatment the stiffness and sensitiveness were rapidly disappearing from his members, he was able to stand erect and walk, and was obviously on the high road to recovery. Had he been treated merely by rest and care, he would probably have made no such progress.

Alongside of him other men, whose injuries had come about in the early months of war, and who in the early stages of their trouble were treated by the conventional methods, seemed to have crystallized in their disabilities. It appeared that after the deformities and tremors had become inveterate it was most difficult to eradicate them, even by the treatment of motor re-education, though this brought about slow and steady gains.

A Harrowing Summary

It was possible, then, in this hospital to find the same clinical pictures resulting from causes of every degree of potency—a slight and merely psychic trauma sufficing to induce the symptoms in the unstable, a violent physical trauma being needed in the well poised.

1. There were the highly neurotic subjects, who had never been near the front, but who on receiving the news from home of the death of a wife or being parted from a sweetheart had developed these terrible attacks and paralyses. These were few.

2. There was the somewhat larger group of cases similar to the first two cited, cases of tougher-fibred but still imaginative men, whom the emotional shocks of the campaign, combined with fatigue and long strain, had been able to bring to a grand hysteria.

3. A third group more stable than the last could be made hysterical only if, after being weakened by hunger, sleeplessness, and overwork, they were subjected to the shock of a violent explosion, though the same shock might have previously left them untouched.

4. Last, there were men, stalwart, tranquil, robust men, who had never known nervousness, neither personally nor in their families—unimaginative, stolid men, who, being suddenly hurled through the air, torn and lacerated in the finer structures of their bodies by an explosion, buried alive perhaps by falling earth, were, when they ultimately regained consciousness, transformed instantaneously into disorganized neurotics, exhibiting all the characteristics typical of the grand hysterics.

To see these strong men suddenly reduced from the flower and vigor of youth to doddering, palsied wrecks, quivering at a sound, dreading the visions of the night, mute or deaf, paralyzed or shaken by violent agitations, rent from time to time by convulsive seizures as though tormented by many devils—this wreckage of men's souls seemed to me to mirror more vividly the horror of war than any picture drawn from the carnage of the battlefield.

Curious German War Medals

"In Our Iron Time—1916"

George Macdonald, who a year ago described in *The Scotsman* some 500 German war medals struck during the first eighteen months of the war, has written this interesting account of later medals announced in a supplementary catalogue issued in Amsterdam.

A PATHETIC feature of the new sales catalogue of German war medals and "tokens" is the great increase in the number of specimens of paper money of small denominations, intended to supply a currency for prisoners' camps or for those portions of the allied countries which are in enemy occupation. It is strange, for instance, to encounter a group of notes, ranging in nominal value from 2 francs to 10 centimes, that belonged to an issue of 2,000,000 francs, guaranteed under date April 23, 1915, by a resolution of seventy communes in the region of the Somme and the Ancre. When one sees in the list such familiar names as Miramont, Irles, Courcelles, Thillois, and Warlencourt, one shudders to think of the appalling rate at which the securities, heritable and other, must have depreciated through the action of high explosives.

All the belligerents, except Japan and Portugal, have contributed their quota to the sum total of the war medals proper. Germany, however, has once again been far and away the most active. In a fair proportion of cases the underlying motive has obviously been a desire to honor individuals by associating them with some particular achievement or with some popular declaration of policy. The collection, in fact, constitutes a sort of national portrait gallery of all the German Admirals, German Generals, and German statesmen whom the events of the last three years have brought into prominence. A bust of von Tirpitz, for example, is backed by a plump figure of Germania "doing battle for the freedom of the seas," while both von Scheer and Hipper receive credit for their great "victory off the Skagerrak," which is said to have been won "not by chance but by sheer capacity." The military

laurels have been gathered mainly on the eastern front, and first and foremost by von Mackensen.

The big events of 1916 in the west are but rarely alluded to, although a huge iron medal with allegorical figures depicts "the horrors of the Somme," and a companion piece shows the scourge of war descending upon Verdun. Tit-bits from the Imperial Chancellor's Reichstag speech of June 5 are immortalized on unwieldy lumps of metal bearing his image and superscription, and royalties more or less considerable are, of course, sprinkled freely through the pages of the catalogue—so freely, indeed, that the Kaiser and the Crown Prince tend rather to be elbowed into the background.

A good deal of space is occupied by heroes of less exalted rank, like the aviators Boelcke and Immelmann. On the latter of these one enthusiastic medalist has conferred the title of "The Eagle of Lille." And it is interesting to observe that few even of the major happenings of the war have caught the German imagination in the way that the exploits of the *Möwe* and the voyage of the *Deutschland* appear to have done. The capture of the *Appam* could hardly have been more loudly celebrated if it had affected the naval situation as profoundly as did *Trafalgar*.

The tribute of medallion portraiture is paid not only to the raider's Captain, Count zu Dohna-Schlodien, but also to the officer who navigated the prize to the United States, Lieutenant Berg. So, too, with Captain König of the *Deutschland*, in immediate juxtaposition to whom we are astonished to find a much older Atlantic voyager—to wit, no less a person than Francis Drake himself. The first glance at his bust, dressed in correct Elizabethan costume, and identified beyond possibility of mistake by his name, sets one wondering whether Houston

Stewart Chamberlain has succeeded in proving that the Spanish Armada was defeated by Germans. But the real explanation is a veritable anti-climax; it is furnished by an inscription on the reverse, "Francis Drake was the name of a gallant man who three centuries ago sailed from England to America in command of a ship, and who when he returned from his distant travels brought with him the good things that we call potatoes. This useful vegetable we owe to the very same State that is today—1916—endeavoring to starve us out. Such is the irony of world history and of world politics."

The Drake Medal is not the only one on which the food difficulty is frankly alluded to. Another piece pillories the butchers who indulge in "profiteering," and threatens them with handcuffs and the knout. A third is directed against the bakers, two of whom are represented diligently sawing a log of wood in order to secure material for bread. That bronze is growing scarce is abundantly clear from the fact that it is not used for almost any of the recent medals, iron being the usual substitute. And gold, as might be expected, is altogether unknown. In this connection a small medal of iron is of special interest; it is issued by the Reichsbank, and presented to persons who hand gold ornaments over the counter. On the obverse is a kneeling woman, holding out a piece of jewelry, accompanied by the legend, "In our iron time, 1916." On the reverse is a branch of oak, and the couplet:

Gold I gave in hour of need,
Iron received as honour's meed.

Presumably the idea is that this should be transmitted as an heirloom. The same consideration for the future is plainly responsible for a medal having on the obverse a "Pickelhaube," or spiked helmet, resting on a shield, and on the reverse a mailed fist clasp ing a hand that is indubitably feminine, the two between them supporting a sword. The legend is, "Wedded in war time." The mention of "war weddings" inevitably suggests a search for the "war baby." And, sure enough, here he is on another medal, nestling inside an in-

verted "Pickelhaube," which reposes on a little pile of bombs. The inscription reads, "Born during the world war." The well-to-do can purchase either of the last two medals in silver.

The productions just described give us a quaint glimpse into the mentality of the great nation with whom our own is now locked in a life-and-death struggle.

A MUCH-SOUGHT-AFTER GERMAN MEDAL, STRUCK TO COMMEMORATE THE SUBMARINE BLOCKADE OF ENGLAND, FEB. 18, 1915. IT PROVIDES AN EARLY EXAMPLE OF THE FAMOUS PHRASE "GOTT STRAFE ENGLAND"

The definitely satiric medals are a more lurid illuminant. It is sometimes said that a boxer never feels thoroughly confident until he sees that his opponent is losing his temper. If the analogy holds good, a perusal of the catalogue should be comforting. In any case it provides a wholesome discipline in the way of seeing ourselves as others see us. The rest of the Allies escape almost scot-free, except for a few fierce thrusts at Italy or at individual Italians, like Gabriele d'Annunzio, who is represented as Judas Iscariot. It is for Britain that the vials of German wrath are reserved. And what vials they are! Humor, or at all events humor of the conscious variety, has taken to itself wings.

The catalogue contains nothing quite so shocking as the Lusitania medal. On the other hand, one cannot help observing that the author of that infamy, Karl Goetz, now appears to enjoy extraordinary popularity as a designer. A speci-

men of his handiwork, dealing with the loss of the Zeppelin L-19 in the North Sea, forms a highly instructive counterpart to the performance through which he first became notorious. On the obverse is the airship laboring heavily amid the waves; the crew have clustered on the upper portion of the envelope, and are looking over the angry waters to a trawler, the King Stephen, which is disappearing in the distance. The reverse is almost wholly occupied by the inscription, "Curse the British at sea! Curse your evil conscience," which is doubtless meant to express the feelings of the Zeppelin crew, (who are all represented as shaking their fists vigorously,) and by the descriptive sentence, "Shipwrecked men, imploring help, were left to drown, 2d February, 1916." Yet an-

of mediaeval instruments of torture, from the midst of which there grins a skull with serpents issuing from its eyes. Across the field is the date of Casement's execution, "3d August, 1916," while round the margin is the doggerel verse:

Edward Third's dead hand
Fastens the noose round Ireland.

Another echo of the unhappy Irish rising presents us with a picture of Death, wearing the undress cap of a hussar and smoking a clay pipe, seated jauntily on the edge of a tomb inscribed "Home Rule. R. I. P." He is contemplating with apparent satisfaction a bunch of shamrock which he holds in his hand, and which is described in the rubric as "A posy of May flowers from the Emerald Isle." This medal is one of a group of six executed by a certain W. Eberbach. They are identical in size, and are clearly meant to be regarded as forming a sort of "danse macabre." In all of them the same repulsive figure is conspicuously "featured," as the cinema advertisements would have it. Thus on one he stands astride above the sinking Lusitania, gloating over her as she sinks beneath the waves, the accompanying legend being "Spite and heedless frivolity on board of the Lusitania." The reverse dedicates the medal "To Woodrow Wilson, the man who despised our warning. 1916."

It is far from agreeable to linger in such company. But the effrontery displayed in a third member of the series is so colossal that one cannot pass it by in silence. As in the case of all the others, Death dominates the field. This time he is seated with his back to the spectator, closely watching a passing liner, whose fate is plainly foretold by the mine which he holds in one hand and the torpedo which he grasps in the other. Above are the words, "England's greeting to the neutral ship Tubantia," the Tubantia being, of course, the fine Dutch steamer which was one of the first victims of Germany's campaign against neutrals. On the reverse is the unexceptionable sentiment, "The best of people can't live in peace if their wicked neighbor doesn't want them to." Britain or Germany—which of these was neighbor to him that fell among thieves?

GERMAN SILVER MEDAL INSCRIBED "NACH PARIS" ON ONE SIDE, WITH A PORTRAIT OF GENERAL VON KLUCK ON THE FACE, MADE IN ANTICIPATION OF THE FALL OF PARIS

other of Goetz's creations shows on the obverse a half-length portrait of Roger Casement, stripped to the waist and bound, with a lanky Highlander busily engaged in tying a rope round his neck; as caricatured in Germany, the British Army usually wears a kilt, a delicate compliment which Scotsmen will not be slow to appreciate. On the reverse a spider is hard at work weaving its web round a stout volume, which is labeled "English Law, 1351." The book itself is supported by a pleasing assortment

The War Problems of Mothers

By the Countess of Warwick

[Published by arrangement with The London Chronicle.]

MOTHERS of soldiers have been in evil plight from time immemorial, ever since the waging of the first wars in some forgotten era of which history takes no count, but in England their troubles in the past were never as they are to-day. Before 1914 we had a professional army for which men underwent long training; only in a few families did the service claim all the sons; as a rule there were some who chose a civil calling. The result was very satisfactory. Mothers had a sense of double security. In the first place, the risks of war could not reach all their loved ones; secondly, the ethics of war could not dominate the house.

Thinking women, whether educated or not, have always recognized in militarism the merciless enemy of feminism; it is a fight to a finish between the two, and neither side will abate its claims. While militarism is up, feminism is down, and when the latter ascends the former must go. I have known suffragists belonging to families that have a great military record, and some of them have hesitated to face the truth on account of personal family history, but there can be no two opinions about it. If women did not realize the whole truth earlier it was because the services claimed no more than a part of their family, and the war risks were comparatively small. In the past sixty years the last Transvaal war (1899-1902) has been the only really serious conflict, and that was little more than an affair of outposts by the side of the struggle that engages the world today.

If the responsible section of my sex has been betrayed by the love of gold lace, ribbons, stars, crosses, and other decorations into thinking too well of war through all the years of peace, the retribution, long though it lingered, has come at last. It has taken a double form. Some of our sons have gone to their

death, and this, indeed, is tragedy enough; but other of our sons have come back dead to the life that held them before they went away, and this in many instances is the worst tragedy of all. A mother's love for her son is something that no man can nearly understand; so many things enter into it beyond the reach of his perceptions. The thinking

COUNTESS OF WARWICK

woman looks to him to carry some at least of her ideals into the world; she molds him that he may be better, nobler, more useful to humanity than she herself ever hoped to be, even in dreams.

It is not easy to say how the mother of a lad who fulfills her ideals would decide if she could choose for him one of two fates—the first, to die in battle in the earliest flush of youth and idealism, returning to his Creator a soul unstained;

the second, to return from the war sound of limb, but with the feeling that our ends and aims are not shaped by any Divinity, that nothing matters, and that it is well to eat and drink and be merry today, because tomorrow the just and the unjust man will share a common grave, over which the dust of oblivion will soon be blowing. I can imagine no more terrible choice for any mother, but I cannot doubt what answer would spring to the lips of those who have kept their faith quite free from definitions, in spite of the bankruptcy of Church and of State. Happily, such an awful responsibility does not fall to any one.

Yet it will be the fate of innumerable mothers to welcome back to their homes, when war is over; sons whose finer susceptibilities and emotions have lost all their edge, boys who were in all save military eyes too young to be plunged into the inferno of strife, who, after growing careless of death, are now careless of life. Men go through their appointed task with unquenchable heroism, and there is no detailed story of a day's work that cannot thrill to the heart, but here in England, happily, we see nothing of the actualities; we read of cannon fodder, but do not realize what it actually means. We only know vaguely that every time the sun rises in the east so many hundreds, or even thousands, of lads and men look upon the dawn for the last time, and that by the hour when the west is reddening whatever their lives held of promise for the world at large is lost. Ours is the knowledge, but the actual sight of all the hideous welter upon which the pen forbears to dwell is the experience of our young sons. How many of us, not lacking in courage, could face with open eyes the sights with which our lads have grown familiar?

There is a certain *esprit de corps* among fighting men. They are jovial to the last, they have neither the time nor the mood to mourn, the normal values of life have passed entirely out of sight. Recklessness is the order of the hour, it strays from action to thought. Young officers have told me in all seriousness that we at home have no real idea of life

at all. To savor the true sense of it one must needs go to the trenches, or over the blackened sites of villages that once held a few hundred simple, harmless lives. "Perhaps God ruled over Europe once upon a time," said one, with a sudden burst of candor, "but I know He doesn't now. Even He could not claim to rule and be responsible for the things I've seen; and ours is no more than a few yards of line." Another assured me that when the army is finally disbanded, nobody will go to church. "There never could be any hypocrisy," he assured me, "equal to going to church after all one has seen."

"Yes, I did hear those rather pitiful stories about the angels at Mons, but they were supposed to have been seen when the war was a month old. If anybody tells of angels now, it is one of the forms of shell-shock. That does make some men pray and others curse, and some can't do the one or the other, and they go mad. But nothing really matters. We all do what we can, and the enemy does the same, and we'll win because, man for man, we're better, even if we're not as clever, and those who don't go west today will go tomorrow, or next week or next month, but most of us will get there before we see the Rhine." He went on to talk lightly of a revue that he had been taken to see three times on his brief leave. "I suppose it's rather a beastly thing," he said, "but we all laughed, and it doesn't matter much anyway."

I could dive deeper into the problem I have suggested rather than outlined here, but to do so would be to commit a breach of confidence. Suffice it that the responsible mothers of the young men who come home have a grave problem before them, the more grave because they cannot, save in a very few exceptional cases, solve it for themselves. All mothers have to remember that their sons grow up, and that of all the forcing processes in the world none is quite so drastic as war. The lads will have reached the time when they will turn for counsel, sympathy, and affection, not to their mothers, who would so willingly give them of their best, but

to the daughters of other mothers, who will become mothers in their turn. I do not think I have ever regretted more keenly the neglect of the education of girls in the middle and upper classes, the little provision there is in it by which they may save alive the soul of a man who is in danger of losing it.

It is one of the ironies of the times that the daughters whose education is in so many instances scarcely worthy the name, whose tastes are so often perverted by the empty life of pleasure that is the only life within their grasp, whose physique is injured by town life, badly ventilated rooms, ill-chosen food, fashionable clothes and the rest of the evil to which the daughters of wealthy parents are heir, should be asked to save the race. Yet, however great the irony of the situation, that situation exists. It must be faced. The battle of militarism against feminism will be resumed. Consciously or unconsciously, they will be combatants. They, and not the mothers who yearn for sons lost and sons worse than lost, must play their part, live awhile face to face with the grave prob-

lem, solve, trifle with or ignore it. War has loaded the dice for militarism. The times will gamble with these loaded dice for the bodies of a generation yet unborn, and all that many a lad will have to stand between him and the further disaster of perpetuating the evils of our day will be some young, fair, foolish head with eyes that a piece of braid or ribbon may be able to dazzle.

I am conscious of a clear conviction that feminists of every class and creed should unite to face this problem; any other success while such a work remains undone is the gain of the shadow and the loss of the substance. The girls of England whose attractions will rule the English world and decide the character of the next generation must be reached while there is yet time, and something of their responsibilities brought home to them. If they are going to disregard them and help to prolong the agonies of our failing civilization, let it not be said that they erred through ignorance or because there were none to teach them the truth about the part they are called upon to play.

British Women in War Service

THE British War Office issued, at the end of February, 1917, the following statement of the terms and conditions governing the employment of women with the British armies in France. Many thousands of women in England had long been awaiting official arrangements enabling them to volunteer for this service:

For twelve months, subject to termination earlier at the discretion of the Army Council upon one month's notice, except for misconduct or incompetence, when one week's notice will be given. The engagement may be renewed by mutual consent at the termination of the first period. A bonus of £5 will be paid to each woman, irrespective of grade, on renewal of the agreement for a second period.

There are five main categories of employment, viz.: (a) Clerical, typist, shorthand typist; (b) cooks, waitresses, and domestic staff; (c) motor transport service; (d) storehouse women, checkers, and un-

skilled labor; (e) telephone and postal services, and (f) in addition there will be certain miscellaneous services which do not fall within the above main classification.

(a) Ordinary clerical work and typists, 23s. to 27s. per week, according to efficiency; clerks employed on higher clerical and supervisory duties, 28s. to 32s. per week, according to efficiency; shorthand typists, 28s. to 32s. per week, according to efficiency. These rates of pay cover forty-two working hours per week, after which overtime will be paid at the rate of 7d. per hour for ordinary clerks and 9d. per hour for clerks employed on higher work and shorthand typists.

(b) Head cooks and waitresses, £40 per annum; cooks, waitresses, and housemaids, £26 per annum, with free board and lodging, together with 6d. per week for personal washing.

(c) Superintendents, first class, 52s. 6d. per week; superintendents, second class, 46s. per week; head drivers, 40s. per week; qualified driver-mechanics, 35s. per week; washers, 20s. per week. These above weekly rates in-

clude Sunday work when necessary, but if employed on Sunday a day's rest in lieu will be given. In addition, overtime will be allowed, except to superintendents, at the rate of 5d. per hour after eight and a half working hours per day.

(d) Storehouse women and unskilled labor, 20s. per week. Extra pay up to 2s. per week where special aptitude is required; leading hands, 22s. per week; checkers, 22s. to 24s. per week; assistant forewomen, 24s. per week; forewomen, 24s. to 30s. per week, according to number of staff supervised. These rates cover forty-eight working hours per week. Overtime, at time and a quarter for the first two hours per day; thereafter and on Sundays, time and a half.

(e) Telephone and postal services. Rates of pay are under consideration by the Postmaster General and will be announced later.

(f) Miscellaneous services. Special rates of pay, according to nature of employment, with a minimum of 20s. per week.

No woman under twenty or over forty years of age will be eligible for employment. A short form of agreement will be entered into. A medical examination by a woman doctor will be necessary. The period of preparation in England will include elementary instruction in hygiene and discipline. Free conveyance to and from France on appointment and termination of engagement will be provided. A fortnight's leave will be given

during each year's service. An allowance of £4 will be paid to provide uniform at the beginning of service, with a further grant of £1 at the end of six months. Similar grants will be made for the second year's service. Slightly different grants will be made in the case of the Motor Transport Section.

In all cases other than (b) cooks, waitresses, and domestic staff; (d) storehouse women and unskilled labor, and (f) miscellaneous services—a deduction not exceeding 14s. per week will be made to cover cost of board and lodging and washing on a regulated scale, which will be provided by the military authorities. In the case of (d) storehouse women and unskilled labor and (f) miscellaneous services, when the pay is less than 21s. per week, the deduction will not in any case exceed 13s. a week. The women will be accommodated, while in France, in hostels, under the care and supervision of lady superintendents. The above applies to France only. It must be understood that enrollment for service includes service at home as well as in France. Those who have a preference should declare it. Where preference for France is declared it will be satisfied if possible, and service in France may ultimately follow service begun at home. The conditions of service of the various classes of women workers at home will remain as at present.

To the First Gun

By ROBERT UNDERWOOD JOHNSON

[The liner St. Louis, the first American merchant ship to carry guns through the German submarine zone, sailed from New York on March 18, 1917]

Speak, silent, patient gun!
And let thy mighty voice
Proclaim the deed is done—
Made is the nobler choice;
To every waiting people run
And bid the world rejoice.

Tell them our heaving heart
Has found its smiting hand,
That craves to be a part
Of the divine command.
Speak, prove us more than ease or mart,
And vindicate the land.

Thine shall the glory be
To mark the sacred hour
That testifies the free
Will neither cringe nor cower.
God give thy voice divinity
That Right be armed with Power.

Thou art not lifeless steel
With but a number given,
But messenger of weal
Hot with the wrath of heaven.
Go earn the right to Honor's seal—
To have for Honor striven.

Lead us in holy ire
The path our fathers trod;
The music of thy fire
Shall thrill them through the sod.
The smoke of all thy righteous choir
Is incense unto God.

And when long Peace is found
And thou has earned thy rest,
And in thy cave of sound
The sparrow builds her nest,
By Liberty shalt thou be crowned
Of all thy comrades, best.

German Women as War Workers

By Caroline V. Kerr

The writer of this article has recently returned to the United States after having served for many years as Berlin correspondent of a New York newspaper. She is able, therefore, to furnish a first-hand report on the wartime activities of German women.

WHAT are the women of Germany doing today? Everything, from sitting in the civic councils to sweeping the snow from the streets. From the very outbreak of the great war it was plain to be seen that the women of Germany were filled with the determination to play their part in the great national epic, and to play it with fortitude and devotion. At no time have they swerved or faltered, and Dr. Delbrück, late Minister for Home Affairs, paid the women of Germany a well-deserved tribute when he declared in the Reichstag that "such intelligent co-operation and striking efficiency as that displayed by the women of the land since the beginning of the war could not be dispensed with when normal conditions were once more restored."

Not only are they engaged in the manifold phases of relief work such as obviously fall upon the womenfolk of a nation at war, but they have taken the places left vacant by the men on the farm and in the factory. The rapid readjustment of the German labor market was due to the fact that the number of female industrial workers was increased by half a million during the first eight months of the war. This new home army has been, chiefly employed in the "war industries"—that is to say, in the metal and machine works or in the electrical and chemical plants. Fifty thousand women are employed in one large ammunition factory, and the manufacture of shells is almost

entirely in the hands of the women. Female labor is utilized, to a large extent, in the production of other war supplies which do not represent so striking a departure from normal activities. This is the case with the textile industries and the factories for ready-made clothing.

No one has been surprised to find German women developing great organizing gifts in dealing with the many ramifications of the Red Cross work, in operating a National League for Public Service, and in elaborating a well-nigh perfect system of municipal kitchens, but it was scarcely to be expected that they would so readily fall into line when it came to recruiting the ranks of the thousand and one small trades and vocations which go to

make up the everyday life of a big nation. They are serving with success as letter carriers, as messenger boys, as chauffeurs, as window cleaners, as "motor-men," as conductors on the street cars and subways, and one is reported as having joined the ancient and honorable guild of chimney-sweeps.

They are familiar figures on the streets where public works are in course of construction, and if you ask them who looks after their households in the meantime they cheerfully explain that they can rely upon the thoroughly organized system of municipal welfare work to care for them and their children.

Women have been included in the municipal councils of Berlin and other large cities, and no civic measure bear-

CROWN PRINCESS CECILIE
OF GERMANY

ing upon the subjects of alimentation and public welfare is carried out without their counsel and co-operation; in fact, a few women of extraordinary initiative and executive ability may be spoken of as ex-officio members of the German Home Office.

Frau Heyl's Enterprises

One of these is Frau Sophie Heyl, the woman who gave the impulse to the centralization of the national movement in household economics. Frau Heyl has received many orders for distinguished service, but no one of these is as gratifying to her as the unofficial title bestowed upon her of "The Hindenburg of the Kitchen."

She is verily a generalissimo in her line of work, and in the opening days of the war gave striking proofs of her gifts in this direction by mobilizing the housekeepers of the land and initiating them into the rôle they were expected to play in the great campaign then opening. Her ever-fertile brain evolved one scheme after another for meeting the unexpected economic situation, and the awakening of a national consciousness among the cooks and housewives of the empire was largely due to the efforts of this remarkable woman.

It was she who organized and financed the first relief kitchen for the "shame-faced poor," and it was due to her foresight that the meat and vegetables were concocted into the savory stew, known as "gulasch," millions of tins of which were sent to the soldiers in the trenches. More than that, her name became a household word throughout the land by means of the series of "War Cook Books," compiled at the request of the German Home Office and distributed gratis by the tens of thousands.

Frau Heyl has not confined her energies to household economics on a large scale, but, believing in the efficacy of small economies, has instituted potato-paring and cherry-pit campaigns. Such activities may seem ridiculously small to the outside world, but are not to be despised in a country now passing through the state of "commercial isolation," once foreseen by the great German philosopher, Fichte.

Public Service League

What Frau Heyl has accomplished in the field of household economics has been achieved along the broader lines of national welfare work by Dr. Gertrude Baumer, President of the National Council of German Women and of that remarkable war organization known as the National League of Public Service.

This organization represents a concentration of effort and a comprehensiveness of scope never before attempted by the women of any country. The war was scarcely a week old when the call went out from Berlin to the remotest corner of the empire summoning the women of Germany to the colors, and the result was the present far-reaching organization prepared to meet every exigency of the war relief and public welfare work.

Both Dr. Baumer and Frau Heyl attribute the phenomenal rapidity with which they were able to organize such large bodies of women, and direct their activities into channels of efficiency, to the much-decried "Prussian militarism," which they claim only means schooling and subordination of the individual to the well-being of the masses—in other words, discipline and organization.

Every town, village, and hamlet throughout Germany maintains a branch of the Public Service League, and these local organizations receive a weekly budget from the municipal treasuries and thus work hand in hand with the city authorities in disbursing the relief funds. Some idea of the magnitude of the work may be gained from the fact that in Berlin alone more than ten million marks are paid out every month to the soldiers' families, and practically all the applications for aid are handled by the league. In two months the Berlin relief committees distributed food certificates and bread and milk cards to a total amount of more than 130,000 marks.

Relief of the Needy

Some of the duties of the league are to look after the war widows and orphans, to feed the hungry, to clothe the destitute, to find work for the unemployed, to mediate between land-

lords and tenants, and in every possible way to come to the immediate and effective relief of all the needy classes of the population. One of the chief activities of the league at the beginning of the war was to care for the thousands and thousands of refugees from the devastated provinces of East Prussia who poured into Berlin and other cities of the interior and for months claimed the hospitality of their more fortunate compatriots living within the "safety zone." In addition to the funds appropriated by the city, the league is the constant recipient of voluntary contributions; in fact, its treasury is in no danger of being exhausted should the war continue indefinitely.

A fact of striking significance in connection with this organization was the sweeping away of all religious and party barriers. The League of Catholic Women as well as those of pronounced Social Democrat tenets allied themselves with the national movement, and a Swedish writer, in commenting upon this phenomenon, says that if "dismembered Germany was welded into an empire by the war of 1870-71, the war of 1914 may be said to have accomplished still more for the nation by bringing about an inner unification and creating an entirely new quality of national consciousness."

The basic principle underlying the activities of the league is to discourage charity and make every applicant for aid self-supporting. It is not possible to carry out this principle in all cases, but its general wisdom is incontestable. Living upon the charity of others soon becomes an incurable habit and is utterly destructive of all feelings of self-respect and personal responsibility.

Parallel with the work of the Public Service League is that of the so-called "Frauendank"—an endowment fund al-

ready amounting to many millions, designed as a special expression of gratitude from the women of Germany to their fallen heroes. The interest on this fund, which is splendidly invested, is to be supplied to the permanent support of the families thus left unprovided for.

It is the women who have also taken the lead in the national "Gold Offering." The official head of this work is the German Crown Princess, from whose various royal residences rich treasures

have been sent to swell the sacrifices laid upon the altar of the Fatherland.

There is no busier woman in the empire than the Crown Princess, as she must not only lend her name and influence to the manifold war organizations, but she is also called upon to represent the Empress at all public functions owing to the fact that the latter has withdrawn herself from active participation in the broader phases of the relief work and

confines herself to a few charities lying very near to her heart.

Thus it happens that the Crown Princess is daily claimed by some official duty or errand of mercy; now she makes the round of the military hospitals; now she is investigating the progress made at the lace school started under her aegis; now she is presiding at a bazaar, where her services are eagerly sought as a saleswoman; now she is acting as patroness at a charity concert, the least irksome of all her duties, as she is a thorough musician. She is particularly interested in the work being accomplished by the Crown Princess Hospital Train, the gift of the Schoenberg Borough of Greater Berlin and said to be the best-equipped hospital on wheels in Germany.

The active participation taken by the royal women of Germany in all phases

GRAND DUCHESS LOUISE OF BADEN

of the war relief work has been a great stimulus to the women of the land, who feel that the war has bridged the social chasm and united them in one common work, quite irrespective of caste distinctions. Here they meet on common ground and are all engaged in fulfilling their sacred duties as wives, mothers, and citizens.

Even the octogenarian Grand Duchess Louise of Baden does not allow her age to deter her from being present to welcome the German wounded soldiers when they first touch home soil at Constance on their way back from the prison camps of France.

Other Royal Women

The Queen of Bavaria is another royal woman whose heart and soul are in the relief work, and in the opening days of the war she personally presided over the sewing rooms established in one of the wings of her Munich palace.

Court society furnishes no more striking example of fidelity to a self-imposed task than Princess Henckel-Dommersmarck, the wife of Germany's largest coal magnate. Despite her years, this woman not only maintains but personally supervises a hospital of 200 beds. By 8 o'clock in the morning she has entered upon her round of daily executive duties, and 8 o'clock in the evening finds her still engaged in her work of mercy.

Baroness von Ihne, one of the beauties of German Court society, was one of the first to recognize the necessity of placing the work being done for the "war blind" on an organized basis, and her Home for the Blind was the first of many to undertake the systematic education of this most tragic class of war sufferers. Here again an endowment fund already reaching the millions insures permanent aid to the beneficiaries.

Another field of work to which German women have devoted themselves with great energy is gardening—not futile, amateur attempts to make things grow, but "war gardening" on a large and purposeful scale.

Baroness von Flotow is the head gardener at the Teltow Vegetable Fields near

Berlin, where 200 young women of gentle birth and breeding have braved wind and weather for two years in the execution of their volunteer task of cultivating 150 acres of land. This is only the largest of the "war gardens" which hang like a heavy green fringe around the skirts of Greater Berlin, now widening, now narrowing as the brick and mortar of the suburban settlements or the shining black ribbon of railway steel imposes an obstacle to their further progress.

The fruits and vegetables grown in these war gardens are sold for minimum prices in the co-operative retail shops opened up by the housewives' unions, who are thus in a position to control the prices of foodstuffs.

Raising Sunflower Seeds

Nothing is deemed so insignificant as to be a negligible quantity in the general economic scheme. A case in point is furnished by the attention paid to the cultivation of the sunflower, strongly recommended to the gardening element by reason of the oil to be extracted from the seeds and the "sunflower cake" to be made from the residue and used as fodder.

Sunflower products form an important item in Russia's export trade, the revenue derived from the export of sunflower oil alone having brought the State the sum of 4,000,000 rubles a year. Germany is not rich in oil-producing plants, and before the war was obliged to import practically her entire supply of oils and fats. In thus encouraging the home production of an indispensable article hitherto bought in foreign countries, the Government has evidently taken as a precedent the present sugar beet industry, which owes its origin to the Continental blockade imposed by Napoleon I. in his wars with England. Forced back upon her own efforts to supply the nation's needs in this article, Germany then laid the foundation of one of her most highly developed national industries.

Naturally the question arises as to what this activity on the part of the women will lead to after the war. Dr. Gertrude Baumer answers this question at the close of her book on the "German

GERMAN WOMEN AT WORK IN A STATE GUN FACTORY

Woman in War Welfare Work." Here she says: "Thousands of women have been brought to a full realization of their duties as citizens in this hour of fate and will remain true to their awakened consciousness. The war has had a qualitative effect upon woman's work and endeavor by reason of the fact that the enormous and unprecedented problems created by the war have forced all sociological organizations to shake off their dilettantism and plant themselves upon the firm ground of scientific knowledge and systematized effort.

Moreover, the official recognition of the part played by the women in the communal and national work has already been shown by the appointment of women as members to the city councils and deputations, the full significance of

which will not be, can not be, estimated until after the war.

The German Nation will not be able to forget that the stern fight for existence behind the front was made possible only by the unremitting efforts of the women of the land, working hand in hand with the men and contributing cheerfully and intelligently to the economic upkeep of the nation. Even women who are not avowed suffragists think that universal suffrage will be one of the inevitable results of the war, for the reason that the law-givers of all the belligerent countries can no longer deny this crowning privilege to the wives and mothers who have worked so bravely, suffered so keenly, and endured so patiently through the long years of this cruel war.

(Copyright, 1917, Otis F. Wood.)

The War's Effects on Woman's Status

AUGUST WINNIG, NATIONAL SECRETARY
BUILDING TRADE UNION OF GERMANY

Women in all the belligerent countries of Europe have taken men's places in industrial life in unprecedented numbers. In Germany at the end of 1916 the number of women employed in industries covered by the sickness and death benefit societies numbered 4,793,472, or nearly one-half the persons included in the insurance system. This is a 33 per cent. increase since the beginning of the war. At the same time there were in England 3,219,000 women employed outside their own homes, of whom 766,000 had replaced men gone to war. About 500,000 of these had gone into munition plants. Cecil Harmsworth, head of the Woman's War Employment Commission, stated on Jan. 6, 1917, that his commission then had a trifle over 1,000,000 women doing men's work, and that they had saved England. In France similar conditions exist, and hundreds of thousands of women are making munitions at wages ranging from \$1.05 to \$2.15 a day. French schools are now taught almost exclusively by women, a radical change from the past, and one likely to remain after the war.—EDITOR CURRENT HISTORY MAGAZINE.

THE world war is a revolution the extent and meaning of which will be fully apparent only to coming generations. Regarding the complex problems that, taken together, are called the woman question, the war has shown itself to be genuinely revolutionary, as it is fast ripening the new social and economic phenomena that have grown out of the peculiar needs of our period. The increasing prominence of woman in the life of Germany and her independent position both mentally and economically form a not unimportant peculiarity of our day. This is a phenomenon inseparably connected with the development and advance of capitalist administration, and, consequently, cannot be stopped by anything, although naturally it may be influenced.

Right here the war has given the wheel of time a powerful turn ahead. For nobody need imagine that with the return of peace everything in this matter will go back to its old form. On the contrary, there are many considerations that force us to the conclusion that, even after the war, women's labor will constitute a far more weighty factor in industry than it did before. It is also certain that this phenomenon cannot be restricted to Germany alone. After the war all Europe will be compelled to employ women to a greater extent in industry. Millions of men in the flower of their working lives are being eliminated from the industrial sphere, either through death

or permanent injury. Europe must find substitutes for them, if she doesn't want to lose her hard-pressed position of superiority in the world of industry, or, more correctly stated, if she wishes to regain it. Millions of the wives of the dead or crippled participants in the war need and seek industrial employment in order to earn a necessary addition to their pension allowances.

The surplus of women will increase, and, in line with this fact, there will be a rise in the number of women who must renounce the idea of marriage and make themselves economically independent. We must expect a sharper competition among the industrial States for the export markets, and this will involve an increased effort to lower the cost of production. These conditions will be present and their influence will be felt in all the industrial nations. Therefore this mighty transformation in the economic position of woman is not limited to Germany. It will be extended to all the belligerent countries, will spread from these to neutral lands, and, as a further consequence, will form the base of a new period in the history of woman.

The position of woman as to her public and private rights, as to her public and intellectual life, is closely bound up with her industrial position and activity. Woman's sphere of influence in the State and in society corresponds to her field of activity. Where woman's activity is

limited to the home and family, where she has no direct connection with the industrial life of the nation, there her legal and intellectual position is confined within narrow boundaries. Right here is verified Marx's declaration that society does not rest upon the law, but that the law rests upon society. Law is the legal expression of the actual social condition. Of course, like everything existing, it is ruled by the tendency to stand fast, and, consequently, it generally yields but hesitatingly, and often resistingly, to changes in conditions.

There is no question that the changes in the relation of women to industrial life that have taken place during the war have been extraordinarily great. Nevertheless, they would remain without any influence upon the legal and intellectual position of woman if they were merely of a transitory nature. Let us summarize the reasons that show that this cannot be the case:

1. The economic life of the belligerent countries needs the labor of women as a substitute for the men whom the war has taken from industrial life either through death or permanent injury.

2. The sharpened industrial competition to which Europe will see herself forced because of her loss of strength will necessarily develop—to the advantage of powerful industrial groups—a strong movement toward a lowering of the cost of production, which will be favored by woman's labor, as it is at present cheaper.

3. The disappearance of the fathers of families from industrial life through death or disability will compel a great many women to seek productive labor in order to increase their pension allowances from the public, so as to be able to maintain the family.

4. The diminished possibility of marriage will force more women than formerly to make themselves economically independent and enter industrial life for this purpose.

Quite aside from the question as to how greatly these conditions will affect matters, there is the problem of how this transformation is going to influence not only the legal and intellectual posi-

tion of woman, but also the entire economic and intellectual life of our people.

Up to the present there have been in Germany only weak currents of feminine opinion insisting upon a change in the present legal standing of women. One of these was composed of the most intellectually active women of the bourgeoisie, whose interest in public life had been aroused, but who lacked a field for its exercise. This current has often been called the "ladies' movement," with the intention of hinting in a deprecatory way that this was not so much an earnest effort for the attainment of equal rights as it was an interesting but harmless sport. The view thus expressed, however, was not quite fair. Even the women's movement of the bourgeoisie had its point of economic support in the circles under its influence. A growing number of women remained single and saw themselves forced by economic, and partly by psychological, reasons to take up a profession, which these women found as doctors, teachers, nurses, or as employes in commercial offices, or in the postal service, or in other lines.

In so far as the bourgeois woman's movement really was backed by numbers its adherents were recruited among these circles, and as a matter of course the leadership fell to the women who were the most fitted for it through education and liberty of movement. The second, and in numbers stronger, movement among the German women was that of the working women organized in the Socialist Party and the trade unions. This movement found support in masses that already amounted to some hundreds of thousands, but in comparison with the total numbers of the women of the working class its active followers were but few. * * *

Enough: It is beyond question that only through that direct participation by women in the economic life of the nation which is connected with economic independence is emphasis lent to the demand for broader rights, and that only then will the great mass of women take up this demand and earnestly support it. Consequently it is evident that an in-

creasing participation by women in industrial labor will influence the legal position of woman in the sense of a broadening of her rights. This connection is due to the fact that the sphere of activity of woman in industry is closely related to the general conditions of the people's life. The wage-earning woman, first of all, has quite different economic interests from those of the housewife, whose activities are limited to the management of her home, the care of her family, and the rearing of her children. Of course the housewife also has economic interests, but between her and the basic economic conditions of life stands the man, to whom falls the main task of providing for the maintenance of life, and who is the first to have to contend with the handicaps and difficulties encountered in this work. Here in a certain sense the man forms a protecting shell for the woman and the family, keeping off the economic pressure from without, or at least lessening it. For this reason the contact of the housewife with the economic conditions of existence is less sharp. The case of the wage-earning woman is different. She lacks the protection of the man. She is entirely dependent upon herself. She senses her economic interests to a much greater degree and soon comes to the conclusion that she must take action herself if she wishes to better her conditions of labor.

Moreover, it is only a step from the field of economic interests to participation in politico-economic and purely political questions; this step, however, is very seldom taken deliberately, but simply forces itself upon the women's organizations. And the women's economic organizations will be something quite different in significance in the future. So long as the wage-earning

woman regards her industrial activity merely as a transition period to be followed by marriage she does not take the matter of defending her trade interests very seriously. Only the consciousness that her wage-earning labor forms the enduring base of her economic existence makes her receptive to the idea of a joint representation of interests through organization.

The basic principle—equal pay for equal work—has more than mere trade union significance. No matter what objections may be raised against it on the part of the employers it is indubitably justified when taken in connection with the nation's industrial and political life as a whole. But it can only be put into effect if woman is kept away from the kind of gainful labor in which she is not equal to man, therefore above all from work that makes especially heavy demands upon bone and muscle. The women in the mines, on railroad track and construction work, in foundries and rolling mills, &c., must remain a phenomenon of war that must end with the war. But even then limitless fields of activity are open to them. But one of the most necessary tasks of legislation is to define, after careful examination, which of the fields of industrial life shall be kept open to woman labor. For only thus may the unavoidable shocks to our economic machinery due to the entering of woman into the army of wage workers be materially lessened. * * *

The war has given the wheel of evolution a swift turn forward. The woman question has entered upon a new stage; its significance for the entire nation has grown mightily. The State and society must recognize the new nature of the woman question and come to an understanding with it.

MUSTERING OUR ARMED FORCES

America's First Million of Fighting Men Mobilized and Ready to Begin Training for the Front

ONE of the most notable advances in the preparations of the United States to take part in the European war came with the conclusion of the effort to bring the regular army up to war strength. This was accomplished on Aug. 9, 1917, when the 183,898 men required at the beginning of the recruiting campaign on April 1 were at last enlisted. More than four months were thus occupied in reaching the maximum war strength of 300,000 men. The average daily enlistments during the 141 days were 1,300. But, despite its having now reached its war strength, volunteers for the regular army have since been coming forward in considerable numbers, so that on Aug. 20 the total was more than 10,000 in excess of the number originally required.

A further addition to the nation's military forces was made on Aug. 5, when the National Guard was drafted into Federal service. More than 300,000 men in the guard units were discharged from State service, and with enlistments which have since taken place the National Guard now numbers about 350,000. Add this to the regular army, and we find that the United States now has 650,000 men under arms. These figures do not include the 40,000 men in officers' training camps. Finally, when the 687,000 men of the first conscript army are under arms, the United States will have over 1,300,000 men in its land forces. If the training of these men proceeds without delay, the United States ought to have its first million men on the firing line at the beginning of the Summer of 1918. Early in September the first section of the National Army—raised by draft—will be in camp. From now onward all these men will form one great army, since regulars, guardsmen, and conscripts, together with the newly trained officers, will be merged into a single fighting force.

Comparison With Peace Forces

Within five months of America's entry into the war the nation will have raised over a million men, a fact which can be more fully appreciated by looking back a few years to the small army which was considered adequate for the defense of the United States in times of peace. In 1880 the actual strength of the regular army was 26,509, in 1890 it was 27,095, in 1900 it was 69,155, and in 1910 it was 77,035. At the beginning of 1916 it had increased to 5,016 officers and 92,973 enlisted men, including 5,733 Philippine Scouts.

But the year 1916 saw important developments. The Mexican raid on March 9, 1916, caused Congress to authorize an increase of 20,000, while the National Defense act of June 3, 1916, which was passed at a time when there was no thought of the United States intervening in the war, provided an aggregate war strength—including officers and special corps and services of all kinds—of 301,375. But when the United States declared war in April, 1917, over 180,000 enlisted men were required to bring the army up to this figure. The National Guard before the war had about 8,500 officers and 123,000 enlisted men.

At that time it was calculated that the United States could put into the field not more than 80,000 men at the utmost. It follows, then, that practically the whole army which will be ready to go to the front in 1918 will be an entirely new fighting force, created since America entered the war.

Navy and Army Totals

The naval forces have not been included in these figures. It was officially announced on Aug. 18 that since the United States declared war approximately 1,300,000 men had offered themselves for service in the naval and military forces of the country. Of this number, not includ-

ing those who have been commissioned from the training camps, 448,859 had been accepted since April 1.

The total number serving on Aug. 18 in the armed forces—all volunteers—on land and sea was 943,141 men, not including the 687,000 men who are being drafted and who will go into training camps in September and October. Since the United States became a belligerent in April, 121,514 men who had volunteered for service in the navy, marine corps, and other sea forces had been accepted. In the regular army the increase since April 1 by voluntary enlistment had been 190,347, and in the National Guard 136,998, making a total of 327,345 recruits accepted in the army branches, and a grand total of 448,859 for both land and sea forces.

Even this figure does not include all who have been accepted for service, for there have been additions to the different reserve corps, but these figures are not all available. The largest single item is that of 27,341 added to the list of land officers representing the young men commissioned from the first series of training camps.

The land forces on Aug. 18 were:

	Enlisted	
	Officers	Men.
Regular army.....	6,700	298,996
National Guard.....	11,000	300,000
Reserve Corps.....	10,500	55,487
Res. Corps (train. camps)....	27,341
Total	55,541	654,483
		55,541

Total land forces..... 710,024

The sea forces are as follows:

Regular navy, enlisted men.....	138,500
Naval Reserves, enlisted men.....	35,000
Naval Militia in Federal service, enlisted men.....	11,000
Hospital Corps, regular navy, enlisted men.....	6,000
Hospital Corps, Naval Reserves, enlisted men.....	400
Marine Corps, officers and enlisted men	33,117

Total 224,077
Approximate number of naval officers 9,040

Total 233,117

The total forces on the date named were:

Land forces.....	710,024
Sea forces.....	233,117

Total forces..... 943,141

The enlistments since the declaration of war (in the case of the army since April 1) were as follows:

Regular navy.....	73,880
Naval Reserve forces.....	25,000
Hospital Corps.....	4,400
National naval volunteers.....	1,500
Marine Corps.....	16,734

Total naval forces..... 121,514

Regular army.....	190,347
National Guard.....	136,998

Total land forces..... 327,345

Grand total..... 448,859

New System of Organization

The changes in warfare during the last three years have been responsible for an important change in American Army organization. The new scheme is outlined in the following general order issued by the War Department on Aug. 7:

"The ratio of artillery strength to infantry is greatly increased. A division will hereafter include only four infantry regiments in two brigades in place of the old division of three brigades, each comprising three regiments of infantry. There will still be three regiments of field artillery in each division. Thus, in the new organization, there will be three regiments of field artillery to every four regiments of infantry instead of the ratio of three to nine. In addition, a trench mortar battery is attached to each division.

"The machine gun arm is also materially enlarged. A machine gun battalion of four companies has been made a unit of each division, in addition to the three machine gun companies included in each regiment.

Each Division 19,000 Men

"The American division will be made by this order to confirm practically to the units utilized by the Entente Allies, among whom a division numbers approximately 19,000 men. The reason for the change is that the division as heretofore made up of about 28,000 men is too unwieldy for the demands of trench warfare. With so large a unit, sure and

swift communication with all parts is difficult. The problem to be met was basically one of mobility for the peculiar needs of fighting on the western front.

"The smaller sized units call for maintenance of all units at full fighting strength. For this purpose reserve battalions will be provided. These will consist of 612 men each and are listed in the general order as 'separate training battalions.' The number of these battalions has not been made public. Details of regimental organization are also withheld for military reasons.

"The new order provides for army corps and armies, units which have practically existed only on paper since the civil war. Corps were organized during the Spanish war, but were not actually operated as such to any great extent.

Three Divisions to a Corps

"Each army corps will consist of three infantry divisions, corps headquarters, and certain army corps troops not specified. Each army will normally consist of three or more army corps, army headquarters, and certain army troops not specified.

"Under the new order each infantry division will be composed as follows, the changes from the present organization being as indicated:

"One division headquarters, (same as at present.)

"One machine gun battalion of four companies, (new.)

"Two infantry brigades of two regiments and one machine gun battalion (four companies) each. (The present division is three infantry brigades of three regiments each.)

"One field artillery brigade of three regiments and one trench mortar battery, (same, except trench mortar battery, is new.)

"One field signal battalion, (same.)

"One train headquarters and military police, (same.)

"One ammunition train, (same.)

"One supply train, (same.)

"One engineer train, (same, except that pontoon and searchlights sections are not included in new plan.)

"One sanitary train of four field hos-

pital companies and four ambulance companies, (same.)

"The new organization provides for no cavalry in the division. The division as at present constituted calls for one regiment of cavalry. The present division also calls for one aero squadron, while the new plan calls for none, the aircraft units being otherwise provided for.

"The order specifies sixteen divisions of the National Army to be organized and numbered from 76 to 91, both inclusive, and states the numbers to be given to each of the different units in each division. It provides that the sixteen divisions of the National Guard now organized shall be reorganized to conform to the new plan as soon as practicable after their arrival in the training camps.

"The regular army, the National Guard, and the National Army will all conform to the same plan."

So far as the regulars are concerned, the reorganization already has been carried out for the units now in France.

Sixteen Weeks of Training

A large number of French officers have been selected by the French War Office to assist in the training of the new armies. France has also furnished aviation specialists for the instruction of American officers as well as a number of artillery specialists, who are giving the benefit of their experience to American artillery men at the Army School of Fire at Fort Sill, Okla. There are several French officers in Washington who have been in daily conference at the War College and the War Department. These officers will be attached to the staffs of the thirty-seven Major Generals recently announced to command the national army divisions.

The plans of the War Department call for sixteen weeks, or virtually four months, intensive training, for the National Army and the National Guard in the cantonments. According to this plan, the first of these men should complete their training in January. On account of difficulties of transportation the probabilities are that American troops will be sent to France in a steady stream as fast as transports are available to send

them. A considerable number of picked National Guard officers are now undergoing special training at the War College in Washington. This special instruction covers the whole field of modern warfare as now developed in Europe.

The number of applications for the second series of officers' training camps was much larger than was at first expected. The figures made public by the Adjutant General showed a total of 72,914, of whom 51,838 passed the physical examinations. This work was accomplished in a month, as the applications were opened June 15 and closed July 15. It was originally stated that the War Department would choose for the second series of camps about 16,000 applicants. Applications came in very slowly at first, but increased with unexpected rapidity during the last ten days, as a result of the active campaign of the War Department. The camps opened on Aug. 27.

Forty-seven Major Generals

President Wilson on Aug. 14 sent to the Senate the names of 37 Major Generals and 147 Brigadier Generals whom he had appointed as general officers in the National Army. The appointments are for the period of the war. These officers may be assigned to the regular army, the National Guard army, or the National Army. All the thirty-five Brigadier Generals in the regular army were promoted to be Major Generals, and two officers of the National Guard were likewise promoted.

These, with the ten Major Generals of the regular army already in office, give the United States a total of forty-seven Major Generals.

Following are the names of the Brigadiers of the regular army who have been made Major Generals:

William A. Mann,
James Parker,
Eben Swift,
Edward H. Plummer,
Edwin F. Glenn,
A. P. Blocksom,
Henry A. Greene,
Francis H. French,
Charles J. Bailey,
George Bell, Jr.,
F. S. Strong,
Harry F. Hodges,
C. P. Townsley,
E. St. J. Greble,
Francis J. Kernan,
John F. Biddle,
George T. Bartlett,
Henry C. Hodges, Jr.,

Joseph T. Dickman,
Charles G. Treat,
Adelbert Cronkhite,
Henry T. Allen,
William H. Sage,
Clarence R. Edwards,
John W. Ruckman,
Chase W. Kennedy,
Omar Bundy,
Harry C. Hale,
R. M. Blatchford,
Samuel D. Sturgis,
David C. Shanks,
William M. Wright,
Robert L. Bullard,
Joseph E. Kuhn,
Peyton C. March.

The National Guard officers made Major Generals of the army are:

Major Gen. Charles M. Clement, Pennsylvania.

Major Gen. John F. O'Ryan, New York.

The Major Generals already in office in the regular army are:

John J. Pershing,	Tasker H. Bliss,
Leonard Wood,	Erasmus M. Weaver,
J. Franklin Bell,	Hunter Liggett,
Thomas H. Barry,	Henry G. Sharpe,
Hugh L. Scott,	William C. Gorgas.

One hundred and five Colonels of the regular army and two Lieutenant Colonels of that service were appointed Brigadier Generals of the National Army; also thirty Brigadier Generals of the National Guard and nine National Guard Colonels. The new officers are to rank from Aug. 5, 1917.

It was announced on Aug. 14 that the first National Guard division to be sent to France would be the Forty-second, to be formed immediately out of troops from twenty-six States and commanded by Major Gen. William A. Mann. Three days later the War Department had completed plans for sending another composite division, the Forty-third, to be made up of National Guard troops from twenty-four States.

The Conscript Army in the Making

The second step toward the development of the National Army was taken on July 20 when a drawing by lot at Washington decided the order in which the nine and a half million men who had registered on June 5 should be called up

for examination. The great national lottery created far more interest and discussion than either the enactment of the conscription law or the registration of the nation's young men.

The War Department had devised a

simple system of deciding the order of all registrants in each of the 4,557 local registration districts. As the total registered in any one district did not exceed 10,500, all that was necessary was to draw all numbers up to that number. When the drawing was complete, the list of rearranged numbers enabled every man to see at a glance when he would be required to report for examination. Thus, the first number drawn was 258, and the man in each district who had received that number was the first to report to the local board. If there were not 258 men in the district, then the first man called was the one holding the first sufficiently low number drawn at Washington. It took sixteen and a half hours to draw the 10,500 numbers.

A Historic Occasion

The drawing of the numbers was made the occasion of an interesting ceremony. The scene was one of the rooms in the Senate Office Building, and the centre of the stage was taken by Newton D. Baker, Secretary of War. He opened the proceedings with a brief address, in which he said:

We have met this morning to conduct the lot or draft by which the national army and such additions as may be necessary to bring the regular army and the National Guard up to war strength are to be selected. This is an occasion of very great dignity and some solemnity. It represents the first application of a principle believed by many of us to be thoroughly democratic, equal and fair in selecting soldiers to defend the national honor abroad and at home.

I take this occasion to say that every step has been most honestly studied with a view not only to preserving throughout the utmost fairness in the selection, but also to preserve all those appearances of fairness which are necessary to satisfy the country that this great selection has been made in accordance with every principle of justice.

There are assembled here this morning in addition to officers of the army, who are going to conduct for the most part the mechanical part of the work, the Chief of Staff, the Adjutant General, and other men high in the military establishment, and the drawing is to be held under the observation of the Senate and House Military Committees, so that both the executive and legislative branches of the Government are here to see that fairness is given to every person.

Secretary Baker then introduced General Crowder, who succinctly explained the process of the lottery and the program of the War Department to acquaint each one of the men registered on June 5 with information regarding the priority of his examination for service with the National Army. As General Crowder concluded, a handkerchief was tied about the eyes of Secretary Baker, the camera squad focused their instruments, the calcium light of the movie operators played upon the big blackboards in the rear, and the lottery began.

Drawing the First Numbers

Secretary Baker plunged his hand into the large glass jar containing the 10,500 numbers inclosed in capsules and drew one, announcing to the spectators, "I have drawn the first number." A clerk assigned by the War Department opened the capsule and announced "258." An officer seated at the long table upon which were spread the tally sheets repeated the number, and another clerk walked to a large blackboard at the rear and wrote upon it the figures. Senator Chamberlain of Oregon, likewise blindfolded, drew the second number. He was plainly nervous. His hand was guided to the top of the jar, which was fourteen inches in diameter. "The second number is 2,522," said the announcer, and again there came the click of the cameras, the rustle of copy paper, and the murmur of excited men and women who thronged the committee room.

Members of Congress and high officials of the army attended the start of the drawing. Eight numbers were drawn by officials before the ceremony became routine, with students from various universities acting as the blindfolded withdrawers of the fateful capsules. Chairman Dent of the House Committee on Military Affairs drew the third gelatin capsule from the jar. The number within was 9,613. In turn Senator Warren, Representative Kahn, the ranking Republican of the House Committee on Military Affairs; Major Gen. Tasker H. Bliss, Acting Chief of Staff; Provost Marshal General Enoch H. Crowder, and Adj. Gen. McCain were blindfolded and led to the glass bowl.

A round of applause greeted the appearance of General Crowder, who had worked tirelessly for days perfecting the details of the nation-wide lottery. Adj. Gen. McCain, too, was applauded by the throng which crowded the committee rooms. Members of the Senate and House Committees on Military Affairs and other members of Congress occupied seats of honor at the drawing.

The unprecedented ceremony seemed particularly to impress Representative Julius Kahn, who had led the Administration's fight in the House for the Army Draft bill. "It is an inspiring sight," he commented as he left the room soon after the proceedings settled down to a routine basis. Mr. Kahn was born in Germany and came to the United States when a child. The thrilling statement printed at the end of this article was issued by him on July 20. As the eighth number was drawn by an official, Secretary Baker said: "We will wait a moment while the photographers remove their apparatus. Meanwhile I want to ask that perfect quiet prevail. This is a most important occasion and absolute quiet is necessary."

Work of Regular Tellers

John H. Phillips, a student of Princeton University, was the first "regular teller" who took his place at the glass jar and began to draw out the capsules—black looking affairs, because the paper upon which the numbers were written was coated black on the outer surface. It was impossible for any one to examine the exterior of a capsule and ascertain the number within. The blind-folding lent an additional touch of the dramatic to the event, but it was unnecessary. Every few minutes Major Gen. C. A. Devol, delegated by Secretary Baker to guard the glass container, walked over to stir the capsules with a long wooden spoon. On the handle of the spoon was a piece of bunting, red, white, and blue. General Devol stirred deeply, bringing the capsules at the bottom to the top and a few moments later sending the capsules at the top to the bottom. While this stirring process was on there was a momentary pause in the recording of the numbers. The only

interruptions were the frequent changes of tired announcers and tabulators and the removal of the blackboards. When a group of 500 numbers had been written the first section of the board was taken out to be photographed to establish an absolute record, while a second section was substituted.

The lottery ended at 2:15 o'clock on the morning of July 21, and later the same day the figures were officially checked and rechecked in the office of General Crowder. There were a number of tally sheets kept simultaneously, in addition to the recording of the drawn numbers on two blackboards, and every number was gone over and checked by a force of experts under the supervision of army officers. The result of the drawing was set into type at the Government Printing Office. "Master sheets" containing the numbers in the order in which they were drawn were then sent by General Crowder to each Governor and distributed to each local registration board.

Appointing the District Boards

Another step accomplished was the appointment of the district boards of the States and the announcement of the names of the five men who composed each of them. Some States have six or eight boards to ease the task, Federal judicial districts, the areas used for geographical location of the boards, being divided into two or three parts for that purpose and a separate board named for each. These district boards have no function until the local boards in their territory have begun to certify to them the men found fitted for military duty physically and not burdened with dependents. The higher boards are courts of appeal, either for the individual or for the Government, against the findings of the local boards. The whole question of industrial exemption, however, has been turned over directly to these district boards, which have original jurisdiction in all cases of this kind. They are sole judges of any registered man's field of greatest service to the nation, whether in the army or in the munition factory, business house, or other civilian occupation in which he is engaged. Each case

is weighed on its merits and the value of the individual, for there is no blanket exemption for the other classes specifically named in the law. Even they must file affidavits showing their status, to be supported in such matters as the board may determine.

The War Department, having completed the work of deciding the order in which registrants should be called for examination, drew up a list showing the quota which each State would have to furnish toward the 687,000 men required in the first draft. Each State in turn determined the quotas for its registration districts. To allow for exemptions, the number called up in each district was double that of the quota, but as it was soon found, when the examinations began at the end of July, that there was a very high percentage of rejects on physical grounds and an unexpectedly higher percentage of claims for exemption, many more men on the lists had to be called

up. At this writing the work of examination is proceeding all over the country.

Sporadic cases of resistance to the execution of the conscription law were reported from some parts of the country, mostly in the South and Southwest. At the outset most of the agitation was in the mountain regions of the South, but it spread later to other districts, and one of the most serious revolts against the law was in Texas. The Department of Justice was informed that fifty-three members of the Farmers' and Laborers' Protective Association had been indicted in the United States court at Dallas for an organized attempt to resist the draft. In Oklahoma farmers were reported to have armed to prevent Federal officers from executing the draft law. There was also said to be organized resistance in Georgia. Through an agent of the Internal Revenue Service the Department of Justice learned of a revolt against the draft in Western North Carolina.

An Appeal to American Patriotism

Representative Julius Kahn of California, a German-born American, made the following statement on the occasion of the drawing of the numbers under the conscription law on July 20, 1917:

For the fourth time in our history we are ready to fight for the right of American citizens to sail the seas untrammelled. Our first difficulty after the Revolution was with France. In 1798 we broke off diplomatic relations with that Government. We ordered the immediate construction of a fleet of many vessels. Washington was appointed, by act of Congress, commander of the American forces. France had interfered with our ships and our shipping. We were determined to fight rather than submit. France yielded our rights, and the incident was closed.

In 1812 we fought England for the rights of American citizens on the seas. Every schoolboy is familiar with the history of that war. In 1815 we threw down the gage of battle for the third time and fought the Barbary corsairs who interfered with American ships in the Mediterranean. We brought them to

terms and compelled them to recognize American rights on the seas without the payment of any tribute.

Now we are at war with Germany to protect again the rights of Americans on the seas. Today the National Army of the United States is being formed through the medium of the draft. Hundreds of thousands of our citizens between the ages of 21 and 31 years will give their lives, if need be, to the service of the country.

To those who were drawn to bear the burdens of the Republic on the field of battle I would like to recall an incident in our national life. In 1798, when we broke off relations with France, the Congress appointed George Washington as commander of the American forces. He was in retirement at Mount Vernon. The Secretary of War himself brought the commission to General Washington and announced to him the action of Congress.

Washington was in the field at the time harvesting his crops. When the matter was stated to him by the Secretary of War, he said:

"I am ready for any service that I can give to my country."

In that spirit I am sure the young men of this day will accept their obligation to the Republic. In that spirit they will again show the world that American rights must be observed by all the world.

In that spirit they will make it possible for future generations to continue still to enjoy the blessings of liberty which this country vouchsafed to its humblest citizens. In that spirit they will again carry the American colors to victory, and may God defend the right.

The United States Army in France

The number of American soldiers in France is gradually increasing as additional contingents arrive, and the training of these men with the assistance of French and British instructors is making excellent progress. These are the two principal facts of the last month regarding the United States Army in France.

The entire army is divided into squads, the majority of which are billeted out with the inhabitants of the district in which the training camp is located. The first official inspection of the camp and the quarters where troops are billeted was made by Major Gen. William L. Sibert on July 19. The result of the inspection was apparently satisfactory in the main, for the General criticised but seldom, and everywhere had a good word for the results achieved by the troops in cleaning up the quarters into which they had moved. The encampment has almost metamorphosed the thoroughly and distinctively French town into an American community, notwithstanding the fact that the soldiers have taken notable pains to adapt themselves to the customs and habits of their hosts.

Actual intensive training began on July 25. Trenches were dug in the way of practice with an enthusiasm almost equal to that with which soldiers dig themselves in under actual artillery fire. These trenches were of full depth and were duplicates of certain sections of the front line, consisting of front, or fire, trenches, support trenches, and reserve trenches, with intricate communication trenches connecting them. Dummies were constructed for bayonet practice, and the men taught the six most vital points of attack. Later instruction in the use of gas masks was begun under British officers.

General Pershing made a thorough inspection of the training centres on Aug. 1 and 2. He also inspected various places suggested for his field quarters, in anticipation of removing from Paris to near the troops in training. At the end of the first day's inspection General Pershing said:

Our principal concern just now, of course, is to perfect the army organization. This is a big task, but it is moving along smoothly and in a most satisfactory manner.

The work at certain ports of disembarkation is well started. Railroad material is coming over as rapidly as can be arranged. The progress we have made thus far with the assistance of the French is a source of great satisfaction to me. Billets and training ground for the men are as well located as could be expected at this time of the year, when space is limited by crops in the field.

After these are removed we shall have plenty of space for lodging and training the divisions that are to come. Some of the places where men are now sleeping are not all that could be desired, but this soon will be remedied by the construction of portable barracks. Training is progressing very well with the assistance of the French.

Official announcement was made on July 18 that the United States transport service was taking over control of the French railroad lines from the port bases to the permanent camp and the front. Tracks were laid and sidings enlarged.

A section of the French State forests has been turned over to the United States. American lumbermen are taking out lumber for railroad ties, barracks, and other purposes. In addition to this, 30,000 tons of lumber are being imported from America monthly.

Troops Greeted in London

A great demonstration took place in London on Aug. 15, when a large contingent of United States troops marched

through the streets, escorted by all the famous bands of the Guards, English, Scotch, and Irish, and were reviewed by Ambassador Page and Admiral Sims from the balcony of the embassy in Grosvenor Gardens, and afterward by King George at Buckingham Palace. British soldiers on their way to the front and wounded men recently sent back from the firing line joined in the demonstration, the like of which had not been witnessed since the frenzied scenes which marked the return of the troops from the Boer war.

A meeting of the Cabinet was in progress when the Americans approached Whitehall. It was promptly adjourned and the Premier and his colleagues hurried in a body to the War Office. As the Americans passed the Horse Guards Parade to Whitehall they were greeted from the windows of the War Office by Premier Lloyd George, Foreign Secretary Balfour, Chancellor Bonar Law, War Secretary Derby, Winston Spencer

Churchill, Minister of Munitions; George N. Barnes, member of the War Council; Admiral Jellicoe, and other high officials, as well as by French and Belgian officers.

The greatest crowd gathered in front of Buckingham Palace. The King, accompanied by the Queen, Queen Alexandra, Princess Mary, Field Marshal French, commander of the home forces; the household staff, and officers, took his place at the gate. The Americans then filed past, eyes left, officers at salute, while the bands played and the cheering and waving of flags continued. As the first Stars and Stripes passed with the ranks the King and his party raised their hands in salute. The flag was dipped, and the crowd roared approval so vigorously that the King was forced to smile. As each flag passed the King saluted, and the enthusiasm of the crowd became almost uncontrollable. After the review the Americans camped temporarily in Green Park, at the rear of the palace.

Food Dictator for the United States

Law to Control War Supplies Places Large Powers in the Hands of Herbert C. Hoover

A WAR measure endowing the President with far-reaching powers over the nation's food supplies became law on Aug. 10, 1917. Herbert C. Hoover, who was thereupon formally appointed Food Administrator by President Wilson, immediately served notice on speculators and profiteers that the time of reckoning had come if they were not ready to co-operate with the Government to obtain lower prices for the American consumer and help supply the Allies with foodstuffs.

The Government's food control program was outlined in a statement issued by President Wilson on May 19, in which he said:

The objects sought to be served by the legislation asked for are: Full inquiry into the existing available stocks of food-

stuffs and into the costs and practices of the various food producing and distributing trades; the prevention of all unwarranted hoarding of every kind and of the control of foodstuffs by persons who are not in any legitimate sense producers, dealers, or traders; the requisitioning when necessary for the public use of food supplies and of the equipment necessary for handling them properly; the licensing of wholesome and legitimate mixtures and milling percentages, and the prohibition of the unnecessary or wasteful use of foods.

Authority is asked also to establish prices, but not in order to limit the profits of the farmers, but only to guarantee to them when necessary a minimum price which will insure them a profit where they are asked to attempt new crops and to secure the consumer against extortion by breaking up corners and attempts at speculation, when they occur, by fixing temporarily a reasonable price at which middlemen must sell.

After nearly two months' delay in the Senate the Administration Food Control bill was passed by that body on Aug. 8. One of the chief objections made by the Senate was to the appointment of one man who would practically have dictatorial powers. But the Senate eventually yielded, as it also did in eliminating the amendment by which it had sought to create a Congressional board to supervise the conduct of the war.

Statement by Mr. Hoover

Immediately after his formal appointment, Mr. Hoover issued a statement in the course of which he said:

The hopes of the food administration are threefold. First, to so guide the trade in the fundamental food commodities as to eliminate vicious speculation, extortion, and wasteful practices and to stabilize prices in the essential staples. Second, to guard our exports so that against the world's shortage we retain sufficient supplies for our own people, and to co-operate with the Allies to prevent inflation of prices, and third, that we stimulate in every manner within our power the saving of our food in order that we may increase exports to our Allies to a point which will enable them to properly provision their armies and to feed their peoples during the coming Winter.

The food administration is called into being to stabilize and not to disturb conditions and to defend honest enterprise against illegitimate competition. If there are men or organizations scheming to increase the trials of this country, we shall not hesitate to apply to the full the drastic, coercive powers that Congress has conferred upon us in this instrument.

The deep obligation is upon us to feed the armies and the peoples associated with us in this struggle. The diversion of 40,000,000 of their men to war or war work; the additional millions of women drafted to the places of their husbands and brothers; the toll of the submarine, have all conspired to so reduce production that their harvests this Autumn will fall 500,000,000 bushels of grain below their normal production.

Therefore, whereas we exported before the war but 80,000,000 bushels of wheat per annum, this year, by one means or another, we must find for them 225,000,000 bushels, and this in the face of a short crop. Our best will but partly meet their needs, for even then they must reduce their bread consumption 25 per cent., and it will be war bread they must eat—war bread, of which a large portion consists of other cereals.

Already the greater call for meat and

animal products, due to the stress of war on the millions of men on the fighting line and the enhanced physical labor of populations ordinarily subsisting on lighter diets, coupled with the inadequate world supply, have compelled our allies to kill upward of 33,000,000 head of their stock animals. This is burning the candle at both ends, for they are thus stifling their annual production. Therefore, not only must we increase their supplies of meat and dairy products, but must prepare, as war goes on, to meet an even greater demand for these necessary commodities.

France and Italy formerly produced their own sugar, while England and Ireland imported largely from Germany. Owing to the inability of the first named to produce more than one-third of their needs, and the necessity for the others to import from other markets, they all must come to the West Indies for very large supplies and therefore deplete our own resources.

Because of the shortage of shipping only the most concentrated of foods, wheat, grain, beef, pork, and dairy products and sugar can be sent across the seas. Fortunately we have for our own use a superabundance of foodstuffs of other kinds—the perishables, fish, corn, and other cereals—and surely our first manifest duty is to substitute these for those other products which are of greater use to our fellow-fighters.

Our second duty is to eliminate wastes to the last degree. Seventy per cent. of our people are well known to be as thrifty and careful as any in the world, and they consume but little or no more than is necessary to maintain their physical strength. It is not too much to ask the other 30 per cent., by simpler living, to reduce their consumption. The substitutions we ask impose no hardships.

There is no royal road to food conservation. It can be accomplished only through sincere and earnest daily co-operation in the 20,000,000 kitchens and at the 20,000,000 dinner tables of the United States. If we can reduce our consumption of wheat flour by one pound, our meat by seven ounces, our fat by seven ounces, our sugar by seven ounces per person per week, those quantities, multiplied by 100,000,000, will immeasurably aid and encourage our allies, help our own growing armies and so effectively serve the great and noble cause of humanity in which our nation has embarked.

Wheat Speculation Stopped

Mr. Hoover's first step was to announce a sweeping scheme to regulate wheat and flour supplies. In a statement issued on Aug. 12 he said that,

with the full approval of President Wilson, the price to be paid for the wheat crop of 1917 would be fixed by a commission headed by Harry A. Garfield, son of the late President James A. Garfield, and President of Williams College. Gambling on the Wheat Exchanges, Mr. Hoover asserted, must end, even if the Government had to purchase the entire wheat supply of the nation. As a preliminary step, Mr. Hoover decided to take over control of all grain elevators and all mills with a daily capacity of over 100 barrels of flour and place them under a system of licenses which would make hoarding impossible. The Grain Exchanges at the same time were to be requested to suspend all dealings in futures. The Food Administration, despite the protests of some of the bread-making interests, considered the present level of prices extortionate.

There was no intimation as to the price which would be fixed for the 1917 crop, but Mr. Hoover was careful to point out that the minimum of \$2 a bushel fixed by the Food Control act did not apply to it, and affected next year's crop only, under restrictions to be later explained.

Flour Contracts Unlawful

The text of Mr. Hoover's announcement read:

With a view to determining a fair price, the President has approved the appointment of a committee, to be selected from representatives of the producing sections and consuming elements in the community. The committee will be assembled under the Chairmanship of President Garfield of Williams College, and it will be the duty of this committee to determine a fair price for the 1917 harvest.

Upon the determination of this fair basis it is the intention of the Food Administration to use every authority given it under the bill and the control of exports to effect the universality of this fair basis throughout the whole of the 1917 harvest year, without change or fluctuation. It should thus be clear that it will not be to the advantage of any producer to hold back his grain in anticipation of further advance, for he will do so only at his own cost of storage and interest, and, if it is necessary for the Government to buy the entire wheat harvest in order to maintain this fair price in protection of the producer, we intend to do so.

Furthermore, the holding of wheat or

flour contracts by persons not engaged in the trade, and even when in trade, in larger quantities than is necessary for the ordinary course of their business is unlawful under the food act, and such cases will be prosecuted with vigor. We would advise such holders to liquidate their contracts at once.

Immediate Drop in Prices

A Chicago dispatch, dated Aug. 12, stated that the signing of the Food Control bill had caused a drop in prices of grain, vegetables, and poultry. Cash corn registered a decline of 25 and 27 cents a bushel. Prices in St. Louis and Peoria fell off 30 and 32 cents a bushel. The last Chicago quotation, \$1.85, showed a loss of 50 cents in three days. Futures were affected, December going to \$1.14. Wheat declined 4 cents a bushel, selling down to \$2.15, within 15 cents of the minimum established by the bill. Hogs at the yards sold at the highest prices ever known, one lot bringing \$17.25 a hundred pounds. Since March 1 hog packing had fallen off 225,000, compared with the same period last year. Pork was now selling higher than beef and poultry. Beef sold as high as \$14.50, almost a record price. Lard was 22.75 cents a pound, 10 cents higher than the same time last year. Pork was \$17 a barrel higher, at \$43.17. Potatoes sold for \$1.50 a bushel, \$2 down from the high price. Poultry was down 2 and 3 cents a pound, turkeys at 14 cents and 17 cents for chickens. Eggs were down 2 cents, at 30 cents for firsts. Butter was down 1 cent, to 37 cents.

Federal Wheat Corporation

A \$50,000,000 corporation, with all the stock held by the United States Government, was established on Aug. 15 to buy and sell wheat at the principal terminals. Preparations were made to take over the entire 1917 wheat crop, if necessary, to stabilize the price of wheat throughout the year. The move was one of a series largely with the object to reduce the price of bread. Millers had already agreed to put themselves under voluntary regulations and were working out with the food administration a differential of profits.

In announcing the formation of the

wheat corporation, the food administration also made known the personnel of a committee to fix the price for this year's wheat yield and the names of twelve purchasing agents for the corporation at terminals. The wheat corporation was put under the Administration's grain division. Its Chairman is

Herbert C. Hoover and its President Julius Barnes, a Duluth exporter, who has been serving as a voluntary aid in the food administration. The price-fixing committee is headed by President Garfield of Williams College, and will comprise twelve members, representing producers and consumers.

Pope Benedict's Appeal for Peace

Official Text of His Proposal

PRESS dispatches from Rome on Aug. 14, 1917, announced that the Pope was issuing a peace proposal in the form of an identic letter to all the belligerent powers, and added an official outline of the document. The British Foreign Office published the French text and an English translation of the Pope's appeal on the evening of the 15th, with Cardinal Gasparri's note of transmission. The translation made by the State Department at Washington, and given to the public on the morning of Aug. 16, is as follows:

To the Rulers of the Belligerent Peoples:

From the beginning of our Pontificate, in the midst of the horrors of the awful war let loose on Europe, we have had of all things three in mind: To maintain perfect impartiality toward all the belligerents, as becomes him who is the common father and loves all his children with equal affection, continually to endeavor to do them all as much good as possible, without exception of person, without distinction of nationality or religion, as is dictated to us by the universal law of charity as well as by the supreme spiritual charge with which we have been intrusted by Christ; finally, as also required by our mission of peace, to omit nothing, as far as it lay in our power, that could contribute to expedite the end of these calamities by endeavoring to bring the peoples and their rulers to more moderate resolutions, to the serene deliberation of peace, of a "just and lasting" peace.

Whoever has watched our endeavors in these three grievous years that have just elapsed could easily see that, while we remained ever true to our resolution of absolute impartiality and beneficent action, we never ceased to urge the belligerent peoples and Governments again to be brothers, although all that we did to

reach this very noble goal was not made public.

About the end of the first year of the war we addressed to the contending nations the most earnest exhortations, and in addition pointed to the path that would lead to a stable peace honorable to all. Unfortunately our appeal was not heeded, and the war was fiercely carried on for two years more, with all its horrors. It became even more cruel, and spread over land and sea, and even to the air, and desolation and death were seen to fall upon defenseless cities, peaceful villages, and their innocent people.

And now no one can imagine how much the general suffering would increase if other months or, still worse, other years were added to this sanguinary triennium. Is this civilized world to be turned into a field of death, and is Europe, so glorious and flourishing, to rush, as carried by a universal folly, to the abyss and take a hand in its own suicide?

In so distressing a situation, in the presence of so grave a menace, we, who have no personal political aim, who listen to the suggestions or interests of none of the belligerents, but are solely actuated by the sense of our supreme duty as the common father of the faithful, by the solicitations of our children who implore our intervention and peace-bearing word, uttering the very voice of humanity and reason—we again call for peace, and we renew a pressing appeal to those who have in their hands the destinies of the nations. But no longer confining ourselves to general terms, as we were led to do by circumstances in the past, we will now come to more concrete and practical proposals and invite the Governments of both belligerent peoples to arrive at an agreement on the following points, which seem to offer the base of a just and lasting peace, leaving it with them to make them more precise and complete.

First, the fundamental point must be that the material force of arms shall give

way to the moral force of right, whence shall proceed a just agreement of all upon the simultaneous and reciprocal decrease of armaments, according to rules and guarantees to be established, in the necessary and sufficient measure for the maintenance of public order in every State; then, taking the place of arms, the institution of arbitration, with its high pacifying function, according to rules to be drawn in concert and under sanctions to be determined against any State which would decline either to refer international questions to arbitration or to accept its awards.

When supremacy of right is thus established, let every obstacle to ways of communication of the peoples be removed by insuring, through rules to be also determined, the true freedom and community of the seas, which, on the one hand, would eliminate any causes of conflict, and, on the other hand, would open to all new sources of prosperity and progress.

As for the damages to be repaid and the cost of the war, we see no other way of solving the question than by setting up the general principle of entire and reciprocal conditions, which would be justified by the immense benefit to be derived from disarmament, all the more as one could not understand that such carnage could go on for mere economic reasons. If certain particular reasons stand against this in certain cases, let them be weighed in justice and equity.

But these specific agreements, with the immense advantages that flow from them, are not possible unless territory now occupied is reciprocally restituted. Therefore, on the part of Germany, there should be total evacuation of Belgium, with guarantees of its entire political, military, and economic independence toward any power whatever; evacuation also of the French territory; on the part of the other belligerents, a similar restitution of the German colonies.

As regards territorial questions, as, for instance, those that are disputed by Italy and Austria, by Germany and France, there is reason to hope that, in consideration of the immense advantages of durable peace with disarmament, the contending parties will examine them in a conciliatory spirit, taking into account, as far as is just and possible, as we have said formerly, the aspirations of the population, and, if occasion arises, adjusting private interests to the general good of the great human society.

The same spirit of equity and justice must guide the examination of the other territorial and political questions, notably those relative to Armenia, the Balkan States, and the territories forming part of the old Kingdom of Poland, for which in particular, its noble historical traditions and suffering, particularly under-

gone in the present war, must win, with justice, the sympathies of the nations.

These we believe are the main basis upon which must rest the future reorganization of the peoples. They are such as to make the recurrence of such conflicts impossible and open the way for the solution of the economic question, which is so important for the future and the material welfare of all of the belligerent States. And so, in presenting them to you, who at this tragic hour judge the destinies of the belligerent nations, we indulge a gratifying hope, that they will be accepted and that we shall thus see an early termination of the terrible struggle which has more and more the appearance of a useless massacre.

Everybody acknowledges, on the other hand, that on both sides the honor of arms is safe. Do not, then, turn a deaf ear to our prayer, but accept the international invitation which we extend to you in the name of the Divine Redeemer, Prince of Peace. Bear in mind your very grave responsibility to God and man. On your decision depend the quiet and joy of numberless families, the lives of thousands of young men, the happiness, in a word, of the people, for whom it is your imperative duty to secure this boon.

May the Lord inspire you with decisions conformable to His very holy will. May Heaven grant that in winning the applause of your contemporaries you will also earn from the future generations the great title of pacificators.

And for us, closely united in prayer and penitence with all the faithful souls who yearn for peace, we implore for you the divine spirit, enlightenment, and guidance.

Given at the Vatican Aug. 1, 1917.

BENEDICTUS P. M. XV.

Cardinal Gasparri's Note

The Papal Secretary, Cardinal Gasparri, sent the following note of transmission with the copy of the Pope's appeal addressed to the King of England:

Your Majesty: The Holy Father, anxious to do everything he can in order to put an end to the conflict which for the last three years has ravaged the civilized world, has decided to submit to the leaders of the belligerent peoples concrete peace proposals exposed in a document which I have the honor to attach to this letter. May God grant that the words of his Holiness will this time produce the desired effect for the good of the whole of humanity.

The Holy See, not having diplomatic relations with the French Government or with the Government of Italy or of the United States, I very respectfully beg your Majesty to be good enough to have handed a copy of his Holiness's appeal to

the President of the French Republic, to his Majesty the King of Italy, and to the President of the United States. I also beg to add twelve other copies, which I request that your Majesty be good enough to hand to the leaders of the nations friendly to the Allies, with the exception, however, of Russia, Belgium, and Brazil, to whom the document has been sent direct.

In expressing to your Majesty my sincere thanks for this extreme kindness, I am happy to take the opportunity to offer you the homage of sentiment and very profound respect with which I have the honor to sign myself.

Your Majesty's very humble and devoted servant.
GASPARRI.

Sentiment of the Nations

The peace proposal of Pope Benedict was received with diverse comments in different circles and nations. The sentiment expressed in the allied countries indicated the likelihood of a respectful refusal by the Entente. Comment in the press of the Central Powers was generally favorable, notably in that of the Catholic Centre Party, whose leader, Herr Erzberger, had some time ago

formulated a similar peace program. In many Entente quarters the Pope's proposal was adversely criticised because it contained no condemnation of German atrocities, the invasion of Belgium, or the submarine warfare. In reply to this charge the Vatican on Aug. 17 issued a supplementary statement thus summarized in a Rome dispatch:

A semi-official statement issued today says the Vatican considers the reproach of a part of the press that the Holy See has not condemned violations of law, such as atrocities committed, is unjust, since Pope Benedict, faithful to his principle of impartiality, in his note had the intention of acting as peacemaker, and not as judge, and also because he lacks the necessary powers to do so. No peacemaker, the statement adds, would have the faintest chance of success if he began by trying to prove which side is right and which is wrong. The Pontiff went as far as possible, the statement continues, to make understood what his feelings are without risking the failure of his proposal on the rocks of Austro-German ill-feeling. Besides, it concludes, the Papal proposals were in solemn condemnation of those responsible for the war methods adopted and the barbarities committed.

Military Events of the Month

From July 18 to August 18, 1917

By Walter Littlefield

ATTENTION has been particularly concentrated during the last thirty-one days on three sectors of the western front, and on one of the eastern—at Ypres, Lens, and the Aisne, and in Bukowina and Moldavia. On the Italian front—in the Trentino and along the Julian and Carso sectors—there have been a succession of bombardments, but whether these foreshadow an Austrian offensive in the former, and an Italian offensive in the latter, or merely the consolidation of positions, is not known. However, by a series of bombardments from their famous Caproni airplanes on the Austrian naval base of Pola and other strategic and fortified positions of the enemy, the Italians appear to have gained the mastery of the air in

the Upper Adriatic. News from the British fronts in Palestine and Mesopotamia reveals the fact that the armies there are preparing for assault in force by the enemy.

Although the strategy maintained on the Aisne, in Champagne, is the same as it has been from the beginning, further west, the great German retreat of last Spring has caused the Allies to make several modifications in the method and place of attack. Whereas, in the battle of the Somme the objectives were purely military, they now have a decided economic and moral significance. In the first place, the air service has laid bare the German lines of communication and their industrial and supply bases, and, in the second, it has been demonstrated

that from whatever terrain the enemy may withdraw he leaves behind him a desert waste, whether the material destroyed be of military or industrial or of mere civic or sentimental value. These considerations, therefore, have been found to qualify, if not actually to limit, the recent military operations of Generals Haig and Pétain.

Hence, it may be convenient to separate the military from the non-military phases of the engagements, for the contrast may be summed up in the statement that the military advantage would have to be greater than there seems the remotest hope of gaining to offset the wanton destruction of a town like Lille, which would be likely to attend deliberate German evacuation quite as much as occupation by assault. And Lille is to the northern part of the line in France what Laon, with its blast furnaces and mediaeval buildings, is to the southern part. And both Lille and Laon, as well as the new factories established by the Germans at St. Quentin, are supplied with fuel from the great coalfields of Lens, which before the war produced 15,000,000 tons a year and employed 25,000 hands. Thus we have an explanation of the fact that for the last month the attacks of the Allies have concentrated at Lens rather than at St. Quentin, although the possession of the latter would be of more military value on account of its control of the German line to the southeast, in the Champagne.

The Battle of Flanders

The British salient at Ypres is no more. It had been a military accident which resulted from the great defensive manoeuvres of November, 1914, when Sir John French was almost flanked ere he could form a junction with the Belgians, and the French reinforcements arrived which were to save Dunkirk. It has since been maintained at great tactical expense and merely for political reasons. German guns from the east commanded every direct approach and the town itself was soon a mass of ruins. For the Allies it was the weakest sector on the whole front. For three years the alternative had been the constant preoccupation of the British and French General Staffs:

to efface it by either abandonment or expansion. Twice had an attempt to achieve the latter failed.

These attacks failed because they were directed against its centre, and its centre was covered by the German guns on Messines Ridge, lying to the south. With the greatest mine and bombardment preparation in the history of the war the British, on June 7, captured this ridge. This capture made what has been called the Third Battle of Ypres, or the Battle of Flanders, possible. So far it consists of two phases—the first of a single day, July 31, the second begun on Aug. 16. In both attacks French troops co-operated in the northern part of the offensive. In the first an advance was made over a front of fifteen miles—from the River Lys to the Yser, the enemy's positions were penetrated to a depth of two miles in the centre and to one mile on the right centre, the powerfully defended Sanctuary Wood and neighboring farms captured, and the villages of La Basséville, Hollebeke, Bixchoote, Verlorenhoek, Frezenberg, St. Julien, Pilkem, Hooge and Westhoek occupied. Nearly 5,000 prisoners were taken by the attack and in the ineffectual counterattacks of the succeeding days. The first two days of the second assault saw an advance along a nine-mile front to the northeast, with the capture of Langemarck and nearly 2,000 prisoners.

The capture of Pilkem is said to have been a particularly fine performance on the part of the guards, as they reached their last goal without the assistance of a barrage by creeping forward and stalking machine gun posts. In this way they got to Steenbeck River, and threw bridges across without serious opposition. The easiest advance was on the northern side of the salient, where there was an expanse of open ground, although more or less waterlogged, like the rest of the Plain of Flanders. Directly east of the town of Ypres the advance was greatly retarded owing to the unusual character of the obstacles met—patches of wood interlaced with shallow streams and pools of water.

The first phase of the Battle of Flanders demonstrated several things and startled the Germans with at least one

BATTLE LINE AROUND LENS. (AUG. 18, 1917.) WHERE THE CANADIANS HAVE BEEN WAGING A DESPERATE FIGHT FOR POSSESSION OF THIS FRENCH MINING CENTRE

surprise. It established the mastery of the British artillery over the German, both in bombardment and barrage fire, particularly with mid-calibre guns; it hammered into pieces some thirteen divisions of the enemy; and it confirmed, by many noteworthy experiences, the value of "tanks" on rolling or flat surfaces, and the use of the bombard-plane in protecting shell-craters from being occupied by the enemy.

This last is of particular importance. At a certain point the barrage fire which has protected the advance of infantry changes its shells from shrapnel to high explosive, so that when the infantry reach the designated point they find a line of entrenchments formed by shell-craters waiting for their occupancy. It had been the custom of the Germans to anticipate this by occupying the craters themselves and facing the advancing infantry with machine guns. In the Battle of Flanders the curtain dropped by the bombard-planes prevented this.

Although the first and second phases of the Battle of Flanders may be considered in natural sequence of the bat-

tles on the Somme and the Ancre, at Vimy Ridge, and at Messines, it would be idle to speculate in advance how the sequel will develop. On no other front, unless it be amid the Alps of the Trentino, do weather conditions play such a dominating rôle in shaping military actions. All the elaborate resources with which modern armies wage war have not abolished their dependence on the weather, whose arbitrary interventions are only the more to be feared now that the complexities of an attack make it impracticable to vary the date for it.

As to the objective of the Battle of Flanders: In an effusive message to Prince Rupprecht of Bavaria the German Kaiser suggested that the Anglo-French attack of July 31 was "intended to conquer the coast of Flanders." This coast, with its submarine bases at Zeebrugge, Ostend, and elsewhere on the shore, and its aerodromes hidden on the downs, certainly forms an inviting objective. On this terrain, too, military strategy and valor have more chance for endeavor than they do amid the concrete-reinforced walled towns and villages further south.

Closing In on Lens

Lens was the elusive objective sought in the Battle of Loos in September and October, 1915, when Sir John French's plan went wrong on account of lack of co-ordination between artillery and infantry. A salient, second in weakness only to that of Ypres, was then left exposed. This Loos salient was commanded from the south by the Germans on the Vimy Ridge, which bore the same relation to it that the Messines Ridge did to the Ypres salient. But Vimy Ridge also had another function, it commanded the great Arras salient to the south and, what is more important, the Arras-Cambrai highway. If eliminated, the southern approaches to Lens would be thrown open as well as the Arras-Cambrai highway.

It was eliminated—April 9—and immediately a British advance was made astride the highway—the first leg of the Hindenburg line—and preparations were made to encircle Lens and its 200 square miles of coal area.

Gradually the encircling took the form of a pair of pincers. On July 20 the Canadian troops reached a post in the mine region to the north hardly 1,500 yards from the heart of Lens. Several days earlier it had been revealed from observations made on Vimy Ridge that most of the buildings in the town had been reinforced with concrete, just as St. Quentin is known to have been, and all indications showed that the Germans were intending to hold the centre of the city until their losses became unendurable.

Hill 65 to the west of the city was taken in the middle of June, but Hill 70, to the north, was not to succumb until Aug. 15. Gradually at first and then more rapidly have the jaws of the pincers closed upon the Prussians from the Rhinelands, men of the Fifty-sixth Division, who hold this mining city. They have put up one of the gamiest fights of the war—counterattacking sometimes very fiercely, as at La Coulotte, just south of Lens and west of Avion, where the Canadian infantry pushed closer and threatened their main defenses.

On the same day that Hill 70 fell, whose formidable defenses had resisted

every assault in the battle of Loos, fell also every defense which dominated the city from the north—Cité Ste. Elizabeth, Cité St. Laurent and the Bois Rasé just north of Hill 70.

On the day following Prince Rupprecht

SHADED SECTION INDICATES ALLIED GAINS IN THE BATTLE OF FLANDERS UP TO AUG. 18, 1917

made frantic efforts to capture the lost positions, and ten times the Prussians charged, each time driven back with frightful slaughter and a heavy loss in prisoners. The Seventh Division is said to have been completely wiped out in a sortie, while the Fourth Guard Division fared little better. It was a day of machine gun and volley fire.

Although the capture of Lens would open the way to Douai and flank, from the north, the Siegfried line constructed to protect that depot and Cambrai, yet its importance to the Germans, aside from the strategic obstruction it has presented to the Allies, is chiefly industrial, as has already been indicated. And this importance is commensurate with the defense it has made.

Laon Threatened with Investment

Laon, a beautiful city whose cathedral-topped hill can be seen for miles around,

is held as a sort of architectural hostage by the Germans for the preservation of the blast furnaces they have established there. One would hardly expect them to evacuate it without leaving it a mass of ruins. The Germans also have a sentimental attachment to the place, for here on March 9-10, 1814, the Prussian Blücher beat Napoleon.

But Laon is threatened with investment from two sides—from the northwest and the southeast. The capture of St. Quentin would open the way to the first approach, and as long as the French hold the Aisne front along the Chemin des Dames and Craonne, with its plateaus, the second is a constant source of danger. Not impossible successes simultaneously achieved at both points would probably mean the envelopment of the city before the Germans could make good their retreat or wreck the place.

Now the Chemin des Dames and the Craonne terrain bear much the same relation to Laon that the French line on the edge of the Meuse-Moselle watershed does to the great fortress of Metz. It fell to the Crown Prince to attempt to eliminate the latter in the battle of Verdun. He is now attempting to eliminate the other. So far it is proving as costly in German lives as his Verdun enterprise. Since April 16 he has had seventy-one divisions, or 1,065,000 men, engaged in vain efforts to push the French back from their threatening positions between Soissons and Craonne and along the Aisne.

Heavy German Losses

Having pulled off his coup d'état at Berlin on July 14, a week later he was back on the front and began a new and furious onslaught against Craonne and its defensive plateaus, Vauclerc, Casemates, and Californie. Four days later he diverted his attack, with the same prodigious loss of men, from the Craonne region to west of the Aisne—to a two-mile front from La Bovelleville to east of the Hurtebise Farm. And so it has been in this region ever since—furious assaults, a waste of men, and the French standing firm or counterattacking with vital results.

Now, aside from the military aspect

of this terrain in its relation to Laon, already dwelt upon, there is also, as an ever-present rule of action in all that the Crown Prince does, the political aspect. And it has been said on high authority that, somehow, somewhere, his Imperial Highness had to secure a striking victory which would affect the malcontents at home, in the Reichstag, and elsewhere. Whether the end which he had in view was purely a military one or not, the net result is that he has lost very large numbers of men without gaining anything in the way of observation posts or a tithe of the area which represented his permanent achievements against Verdun.

From the right bank of the Meuse the French lines still threaten Metz across the plain of the Woëvre; still the French from the Chemin des Dames and the Craonne Ridge can see the cathedral of Laon.

Offensive Against Russia

The Teutonic offensive against the southern end of the eastern front, where it drops from Bukowina into Rumania, seems like an attempt to capture a doubtful outpost while the citadel itself lies exposed—the citadel in this case being the road to Petrograd or to Moscow. But it takes men to capture even an exposed citadel, and men neither the Germans nor the Austrians have got. The Bulgars will not lend them any. The Turks cannot.

When between April and June both the Wilhelmstrasse and the Ballplatz were momentarily expecting Prince Leopold's efforts with the Provisional Government of Russia to be crowned with the success of a separate peace 300,000 Germans were sent to the western front and over 100,000 Austrians to the Italian. These men have not come back. Many of them cannot.

Moreover, a successful campaign in Rumania leading into Bessarabia, aside from its political significance, would shorten the great eastern battlefront by 200 miles—a very inviting prospect in Teuton eyes.

By July 11 the personally led spasmodic offensive of Kerensky had capt-

BLACK LINE INDICATES WHERE THE RUSSIANS AND RUMANIANS AT LAST CHECKED THE GERMAN ADVANCE ABOUT AUG. 15, 1917

ured Halicz, the strategic key to Lemberg, the capital of Galicia, and a week later the offensive reached its ultimate, investing Zloczow and Brzezany, forty miles east of Lemberg. By July 21 the Russian mutiny and retreat in Galicia were in full swing. That it has not accumulated more velocity is probably due to the fact that the pursuers are not fully prepared either in numbers or in munitions.

By July 23 the Russian retreat had expanded to a 150-mile front, but there were Russo-Rumanian successes in the Susitza and Putna Valleys, with 2,000 prisoners and 57 guns taken. Then in rapid succession followed the fall of Stanislaw and Tarnopol, the enemy crossing the Sereth from Tarnopol to Czortkow, and finally the fall of Czernowitz, and the last Russian soldier was driven out of Bukowina.

The difficulty of getting men and supplies over the mountains to the Austrians

desperately fighting among the streams on the right bank of the Sereth in Moldavia gave a respite to all that remains of Rumanian territory. Whether it will be retained depends upon the rehabilitation of the Russian arms. Even so, Rumania has not the value as an ally to the Provisional Government at Petrograd that it had to the Government of the Czar. The present Russian institution does not covet Constantinople.

Germany's Waning Man Power

The most striking revelation that has emerged from the month's fighting has been the waning of Germany's man power, both in numbers and stamina. She is already using her 1918 men on the western front and there are isolated cases of boys of 14 being found among her dead. In November she will call her 1919 men to training. These will furnish 450,000; no more. Her casualties since Aug. 1, 1916, have been nearly a

million, (943,982,) according to her own official lists. Man for man they have shown themselves inferior to the French and English in Flanders. Another important feature, also revealed in the

Battle of Flanders, has been the machine-like, complementary co-operation between the French and English and the wonderful co-ordination of artillery fire and its relation to infantry attacks.

The Battle of Flanders

Terrific Barrage Fire

BELGIUM, during the last month, has been the scene of the fiercest fighting on the Western front. For three weeks the bombardment on both sides was tremendous. The German artillery, thickly massed against the most vital sectors of the British front, poured vast quantities of shells into Nieuport, Ypres, Armentières, and other towns. The German long-range guns fired at targets twelve to twenty miles beyond their emplacements. The British reply was even more terrific. For every German shell fired, the British returned two. "A rivalry in destruction greater than any former phase of the war," was one British correspondent's description of the great artillery duel.

The bombardment culminated on the morning of July 31 in a gigantic infantry attack in which both the British and French troops took part. They attacked along a front of nearly twenty miles, from Dixmude in the north to Warneton in the south, on the Franco-Belgian frontier. The preliminary bombardment had leveled the German trenches, at some points wiping them out completely. While the shelling had been going on for days at what appeared to be the highest pitch, it was redoubled on the morning of the attack just before the men went "over the top." The first and second German lines were soon behind the advancing infantry, and in places they crossed the third line of trenches. At some points the Germans put up a desperate resistance in their rear positions, holding up the advance with machine guns. These places were stormed, not without some losses, although both General Haig and General Pétain called at-

tention to the fact that their losses were exceedingly small.

Capture of Menin Tunnel

One of the most striking and spectacular events of the day's fighting occurred at the so-called Menin tunnel, a great underground fortification constructed by the Germans on the Menin road, opposite Hooze. The British preliminary bombardment had forced the Germans to hold the French line thinly here, and the British division which was to attack at dawn lay out all night in shell holes within twenty-five yards of the German line, waiting for the signal to advance. When the time arrived for the charge, and the British gunners had dropped a protecting barrage on the German front trench ahead of the British troops, it was seen that the Germans were fleeing. The British, seeing their prey escaping, went mad and charged directly through their own barrage, fortunately without heavy casualties. The Menin tunnel, which was expected to be occupied by several hundred Germans, was found to be held by only forty-one, the rest having retreated. It was only at the second line that the British met resistance, and here, after sharp hand-to-hand fighting, they forced the Germans again to withdraw.

German Account of Fight

A semi-official survey of the Flanders battle supplied by the German General Staff through the Wolff Bureau mentioned that Bixchoote three times changed hands, the French eventually retaining the village at nightfall, but that the German lines gripped the village north and east. The British, according to the survey, delivered the main thrust before Ypres and succeeded

in capturing Langemarck in addition to other places, but were unable to hold Langemarck and St. Julien in the face of a German counterattack and were repulsed. The report sought to give the impression that only the immediate front-line trench in any case was lost, and carefully avoided any mention of the depth of the Entente gain. The *Berliner Tageblatt* correspondent wrote:

The great brutal force of the initial blow has been parried. We survived the gruesome tension occasioned by the uncanny artillery fire, and we are able again to hold our heads high as the battle of living men is resumed. The struggle has now reached the phase of human effort, after unseem mechanical death has been knocking at the door day and night for weeks. The German fighting spirit was fully awakened, and heroes flung themselves from the islands of defense in the conquered district against the advancing masses and seriously weakened the flanks of the oncoming troops. Millions of shells have been spent, and now comes the test of strength and nerves.

The mainspring which impelled the German fighting man was the strong realization that he was here called upon to defend the German U-boat—to serve the mightiest, most promising weapon of his country and bar the path to it with his life. The German troops counterattacked in frightful bayonet and hand grenade combats. It was the mightiest counterthrust, following the mightiest impact, which the world has ever seen.

Nightfall witnessed the happy German achievement. The foe had won German trenches, had gained control of Bixschoote, and had carried off prisoners, but he lay bleeding at the foot of the wall he desired to scale.

Battling in the Rain

Stubborn and almost blind fighting in the pouring rain was kept up throughout the night of Aug. 1 and the following day from the junction of the French and British lines at Langemarck, in Flanders, to the French frontier, along the banks of the River Lys. It was almost entirely an infantry struggle, for neither the air nor artillery branches could work effectively in the thick, torrential weather. General Haig's lines between St. Julien and the Ypres-Roulers railway, northeast of Ypres, were completely re-established in the face of repeated and costly enemy assaults.

The controlling factor in the military

situation in Flanders at this time was the incessant downpour of rain, which had now lasted for fifty hours. Over the whole field of attack the only high ground lay where the Germans massed their counterassaults. Elsewhere the country was a marsh, split and interwoven with flooded streams. This unstable quagmire was just beginning to form when the Anglo-French drive was launched. The infantry slipped and stumbled forward. The tanks managed to negotiate the distance in mud up to the hubs of their caterpillar wheels.

Westhoek and Langemarck

By a sharp stroke early on the morning of Aug. 10, east of Ypres, General Haig penetrated the German lines to a depth of several hundred yards, completing the capture of the village of Westhoek, and carrying the remaining positions held by the Germans on the Westhoek ridge.

The following day there was more violent fighting. The right of the British attack in Glencorse Wood was heavily engaged with the enemy concealed in the usual concrete emplacements and defending himself with well-placed machine guns. The Germans massed great power of artillery against the British, and there was apparently no immediate lack of ammunition. It was truly a fearful thing to see, even from a distance, the wide and deep belt of fire flung by the German guns over the countryside. For miles the horizon was seething with the smoke of heavy shells. Anti-aircraft guns sprayed the sky with shrapnel, and from a range of twelve miles or more monstrous shells were exploding. The great unending tragedy of war was along that belt of ground, sweeping around the horizon where innumerable shells were bursting and where in the smoke of them great bodies of men were fighting and dying.

The enemy's barrage fire was great; that of the British was greater. Between Glencorse Wood and Inverness Copse and all about Stirling Castle and Frezenberg he made a hell of fire, and many of the British had to pass through its fury, and not all passed or came back again. But

afterward the enemy's turn came, and masses of his men—thick waves of them sent forward with orders to counterattack—were caught under the fire of British guns and smashed to pieces.

Striking together on a nine-mile front east and northeast of Ypres early on the morning of Aug. 16, British and French troops carried all their objectives except on the right flank. The French, on the left, drove the Germans from the tongue of land between the Yser Canal and the Martjevaart and captured the bridgehead of Dreigrachten. In the centre Haig's troops captured the village of Langemarck, which had been held strongly by the Germans ever since the allied attack early in the month, and pushed half a mile beyond. On the right British troops attempted to seize the high ground almost directly east of Ypres, which lies north of the road to Menin. They swept up and gained the ground, but in face of terrific losses the Germans attacked with great fury, and finally pressed the British back from the terrain they had won.

Reports of British casualties issued during the first two weeks of August gave a total of 21,722 officers and men. They were divided as follows: Killed and died of wounds—Officers, 223; privates and noncommissioned officers, 4,424. Wounded or missing—Officers, 1,821; men, 15,254. Total of killed, wounded, and missing, 21,722.

Wonderful Barrage Fire

The wonderful accuracy of the British barrage fire was described by an artillery observation officer who was wounded at Langemarck:

I have seen much modern artillery work, but, frankly, I never dreamed there could be such perfection. I was stationed in an advance post where I could see the full effects of our fire on the Langemarck region. While I directed the firing of the guns in the rear I was amazed to see what our gunners could not see. At the jumping-off hour, which was 4:45 o'clock, the British batteries dropped a barrage in front of our infantry for the advance. It was as though a solid curtain of steel had been dropped before our men. It moved forward with the mechanical precision of clockwork. All our guns broke out with such a hurricane of fire that I

was stunned with the effect. I tried to say something to a companion standing beside me, but could not make him hear my loudest shouts.

The barrage moved forward with such accuracy that our infantry was able to keep quite close to it without danger, for there was no wavering of the barrage line. Straight on over Langemarck and the surrounding region passed the barrage, with the infantry trailing. The Germans undoubtedly were expecting our attack, for their counterbarrage was dropped back of our lines almost as soon as our advance began. There is absolutely no doubt of the tremendous superiority of our artillery work and the preponderance of our guns. No worse ground for an advance could have been encountered. The Steenbeke River was in flood and the whole region was waterlogged from recent rains. Our infantry was wallowing in mud all the time, and had it not been for the efficacy of our artillery fire the men would have had a hard time with the enemy.

Our troops had destroyed most of the concrete machine gun redoubts which represent the main defenses in this section, but there still remained many underground fortifications which had to be fought through and silenced with bombs or left behind with the Germans still in them. There was a typical example of this at a point southwest of Langemarck known as Aubongite. Here the Germans had constructed a steel and concrete dug-out with heavy steel trapdoors on top. It would hold perhaps fifty to seventy-five men with numerous machine guns. The artillery had been unable to shell them out, and when the infantry advanced, the Germans crawled into their hole and closed the steel doors over them. There was no bombing them out, but the Germans themselves were prisoners. They dared not open their doors to fire machine guns for fear of bombs, so we pushed ahead and left the Germans there with a squad of bombers sitting outside ready to throw explosives when the door opened.

This advance brought to a conclusion another phase of the battle of Flanders. The Allies were now able to look back on one of the great achievements of the war. The attack against the Germans east of Ypres, which resulted in such sanguinary fighting, did not accomplish the advance desired, but the great push to the north represented one of the remarkable accomplishments of the year.

This fighting was noteworthy for a radical change in the German defense methods. The continuous lines of wonderfully constructed forward trenches with their deep dugouts, in which lived

and fought great numbers of men, were now fast passing into the discard. The new system was one of scattering advance forces over a great depth. Cunningly constructed strongholds among the myriads of shell holes along the front concealed innumerable small and more or less isolated garrisons of men who formerly fought shoulder to shoulder along great stretches of picturesque ditches, through which communication was not broken for miles. This alteration was brought about by the ever-growing

preponderance of British artillery, which buried the German front line trenches under an avalanche of shells and left the defenses nothing but heaped furrows of earth, and rendered the famous dugouts mantraps, in which many thousands lost their lives without a chance of fighting back. The continuous deluge of breaking steel made repair work on the trenches impossible, and as the Germans were gradually pushed back they of necessity were forced to invent another mode of stemming the advancing tide.

A German Word Picture of the British Attack in Flanders

Max Osborn, war correspondent of the Berlin Zeitung am Mittag, wrote from the German Headquarters on the west front, July 30, 1917:

NEVER-ENDING howls and piercing screams are rending the air from the sea to the River Lys, while accessory noises like growls and blows seem to spring from everywhere on the Yser, in front of Dixmude and Langemarck, around Hollebeke and Warneton. The whole of West Flanders is one large, steaming pot, in which death and devastation are brewing. With the sun smiling its brightest at us, terrific, never-ending thunderstorms are raging over the land. Amid noises such as the old earth never heard before, a crop of new battles and new wars between nations is growing to maturity.

What were the battles of the Somme, Arras, the Aisne, and Champagne against this earthquake of Flanders? Millions of capital are blown up in the air and explode in the ground. It is like a Cyclopean concert of unheard-of brutality, to celebrate with becoming fitness the end of the third year of universal madness. The louder the desire of the nations for peace begins to express itself, the wilder the thunder of the guns at England's command to drown any cry of hope. Sometimes one thinks the end of the bloody intoxication is coming, but there

are still graduations of description for which there are no words. We thought we had got accustomed to the atrociousness of all this, and at home you may forget the monstrous events. At the front for days our senses and nerves must certainly have suffered from these awful three years. Spirit and feelings seek to escape the intolerable horror, but it is no use. Here, up against the worst form of slaughter, again these nameless noises bring it home to you with overpowering force.

This battle has lasted for days; now it is again that continuous roar that effaces, or, rather, consumes, all individual noises, that makes even fierce explosions close by you indistinguishable. Everything disappears in one loud, rolling, threatening volume of sound. The air carries it a hundred miles distant, and tremblingly they listen, south and north, west and east, where they cannot see the horror of all this.

But if you come nearer, it is like the bowels of the earth exploding. Our soldiers sit in their dugouts, and cannot do anything but trust to luck. Just now the infantry must keep quiet; only the big guns are talking. The waiting infantry is, as it were, locked in prison. The men cannot get out, nor can anybody approach them. The way to them is fraught with fearful danger. All around

spatter steel splinters, shrapnel bullets, stones and earth. If you are hit you are dead or crippled. What shall one do? One smokes incessantly, until the air in the narrow shaft is heavy enough to cut. That is bad, but somehow it helps one to endure the horror of the situation.

You live for days in the closest contact with your comrades in a contracted space. You cannot move, and are unable to think clearly. Never did I realize how difficult it can be to lead a human life. There is nameless agony in it.

Suddenly there is a terrible explosion quite near you. The earth is moving. Splinters drop from nowhere. Our works have been hit at an adjacent point, but thank Heaven! there are no wounded. Nobody was stationed there when the projectile struck.

There is still another explosion, this time the other side of us. Nine dugouts have been hit and have collapsed.

Then there is one of those rare lulls in the cannonade, and quite distinctly we make out some of our comrades struggling in the ruins of a wrecked dugout. We rush to their aid, heedless of the shells bursting around us. Another of those deadly beasts strikes almost at our feet, but it does not explode. We don't stop; we rush on; we shout to our friends, who are buried under the earth, stones, and timber, and we set to work digging them out.

"Nobody is seriously hurt," they cry joyously, when we drag them, covered with scratches and contusions, to daylight again. We do not always fare so well as this. Sometimes we dig them from cellars and earthworks as corpses, sometimes fearfully mutilated, or just in time to draw their last breath.

But, after all, our losses are not so large—certainly not compared with the mass of munitions exploded. Our men have become masters in the art of dodging and using cover. They certainly

have had experience enough. But still too many sons of German mothers must yield up their young lives mutely without a chance of defending themselves. But they all realize that only the Fatherland counts; that the individual cannot claim special attention here. The heavy twenty-four-centimeter projectiles of the enemy care not where they strike, be it human life, wire entanglements, or trench, and sometimes they hit our nerves though they strike many meters distant.

There is one consolation: Our artillery pays them back with interest, and the hellish noises at our rear are almost music to the ears of our men in our dugouts. Once upon a time infantrymen used to swear at artillery in battles; nowadays you hear nothing of the kind. Our infantry knows that those men behind their guns are having a hell of a time, while the infantryman is comparatively safe in his dug out.

But even the artillery needs our infantryman. He must carry munitions to positions that are inaccessible to horses and carts. The infantryman must watch the approaches to the artillery positions from all sides, and must be at his post when the sign is given for a general advance. Is this the end of terror, or merely the lull before the attack? Fiercely your fist grips gun and hand grenade. The eyes of the men on guard pierce the dense darkness ahead. There rises a green fireball. Is it ours? Is it theirs? Nobody seems to know its meaning, but all of a sudden the English begin to rain steel again. We give them tit for tat. The artillery on each side seems to try to surpass that on the other. What has happened? Nothing particular, but since they were at it, they thought they might as well keep hammering, and that one long roar continues until the sun rises again on a new day as cruel as yesterday. Nobody will ever forget the horror of it.

U-Boat Destruction of Shipping

Record From July 15 to August 12, 1917

THE average number of merchant ships destroyed by submarines and mines apparently remained almost constant in the last month. The aggregate British tonnage lost was almost the same as that in the preceding month, as the following figures, issued officially by the Admiralty, show:

	Over 1,600 Tons.	Under 1,600 Tons.	Fishing Vessels.
Week ended July 22..	23	3	1
Week ended July 29..	18	3	0
Week ended Aug. 5...	21	2	0
Week ended Aug. 12..	14	2	3
Total for four weeks	74	10	4
Total for previous four weeks.....	64	19	26

The increase in the loss of larger ships equalizes, if it does not exceed, that of the smaller vessels and fishing craft.

Premier Lloyd George, speaking in the House of Commons on Aug. 16, said that there was a steady diminution of vessels sunk. The unrestricted submarine campaign, he continued, began in February, and by April England had lost 560,000 tons of shipping in one month. The German official figures claimed that England was losing between 450,000 and 500,000 monthly after allowing for new construction. Mr. Lloyd George said his figure of 560,000 tons for April was gross. In June the losses had fallen to 320,000 tons gross, and if the improvement were maintained those for July and August would be 175,000 each. Steps had been taken, he added, for quickening shipbuilding, and a good many ships had been ordered abroad. In 1915 the new tonnage built was 688,000 tons. In 1916 it was 538,000 tons. For the first six months of this year it was 480,000 tons. The tonnage acquired by construction and purchase during the last six months would be 1,420,000. The total for the year would be 1,900,000 tons.

The figures of losses given above do not include French, Italian, Swedish,

Norwegian, Dutch, or American ships, a considerable number of which have been sunk since the beginning of February. In regard to American vessels 37 have been destroyed, with a loss of 121 lives, in the three years of war by German or Austrian raiders or submarines. Before the United States entered the war, on April 6, 1917, thirteen ships had been sunk. Since that time twenty-four have been destroyed. The tonnage of the vessels destroyed is estimated at about 110,000 tons, 61,000 of which have been lost since the United States entered the war. Only four American ships were sunk before Germany began her unrestricted submarine warfare. Two of these were destroyed in 1915, and two in 1916. Between the publication by Germany of unrestricted submarine warfare and the acknowledgment of a state of war by the United States nine American vessels were sunk, either by torpedoes or by gunfire, with a loss of forty-seven lives. Since the United States entered the war twenty-four ships flying the United States flag have been lost, and seventy-one lives sacrificed.

It was announced in the House of Commons on Aug. 14 that 9,748 lives were lost on British merchantmen from the opening of the war to June 30, 1917, as a result of enemy action. Of these 3,828 were passengers, the remainder being officers or seamen. A later official declaration, bringing the figures down to Aug. 20, 1917, stated that the losses of British mercantile sailors and officers were 6,637.

The Belgian Prince Outrage

That thirty-eight members of the crew of the British steamship *Belgian Prince* were drowned in the most deliberate manner by the German submarine which sank the ship was the accusation made by survivors on reaching British shores. One of them was the Chief Engineer, who many times after the steamer was torpedoed was perilously

near drowning. He gave the following narrative of his experience:

About 9 o'clock on Tuesday evening, (July 31,) when we were 200 miles off land, I saw the wake of an approaching torpedo. The vessel gave a lurch as she was hit, and I was thrown to the deck among the debris. The vessel listed heavily, and all of us took to the boats. The submarine approached and shelled the vessel, and then ordered the small boats alongside the submarine. The skipper was summoned and taken inside. The others were mustered on the deck of the submarine. The Germans removed the lifebelts and the other clothing of all except eight of us, smashed the lifeboats with axes, and then re-entered the submarine and closed the hatches, leaving us on deck. The submarine went about two miles and then submerged. I had a lifebelt. Near me was an apprentice boy of 16, shouting for help. I went to him and held him up until midnight, but he became unconscious and died of exposure. At daylight I saw the Belgian Prince afloat. I was picked up after eleven hours in the water by a patrol boat.

The second engineer, who also was a survivor, succeeded in reaching the Belgian Prince before she blew up. The Germans came on board and looted her, he reported. He was in hiding, but finally jumped into the sea and kept afloat on the wreckage. William Snell,

a negro of Jacksonville, Fla., the only American survivor, added the following details:

We left the Belgian Prince in three boats and had got fifty yards from the ship when the submarine came alongside and asked for our Captain, who was taken aboard and inside the U-boat. The members of the crew were ordered to hold up their hands, and the Germans asked if there were any gunners among us. Although there were two, we said "No." The Germans next asked if we had any pocket arms. We were then ordered to the deck of the submarine, where we were told by the commander to remove our lifebelts and to lie on the deck. This we did. Then the commander went into the boats, threw the oars into the sea, and had his men remove the provisions. After that the plugs were taken out of holes in the boats, which were then cast adrift. The submarine went to the northeast for twelve miles, the commander taking the lifebelts to the top of the conning tower and throwing them overboard. I hid mine under a raincoat, and as the submarine began to submerge I tied it around my neck and jumped into the sea. The rest of the crew stayed on deck until they were swept off by the sea as the boat dived. It was a terrible sight. One by one they threw up their hands and went down, or, fighting to keep up, they splashed water as they disappeared.

CURRENT HISTORY CHRONICLED

[PERIOD ENDED AUG. 20, 1917]

CHINA AND SIAM DECLARE WAR

CHINA formally declared war on Germany and Austria, beginning at 10 A. M., Aug. 14, 1917. The official war proclamation, which was signed by President Feng Kuo-chang, reviews China's efforts to induce Germany to modify her submarine policy. It says that respect for international law and protection of the lives and property of Chinese citizens forced China to sever relations with Germany and now compels her to declare war against Germany and Austria, too, as it was not Germany alone, but Austria-Hungary as well, which adopted and pursued this policy without abatement.

The proclamation declares that all

treaties, agreements, and protocols between China and the Central Powers have been abrogated. It says China will respect The Hague conventions and the international agreements respecting the humane conduct of the war, and, in conclusion, asserts that China's object in entering the war is to hasten peace. President Feng Kuo-chang made this statement:

Our people have not yet recovered from the sufferings due to the recent political disturbances. Calamity again befalls us. I, as President of the Republic, have a profound sympathy for our people when I consider their further sufferings. I did not resort to this step until it seemed impossible to delay the momentous decision. I could not bear to think that the dignity of international law should be

impaired through us; that our position in the family of nations should be undermined, or that the restoration of world peace and happiness should be retarded. Therefore, it is hoped that all our people will endeavor, in these hours of hardship, to maintain and strengthen the Chinese Republic, so that we may establish ourselves amid the family of nations and share the happiness and benefits to be derived from that position.

Siam officially declared war against Germany and Austria at 6 o'clock July 22, 1917, and all German and Austrian subjects were interned and German ships seized. Prince of Songkla, brother of the reigning monarch, declared on July 23 that national necessity and moral pressure forced Siam into the war on the side of the Entente. Neutrality on the part of this small but long independent nation in the Far East had become increasingly difficult, and there had been a growing sentiment that freedom and justice for States not strong from a military standpoint were not to be secured through the policy of the Central Powers. Sympathy for Belgium, which began with the invasion of that country, had taken strong hold on the Siamese, and the popular aversion to Teutonic methods, solidified by President Wilson's message asking Congress to declare a state of war, left no doubt as to the duty, as well as the path of expediency, of Siam.

* * *

OUR ARMED FORCES 1,500,000

THE regular army of the United States was brought up to its full war strength of 300,000 men on Aug. 9, 182,000 volunteers having enlisted from April 1 to Aug. 9. During the same four months the volunteering for the navy brought the naval total up to 137,000 men and the Marine Corps to its authorized strength of 30,000, while 45,000 enlisted in the Naval Reserve and the National Naval Volunteers. The National Guard, brought up to a strength of 300,000, was drafted into the Federal service on Aug. 5. This brought the regular army and navy up to 812,000, to which the draft for the National Army added 687,000 on Sept. 1, thus bringing the armed forces of the United States to a total of 1,500,000. It was only four months preceding that the United States

was a peaceful and unprepared nation, with an army and navy totaling less than 175,000. In the same period the country floated and oversubscribed a war loan of \$2,000,000,000 and made extraordinary strides in preparation and equipment, besides sending a preliminary expeditionary force of sailors, soldiers, engineers, aviators, doctors, hospital units, &c., to France.

* * *

GREAT BRITAIN AFTER THREE YEARS OF WAR

PREMIER LLOYD GEORGE, while at Paris on July 27, in a formal statement to leading French editors, said that Great Britain now had between 5,000,000 and 5,500,000 soldiers enrolled, without counting between 400,000 and 500,000 belonging to the navy, or nearly a million men from the dominions and colonies.

Great Britain had placed at the disposition of her allies, he added, from 1,500,000 to 2,000,000 tons of merchant ships. Next year's building program for merchant ships, which already has begun, amounts to 4,000,000 tons, or twice as much as in a good year during peace time. Referring to the campaign against submarines, Mr. Lloyd George said:

The diminution in shipping losses is incontestable. It is impossible to abandon this subject without paying homage to the aid given by the American Navy, both regarding the organization of convoys and by torpedo boat destroyers, which have rendered an invaluable service.

Mr. Lloyd George said that 5,000,000 men and women now were engaged in war work in the United Kingdom. More women could be employed if the trades unions did not fear the competition of women after the war.

* * *

CHINA'S MILLENNIUM OF PEACE

THIS appears to be the first time in the last thousand years, since the reconstruction of the Chinese Empire under the founder of the Sung dynasty, that China has issued a declaration of war, taking the initiative in bringing about an armed conflict.

Beginning with the period about a thousand years ago, China was repeatedly invaded by her militant northern

neighbors, the Mongols and their kindred, but China always fought defensive campaigns and was content with driving the invaders beyond her frontiers, or persuading them to withdraw by the payment of indemnities of money and China silks. This procedure encouraged the Mongols to continue their raids until 1260, when Kublai Khan, perhaps the most remarkable member of a family which produced some of the world's greatest soldiers and conquerors—the descendants of Ghengis Khan—finally invaded and conquered China. His successors, lacking administrative ability, gradually allowed his empire to fall to pieces, until the founder of the Ming dynasty re-established an independent China. But raids from the north continued, the Manchus gradually becoming the dominant aggressors and conquering China in 1644.

The Mings had waged a successful war against Japan during the years when Shakespeare was writing his first plays, but here also the Japanese were the aggressors, invading and overrunning Korea, which was claimed as a vassal kingdom by China. Twenty-two years ago Japan again fought China, once more for the control of Korea, but Japan was the aggressor. In 1900, at the time of the Boxer outbreak, Peking was occupied by foreign troops, but there was no formal declaration of war. Now, after a thousand years, China for the first time takes the initiative by declaring war against Germany and her allies.

THE POPE'S PEACE PROPOSAL AND THE AUSTRIAN EMPIRE

STUDENTS of contemporary history have already pointed out the close similarity between the peace proposals put forward in the middle of August by Pope Benedict and the peace plans of the Centrist (Catholic) Party in the Reichstag, voiced by Matthias Erzberger, a representative of the Catholic Kingdom of Bavaria. In both cases it was suggested that these proposals embodied the wishes of Austria, and especially of the young Austrian Emperor Charles. It was further suggested that both proposals represented an effort on the part

of Austria and of the Catholic States of South Germany to free themselves from the burdens laid on them by Prussia's victories in 1866 and 1870; and that the Vatican, desiring to preserve the integrity of the strongly Catholic Austrian Empire and to strengthen the South German Catholic States, for that reason strongly seconded the effort of the Emperor Charles.

When this possible co-operation between the Vatican, on the one side, and Austria and the South German Catholic States, on the other, has been discussed, it has generally been conjectured that an effort to revive the temporal power of the Pope, as ruler of the Papal States, was included as a part of the contemplated arrangement. It has many times been said that Kaiser Wilhelm had promised this restoration in case of the victory of the Central Empires.

But, even without this restoration of the temporal power, the Vatican's position in the world would be strengthened should Catholic Austria regain something of the power and prestige she lost when defeated by Prussia in 1866, and even more, perhaps, when the King of Prussia assumed the title of Emperor in 1871; and, should a new alignment of the Germanic States be brought about which would detach Bavaria and the other South German Catholic States from Prussia and join them to Austria, this would, of course, still further raise the Vatican's prestige.

* * *

RUSSIA'S GREEK CHURCH AND THE ROMAN CATHOLICS

WHILE the people of Russia are preparing to hold a Constitutional Convention, or Constituent Assembly, to decide on the future government of the 8,000,000 square miles of territory formerly ruled by the Czars, the Russian Church is getting ready to hold a National Church Council, which is expected to re-establish the office of Patriarch of Russia, abolished by Peter the Great; for Peter the Great was unwilling to see a single conspicuous personality at the head of the national church who might become a rival to the Czar. Peter, therefore, substituted for the Russian Patri-

arch a Synod, or College of Bishops, with a civil Procurator as his representative; the Procurator of the Holy Synod having a controlling voice in church appointments.

If the Russian Patriarchate be restored, the Patriarch of Russia will be one (and the most influential) of a group of five Oriental Patriarchs: the Patriarchs of Jerusalem, Antioch, Alexandria, Constantinople, and Russia. Two of these, the Patriarch of Jerusalem and the Patriarch of Antioch, claim to outrank in antiquity the Patriarch (now the Pope) of Rome, who, they say, owed his precedence to the fact that Rome was the political capital of the empire.

It was the claim of the Patriarch (Pope) of Rome to exercise authority over the Patriarchs of Constantinople, Antioch, Jerusalem, and Alexandria, which brought about the division between the Eastern and Western Churches; the Eastern Patriarchs were willing to admit the seniority, but not the absolute authority, of the Patriarch (Pope) of Rome. When the Roman See demanded complete obedience, the Eastern Patriarchs declared their complete independence of Rome. This event took place some nine centuries ago.

The division between the Eastern and Western Churches has colored the religious life of Eastern Europe and much of Western Asia ever since. The eastern half of the empire, with Greek as its ecclesiastical tongue, included most of Asia Minor and the Balkan Peninsula—the whole region later to be invaded by the Mohammedan Turks. Greece, Serbia, Bulgaria, and Rumania were thus within the area of the Eastern Church, and, when Serbian missionaries carried Eastern Christianity northward, to the new realm of Russia, they also carried with them allegiance to Constantinople and the old Serbian tongue, which became, and has ever since been, the ecclesiastical language of Russia, as it is of Bulgaria and Serbia, and as it long was for Rumania also.

There are practically no differences of doctrine in the group of autonomous churches which form the Eastern Orthodox Church, including, besides the four

ancient patriarchates, (Jerusalem, Antioch, Alexandria, Constantinople,) the churches of Russia, Serbia, Rumania, and Bulgaria. Poland, though Slavonic, owes allegiance to the Church of Rome, while, in the regions which were long the subject of contest between Poland and Russia, a compromise was arrived at, some two centuries ago, under which certain populations retained the Slavonic ritual, while acknowledging the supremacy of the Pope of Rome. Their religious organization was called the Union, or "Unia," and they were known as Uniates; but they have recently been called "Greek Catholics," to distinguish them from the Roman Catholics, who, like them, acknowledged the supremacy of the Pope, but who, unlike them, used the Latin ritual, on the one hand; and from the Greek Orthodox, belonging to the Eastern Church which used the Greek or Slavonic ritual and included the group of autonomous but united churches, governed by the patriarchs of Jerusalem, Antioch, Alexandria, and Constantinople, the synods of Russia, Serbia, and Bulgaria, and the Primate of Rumania.

Russia's intervention in the Balkan Peninsula in the nineteenth century to aid in the liberation of the Greeks, Serbians, Rumanians, and Bulgarians from the domination of the Mohammedan Turks was largely due to the fact that these small peoples, like Russia, belonged to the Eastern Orthodox Church.

* * *

THE PEOPLES OF SIAM

THERE is a curious fitness in the entry of Siam into the world war among the nations that are "making the world safe for democracy," since the native names of Siam, "Thai," and "Muang-Thai," mean "free" and "the kingdom of the free." Siam is about as large as France (about 200,000 square miles) with a population slightly larger than that of Belgium just before the war, some eight millions. Its people, who are of many shades of yellowish brown, appear to have drifted down into this furthest outpost of Asia from the highlands north of Burma and east of Tibet descending the valley of two immense

rivers, the Mekong and the Salwen, that rise on the Tibetan uplands not far from where the Yang Tse-kiang also has its source.

There was a folk tradition among these people that the further south they descended the shorter they would grow; when they reached the southern plains they would be no larger than rabbits; when they came to the sea, they would vanish altogether. But while the northern tribes are much taller than the southern, the prophecy has stopped short of complete fulfillment. The various yellow-brown tribes who make up the Siamese people, found on their arrival, several thousand years ago, a race of black dwarfs, absolutely savage and akin to the Negrito race of the Philippines—one of the oldest races in the world. These small black men they drove back into the mountain jungles, where they still dwell in caves and nests of palm-leaves, so shy and furtive that it is almost impossible to catch sight of them.

Siam received its literary and religious culture from Southern India and Ceylon, after the conversion of Ceylon to Buddhism. In this way Buddhism became the dominant religion of "the kingdom of the free." There are many Mohammedans also, supporting more than 500 mosques in this far-eastern land, yet these are far from being the most easterly Mohammedan settlements, for one is found nearly 2,500 miles further east, in the Aru Islands, immediately over Central Australia.

* * *

THE FIGHT FOR UNITED ITALY

NOT all students of the world-war realize, perhaps, that Italy's part in it is simply the continuation of the struggle to unite the whole Italian nation, the fight for "United Italy," begun in Garibaldi's days. Italy was included in Charlemagne's empire, the union between the Emperor and the Pope dating from 800 A. D., when the Pope crowned Charlemagne. By the Treaty of Verdun, Lothair, Charlemagne's grandson, united under a single crown Italy (to a line south of Rome) and Lotharingia, (from which comes the modern name, Lorraine,) which included both Belgium and Hol-

land. Thenceforth, throughout the whole history of the Empire, much of Italy was held, for long periods, by the Teutonic Emperors, the title of the Empire, from the tenth century, being "The Holy Roman Empire of the German People."

Thus, at the beginning of the Napoleonic period, much of Northern Italy, including Venice and Trieste, was a part of the Austrian Empire. Napoleon forced Austria to loosen her grip on Italy, but made no united Italian kingdom; and, after his fall in 1815, both Venice and Trieste, with Lombardy, were united once more to Austria. Beginning in 1859, Victor Emmanuel and Cavour worked for the union of Italy, using Piedmont, the northwest corner of the peninsula, as a foundation for the building. In that year the victory of Napoleon III. over Austria at Magenta and Solferino drove Austria out of Lombardy, and brought it under Victor Emmanuel's crown.

In March, 1860, the three duchies of Parma, Modena, and Tuscany, having driven out their dukes, by an almost unanimous plébescite united themselves to Victor Emmanuel's growing kingdom. Two months later, in May, 1860, Garibaldi sailed from Genoa and captured Sicily and the kingdom of Naples, and proclaimed Victor Emmanuel King of Italy. But the eastern part of the Papal States, ruled by the Pope as temporal sovereign, was excepted. In 1866, Venice was won from Austria, Prussia being then Italy's ally; and finally, in 1870, Italy took possession of Rome, her ancient capital. There remained "unredeemed" Trent and Trieste, for which Italy is now fighting.

* * *

GERMANY'S NEW MINISTRY

THE political crisis in Germany has subsided following the appointment of Dr. Georg Michaelis as Imperial Chancellor, and of other new Imperial and Prussian Ministers. Dr. Zimmermann has been succeeded as Foreign Secretary by Dr. Richard von Kühlmann, formerly German Ambassador to Turkey. Dr. Karl Helfferich remains as Imperial Vice Chancellor, member of the Ministry of State, and temporary Minister of the

Interior. One of the most interesting of the new appointments is that of Dr. Peter Spahn, leader of the Catholic Centre Party in the Reichstag, to be head of the Prussian Ministry of Justice. Adolph von Batocki, the Food Controller, resigned, and was succeeded on Aug. 15 by Herr von Waldow, formerly Lord Lieutenant of Pomerania. None of the changes indicates any advance toward Parliamentary control. The Reichstag adjourned on July 20 to reassemble Sept. 26.

CONSCRIPTION IN CANADA

AFTER an acrimonious debate in Parliament, preceded by grave disorders and threats of civil war by French Canadian Catholics, in which prominent clericals participated, the Canadian Senate on Aug. 8 passed on its third reading the Conscription bill previously passed by the House. It provides for drafting men between the ages of 20 and 32. It is expected that 100,000 men will be raised by the draft. No disorders followed the passage of the measure.

* * *

PREMIER ALEXANDER KERENSKY

IT has several times been asserted that Kerensky, the most conspicuous figure in Russia since the revolution, is "a young Jewish Socialist." But a careful canvass of the Russian official colony in New York appears to make it certain that he is a Russian Slav by birth and ancestry, the son of a schoolmaster in the town of Saratoff on the Volga. Alexander Kerensky early manifested oratorical gifts of a high order, studied law, and was elected a member of the Duma from one of the constituencies in the region between the Volga and the Siberian border. He particularly interested himself in labor questions and defended labor cases in the law courts, so that he soon came to be regarded as one of the leading advocates of labor interests in the Duma.

As labor organizations were forbidden in imperial Russia, the workmen, seeking to protect their interests, were induced to join the Socialist Party in large numbers. It thus happened that the

Socialists were the best organized and most numerous body in Petrograd when the revolution took place, and their Council of Workmen's Deputies immediately became prominent, seeking to dictate the domestic and foreign policies of the Provisional Government (formed of Duma leaders) and even interfering disastrously with the discipline of the army. The organization of debating committees in each unit of the army was the work of this council, and was the source of the worst demoralization of the Russian Army. The proposal to confiscate the property of the landowners originated at the same source.

While Kerensky called himself a Socialist, he has, since he became Premier, done everything in his power to reverse the action of the Petrograd Socialists. He has forced a continuation of the war, has first limited and then forbidden the army debating clubs, and has restored the death penalty for insubordination in the army.

THE POLITICAL STATUS OF EGYPT

THE present political status of Egypt is an example of the innate conservatism—in the sense of conservation—which has marked all England's dealings with Oriental peoples, and notably with the peoples of India. For while, as a result of Turkey's entry into the war and England's command of the sea, British power was extended over Egypt in December, 1914, Egypt becoming in effect an integral part of the British Empire, England nevertheless conserved all details of the existing administration, except that the title of Khédive, hitherto borne by the native ruler, was changed to Sultan. As the former Khédive had thrown in his lot with Turkey and the Central Powers, he was declared deposed, and Hussein Kamil Pasha was put at the head of the Egyptian Government, with the title of Sultan. The present Sultan of Egypt, born in 1854, is the son of Ismail I., who was forced to abdicate under pressure of the British and French Governments in 1879, and is the eighth in descent from Muhammed Ali, appointed Governor in 1805, who threw off Turkish domination six years later,

though a money tribute was still paid to Turkey.

The administration of Egypt is carried out by a native ministry acting under the Sultan, but England exercises, through a Financial Adviser, a decisive influence over the acts of the Egyptian Government. In July, 1913, certain existing councils were replaced by a new Legislative Assembly, which includes the Ministers, sixty-six elected members, and seventeen members nominated by the Government, to represent minorities. The elected members hold office for six years, one third being elected every two years, as in the United States Senate. This Legislative Assembly has a considerable voice in law making and taxation. There are 10,000,000 Mohammedans in Egypt, or 90 per cent. of the population; the Copts, 700,000 in number, who are the descendants of the ancient Egyptians, are the next largest element.

* * *

NEW FACES FOR WOUNDED MEN

FACIAL plastic surgery has made great strides recently. A new hospital has been opened in London devoted especially to the work. It is devoted to the building up of the features and restoration of contour from the patient's own tissues. Portions of skin, bone, and cartilage are transferred and manipulated in a manner which a few months ago would have been thought to be impossible.

Demonstrations have been made showing how a portion of a man's own rib can be taken whence he will feel no inconvenience, and used as the foundation of a new jaw. Bits of cartilage can be taken from his chest to reconstruct a nose, and the new creation is of a type to accord with the features of the patient.

Skin from the brow can be turned down, flaps can be drawn from parts of the face that are intact, for these things taken from the living organism can still preserve their own vitality under the process of transference. The method is slow. As much as a whole year, or even two, may be occupied as one after another of the delicate operations are successfully performed. Indeed, the only real difficulty in regard to a perfect cure

is that the men are frequently so delighted with the amendments partially wrought that they and their friends say that is quite good enough, and no more need be done. At least, they know none will shrink away from them.

* * *

A FRENCH OFFICER'S TRIBUTE TO AN AMERICAN HERO

THE first American to be killed under enemy fire on the French front after the entry of the United States into the war was Paul G. Osborn of Montclair,

N. J., a Dartmouth student in the class of 1917, who had volunteered as an ambulance driver at the beginning of the war, and who received fatal injuries while transporting wounded French soldiers from a mid heavy shell fire to the nearest aid stations, dying on June 22, 1917.

PAUL G. OSBORN

His body lay for a time in the little wooden field chapel at Chalons, covered with a great American flag. According to l'Illustration of Paris, which devoted a page to pictures and text on the subject, the funeral was held at Chalons on June 26, the day when the first United States troops were landing on French soil. The body, borne to the grave on an ambulance truck draped with the flags of both nations, was accompanied by a delegation of French troops in command of General A. Baratier of Fashoda fame, who spoke these eloquent sentences in honor of the young hero:

In the name of the 134th Division I salute Soldier Osborn, who came at the outbreak of the war to aid us to triumph for right, liberty, and justice. In his person I salute the army of the United States, which is fighting with us. The same ideal inspires and leads us onward. We are fighting to save the liberty of the world.

Soldier Osborn, my thoughts go out to

your parents, who on the other side of the ocean will learn of the grief that has stricken them. I know that words have no power to lessen a mother's sorrow, but I know, too, that the ideal which she inspired in the heart of her son will be able if not to dry her tears at least to transform them, for it is through these tears, the tears of all mothers, of all women, that victory will come—that victory which will assure the peace of the world, which will be theirs more than any others, since they will have paid for it with their hearts. Soldier Osborn, sleep in the midst of your French comrades, fallen gloriously like you. Sleep on, wrapped in the folds of the American flag and under the shadow of the banners of France.

* * *

SUPPORTING CANADIAN SOLDIERS' FAMILIES

THE United States will establish a system for the maintenance of the dependents of men who join the army and navy based on the Canadian system, whose main features are these:

(1.) Enlisted men (not officers) are required to assign at least one-half of their monthly pay, but not more than twenty days' pay each month.

(2.) The Canadian Government grants to dependents a separation allowance, based on the rank of the soldier, as follows: Privates, \$20; Sergeants, \$25; warrant officers and Lieutenants, \$30; Captains, \$40; Majors, \$50; Lieutenant Colonels, \$60.

(3.) In certain localities in Canada families of enlisted men are protected by life insurance, the premiums on which are paid by the municipality in which the soldier resided at the time he enlisted.

On May 14 in Toronto alone \$42,297,000 insurance was outstanding, of which the municipality carried 76.4 per cent.

The fourth source is from patriotic funds, largely made up of voluntary subscriptions. This fund in April, 1917, had reached \$22,981,615, of which \$16,575,634 had been disbursed. The scale of assistance runs from \$5 a month for a wife having no children (in receipt of \$20 a month as separation allowance and \$15 a month or more as assigned pay) to \$30 a month for a wife with seven or more children. A widowed mother receives from the fund a monthly allowance not to exceed \$10. If the parents are dependent on the soldier they receive from the fund a monthly allowance not to exceed \$20. A wife with

three children receives a total of \$60 a month from all sources. The pension for total disability or death is \$480 a year for privates to \$2,700 for Brigadier Generals.

* * *

RUSSIAN WOMEN IN BATTLE

PRESS correspondents assert that the battalion of Russian women was actively engaged late in July on the Vilna front, and that five women were killed and wounded in the first battle; it was reported that in a subsequent engagement only fifty-five women in the entire battalion escaped unhurt. The women's battalion left Petrograd for the front in July under command of Mme. Botchkneva, who was herself injured by shell shock. They called themselves the Legion of Death. The women soldiers were garbed in trousers, puttees, and tunics a trifle longer than the usual army coats. They wore the regulation army caps over bobbed hair and carried packs only a trifle lighter than those of the regular Russian soldiers.

They entrained amid the tears of their families, like veterans. The girls were of Russia's best blood, of the strong stock of some of the city's intellectual, financial and social leaders. Most of them were students at universities. Some were wealthy. They were recruited from the higher educational institutions with a few peasants, factory girls, and servants. Some married women, but none with children, were admitted. They range in age from 18 to 25 years and are of exceptional physique. Their hair is worn short. They are armed with the cavalry carbine, which is lighter than the regular army rifle. They were trained by officers of the Kolynsky Regiment.

* * *

VAST BRITISH WAR CREDITS

THE British Commons granted an additional new vote of credit of \$3,250,000,000 in July, which brings the total up to \$26,000,000,000, as follows, in English money:

1914-1915.		
Aug. 6.....	£100,000,000	
Nov. 15.....	225,000,000	
March 1.....	37,000,000	
		£362,000,000

1915-1916.	
March 1.....	£250,000,000
June 15.....	250,000,000
July 20.....	150,000,000
Sept. 15.....	250,000,000
Nov. 11.....	400,000,000
Feb. 21.....	120,000,000

£1,420,000,000

1916-1917.	
Feb. 21.....	£300,000,000
May 23.....	300,000,000
July 24.....	450,000,000
Oct. 11.....	300,000,000
Dec. 14.....	400,000,000
Feb. 12.....	200,000,000
March 15.....	60,000,000

£2,010,000,000

1917-1918.	
Feb. 16.....	£350,000,000
May 9.....	500,000,000
July	650,000,000

Total£5,202,000,000

At normal exchange this total is \$26,-460,000,000. Of the preceding sums, somewhat in excess of \$5,000,000,000 was advanced to the allies of Great Britain.

* * *

HOW BRITAIN BUYS SUPPLIES

GREAT BRITAIN'S expenditures for army supplies up to June, 1917, embracing only clothing, food, and utensils for the present war, were \$3,500,000,000, of which \$1,000,000,000 was expended for her allies. The purchases now run for Great Britain alone at the rate of \$1,750,000,000 per annum, nearly \$5,000,000 a day. Among the purchases during the war are included:

Cloth	105,000,000 yards
Flannel	115,000,000 yards
Knives, forks, and spoons	35,000,000
Bacon	400,000,000 pounds
Cheese	167,000,000 pounds
Jam	260,000,000 tins
Preserved meats.....	500,000,000 rations
Boots	35,000,000 pairs
Smoke helmets.....	25,000,000
Horseshoes	40,000,000

The method pursued in buying depends on the relation that the demand has to the general output. If it is in small proportion, competitive bids are invited; if the industry must be enlarged to meet the demand, the price is fixed plus a reasonable profit. In some trades, on which the demands of the department are unusually heavy, it is necessary to regulate production in all stages of man-

ufacture down to the raw material. The latter is either purchased by the department or dealings in it are controlled under the Defense of the Realm Regulations, and its conversion into the finished article is arranged on the basis of fixed prices for each process of manufacture. The chief raw materials controlled in this way are wool and jute, and a similar kind of control is applied to leather, flax, and hemp.

* * *

AMERICAN LOANS TO ALLIES

THE loans by the United States to the Allies up to July 13, 1917, had reached \$1,327,500,000, divided as follows:

1917.		France:	
Great Britain and Ire-	May 8...	\$100,000,000	
land:	June 2...	100,000,000	
April 25..	\$200,000,000	June 26..	10,000,000
May 5....	25,000,000	July 6...	30,000,000
May 7....	25,000,000	July 9...	70,000,000
May 14....	75,000,000	July 23..	60,000,000
May 25....	75,000,000		
June 9...	75,000,000		\$370,000,000
June 14...	25,000,000		
June 19...	35,000,000	Belgium:	
June 26...	15,000,000	May 16...	\$7,500,000
June 30...	10,000,000	June 19...	7,500,000
July 2...	25,000,000	July 23...	7,500,000
July 5...	100,000,000		
July 20...	85,000,000		\$22,500,000
	\$770,000,000	Russia:	
		July 6...	\$35,000,000
Italy:		July 13...	10,000,000
May 3...	\$100,000,000		
July 5...	20,000,000		\$45,000,000
	\$120,000,000		

* * *

GERMANY'S LOSS OF SHIPPING

IT will be remembered that, on or about Aug. 5, 1914, the powerful German wireless stations all over the world sent out a general alarm to all German ships, announcing that England had declared war against Germany, and ordering the Captains to take refuge at once from the British fleet in the nearest neutral ports. Obeying this order, Germany's large merchant marine almost immediately disappeared from the seven seas, seeking internment in American, Asiatic, and neutral European harbors. One of the features of the war has been the progressive conversion of nearly all these originally neutral powers into active enemies of Germany, with the re-

sultant seizure of the interned German ships, which have then been diverted to the traffic of the Allies, to replace tonnage destroyed by Germany's illegal submarine campaign.

Portugal was the first conspicuous instance of this, a large fleet of German merchant ships which had taken refuge in the Tagus being seized by the Portuguese Government and this seizure leading to a declaration of war against Portugal by the German Government; Siam and China are the latest powers to take this course. With the exception of the few German steamships which may have taken refuge in Scandinavian, Dutch, or Spanish harbors, and the few ships in German ports when war was declared, practically all of Germany's once great merchant marine is now in the service of the Allies, or is being prepared for such service.

* * *

UNDER the new income tax law in France the following are the rates: Business profits, $4\frac{1}{2}$ per cent.; salaries, incomes, &c., $3\frac{3}{4}$ per cent.; mortgages, loans, deposits, 5 per cent. Revenue tax on total business done by firms is as

follows: Between \$200,000 and \$400,000, 1 per cent.; \$400,000 and \$2,000,000, 2 per cent.; \$2,000,000 and \$20,000,000, 3 per cent.; between \$20,000,000 and \$40,000,000, 4 per cent.; above, 5 per cent. The impost on revenue from rents starts at 5 per cent. and increases to 12 per cent. The margin free of tax allowed residents of Paris is \$600. The impost on rents annuls the tax heretofore laid on doors and windows.

* * *

A FORMAL charge of theft was preferred against Prince Eitel Friedrich, second son of the Kaiser, by M. Dubois, proprietor of a château in the neighborhood of Compiègne. There was a formal hearing before the Court of the Oise Department, and testimony was introduced to establish the theft of furniture, valuable ornaments, and decorative and artistic articles by the Prince.

* * *

THE House of Commons after a sharp debate fixed the minimum wage of British farm laborers at \$6.25 a week. The Labor Party moved to make it \$7.50, but the Government carried its point by a majority of 199.

Progress of the War

Recording Campaigns on All Fronts and Collateral Events
From July 19 Up to and Including August 19, 1917

UNITED STATES

The drawing for the nation's first draft army took place in Washington July 20.

Congress passed a bill, signed July 24, appropriating \$640,000,000 for the aviation service.

Another contingent of troops from the regular army arrived in France.

A controversy between William Denman, Chairman of the Shipping Board, and Major Gen. Goethals, General Manager of the Emergency Fleet Corporation, over the merits of steel and wooden ships resulted in the resignation of Major Gen. Goethals and in the retirement of Mr. Denman, at the request of President Wilson. Edward Hurley was appointed to succeed Mr. Denman and Rear Admiral Washington Lee Capps was named to suc-

ceed Major Gen. Goethals. Captain John B. White, a member of the Shipping Board, also resigned. He was succeeded by Bainbridge Colby.

A Norwegian Commission and a Swiss Commission arrived in the United States to discuss the question of food importation as the result of the passage of a bill to limit exports to neutral countries.

The Council of National Defense was reorganized to provide for the formation of a War Industries Board of seven members and a Central Purchasing Commission to take charge of obtaining war supplies for the United States and her allies.

A food control bill was passed by Congress and was signed by President Wilson Aug. 10. Herbert C. Hoover was named Food

Administrator. A \$50,000,000 corporation, headed by Mr. Hoover, was formed to control wheat prices and supply.

SUBMARINE BLOCKADE

Official British reports made public July 19 showed that losses by actual sinkings of allied and neutral ships in the first six months of 1917 amounted to 3,507,257 tons, and the total losses from August, 1914, to July, 1917, were 7,706,291 tons.

Germany declared that the monthly average of her losses in submarines was little more than three.

The American bark *Camela* was sunk by bombs at the entrance of the English Channel after it had been attacked by a German submarine and looted. Twenty-four persons, including eight naval gunners, lost their lives in the sinking of the American steamship *Motano*. The *Standard Oil* tanker *Campana* was sunk and the Captain and four members of the naval gun crew were reported taken prisoners. Other American losses included the schooners *John Hays Hammond* and *John Twohy* and the bark *Christiane*.

England lost twenty-one vessels of more than 1,600 tons in the week ended July 21, eighteen in the week ended July 28, twenty-one in the week ended Aug. 4, and fourteen in the week ended Aug. 11. Thirty-eight members of the crew of the steamship *Belgian Prince*, including four Americans, were drowned after the attacking U-boat took away their lifebelts and smashed the lifeboats. Forty American muleteers were lost on the steamer *Argalia*. The cruiser *Ariadne* was sunk and thirty-eight members of the crew drowned.

French losses averaged about three vessels of more than 1,600 tons each week. Italy lost from four to six small steamers each week of the month.

Sweden's losses from submarines and mines, from the beginning of the war, amounted to 136 vessels with a tonnage of 125,000 and Denmark's amounted to 100 ships. Norway lost thirty-three ships in July. Ten persons were killed in the sinking of the Norwegian steamer *Falkland*.

Argentina sent a peremptory note to Berlin concerning the sinking of the steamship *Toro*.

Peru refused Germany's offer to submit the circumstances of the sinking of the Peruvian bark *Lorton* to a prize court, and demanded payment for damages and an indemnity.

The German Emperor accepted proposals to spare hospital ships.

CAMPAIGN IN EASTERN EUROPE

July 19—Germans penetrate Russian positions in Northeastern Galicia on a wide front near *Zlochow*; Russians reoccupy *Novica*, but withdraw to the eastern end of the village under heavy losses.

July 20—Teutons make successful attacks on the *Pieniaki-Harbusov* front, owing to mutiny of extremist Russian regiments, and occupy Russian first-line trenches east of *Brzezany*.

July 22—Russians continue to retreat in Northern Galicia as mutiny spreads, and yield ground as far south as the *Dniester*; *Babino*, on the *Lomnica*, evacuated.

July 23—Russians pierce German lines north of the *Pinsk* marshes, in the district of *Tsary-Bogushi*, but retreat further in Northern Galicia; Germans capture *Tarnopol*.

July 24—Germans pursue Russians on a 155-mile line from the Baltic to the Black Sea and cross the *Sereth* River in the region of *Mikulice*; Russians evacuate *Stanislau*; regiments on the *Dvinsk-Vilna* front abandon the enemy's positions after capturing them, as mutiny spreads north.

July 25—Germans occupy *Tarnopol*, *Stanislau*, and *Nadworna*.

July 26—Germans pursue the Russians east of *Tarnopol* to the *Gnizdiorzno* and *Gnizna* Rivers, penetrate positions near *Losznio* and on the *Sereth*, south of *Trembowla*, and occupy three towns south of *Tarnopol*; Russians abandon the Carpathian front as far as the *Kirlibaba* sector.

July 27—Russians retire from *Czernowitz*; Germans capture *Kolomea*.

July 29—Russians retreat over the Galician border at *Husiatyn*; Germans capture *Kuty*, in the Carpathians.

July 30—Russians stiffen their line and hold heights to the east of the River *Zbrocz*; Germans advance through the *Suchawa* Valley toward *Seletyn*.

Aug. 1—Russians begin offensive in Galicia in the direction of *Trembowla*, but retreat in the south.

Aug. 3—Austrians capture *Czernowitz*.

Aug. 4—Austrians cross the Russian frontier northeast of *Czernowitz*; all of Galicia except a narrow stretch of ground from *Brody* to *Zbaraz* wrested from the Russians.

Aug. 5—Russians resume offensive tactics east of *Czernowitz* and capture a wood near *Baian*, but retire southwest of that region.

Aug. 6-7—Russians take the offensive in *Volhynia* and capture two villages; Russians evacuate *Proskurov*, in *Podolia*, and *Kamenetz-Podolsk*, the capital of *Podolia*.

Aug. 8—Russians resume the offensive in the *Chotin* region and capture two villages and retake positions near *Sereminki*, in *Volhynia*, after being driven out.

BALKAN CAMPAIGN.

July 21—Fighting resumed on the Rumanian front; Austro-Germans attack positions near the confluence of the *Rimnik* and *Sereth* Rivers, but are repulsed.

July 25—Rumanians enter Teuton trenches in the region of *Bystro Patak*.

- July 27—Rumanians capture ten villages in their advance toward the upper reaches of the Suchitza River.
- July 30—Germans advance east of the Upper Moldavia Valley and attack on both sides of the Fokshani-Ajoud Railway.
- July 31—Rumanians take fortified positions on the right bank of the River Putna, northwest of Soveia.
- Aug. 2—Teutons advance in Bukowina and take stand before Kimpolung.
- Aug. 3—Russians evacuate Kimpolung.
- Aug. 5—Teutons occupy Vama.
- Aug. 7—Austro-Germans begin offensive against Russo-Rumanian armies in Moldavia and storm Russian positions north of Fokshani.
- Aug. 8—Russians fall back between the Fokshani-Marasechti Railroad and the River Sereth.
- Aug. 11—Teuton attacks in the valleys of the Sereth and Suchawa, in the region of Terechini and Gadikalba, repulsed; Rumanians retire southwest of Ocna.
- Aug. 12—Austro-Germans in Moldavia capture Grozesni and the dominating heights; Russian attack at the mouth of the River Buzeu repulsed.
- Aug. 15—Austro-Germans seize the bridgehead at Baltaretu and capture Stracani, northwest of Pantziu.
- Aug. 16—Russians and Rumanians forced to cross to the east side of the River Sereth and retire on the Moldavian border.
- Aug. 18—Austrians drive Russo-Rumanians from intrenched positions south of Grozescl.

CAMPAIGN IN WESTERN EUROPE

- July 19—Germans make two attacks upon the French lines south of St. Quentin and reach the first French line, but lose most of their gains.
- July 20—Germans repulsed on the plateau before Craonne and Vauclerc, and between the Californie Plateau and Casemates Plateau.
- July 22-23—Germans launch fierce attacks on the Casemates and Californie Plateaus.
- July 24—French retake all ground lost between Casemates and Californie Plateaus; heavy artillery duels in Flanders.
- July 26—Germans penetrate French lines from La Bovelle Farm to a point east of Hurtebise.
- July 27—French repulse five German attacks on the heights south and west of Moronvillers; British capture La Bassée Ville.
- July 31—French and British smash German lines in Belgium on a twenty-mile front from Dixmude to Warneton, taking ten towns and crossing the Yser in many places; French on the Aisne capture German trenches over a front of nearly a mile.
- Aug. 1—Germans in Belgium retake St. Julien from the British and gain a footing at Westhoek.
- Aug. 2—British regain Ypres-Roulers railway

- station and repulse German assaults between the railway and St. Julien.
- Aug. 3—British reoccupy St. Julien and improve their positions south of Hollebeke.
- Aug. 4—French push forward east of Korteker Cabaret and check Germans near Verdun; British expel Germans from trenches near Monchy-le-Preux, re-establishing their lines.
- Aug. 5—Canadians push forward southwest of Lens; British advance at St. Julien and repulse attacks at Hollebeke.
- Aug. 8—French take German trenches northwest of Bixschoote.
- Aug. 9—French advance south of Lange-marck.
- Aug. 10—British capture Westhoek Ridge; French extend their positions in the Bixschoote region; Germans win ground north of St. Quentin.
- Aug. 11-12—British win more ground east of Ypres; French retake lost trenches at Fayet.
- Aug. 14—British push German posts across the Steenbeke River and re-establish their lines.
- Aug. 15—Canadians take German positions on a two-mile front east and south of Loos, including Hill 70.
- Aug. 16—British capture Langemarck and push on a half mile beyond; French drive Germans from a tongue of land between the Yser Canal and the Martjewaart.
- Aug. 18—French complete their conquest of German territory south of the St. Sansbeek and Breenbeek Rivers.
- Aug. 19—British advance 500 yards east of Langemarck.

ITALIAN CAMPAIGN

- July 20—Italians destroy advanced Austrian post on Monte Plana and repulse a patrol at the Maso Torrent; Austrians bombard Italian positions in the Plezzo Basin, on the Vodicce, on the Dosso Faite, and west of Versic.
- July 24—Austrians show increased activity in the Trentino and attack advanced Italian posts in the Posina Valley, San Pelleggrina Valley, and Overbacher region.
- Aug. 10—Italians repulse attacks in the Coalba Valley, at Brenta, and north of Caterina.
- Aug. 19—Italians begin offensive on a thirty-seven-mile front from the region of Tolmino to near the head of the Adriatic Sea.

CAMPAIGN IN ASIA MINOR

- July 24—Russians bombard Tireboli, on the Black Sea, with torpedo boats and artillery; scouting parties cross the Karshut Darasi and enter Turkish trenches; Turks report dislodging of British troops who had penetrated positions at Chewet-Tepe, on Gaza-Honjunous Road.
- Aug. 8—Russians defeat Kurds near Hoshaba, southeast of Van, and near Dizy, west of Urm.

Aug. 14—Turks begin offensive in the region of Mount Salvus, Dag, and Pelimer, in the direction of Kharput.

AERIAL RECORD

On the western front the British raided Zeebrugge, Bruges, Ghisteltes, and other Belgian towns and dropped bombs on the German airdrome at Sparappelhoek. Many notable battles were fought. On July 28 the British downed thirty-one German machines, and on July 29 they brought down sixteen machines and drove fourteen out of control. Thirteen British machines were reported missing. In the fighting Aug. 17-18 the Allies brought down thirty-seven machines and the Germans twenty-six.

German airplanes flew over Paris on the nights of July 27 and 28 and dropped bombs in suburban sections. One aviator attacked a hospital near the front, killing four people.

Twenty German airplanes dropped bombs over Felixstowe and Harwich on July 22, killing eleven persons and injuring twenty-six. One German airplane was brought down at sea. In a raid on watering places on the southeast coast of Essex on Aug. 12 twenty-three persons were killed and fifty injured. Two German machines were destroyed.

Sir George Cave, the Home Secretary, announced in Commons on July 30 that since the beginning of hostilities 366 persons had been killed and 1,092 injured in the London metropolitan area.

Germany announced that the Allies lost 213 airplanes and 24 captive balloons in July and admitted the loss of 60 German machines.

Italians raided St. Lucia-Tolmino, damaging the railway works, bombed the arsenal and military works of Pola, and dropped four tons of high explosives on Austrian troop quarters in the Chiapovano Valley.

Austrians raided the maritime arsenal at Venice. The School of St. Mark was damaged.

NAVAL RECORD

Two German ships were sunk off the coast of Holland by British destroyers and two were captured and taken to England.

The Netherlands Government charged that a British submarine violated Holland's neutrality by sinking the Dutch steamship Batavier II. in her territorial waters.

Nineteen passengers, including five Americans, were lost when the British steamer City of Athens was sunk by a mine off Cape Town on Aug. 10.

MISCELLANEOUS

Chancellor Michaelis addressed the German Reichstag on July 20, declaring that Germany contemplated no new peace offer, but was willing to treat with the Allies if they opened negotiations. A resolution for peace without annexations or indem-

nities was adopted. The British House of Commons rejected a resolution of sympathy with this move.

Pope Benedict sent a letter to the rulers of the belligerent countries urging peace. The text was made public in England on Aug. 15.

The Finnish Diet adopted the Autonomy bill July 19, after rejecting a proposal to submit it to the Russian Provisional Government. The Russian Government declined to acknowledge the validity of the measure, dissolved the Landtag, and declared that it would submit to the Landtag its own laws governing Russo-Finnish relations. On Aug. 16 the Cabinet resigned and the Governor General asked M. Tokio to form a Socialist Ministry. Revolts were put down by Russian troops. The Canadian Parliament passed a conscription bill.

Siam and China declared war on the Central Powers. Austria-Hungary declared that China's declaration was illegal and unconstitutional.

Germany notified Turkey and Bulgaria that she would assume all the expenses incurred by those countries in the campaign of 1917-1918.

Changes were made in the British Admiralty, Vice Admiral Sir Rosslyn Wemyss succeeding Sir Cecil Burney as Second Sea Lord and Alan Garrett Anderson assuming the Controllorship of Naval Construction. George Nicoll Barnes was appointed to succeed Arthur Henderson as Labor member of the War Cabinet.

Serbia protested to the United States against the economic exploitation of the Serbian provinces by the Austro-Hungarian and Bulgarian authorities. The capital was moved from Corfu to Saloniki.

On Aug. 6 official announcement was made that four German Imperial Secretaries, including Foreign Secretary Zimmermann and Adolph von Batocki, President of the Food Regulation Board, and five Ministers of the Prussian Cabinet had resigned. Dr. Richard von Kühlmann was appointed Foreign Minister and Herr von Waldon was named food rationer.

Representatives of the allied powers held a conference in Paris July 25-26. They decided to continue the war until their objects were attained and to withdraw their troops from ancient Greece, Thessaly, and Epirus.

Rear Admiral Lacaze, French Minister of Marine, and Baron Denis Cochin, Under Secretary of State for Blockade, resigned from the French Cabinet. Charles Chaumet succeeded Lacaze. An Under Secretaryship of Marine was created and Jacques Louis Dumesnil was appointed to the post. The Chamber of Deputies was prorogued until Sept. 18, following the withdrawal of support from the Government by strong Socialist groups.

The Grand Tactics of Three Years of Warfare

By Thomas G. Frothingham

Member of the Military Historical Society of Massachusetts

IT is now known that, at the outbreak of the war in 1914, the German Great General Staff had its definite plan of campaign, which had been decided upon for years, and which had been carefully worked out in every detail. This was a repetition of the plan of 1870 directed against Paris. It was true in 1914, as in 1870, that the French capital was the heart of France, and its capture, with the huge levy of money that would have been imposed on the city, would have paralyzed France.

The German Staff had mistakenly committed its plans to an invasion of France through Belgium to avoid the theoretical strength of the French frontier fortresses. The Germans at that time did not realize that in the powerful Teutonic artillery they possessed a weapon that made all fortresses of no value. They had believed the French fortresses impregnable, and had deliberately chosen a passage through a neutral nation instead of the attempt to reduce them.

In a previous article* it was shown that the unexpected resistance of the Belgians, which delayed the Germans nearly three weeks, gave the French time to mobilize, to correct the mistaken offensive in Alsace, and to interpose the French armies against the German invaders. The French Commander in Chief, General Joffre, was the ideal man in character and temperament for such a crisis. He fought a cool, wary, retiring fight, all the time gathering his resources for a final stand against the onthrusting Germans.

In England Lord Kitchener had been given absolute military authority, and a British army of regulars, (about 90,000,) under General French, Kitchener's Lieutenant in South Africa, had been sent to France, where it was placed on

the left flank of the French armies, (Aug. 21, 1914.)

As the Germans advanced into France General Joffre kept his armies in hand, fighting and falling back successively from the lines of the Semois, (Charleroi,) Meuse, and Aisne, (Aug. 23-28.) At the beginning of these withdrawals the British army on the left flank had overstayed its battle, (Mons, Aug. 23,) and in its retreat had been badly cut up by the German right, but the French armies were not impaired.

Joffre's Stroke at the Marne

General Joffre had withdrawn to the Marne, (Sept. 3,) and General von Kluck, who commanded the German right, knowing the battered condition of the British army on the French left, believed that his own right flank was safe, and drove on to the southeast to join the massed attack on Paris. But there was a new element in the campaign that changed the result. General Joffre had sent in a fresh army from the environs of Paris (Sixth Army) and placed it on the left of the British army, so that the latter was no longer the left flank of the Allies.

This Sixth Army on Sept. 6 pressed north, threatening the German right, as did the Fifth Army which had been on the right of the British. This brilliant manoeuvre decided the battle of the Marne, (Sept. 6-10,) and saved Paris.

The Germans were forced to retreat to the Aisne, where they intrenched in positions previously chosen in case of an emergency. After vain attempts to break this line, (battle of the Aisne, Sept. 12-17,) the Allies intrenched against it.

The regions of Verdun and the other

* The Moltke of 1870, &c., CURRENT HISTORY MAGAZINE, February, 1917.

French frontier fortresses had been also intrenched, as fortresses had already been proved of no value against the heavy Teutonic artillery. Both armies extended their flanks toward the sea, and in an astonishingly short time there was a line of Petersburg intrenchments from Switzerland to the sea, which has since swayed backward and forward for almost three years.

A part of the pre-war calculations of the German Staff had been the confident assumption that there would be so much delay in the mobilization of the Russian Army that no serious move was to be expected from Russia for many months. Instead of this the Russian mobilization was unexpectedly rapid, and in August, 1914, there was an invasion of East Prussia by two Russian armies, which started an exodus of the inhabitants, and made it necessary to send German troops to that front. This, of course, was a help to the Allies in the French campaign.

Battle of Tannenberg

The command of this German army in East Prussia was given to General von Hindenburg, who had been out of favor and in retirement. Hindenburg had been derisively called "The Old Man of the Lakes," because of his insistence on the strategic value of the Masurian Lakes in East Prussia. Against the Russians in actual warfare Hindenburg proved the truth of his contention. Calmly and methodically, as if at army manoeuvres in his favorite region, he halted the advance of the Russian General, Samsonov, in a strong frontal position among the Masurian Lakes, and, striking first one flank, then the other, Hindenburg practically destroyed Samsonov's army. The other Russian army, under General Rennenkampf, which had invested Koenigsberg, at once retreated into Russia.

This battle of Tannenberg (Aug. 26-Sept. 1, 1914) is already considered a classic by military critics, and it made Hindenburg the idol of Germany, as confidence waned in the supposedly infallible General Staff. The defeat itself was not a vital blow to Russia, nor to the Entente Allies. In fact, the diversion of troops and the necessity of retaining an

army on the Russian front was well worth the price; but the consequent rise of Hindenburg resulted in great harm to the cause of the Entente Allies.

In the southeast the rapid mobilization of the Russians also disconcerted the Teutonic Allies. The Austrians had prepared in Galicia for an invasion of Russian Poland. Instead of being able to carry out their plans, the Austrians met an onslaught of Russian armies, which invaded Galicia, captured Tarnopol, Halicz, and Lemberg, the capital, (Aug. 27-Sept. 3,) and forced the Austrians to retreat to Cracow, Przemyśl, and Jaroslav. So crippling were these defeats to the Austrians that the Serbians were able to defeat the weak Austrian forces that could be spared for use against them, and Serbian territory was kept intact.

On the western front in France and Belgium intrenching tactics changed the whole character of the war. All through the Fall of 1914 and into the Winter there were bloody battles which had no real military effect except to cause great losses on both sides. The one tactical result achieved at this time was the German conquest of the Belgian coast, which the Germans have retained to the present date. This tactical gain was not appreciated at the time, in view of the failure of the Germans to reach Calais; but it has given the Germans a base for submarines and aircraft, which has been of increasing tactical value.

On the eastern fronts the Russian successes continued. In the north repeated German offensives against Warsaw were beaten off, and Russian offensives followed which kept up a continued pressure on the Germans. In Galicia the Russians swept forward. Jaroslav was captured, (Sept. 20, 1914,) Przemyśl was besieged, (surrendered March 22, 1915,) and on the Carpathian front the Russians had broken into Austria-Hungary.

Early British Naval Errors

In the meantime Great Britain's navy had proved to be the great factor on the sea, as anticipated by military critics. The concentration of the British fleet in the North Sea dominated the German fleet at once, but in the other areas her naval resources were not so well used.

TERRITORY HELD BY CENTRAL POWERS AT THE BEGINNING OF 1915. BLACK LINES INDICATE THE BATTLE FRONTS, DOTTED LINES NEUTRAL BOUNDARIES

TERRITORY HELD BY CENTRAL POWERS AT END OF THREE YEARS OF WAR. BLACK LINES INDICATE BATTLE FRONTS, DOTTED LINES NEUTRAL BOUNDARIES

Allowing the Goeben and Breslau to get into Constantinople had a serious effect on the Turkish situation, out of all proportion to the value of the ships themselves.

There seems to have been no reason for leaving the squadron in the Pacific without reinforcement, to be destroyed by a concentration of outlying German cruisers (Coronel, Nov. 1, 1914)—neither should the light cruisers (Emden, &c.) have been left footloose on the seas. These last errors had no effect on the grand tactics of the war, but Great Britain's mistake in the failure to declare a legal blockade of Germany at the outset has had a serious and increasing tactical effect on the war.

The perfected case of a legal blockade established by the United States in the civil war was at England's service, but, not realizing the possibilities of the submarine, Great Britain trusted to her command of the sea, and, instead of declaring a blockade, in an Admiralty order, (Nov. 2, 1914,) announced military areas in the North Sea. This was most unfortunate, as it gave Germany the chance to adopt the "war zone" policy, which has been one of the evils of the war.

The harm of this was not apparent early in 1915. Submarines had not developed any alarming efficiency. Great Britain controlled the sea, and, in spite of German occupation of French and Belgian territory, the military situation was then apparently in favor of the Entente Allies. On the western front the plan of the German General Staff had been defeated, and the great German armies of invasion had been brought to a halt. On the eastern front there was a strong pressure on the Teutonic Allies, especially on Austria. In fact, a study of the map will show that the Teutonic Allies were practically besieged in the early Spring of 1915. They were even cut off from their new ally, Turkey. (Turkey at war Oct. 30, 1914.)

Allied Offensives of 1915

The three great nations of the Entente Allies had intrusted their preparations for the coming campaigns of 1915 to three military dictators—for such had General Joffre become in France

after his victory of the Marne. Lord Kitchener and the Grand Duke Nicholas, each the typical soldier of his nation, had absolute control in Great Britain and Russia. Herein lay the failure of the Allies, for each of these leaders believed that the height of military efficiency had been reached in the past campaigns. The great development of barrier fire and the excellence of the French "75s" had brought about the misguided belief in the "established superiority in artillery," which lulled the Entente Allies into false confidence.

In reality at this time the Teutonic Allies were making the colossal preparations of artillery and munitions which were destined to change the year of 1915 into a tragedy for the Entente Allies.

The first allied offensive in 1915 was Great Britain's ill-starred attempt on the Dardanelles, which was undertaken with her fleet alone. In spite of all the re-criminations of those responsible, it is evident that at the time there was great confidence in the ability of the guns of the fleet to reduce the land defenses. The new 15-inch guns of the Queen Elizabeth class were particularly relied upon.

All the naval bombardments were without tactical result—and several ships were lost, (February-March, 1915.) It was decided to use a landing force, which Great Britain had available in Egypt. This army was brought to the strait in March, but the transports were found to be "improperly loaded."* The troops were then returned, reshipped, and, after a delay of more than another month, a landing was made on the tip of the Gallipoli Peninsula, (April 25-26,) with fearful losses. Although the great fleet was at hand, there was no serious bombardment of the point of landing, and the Turks, who had received so much warning in advance, took full advantage of the situation.

The battered army was retained on the peninsula for months of desultory, useless fighting. In August there was another landing, which was as costly as the first, and the expedition was withdrawn

*General Ian Hamilton.

in the Winter. From first to last it was a blunder, costly in losses, and most costly in its effects upon the war, especially in its influence on the hesitating nations, Bulgaria and Greece.

In the Spring of 1915 this disaster had not yet developed, and there were great hopes of the allied offensives, but on the western front these hopes were soon disappointed. The failures at Neuve Chapelle, Ypres, &c., showed conclusively that the preparations of the Allies for carrying the formidable German intrenchments had been inadequate. Not only did the Allies' best efforts fail to make any real impression on their enemies, but their assaults were not dangerous enough to divert Teuton troops from the eastern front, where a fearful change had taken place in the military situation.

Hindenburg's Drive in Galicia

In these regions, where the position of the Entente Allies was apparently so favorable in the Spring of 1915, with Galicia overrun and the Russians breaking through the Carpathians, Hindenburg, who had been given the command in the East because of his victory at Tannenberg, had been making preparations for a campaign unprecedented in history. The Austrian and German forces had been amalgamated, and the new huge artillery had been massed for an assault on the overconfident Russians—for the Grand Duke and his Generals did not seem to have any suspicion of the impending danger.

Suddenly (April 28, 1915) the storm broke. General von Mackensen, who commanded in Galicia, blasted out the Russian lines with artillery attacks such as had never been seen in war, and in a few days the whole Russian front was in retreat before massed assaults that did not allow the Russians to make a successful stand for months.

May 14 the Russians were driven over the San. Przemyśl fell June 2, Lemberg June 22. In the north Libau was taken in May, and Courland was overrun. Then came the irresistible drive on Warsaw, which was taken Aug. 5. Kovno, Novo Georgievsk, Ossowietz, Brest-Litovsk, and Grodno all fell within a month—and

all the time the Russian losses in men and guns had been enormous. It was not until Fall that the Russians were able to hold the line from Riga to Eastern Galicia, where they have remained so long with little change.

At the time there was so much daily comment on the "masterly retreat" of the Grand Duke Nicholas that most of our people do not now realize the great military results of this most disastrous campaign in all history. The Russian losses are estimated to have been: Killed and wounded, 1,200,000; prisoners, 900,000. Some 65,000 square miles of territory were lost.

These Russian reverses in 1915, and the failure at the Dardanelles brought Bulgaria into the war on the side of the Teutonic Allies, (October, 1915.) There was a simultaneous invasion of Serbia by Austro-Germans and Bulgarians, and all Serbia was conquered before the Allies could give any help. An Anglo-French army was landed near Saloniki, but its only usefulness was to insure the neutrality of the Greeks, which was very uncertain at the time. By the end of November, 1915, the last of the Serbian troops had been driven into Albania. In January, 1916, Montenegro was also conquered, and Scutari, the capital of Albania, was captured, (Jan. 23, 1916.)

In May, 1915, Italy had declared war on Austria alone, and at once frankly began to fight "nostra guerra" in an attempt to win the Trentino and Trieste. Consequently the tactical value of the Italians to the Entente Allies and their effect on the results of the great war in 1915 must be measured by the number of Austrians they diverted from the Russian campaign. Owing to the difficulties of the country, which made defense easy for Austria, it is probable that no great numbers of Austrian troops were needed until after the fall of Warsaw. Consequently, the effect of the entrance of Italy was not great—and Italy's own campaign of conquest was barren of military results in 1915.

On the western front, after the allied failures in the Spring of 1915, there was only desultory fighting through the Summer. In September the British and

French undertook another offensive in the region of Loos and in the Champagne, but again the Allies failed to win any military results; neither did they succeed in making a diversion that would take away troops from the eastern front and help Russia and Serbia.

Development of Submarines

On the sea in 1915 Germany was shut in so far as concerned any use of her fleet. There had been some raiding, but nothing that had any effect on the war. Throughout the year Germany was developing a tactical use of submarines, and, taking advantage of the pernicious war zone areas, was breaking away from international law with the U-boats; but at the end of 1915, although there had been much ruthless destruction of life, it cannot be said that the submarines had become a factor in the grand tactics of the war.

A comparison on the map will show that the military situation at the beginning of 1916 was much less favorable for the Entente Allies than early in 1915. On the western front the intrenched lines faced one another as before, but in the East all was changed. On their northern front the Russians had been driven out of Russian Poland and far back into Russia. In the south they had been swept back in Galicia until they only held a narrow strip on the eastern frontier.

The entrance of Bulgaria and the conquest of Serbia had given the Teutonic Allies a strip of territory which connected them with Turkey—and gave them the control of the "bridge" to the East. The Teutons were no longer hemmed in; they had raised the siege.

At the beginning of 1916 the disappointment of the Allies in their military hopes and the realization that their preparations in the first Winter had been inadequate, had brought changes in the administration of the Allies. The three military dictators were no longer in control. Joffre was not paramount in France, though still Commander in Chief. In England, Lloyd George had become Minister of Munitions, Lord Derby had charge of the recruiting, and Sir William

Robertson was Chief of Staff. The Russian Grand Duke Nicholas had been sent to command in the Caucasus.

The Attack at Verdun

At this time in England and France powerful artillery and vast amounts of munitions were being hurried to completion for use in the campaigns of 1916—but before these were ready in sufficient quantities France received a costly lesson as to the need of heavy guns to cope with the German artillery. Suddenly in February, 1916, north of Verdun, on a sector over ten miles long, the French were blasted out of their trenches by a concentration of heavy artillery, just as the Russians had been in the Spring of 1915. Although it was known that there was some movement on foot, the French Staff had been unable to tell where an attack was to be made.* That the Germans were able to make this concentration of hundreds of thousands of men and hundreds of guns without being observed by the airplanes is a blow to faith in scouting from the air, but such is the fact.

For three weeks after the first assault (Feb. 21, 1916) there was a fearful sacrifice of the best blood of France. Verdun itself, as has been explained, was no longer a fortress, but a system of trenches, and of no more real value than any other system of trenches. But the name Verdun meant the prestige of France in all Europe, and it was decided to hold the place at any cost.

Enormous losses were heroically endured. Every available gun was rushed to this region, and at last, by using naval guns, many of them actually taken from the warships, an equality in artillery was secured. In the latter part of March it became an even battle, and later the advantage was with the French. It is evident from the official accounts that in the first stages the French losses greatly exceeded those of the Germans, as the German gains were made by artillery, and then consolidated; but in the later phases the German losses were probably greater. This battle was a fearful drain on the man-power of France, but the

*Official, March 18, 1916.

German prolongation of the action for months without result caused great dissatisfaction in Germany, and brought about the appointment of Hindenburg to supreme command of the German armies.

Spring and Summer of 1916

On the eastern fronts in the Spring of 1916 there was naturally no early allied offensive of any moment. The Russian armies had great losses to repair, and the allied army at Saloniki was held inactive by the attitude of Greece. In Asia Minor, however, the Grand Duke Nicholas's campaign was winning important results. Erzerum was taken Feb. 14, Trebizond April 18. On the Tigris the totally inadequate British force which had been sent from India against Bagdad was compelled to surrender, (Kut-el-Amara, April 28, 1916,) but this was unimportant except as it affected British prestige in the East. In the Spring of 1916, on the Italian front, the Austrians, relieved from the pressure of the Russians, invaded northern Italy and were steadily making progress, when a renewed Russian offensive (June, 1916) made it necessary to recall Austrian troops, and this saved the situation for the Italians.

The Russians had recuperated in an astonishing degree, and in June, 1916, under General Brusiloff, took the offensive, quickly overran Bukowina, and became dangerous in Galicia, again threatening Lemberg. So strong was the pressure on Austria-Hungary through the Summer of 1916 that the Rumanians, who had been waiting with a mobilized army for a chance to win spoil in the war, thought that Austria was sufficiently weakened to enable the Rumanian Army to seize Transylvania. In this belief Rumania declared war, Aug. 27, 1916, and at once invaded the coveted province, without making any attempt to act in unison with the Entente Allies.

Never was there a more complete failure. Hindenburg had made unsuspected preparations for just such action on the part of Rumania. Two armies under Mackensen and Falkenhayn were ready—they swept the Rumanians out of Transylvania, invaded Dobrudja, and, united under Mackensen, conquered Ru-

mania without a check. (Bucharest captured, Dec. 6, 1916.) The Teutons had gained rich wheat fields and oil lands at small cost, and only Moldavia was left in the hands of the Rumanians.

Battle of the Somme

On the western front the Entente Allies had begun their great offensive of the year on July 1, 1916. This is known as the battle of the Somme, and it lasted intermittently until November. As has been said, the Allies had much strengthened their artillery. At first there was great encouragement at the gains made, but after a time it became evident that, while they were taking a certain number of trenches, these trenches were being yielded only at a prohibitive price in losses. For months the British losses alone were far above 100,000 a month, and the battle gradually slowed down to raiding tactics. As was the case in 1915, the pressure of the allied assaults had not been sufficient to affect the situation in the east and prevent the conquest of Rumania.

The Italians, relieved by the withdrawals of Austrian troops to Galicia in June, 1916, won their one victory of the war by the capture of Gorizia, Aug. 9, 1916, but they have been unable to make any progress in the difficult mountainous country from that time to the present date. However, there is an Italian army of perhaps 200,000 men in Albania, which helps the allied situation in the Balkans, although it has aroused the jealousy of Greece. In this region, in spite of the fact that King Constantine has abdicated and Greece is nominally pro-ally, the Greek situation has been so uncertain that General Sarraïl's Balkan army has remained inactive.

Battle of Jutland

On the sea in 1916 the German High Sea Fleet came out and fought the British Grand Fleet, so timing its battle that the German fleet first struck Vice Admiral Beatty's advance force, which was out of touch with Admiral Jellicoe's main fleet. After badly damaging this detached force, the German fleet managed to engage the superior British fleet under conditions of mist and falling darkness,

with threatened torpedo attacks, which caused the British fleet to draw off from the battlefield—to return to it the next morning. In consequence, the German fleet was enabled to return to port with the prestige of having inflicted heavier losses on the British, and of having remained on the battlefield. This great naval battle (Jutland, May 31, 1916) had no effect on England's control of the sea, but it had a great moral effect in Germany.

Throughout 1916 Germany developed increased tactical use of the submarines, and Feb. 1, 1917, began unrestricted submarine warfare in the greatly enlarged war zones, which included all the waters about her enemies. Since then large numbers of Teuton U-boats have caused a serious loss of shipping, and this successful tactical result has made the submarine campaign as much a part of the grand tactics of the war as any movements of the armies. In fact, the submarine is now the most dangerous weapon possessed by the Teutonic Allies.

Dissatisfaction with the conduct of the war in 1916, especially with the Somme offensive, had brought about a political change in England, and the energetic Lloyd George was made head of the new War Council, (Dec. 6, 1916.) Increased preparations in great guns and munitions were made by Great Britain and France, and Russia was equipped as never before.

Events of 1917 Summarized

In the beginning of 1917 an adequate British expedition was approaching Baghdad, (taken March 11, 1917,) and Russian forces were moving to co-operate in Asia Minor and Persia. There appeared to be hope of cutting through the Teuton "bridge" to the east, but suddenly the Russian revolution broke out (Czar abdicated March 15, 1917) and all the Russian armies were paralyzed for any offensive value.

For four months the Russian armies did practically nothing but debate. In July, 1917, there was a feverish offensive, urged on by the Russian democratic leader, Kerensky, and the Russians made gains in Galicia, probably helped by the surprise and by withdrawals of Teutonic

troops. But when Austro-German forces were brought up against them, the Russian troops again became demoralized, and many of them refused to fight, marching away in Galacia without firing a shot. This is the situation at the time of writing. However, there is one favorable element in this Russian situation which must be kept in mind: Evidently the Teutonic allies are still compelled to keep large forces on the Russian fronts.

On the western front, in the Spring of 1917, a great allied offensive, using the new strength of artillery, was launched against the Arras salient, which extended from north of Arras beyond Soissons. Here an extraordinary situation developed. Hindenburg had anticipated the attack of the Allies on this sector, and he had withdrawn to more favorable positions behind the exposed salient, (March, 1917.)

Leaving small detachments in his trenches to keep up appearances, Hindenburg had moved back his men, his guns, and all his material safely to his new positions. That he was able to do this on a front of over fifty miles, unsuspected and unmolested, with the air full of allied airplanes, is comment enough on the limitations of scouting from the air. An attack in force by the Allies while this movement was going on would have been dangerous for the Germans.

At first this withdrawal was not understood, but in the battle of Arras (April 9-May) which followed, it was found that Hindenburg had improved his own positions and given the Allies a devastated and shell-scarred terrain to fight over. There were gains for the Allies at first, but, as before, the battle waned into raids, and there has been no aggressive fighting in this region for weeks. Again the only tactical result of great effort has been the number of Germans who have been put out of action.

A terrific blast of over 1,000,000 pounds of high explosives which had been placed in mines under a salient at Messines, south of Ypres, wrecked everything in the German trenches (June 7, 1917) and gave the British possession; but no

(Photo © Underwood & Underwood)

tactical gain has followed, and this is cited merely to show the proportions to which mining operations have grown. Since then north of Ypres the Germans, by a concentration of artillery unnoticed by the airplanes, destroyed British forces across the Yser Canal and captured their position. This British loss was of some tactical importance, as it strengthened the German hold on the Belgian coast, which is now realized to be a dangerous German base. At the time of writing, a new British offensive has begun in Flanders.

In spite of all the resources devoted to them in the three years of warfare, aircraft have not become a part of the grand tactics of the war. The Zeppelins have not been of any military value, and airplanes have not yet been devised that can carry their fuel and sufficient weight of explosives for serious bombardments. Even for the short flights over the Channel the raids have been mere haphazard dropping of bombs, and have not won any military results; and for scouting and direction of artillery the present airplanes have great limitations.

True Military Situation

From the foregoing, it is evident that the advantage would be with the Teutonic allies if it were possible to weigh the military results of this war in the usual scales. But such standards of other days do not apply to this epoch-making cataclysm. Entirely different estimates must be made to arrive at the true military situation. To military critics the one outstanding fact is that this war is being

fought with enormous losses in men and material out of all proportion to the military results attained.

Changes to intrenching tactics have greatly increased the tasks of the armies and multiplied their losses. The giant proportions of the artillery and of material of all kinds in these campaigns have become a fearful drain, such as has never before been imagined. Simply to consider the tons of costly munitions thrown away in an everyday bombardment is astonishing, and expenditure on the same enormous scale must be made in all the other material. The constant appalling losses of men* and the incalculable wastage of material have become the dominant factor in the grand tactics of the war, and all other military results are dwarfed in comparison.

In all the wars in the past, the military results have been self-evident in victories and in gain of territory. In this war, to judge from any such evidence would be to arrive at a false estimate of the actual military situation, which is not contained in any list of victories or in any advantages that can be seen on the map. The real military results have gone far beyond all this, and the only true estimate of the present tactical situation is to realize that the real results of the grand tactics of three years of war are two groups of haggard nations, equally depleted in men and resources—and equally war weary!

* A conservative estimate of those killed in three years is 7,000,000.

Estimates of War Casualties

OFFICIAL statistics of the killed, wounded, and missing are not regularly published by any one of the nations, though compilations made from official lists as published each month by some of the belligerents convey a fairly accurate idea of the losses. These lists, however, do not specify the particular periods covered.

The German official casualty lists, re-

ported during June, 1917, are as follows:

Killed and died of wounds.....	28,819
Died of sickness.....	3,215
Prisoners	1,835
Missing	36,772
Severely wounded	21,315
Wounded	5,354
Slightly wounded	56,160
Wounded remaining with units.....	13,077

Total166,547

The above casualties, added to those

reported in previous months, (including the corrections reported in June, 1917,) bring the totals reported in the German official lists since the beginning of the war to:

Killed and died of wounds.....	1,032,800
Died of sickness.....	72,960
Prisoners	316,506
Missing	275,460
Severely wounded	590,883
Wounded	315,239
Slightly wounded	1,655,685
Wounded remaining with units.....	263,774

Total4,523,307

The above figures include all German nationalities — Prussians, Bavarians, Saxons, and Württembergers. They do not include naval casualties or casualties of colonial troops.

Since these figures were put into type the German casualty totals for July, 1917, have been published, adding an aggregate of 89,863 to the total in the foregoing table.

The British casualties, as officially reported for July, 1917, prove the extreme severity of the fighting in the series of offensives launched by Field Marshal Haig. In that month alone the casualties totaled 71,348, of whom 2,490 were officers and 68,858 men; killed, died of wounds, and missing were 723 officers and 16,276 men; only 2 officers were made prisoners of war, and only 96 men. The ghastly figures for the five months of March, April, May, June, and July, 1917, tell a tale of ferocious fighting, and are as follows, respectively:

	Officers.	Men.
March	1,765	28,709
April	4,381	31,619
May	5,991	107,075
June	3,601	84,667
July	2,490	68,858
Total	18,228	252,928

This makes a grand total of 271,256 British casualties for the five months.

In July, 1915, estimates by the Red Cross were as follows for the first year of the war:

	First 6 Mos.	First 12 Mos.
Dead	482,000	1,000,000
Severely wounded	97,000	200,000
Slightly wounded	760,000	1,500,000
Prisoners	233,000	485,000

In March, 1917, the official compilations at Washington placed the number of German dead at 893,000, wounded at 450,000, captured and missing at 245,000.

The untrustworthiness of all present estimates is clear from the above. The number of German prisoners and missing estimated in the first year is put at 485,000, whereas near the end of the third year the number officially reported by Germany is 591,966.

On Dec. 6, 1915, the following tables were compiled, showing the losses during the first fifteen months of the war:

	Killed.	Wounded.	Prisoners and Missing.
Great Britain	115,000	351,000	710,000
France	270,000	840,000	180,000
Russia	450,000	1,400,000	375,000
Italy	72,000	224,000	48,000
Belgium	27,000	84,000	18,000
Serbia	27,000	84,000	18,000
Montenegro	4,500	14,000	3,000
Germany	485,370	1,510,040	323,580
Austria	319,140	992,880	265,950
Turkey	45,000	140,000	30,000
Bulgaria	36,900	112,000	24,000

In March, 1917, compilations made at Washington were tabulated as follows, covering the period from the beginning of the war to February, 1917:

	Dead.	Wounded.	Prisoners and Missing.
Russia	1,500,000	784,200	800,000
France	870,000	540,800	400,000
Great Britain	205,400	102,500	107,500
Rumania	100,000	150,000	250,000
Italy	105,000	49,000	56,000
Belgium	50,000	22,000	40,000
Serbia	60,000	28,000
Germany	893,200	450,000	245,000
Austria	523,000	355,000	591,000
Turkey	127,000	110,000	70,000
Bulgaria	7,500	7,000	6,000

Estimates at the end of the third year, published July 28, 1917, are tabulated as follows:

	Killed.	Seriously Wounded.	Capt'd or Missing.	Total.
England..	*298,988	177,224	182,452	659,664
France ...	1,580,000	921,328	696,548	3,197,876
Russia ...	2,062,064	1,223,476	1,243,096	4,528,636
Italy	130,356	60,840	68,292	259,488
Belgium..	62,064	27,324	149,644	239,032
Serbia ...	74,484	34,776	109,260

Totals ..4,263,956 2,444,968 2,341,032 9,049,956

*Includes Canadian and Australian but not Indian troops.

	Killed.	Seriously Wounded.	Capt'd or Missing.	Total.
Germany..	1,908,800	958,612	704,128	3,571,540
Austria ..	849,368	540,673	833,644	481,096
Turkey ..	157,644	236,548	86,904	481,096
Bulgaria..	9,324	8,676	7,452	25,452
Total ..	2,925,136	1,744,509	1,632,128	6,301,776

Grand tls. 7,188,092 4,189,477 3,973,169 15,351,732

Eighty per cent. of the Entente allied wounded return to the armies; Germany claims that 85 per cent. of her wounded return as combatants.

According to an Associated Press estimate made May 15, 1917, the Central Powers held the following prisoners at that time:

Held by Germany...1,690,731 (17,474 officers)
 By Austria.....1,092,055
 By Bulgaria.....67,582
 By Turkey.....23,903

Total2,874,271 (27,620 officers)

This total is made up as follows:

	Total.	In Germany.
Russian prisoners.....	2,080,699	1,212,007
French	368,607	367,124
Serbian	154,630	25,879
Italian	98,617
Rumanian	79,033	10,157
British	45,241	33,129
Belgian	42,437	42,435
Montenegrin	5,607

The total number of prisoners taken by the Allies up to May, 1917, was estimated at 1,284,050, divided as follows:

	In England.	In France.	In Russia.	In Italy.
German prisoners ..	85,000	259,050	250,000
Austrian	550,000	80,000

In addition, 40,000 Austrians and Bulgarians captured by Serbia are now in Italy, and 20,000 Turkish prisoners are in Egypt.

Arrival of the Japanese Mission

Other Visiting Envoys

A JAPANESE Commission, headed by Viscount K. Ishii, Ambassador Extraordinary and Plenipotentiary, arrived at a Pacific port on Aug. 13, 1917, where its members were met by an official delegation from Washington consisting of Breckenridge Long, Third Assistant Secretary of State, and Gavin McNab, an attorney, with representatives of the army and navy. A United States battleship circled the Japanese vessel during its approach to the port, and masses of troops at "present arms" lined the streets through which the mission passed, while the Japanese anthem was played. A reception in the City Hall began a series of entertainments lasting three days, during which every appropriate honor and courtesy was vouchsafed the visitors.

At a dinner given to the mission in the evening of Aug. 14 Viscount Ishii said:

We are here to say that in this tremendous struggle for those rights and liberties America and Japan are bound together; that when the victory of the allied forces is secure, America and Japan should so live that your sons and our

sons will have a certainty of good neighborhood; so live that no word or deed of either can be looked upon with suspicion; that venomous gossip, hired slander, sinister intrigue and influence, of which we have both been the victims, can in future only serve to bring us closer together for mutual protection and for the common welfare.

The importance of this co-operation was brought home to us particularly as we voyaged safely and pleasantly across the Pacific Ocean. We must indeed have assurance of good order in our neighborhood. We cannot, either of us, take risks. It becomes the first duty of Japan and America to guard the Pacific and to insure safe, continuous intercourse between Asia and the United States, to see to it that the ships of the ferocious pirates whose crimes upon the high seas can never be palliated find no shelter in the waters of our seas.

It is for us together to continue to enforce respect for law and humanity upon the Pacific, from which the German menace was removed at the commencement of the war. Had this not been so, had the barbarian of Europe not been rooted from his Oriental bases, the shuddering horrors of the Atlantic and the Mediterranean would today be a grim reality on the Pacific. In the protection of our sea-going merchandise and men,

in safeguarding the pleasures of intercourse, you may count on us as we must count on you.

In the dawning of this new day of stress and strain let us forget the little molehills that have been exaggerated into mountains to bar our good relations. Let us see together with a clearer vision the pitfalls dug by a cunning enemy in our path, let us together fix our eyes upon the star of principle which shall lead us together most surely to a participation in the triumph of the right, to a certain victory in the greatest and, let us hope, the last great war in human history.

The cordiality of the Pacific Coast's reception of the mission impressed the visitors deeply. "Your action," said their spokesman, when departing for Washington, "clears away many a doubt and misunderstanding on the part of the people of both countries as to our mutual aims and aspirations. Your generous attitude makes it possible for every fair-minded man to believe that there are no pending questions between America and Japan which, approached in this spirit, are not susceptible of honorable and fair adjustment."

Nansen's Norwegian Mission

All the neutral nations of Europe were greatly perturbed by President Wilson's declaration of July 9, placing under Government control the volume of foodstuffs and other wartime material which may be sent to other countries. As put into operation, this order has resulted in a virtual embargo on foods, forage, and fats bound for neutral lands adjoining Germany. At the present writing more than eighty Dutch vessels laden with such cargoes have been waiting for a month in New York Harbor and adjoining waters for a ruling that would give them clearance papers.

Norway was among the first of the European neutrals to send missions to this country to negotiate for a relaxation of the embargo, which, they declared, threatened them with starvation. Dr. Fridtjof Nansen, the arctic explorer, headed the Norwegian Mission, which reached Washington at the beginning of August, and held a long conference with the State Department on Aug. 8.

To press representatives Dr. Nansen stated that at the beginning of the war Norway had 3,000,000 tons of merchant

shipping, and that one-third of it had fallen victim to Germany's submarines. Most of the ships so lost, he said, were

DR. FRIDTJOF NANSEN

serving the Allies when destroyed. Dr. Nansen stated his case as follows:

The fact that our imports from the United States have increased during the war does not mean that our total imports have increased. Exportation of fats, grain, and sugar is wholly prohibited; no licenses are issued for them. What we want first of all are foodstuffs, because Norway does not produce enough to live on. Our chief needs are carbohydrates, which are found in wheat, sugar, and fats; if they are cut off it will mean starvation. We had an instance of that one hundred years ago, during the Napoleonic wars, and we don't want to experience it again.

Our exports to Germany now consist of fish, principally. We wish to remain neutral, and it would be unneutral to cut off all supplies to one side and permit them to continue to go to the other side. Meats, fats, milk, butter, everything in the way of Norwegian foodstuffs, except fish, has been cut off from Germany, and fish is exported to Germany in accordance with an agreement with Great Britain. We have maintained that we could not cut off fish to Germany because that would mean war with Germany; whatever is now exported to Germany is really with the consent of the British Government. My hope is to come to some agreement with the United States on the lines we have with Great Britain.

A Swedish mission for the same purpose, headed by Hermann Lagerkrantz, former Swedish Minister to the United States, visited Washington in July. A similar mission from Switzerland, consisting of National Counselor John Suz, Colonel Staenpfi, and Professor William Rappard, arrived on Aug. 15, in company with Dr. Hans Sulzer, the new Swiss

Minister to the United States to succeed Dr. Paul Ritter. At the same time an official mission of the same nature was sailing from Holland. Its chief spokesman, Joost von Vollenhoven, declared: "If we fail to persuade the American Government to permit a continuance of the supply of grain it will mean misery and economic ruin for Holland."

Serbia's Plan of Reorganization

Following is a summary of an official statement issued in July, 1917, by the Serbian Press Bureau on the Island of Corfu:

AT a conference of members of the former Coalition Cabinet, the present Cabinet, and the representatives of the Yugoslav Committee, views were exchanged with the co-operation of the President of the Skupshtina on all questions relating to the life of the Serbians, Croats, and Slovaks in their future united state. Complete unanimity on every question that arose prevailed. Divided among several States our country is cut up in Austria-Hungary alone into eleven provincial administrations with thirteen legislative bodies. The war forced by German militarism upon Russia, France, and Great Britain has been transformed into a fight for the liberty of the world and for the triumph of right over force. To noble France, which proclaimed the liberty of nations, and to Great Britain, the home of liberty, there has been joined the great American Republic and the new, free, and democratic Russia in proclaiming as the principal object of the war the triumph of liberty and democracy, and, as the basis of a new international system, the freedom of nations to govern themselves.

The authorized representatives of the Serbs, Croats, and Slovenes declare that the desire of our people is to free itself from all foreign oppression and to constitute itself into a free, national, and independent State, based on the principle that every people is free to govern itself, and are agreed in considering that this State should be founded on the following modern and democratic principles:

1. The State of the Serbs, Croats, and Slovenes, who are also known by the names of Southern Slavs and Jugoslavs, will be a free and independent monarchy, with an indivisible territory and unity of power. This State will be a constitutional, democratic, and Parliamentary monarchy, with the Karageorgevitch dynasty, which has always shared the ideals and feelings of the nation in placing above everything else the national liberty and will at its head.

2. The name of this State will be the Kingdom of the Serbs, Croats, and Slovenes, and the title of the sovereign will be King of the Serbs, Croats, and Slovenes.

3. This State will only have one coat of arms, one flag, and one crown.

4. The four different flags of the Serbs, Croats, and Slovenes will have equal rights, and may be hoisted freely on all occasions. The same will obtain for the four different coats of arms.

5. The three national denominations, the Serbs, Croats, and Slovenes, are equal before the law in all the territory of the kingdom, and each may freely use it on all occasions in public life and before all authorities.

6. The two Cyrillic and Latin alphabets also have the same rights, and every one may freely use them in all the territory of the kingdom. The royal and local self-governing authorities have the right and ought to employ the two alphabets according to the desire of the citizens.

7. All religions are recognized, and may be free and publicly practiced. The Orthodox Roman Catholic and Mussulman religions, which are most professed in our country, will be equal, and will enjoy the same rights in relation to the State. In view of these principles, the Legislature will be careful to preserve the religious peace in conformity with the spirit and tradition of our entire nation.

8. The Gregorian calendar will be adopted as soon as possible.

9. The territory of the Serbs, Croats, and Slovenes will comprise all the territory where our nation lives in compact masses and without discontinuity, and where it could not be mutilated without injuring the vital interests of the community. Our nation does not ask

for anything which belongs to others, and only claims that which belongs to it. It desires to free itself and establish its unity. That is why it conscientiously and firmly rejects every partial solution of the problem of its freedom from the Austro-Hungarian domination.

10. The Adriatic Sea, in the interests of liberty and equal rights of all nations, is to be free and open to all and each.

11. All citizens throughout the territory of the kingdom are equal and enjoy the same rights in regard to the State and the law.

12. The election of Deputies to the national representation will take place under universal suffrage, which is to be equal, direct, and secret. The same will apply to the elections in the communes and other administrative institutions. A vote will be taken in each commune.

13. The Constitution to be established after the conclusion of peace by the Constituent Assembly elected by universal, direct, and secret suffrage will serve as a basis for the life of the State. It will be the origin and ultimate end of all the powers and all rights

by which the whole national life will be regulated. The Constitution will give the people the opportunity of exercising its particular energies in local autonomies, regulated by natural, social, and economic conditions. The Constitution must be adopted in its entirety by a numerical majority of the Constituent Assembly, and all other laws passed by the Constituent Assembly will not come into force until they have been sanctioned by the King.

Thus the united nation of Serbs, Croats, and Slovenes will form a State of twelve million inhabitants. This State will be a guarantee of their national independence and of their general national progress and civilization, and a powerful rampart against the pressure of the Germans, and an inseparable ally of all civilized peoples and States. Having proclaimed the principle of right and liberty and of international justice, it will form a worthy part of the new society of nations.

Signed at Corfu, July 20, 1917, by the President of the Council and Minister of Foreign Affairs of the Kingdom of Serbia, Nikola Pashitch, and the President of the Yugoslav Committee, Dr. Anto Trumbic.

O Valiant Hearts

By JOHN S. ARKWRIGHT

[A new hymn sung at the intercession service in Westminster Abbey, London, on the third anniversary of the war.]

O valiant Hearts, who to your glory came
Through dust of conflict and through battle-flame;
Tranquil you lie, your knightly virtue proved,
Your memory hallowed in the Land you loved.

Proudly you gathered, rank on rank to war,
As who had heard God's message from afar;
All you had hoped for, all you had, you gave
To save Mankind—yourselves you scorned to save.

Splendid you passed, the great surrender made,
Into the light that nevermore shall fade;
Deep your contentment in that blest abode,
Who wait the last clear trumpet-call of God.

Long years ago, as earth lay dark and still,
Rose a loud cry upon a lonely hill,
While in the frailty of our human clay
Christ, our Redeemer, passed the self-same way.

Still stands His Cross from that dread hour to this
Like some bright star above the dark abyss;
Still, through the veil, the Victor's pitying eyes
Look down to bless our lesser Calvaries.

Russia Passes Through Deep Waters

Kerensky's New Leadership

THE Russian revolution encountered its most perilous period toward the end of July, 1917, and for a time conservative judgment in the United States and England entertained grave fears of civil war or anarchy; but there was remarkable restraint on the part of the masses when affairs seemed at their worst, and out of the depths of the national spirit there arose a new revolution to save the situation and maintain order. Within a fortnight after the crisis the forces of law and order were firmly in the ascendancy and the revolution seemed more strongly intrenched by the middle of August than at any previous time.

When matters were at their worst late in July, the country everywhere the scene of riotous disturbances, the army in a state of demoralization, anarchists, radicals, and monarchists seeming to be working hand in hand to precipitate a reign of terror, the real Russian conservatives who accomplished the original revolution practically without bloodshed, again took control and effected a complete reorganization of the Provisional Government.

Kerensky Saves the Situation

On July 20 it was announced that the Premier, Prince Lvoff, had resigned, and that Alexander F. Kerensky had been appointed Premier, but would also temporarily retain his portfolio as Minister of War and Munitions. A new Government was quickly formed. Kerensky was made practical dictator, and his Government received the complete indorsement of the Joint Congress of Workmen's and Soldiers' Councils and of the All-Russia Council of Peasant Delegates, conferring upon the new Premier and his Cabinet unlimited authority.

The effect was electrical. Orders were given to fire on deserters and runaways at the front, and warrants were issued for the arrest of revolutionary agitators wherever they might be. Rear Admiral

Verdervski, commander of the Baltic fleet, was seized for communicating a secret Government telegram to sailors' committees. Lieutenant Dashkevitch and another executive committeeman of the Workmen's and Soldiers' Council also were arrested, the former on the charge of inciting the Peterhof troops to remove the Provisional Government.

The decision of the councils to resort to the extreme measure of conferring supreme and unrestricted power on the Government was reached after a session that lasted throughout the night of July 22, and was embodied in the following resolution, which was passed by 252 to 57:

Recognizing that the country is menaced by a military débâcle on the front and by anarchy at home, it is resolved:

First—That the country and the revolution are endangered;

Second—That the Provisional Government is proclaimed the Government of National Safety;

Third—That unlimited powers are accorded the Government for re-establishing the organization and discipline of the army for a fight to the finish against the enemies of public order and for the realization of the whole program embodied in the Governmental program just announced.

A Ringing Proclamation

The Executive Councils of the All-Russia Workmen's and Soldiers' and Peasants' organizations issued the following proclamation on the 23d:

Fellow-soldiers: One of our armies has wavered, its regiments have fled before the enemy. Part of our front has been broken. Emperor William's hordes, which have moved forward, are bringing with them death and destruction.

Who is responsible for this humiliation? The responsibility rests with those who have spread discord in the army and shaken its discipline, with those who at a time of danger disobeyed the military commands and wasted time in fruitless discussions and disputes.

Many of those who left the line and sought safety in running away paid with their lives for having disobeyed orders. The enemy's fire mowed them down. If

this costly lesson has taught you nothing, then there will be no salvation for Russia.

Enough of words. The time has come to act without hesitation. We have acknowledged the Provisional Government. With the Government lies the salvation of the revolution. We have acknowledged its unlimited authority and its unlimited power. Its commands must be law. All those who disobey the commands of the Provisional Government in battle will be regarded as traitors. Toward traitors and cowards no mercy will be shown.

Fellow-soldiers: You want a durable peace. You want your land, your freedom. Then you must know that only by a stubborn struggle will you win peace for Russia and all nations. Yielding before the troops of the German Emperor, you lost both your land and your freedom. The conquering, imperialistic Germans will force you again and again to fight for your interests.

Fellow-soldiers at the front: Let there be no traitors or cowards among you. Let not one of you retreat a single step before the foe. Only one way is open for you—the way forward.

Fellow-soldiers in the rear: Be ready to advance to the front for the support of your brothers, abandoned and betrayed, fleeing from their positions in the regiments. Gather all your strength for the struggle for a durable peace, for your land and your freedom. Without wavering, without fear, without disastrous discussions, carry out all military commands. At the time of battle disobedience and wavering are worse than treachery. Your ruin lies in them, the ruin of Russia.

Fellow-soldiers: You are being watched by those who work for Russia and by the whole world. The ruin of the Russian revolution spells ruin for all. Summon up all your manhood, your perseverance and sense of discipline and save the fatherland.

Provisional Government's Action

The Provisional Government also issued a proclamation on July 22 charging that the disorders were precipitated to bring about a counter revolution by the enemies of the country. Proceeding, the proclamation said:

The Government firmly believes that the crisis will lead to recovery, not death. Strong in that belief, the Government is ready to act with the energy and resolution the exceptional circumstances demand. The Government regards as its first and capital task the application of its whole strength to the struggle against the foreign foe and to the defense of the new Governmental régime against every anarchical and counter-revolutionary at-

tempt, without hesitating to take the most rigorous measures in its power. At the same time the Government reiterates that not a drop of blood of a Russian soldier shall be shed for any foreign end, as already proclaimed to the whole world. * * *

The Government considers it indispensable immediately to proceed with a series of measures putting the principles announced on May 19 into operation, and adheres to the steps already taken to convene a constituent assembly on Sept. 30. The speediest introduction of autonomy for municipalities and Zemstvos, based on direct, equal, secret, universal suffrage, and the extension of this principle to the entire country is the Government's chief problem in internal policy.

Military Disaster

The political crisis produced deeper demoralization in the army, which disregarded discipline and refused to recognize military rule. A general retreat followed. The Germans and Austrians steadily advanced through Galicia and crossed the frontier before the Russian armies could be forced to make a stand. The death penalty for treason or mutiny was restored in the army on July 25, when Kerensky threatened to resign unless this was done. The Government on July 25 authorized the Minister of the Interior to suspend the publication of periodicals that incite to insubordination or disobedience to orders given by the military authorities.

On the 25th the Council of Workmen's and Soldiers' Delegates and the Peasants' Congress issued another proclamation, declaring:

Lack of discipline and open treachery at the front are facilitating Field Marshal von Hindenburg's new offensive. The serious defeats inflicted on our army are opening the way to the enemy for increasing the general panic and preparing the soil in which the poisonous seeds of counter-revolution may come into full bloom. Already an attack is being organized by the strong bourgeoisie; already the jackals and hyenas of the old régime are howling. * * *

We turn to you, our representatives, with a passionate appeal. * * * Support the revolutionary authority; try to secure the full submission of workingmen, soldiers, and peasants to all the decisions of democracy's majority. Inspire them; awaken enthusiasm in them. Exert your entire will, your entire energy. Rally round our All-Russian centres and we will show the country and

the world that the nation which created the greatest revolution in the world can not and shall not perish.

By July 28 the situation had become more hopeful. On that day General Nicholas Ruzsky, formerly Commander in Chief of the northern armies of Russia, and General Gurko, ex-commander on the Russian southwestern front, were summoned to Petrograd. The retirement of General Ruzsky from command of the armies of the north and of General Gurko from a group in the south had involved the same principle, but from different points of view—interference with the Provisional Government by the Council of Workmen's and Soldiers' Delegates.

Pro-German Agitators Censured

As further evidence of the return of reason the Executive Committee of the Council of Workmen's and Soldiers' Delegates adopted by an overwhelming majority (300 to 11) a resolution censuring Lenine and his associate, Zinovieff, and demanding that the Radical leaders be tried. The resolution contains the following recommendations:

First—The whole revolutionary democracy desires that the group of Maximalists accused of having organized disorders or incited revolts or of having received money from German sources should be tried publicly. In consequence, the Executive Committee considers it absolutely inadmissible that Lenine and Zinovieff should escape justice, and demands that the Maximalist faction immediately and categorically express its censure of the conduct of its leaders.

Second—In view of the exceptional situation, the committees of Workmen's and Soldiers' Delegates demand from all their members and from all factions of which they are composed, as well as from all members of local councils, the putting into absolute practice of all decisions adopted by the majority of the central organizations.

It was disclosed on July 31 that the crisis in Russia earlier in the month had been the work of radicals like Lenine working under German direction and financed by Germans. A whole day before the news of the crisis in Petrograd reached the army Lenine's agents were acquainted with it through traitors in the wireless service. They spread a report among the troops that the Maximalists

were in control of the Government and that the war was at an end, hence the army became demoralized and the German advance was practically unopposed.

On Aug. 2 it was announced that General Alexis A. Brusiloff, Commander in Chief of the Russian Armies, had resigned. General L. G. Korniloff, Commander in Chief of the Russian armies on the southwestern front, was appointed Generalissimo. General Tcheremisoff, commander of the Eighth Army, was appointed to succeed General Korniloff on the southwestern front.

Cabinet Reorganization

The Cabinet was disrupted on Aug. 3 by charges made against M. Tchernoff, the Socialist Minister of Agriculture, whose resignation was demanded by Kerensky and his fellow-Ministers. Kerensky then undertook the difficult task of organizing a coalition Cabinet, and was at length successful. The new Cabinet was announced Aug. 7. Only three of the original Ministers survived: Kerensky, who was originally Minister of Justice; Terestchenko, Minister of Finance, and Nekrasoff, First Minister of Communications. In addition these four Ministers were included from the first Kerensky Cabinet of July 24: Tchernoff resumed his portfolio of Agriculture; Pieschelonoff, that of Supplies; Yefremoff, that of Justice, and Skobelev, that of Labor.

Four of the most prominent Parliamentary Socialists—Kerensky, Skobelev, Tchernoff, and Pieschelonoff—were retained, while extreme radicals, whether Socialists or not, were dropped. Tseretelli, who was the famous obstructionist leader of the Council of Workmen's and Soldiers' Delegates, in the Department of Posts and Telegraphs, gave way to M. Nikitine, a Social Democrat.

A feature of the new Cabinet was the appearance of representatives of the "bourgeoisie" class, who so long held aloof and who appeared as Constitutional Democrats—M. Oldenburg of the Academy of Sciences, M. Astroff, Mayor of Moscow; M. Kartasheff, who succeeded Nicholas Lvoff as Prosecutor of the Holy Synod, and Golovine, who succeeded Godneff as Controller of State.

There were four Parliamentary Socialists and one Social Democrat facing four representatives of the new Constitutional Democracy, which also had the support of the non-Socialists who came over from the late Cabinet—Terestchenko, Nekrasoff, Yefremoff, and Prekopovitch—who swing the balance of power.

Conditions began to show improvement from this time forth. On Aug. 11 the Government showed confidence by announcing that commissions would be appointed in connection with the establishment of iron discipline in the army. The Government also prohibited the further holding of all meetings or congresses which they regard as dangerous from a military viewpoint or as menacing the security of the State.

Colonel Kolotkoff's Report

Causes of the military collapse were set forth Aug. 10, in a report by Colonel Kolotkoff to the Council of Workmen's and Soldiers' Delegates, who placed the responsibility on the former policemen, gendarmes, and spies of Emperor Nicholas at the front.

Until the end of June, says Colonel Kolotkoff, the army on the west front was in excellent fighting trim technically, and was beyond criticism as regards supplies. There was an admirable plan to advance, which would probably have led to the reconquest of Vilna, but the police, gendarmes, and spies of the autocracy started a counter-revolutionary campaign, the first aim of which was the dissolution of the army.

Large numbers managed to get elected to company committees, and started a propaganda against war, inciting soldiers against officers and the Provisional Government's commissaries. Later they distilled vodka, and on the advance dosed soldiers therewith. Criminal convicts, who were sent to the army as were deserters, demoralized the soldiers by their example.

The Germans took advantage of these conditions and flooded the Russian trenches with spies in Russian uniforms, finding this easy because many Russian soldiers at the front do not carry documents of identity. Many of these Germans spoke Russian so well that they sat

at the officers' mess without exciting suspicion. The spies organized fraternization. Soldiers born in provinces occupied by the enemy were allowed to visit their homes, and after a short absence returned to the trenches completely Germanized in sentiment.

The result was that as the attempt was started to recover Vilna many soldiers refused to participate in the attack. How good was Russia's chance, says Colonel Kolotkoff, is proved by the fact that weakened Germans often ran away, and the strange spectacle of Russians flying from fleeing Germans was sometimes seen. The Germans realized the situation first, and having an iron discipline were able to turn the Russian collapse to advantage.

Return of the Root Mission

The Root Mission returned from Russia early in August, and reported to Washington Aug. 12. On that day, at a public reception given by the citizens of New York, Senator Root, head of the mission, expressed supreme confidence in the stability of the revolution. He spoke as follows:

The extraordinary ease with which the Czar's Government was removed was due not merely to the fact that it was an autocracy, but also to the fact that it did not govern efficiently; it was not up to the job; it had allowed Russia to drift into a position where there was vast confusion and they were on the verge of bankruptcy, and the Government had become, practically, merely a Government of suppression, a Government of negatives that ceased to lead the people, so that the Czar and the bureaucracy were slipped off as easily as a crab sheds its hard shell when the proper time comes.

Now, into that state of affairs there came intervention by that malevolent power which is intermeddling with the affairs of every nation upon earth, stirring up discord, stimulating, feeding, financing all the forces of evil—doing it here among us now—that power that finds its account in alliance with all evil passions, all the sordid impulses of humanity in every nation in the world, entered into Russia. Thousands of agents poured over the border immediately upon the revolution.

Notwithstanding all this, in a country with no Central Government that had power to enforce its decrees, in a country with no police, a country in which the sanction and moral obligation of the

laws had disappeared with the disappearance of the Czar, there reigned order to a higher degree than has existed in the United States of America during this period.

People's Wonderful Stability

In the first enthusiasm for freedom in the liberation of political prisoners a great many ordinary criminal prisoners were also released, and they went about and committed some depredations, which, of course, all found their way into the newspapers, but even with that the general average of peace and order, of respect for property and life in Russia was higher than could reasonably be expected from any 130,000,000 people in the world under any Government.

Now, that extraordinary phenomenon called for a study, a careful study, not merely from the newspapers or from talking with Government officials, but by countless serious interviews and conversations with men of all grades and stripes and callings and conditions of life, and those studies satisfied all the members of this mission that the Russian people possessed to a very high degree qualities that are necessary for successful self-government. They have self-control equaled in few countries of the world. They have persistency of purpose; they have a most kindly and ingrained respect—not only respect, regard for the rights of others. They will not willingly do an injustice to any one, and that sense of justice carries with it a broad character. They have a noble idealism which is developed and exhibited in the minds that are enlarged by education, and they have a strong sense of the mission of liberty in the world, and they have an extraordinary capacity for concerted action.

If their character is unequal to the task, all the aid of all the great countries in the world cannot give them their freedom. Freedom must find its foundation, its sure foundation, within the people themselves, and we think the Russians have that sure foundation. * * *

No one can tell what the outcome will be, but this is certain, that Russia, tired of the war, worn and harried by war; Russia, which has lost 7,000,000 of her sons, every village in mourning, every family bereaved, Russia has again taken up the heavy burden; she has restored the discipline of her army; she has put away the bright vision of peace and rest, and returned yet again to the sacrifice and the suffering of war in order that she might continue free.

Former Emperor Nicholas and his family were removed Aug. 15 from the palace at Tsarskoe Selo to Tobolsk, Si-

beria. The official announcement, not issued until the 19th, was as follows:

Owing to reasons of State, the Government decided to transfer to a new residence the ex-Emperor and ex-Empress, who are detained under guard. The place selected was Tobolsk, where they were taken after requisite measures to insure their safety. With them went of their own free will their children and certain of their entourage.

Former Czar an Exile

Nicholas was very depressed in appearance, but the former Empress, Alexandra, who was seen walking for the first time in months, seemed pleased at the prospect of a change in surroundings.

An hour after the train arrived Nicholas appeared on the steps of the palace, dressed in a Colonel's uniform, with a khaki blouse and with no decorations. Without lifting his eyes from the ground he entered an automobile, accompanied by Prince Dolgoroukoff and Count Benckendorff, former Court Marshal, who thus far have shared the captivity of the fallen ruler. They were followed by the former Empress Alexandra, who was accompanied by Countess Naryshken, her close friend and former Lady of the Court; all the four Grand Duchesses, with their maids of honor, and finally by Alexis, the former heir to the throne, at whose side was the gigantic sailor, "Derevenko," the protector of Alexis since his birth, and his constant companion and playmate.

Tobolsk is a remote town of 20,000 inhabitants in Western Siberia, far from the railroad, and visited only by steamers which ply the Irtish River. In former times it was an administrative centre for exiles banished to Siberia by the Russian rulers. The climate is extremely severe in Winter. Tobolsk recently achieved a dubious publicity in revolutionary Russia as the birthplace of Gregory Rasputin, the mystic monk, who wielded a remarkable influence over the ex-Emperor's family up to the time of the priest's assassination in Petrograd last December.

The Finnish Diet, under the influence of Swedish members, on July 19 adopted a bill refusing longer to recognize any rights of Russia in Finnish affairs. The

Provisional Government of Russia on July 25 refused to acknowledge the validity of this measure. On Aug. 4 the Finnish Senate by a vote of 7 to 6 adopted a resolution declaring the action in proclaiming independence a mistake, and asserting that the Provisional Government was the legitimate organ of control. This action, however, was not approved by the Deputies of the Landtag, and serious disorders arose, resulting in clashes between the Russian authorities and the independents, in which a number of Finns were killed and wounded.

The Ukraine National Assembly, which has declared for autonomy, includes in the request the following States to be incorporated into the new Government: Kiev, Poltava, Podolia, Volhynia, Tchernikov, Khargov, Ekaterinaslav, Kherson, Taurida, and Bessarabia.

The Russian Government is disposed to grant autonomy to all these districts except Bessarabia, where the Ukraine population is only 19 per cent., and a plébiscite will be held in that territory to determine the will of the majority.

Paris Conference on Balkan Affairs

A CONFERENCE of allied diplomats and military leaders held at Paris to examine into the situation in the Balkan Peninsula adjourned its last sitting on July 26, 1917. Before separating, the members unanimously passed the following resolution:

The allied powers, more closely allied and more closely united than ever before in defense of the rights of nations, especially those of the Balkan Peninsula, are determined only to lay down arms when they have reached the goal which in their eyes is more important than all others, that is, to render impossible any return in the future of acts of criminal aggression such as those for which the autocracy of the Central Empires has been responsible.

The conference reached an agreement concerning the Greek territories at present in military occupation. Great Britain, France, and Italy agreed to cease simultaneously, as soon as possible, the

military occupation they were obliged to undertake of territory in Old Greece, Thessaly, and Epirus. The occupation of the triangle formed by the Santi Quaranta road, the frontier, and Epirus will be continued provisionally, in view of the maintenance of order, pending an arrangement between Italy and Greece regarding the re-establishment of civil administration under the authority of a Greek Commissioner.

Great Britain, France, and Italy will retain for the period of the war the naval and military base at Corfu, which will remain under Greek sovereignty.

Representatives of all the allied countries had been invited to this conference. The decisions adopted were unanimously confirmed, and a conference of the Ministers of Departments concerned met shortly afterward in London to arrange measures for their execution.

The Socialists in the War

Their Pacifist Activities

DURING the last month the Socialists of various countries have caused a great deal of discussion on account of their attempt to hold an international conference at which terms of peace were to be formulated. As the Socialists include active pacifist elements in all countries and have become a focus of whatever strength there is in any general movement for peace, it is important to review their activities since the beginning of the war, and to grasp their point of view. Although the action of the British, French, Italian, and American Governments in refusing passports to delegates has virtually broken up the proposed Stockholm Conference, certain elements of socialism continue their agitation for such a conference, and are profiting by whatever discontent and weariness the war is producing.

Before the outbreak of the war at the beginning of August, 1914, the European Socialists had organized a revived "International," which borrowed the name and principles of an organization several decades earlier, and the purpose of which was to make war impossible by organizing general strikes in the different countries of Europe. It is of historic interest that this scheme of universal strikes was largely developed by Aristide Briand, France's great war Premier, in his earlier Socialist days.

When the war began the Parliamentary strength of the Socialists in Europe was as follows: In the German Reichstag there were about 100 Socialist members, of a total of 397; but the Socialists represented 4,250,399 votes out of 12,260,731 who actually voted; that is, considerably more than one-third, while they had only about a fourth of the Reichstag membership. But as under the German Constitution the Reichstag has no voice in the question of war or peace, these Socialist members had no opportunity at all to declare themselves

on the question of the invasion of Belgium and France.

In the French Chamber of Deputies, of a total of 602 members there were, at the beginning of the war, 102 organized Socialists and 30 independent Socialists. In the Russian Duma, elected in 1912, with a total of 383 members, there were 12 Social Democrats and 11 Labor members, but the Socialist Party was strong in the manufacturing centres. In the Italian Chamber of Deputies, elected in 1913, with 508 members, there were 80 Socialists. There were also a few Socialists in the British House of Commons.

When German armies invaded France the Socialist members of the French Chamber of Deputies frankly deserted the International and supported the Ministry, of which M. René Viviani, who afterward visited the United States, was then the head. Socialist Ministers like M. Albert Thomas, Minister of Munitions, were among the ablest members of the successive French War Ministries under Viviani, Briand, and Ribot.

Views of Various Leaders

In Germany Dr. Karl Liebknecht, at one time leader of the powerful Socialist Party, was the only member of the Socialist faction to vote against the war credits demanded by the Imperial Chancellor, Dr. Bethmann Hollweg. In the Tagwacht, published at Berne, in German Switzerland, Dr. Liebknecht wrote: "It is painful to write at a time when the radiant hope of former days, the Social International, lies smashed amid its thousand expectations; when even many Socialists of the belligerent countries of this most rapacious war will put on the yoke of imperialism." Dr. Liebknecht was severely rebuked by the German Socialist Party for violating the policies of their Reichstag caucus. He aroused the enmity of the Imperial Government by declaring that "this war was

begun by a lie and is carried on by lies"; and he was finally prosecuted, condemned, and sentenced to a long prison term on a charge of treason.

The Russian Socialist organ, *Sovremenny Mir* (the *Contemporary World*), declared that "the present war is caused by the vital interests of capitalist nations; it is the inevitable way of solving international conflicts in a bourgeois society. Russia's participation in this war is necessitated by the vital interests of the country, the imperative demands of its capitalistic development, and its social economic progress."

An International Congress of Socialists was planned to meet at The Hague, Holland, in July, 1915; but M. Vandervelde, the Belgian Socialist leader, refused pointblank to take part in it, as this would have involved meeting German Socialists. The French Socialists also refused to attend.

On July 27, 1916, the National Committee of the American Socialist Party began the preparation of a party platform, to be adopted by a mail referendum vote, and containing the following among other planks:

That all laws for the increase of the army and navy be repealed.

That power be taken from the President to lead the nation into war * * * that no war be declared or waged without a referendum vote of the people, except for the purpose of repelling invasion.

That the Monroe Doctrine be abandoned.

On July 31, 1916, an International Socialist Conference of six neutral nations—the United States, Spain, Sweden, Denmark, Argentina, Holland—was held, at which the Dutch Socialist leader, Pieter Jelles Troelstra, presided. Resolutions were passed demanding the reestablishment of the independence of Belgium and Poland and a democratic federal union of the Balkan States; an economic war after the war was condemned, and protests were recorded against the sentences of Dr. Liebknecht and others.

On Aug. 7, 1916, the National Council of French Socialists, assembled at Paris, voted by 1,824 to 1,075 votes to sever

international relations with the German Socialists.

Socialist Split in Germany

On Jan. 13, 1916, the German Socialist caucus censured Dr. Liebknecht for his opposition to the war policy of the Imperial German Government. On March 24, 1916, eighteen of the Socialist members of the Reichstag broke away from their comrades and founded an independent Socialist group, with the title of the Social Democratic Labor Union. Under the leadership of Philip Scheidemann, eighty-nine Socialist members of the Reichstag continued to support the Imperial war policy and to vote war credits.

On Oct. 11, 1916, speaking in the Reichstag, Scheidemann said: "We declare openly and clearly that the nation wants peace. * * *" Hugo Haase, leader of the dissenting minority of eighteen Socialists, said: "Millions are looking to the Reichstag for a glimmer of peace. * * * Our dream of domination in this war will never be realized. An agreement must be sought without hesitation in order to save the people from the worst. * * *"

These speeches were followed by Chancellor Bethmann Hollweg's "peace gestures" on Nov. 9 and Nov. 30, 1916.

On March 1, 1917, the British Socialists, refusing an invitation to a Socialist conference, voted that "the weakness of the German Social Democratic Party, whose leaders, despite pledges made in Paris and Brussels, vigorously supported the Junker and capitalist army of aggressive militarism, destroyed at a blow all the mutual international confidence between the Socialists of all nations."

The Russian Revolution

On March 15, 1917, Nicholas II. signed an act of abdication for himself and his son, the Grand Duke Alexis, and named his brother Michael as his successor. The Grand Duke Michael refused to accept this nomination until it should be evident that such was the will of the Russian people.

A Provisional Government, under the Presidency of Prince George E. Lvoff, was then formed of leaders of the Lib-

eral and Socialist Parties in the Duma, Paul Milukoff, Michael Rodzianko, Alexander Gutchkoff and Alexander Kerensky being the most prominent.

The Provisional Government, however, found itself opposed at every step by the Socialist Council of Workmen's and Soldiers' Delegates, with Nicholas Tschheidze, a native of Georgia in the Caucasus, at its head. This council claimed to represent revolutionary Russia and, as such, to dictate all policies of the Provisional Government. It issued two orders to the army, calling on each unit (company, battalion, regiment, brigade, division and corps) to form a deliberative council to decide all questions and to answer for the discipline of that unit. Army units were also invited to elect their own officers, but it was later said that this should apply only to the regiments in Petrograd and Moscow that had helped to bring about the revolution. Gutchkoff, the Minister of War, accepted the measure thus dictated by the Council of Workmen's and Soldiers' Delegates, embodied it in a Ministerial order and distributed it to all sections of the Russian Army.

This order at once destroyed the authority of the officers and dislocated the discipline of the Russian armies. It caused an immediate and forceful protest from the highest and best-known Generals, with General Brusiloff at their head, with the result that Gutchkoff was forced to resign, Alexander Kerensky taking his place as War Minister and declaring that he intended to introduce iron discipline once more into the army.

The continual pressure of the Socialist Council of Workmen's and Soldiers' Delegates, with violent demonstrations organized by Socialists in the streets of Petrograd, made the work of the Provisional Government almost impossible, with the result that first Paul Milukoff, and later Prince Lvoff, Rodzianko, and all the Duma leaders were forced out of the Provisional Government, which became almost completely Socialistic.

Immediately after the revolution the Provisional Government issued orders liberating all political exiles in Siberia and inviting all those who had left Russia for political reasons under the im-

perial rule to return. Bands of exiles at once began to stream toward Petrograd from Siberia, from the United States, and from Switzerland. The Imperial German Government did everything to facilitate the return of certain of these Russian exiles who had been living at Berne and elsewhere in German Switzerland, providing them with passports, and expediting their passage through Germany, although they were citizens of a country then at war with Germany. Two conspicuous members of this German-Swiss group were Nikolai Lenin and Chernoff, later a member of the Ministry.

The arrival of certain of these Russian Socialists, whose return had thus been facilitated by Germany, was the signal for violent disturbances and anarchistic outbreaks at Petrograd and elsewhere. The garrison of Schluesselburg, and later the garrison of the great naval base at Kronstadt, in the Neva River below Petrograd, declared themselves independent republics and refused, for some time, to recognize the authority of the Provisional Government.

Nikolai Lenin organized demonstrations of armed anarchists and Socialists in the streets of Petrograd, denounced the Provisional Government, threatened, and even attempted, to kidnap members of the Ministry, and did everything that was possible to bring Russia to ruin and confusion.

When he was at the height of his power, he delivered before the Council of Workmen's and Soldiers' Delegates a violent address, urging Russia to conclude a separate peace with Germany, "without annexation or indemnity." This was on June 22. When this harangue was concluded, M. Veirensky—according to a special cable from Ambassador Francis, representative of the United States at Petrograd—announced that he would repeat Lenin's speech, and proceeded to read a document almost identical with it. When M. Veirensky had concluded, he announced that he had been reading an intercepted radiogram from Germany, signed by Prince Leopold of Bavaria, German commander on the Russian front. A few days later Gen-

eral Brusiloff announced, through an officer of his staff, that he had conclusive evidence that Lenin was the agent in Russia of the German General Staff. Other members of the Socialist group who returned through Germany were implicated; it was announced that one of them had to his credit a sum of 2,000,000 rubles, to be used as a German corruption fund. It was further said that large sums of gold had been withdrawn from the German Reichsbank, to be used for corruption work in Russia. There were further anarchist and Socialist extremist plots in Petrograd, leading to street fighting, during which Lenin disappeared, fleeing, it was said, to Finland and thence, through Sweden, back to Germany.

Disastrous Military Results

On July 1 the Russian Army began an offensive in Galicia, under the personal leadership of General Korniloff. At first he carried everything before him, capturing Halicz and sweeping forward close to Dolina in the Carpathian foothills. Then, under very slight Austro-German pressure, the Russian armies immediately to the north and south of Korniloff's army broke and ran. This action, which was directly traced to the orders subversive of discipline, emanating from the Socialist Council of Workmen's and Soldiers' Delegates, began a disastrous retreat which, by the first week in August, had practically lost the whole of Galicia, threatened Moldavia, and gravely menaced Russian Bessarabia and even the great seaport of Odessa.

The Socialist Council had already driven every conspicuous member of the Duma Provisional Government to resign. It had further undertaken to bring pressure on all the Entente Powers to revise their war aims in conformity with the Socialist formula, "peace without annexation or indemnity," which had been indorsed by the German commander, Prince Leopold of Bavaria, and which had been cordially indorsed by Field Marshal Hindenburg in another radio-gram to the Petrograd Council of Workmen's and Soldiers' Delegates.*

The Stockholm Conference.

The German majority Socialists in the Reichstag, 89 in number, under the leadership of Philip Scheidemann, had, as we saw, accepted the imperial war program of the Chancellor, which was attacked by the minority group under the leadership of Hugo Haase. Shortly after the split, which took place nine days after the abdication of Nicholas II., it was openly said that Scheidemann was cordially co-operating with the Chancellor in his effort to bring about the peace which was desired by Germany, the peace supported by the Chancellor in his Reichstag speeches of Nov. 9 and Nov. 30, 1916.

A plan for an International Conference of Socialists, to meet at Stockholm, to discuss the basis of peace, came to the front in the following months, and was warmly accepted by the Petrograd Socialist Council of Workmen's and Soldiers' Delegates. The proposed Stockholm Conference at once became an international storm centre. On the one hand, it was said by Socialists that to refuse to take part in this conference would be to offend the Socialist Council of Workmen's and Soldiers' Delegates at Petrograd and, perhaps, might drive the Council and the new Russia into the arms of Germany. On the other hand, it was said that this conference, at which the German Government would be represented by Philip Scheidemann, was nothing but a German stratagem to bring about "a German peace."

The Stockholm Conference was several times postponed. English Socialists and Labor groups elected delegates, but the British Seamen's Union absolutely refused to navigate any ship that carried them, so that they were unable to sail.

Opinion in France was divided. There was a decided unwillingness to meet German Socialists at Stockholm; but there was an almost equal reluctance to allow the Russian Socialists to meet their German "comrades" with no Entente Socialists present to counsel and safeguard them.

The State Department of the United States more than once refused to issue

* See THE NEW YORK TIMES, June 8, 1917.

passports to delegates chosen by the Socialist Party of the United States.

American Socialist Party

Meeting at St. Louis on April 14, delegates of the Socialist Party of the United States addressed this open letter to "the Socialists of the Belligerent Countries":

Comrades: Now that the people of the United States have been forced by their ruling class into this world cataclysm, as you have been heretofore by your own rulers, we, the Socialists of the United States, feel it our right and duty to address you on this most momentous subject.

We wish to say at the outset that the workers of this country have no enmity toward the workers of Germany, and that we, the Socialists of the United States, feel that the great affliction now shared in common by the workers of the United States and Germany should, and we hope that it will, strengthen that consciousness of a common brotherhood between them which will ultimately bring about peace between these two countries, and a general world peace with it.

We also wish to convey to you our firm determination, and we pledge ourselves to do our duty and make the sacrifice which may be necessary, to force our masters to conclude a speedy peace, and we hope and expect that, whatever may have been the policies which some of you may have followed in the past, you will henceforth adopt rigorous measures to force your masters to the same course of action.

We therefore call upon you to join hands with us so that all of us may use all the means at our disposal in a common effort to bring about a general peace which will be just and lasting, without indemnities, and without any forcible annexations of territory by any of the belligerents, whether avowed or sought to be hidden by some less offensive term that may be invented for the purpose; so that no nation may be deprived of any part of its liberty or made in any way dependent, politically or economically, upon any other nation; and that no change of territory shall take place without the consent of its inhabitants, freely and unmistakably expressed.

Down with war! Down with misery and hunger and mass murder, must be the war cry of the proletariat. Long live peace! Long live the brotherhood of nations and the solidarity of the proletariat!

British Labor and Stockholm

On Aug. 11 a conference of the British Labor Party was held at Westminster, to vote on the question of sending delegates

to the postponed Socialist Conference at Stockholm.

James Ramsay Macdonald, Socialist Member of Parliament, made a vigorous plea to the delegates to "bury the past, go to Stockholm, lay your case before the conference, hear the other side discuss matters generally, and return with the basis of peace in your pockets."

Arthur Henderson, Minister without portfolio, urged the sending of delegates to Stockholm for consultation, but not to discuss peace terms.

G. N. Barnes, Minister of Pensions, spoke against attending a conference at which delegates from enemy countries would be present, saying that the United States, Belgium, France, and Italy were not sending delegates. George Henry Roberts, Labor Member of Parliament, made a strong fighting speech against delegates going to Stockholm. When a vote was taken, it was found that votes representing 1,046,000 members had been cast in favor of sending delegates to Stockholm, to a consultative conference, with 550,000 votes against this.

On Aug. 11 it was also announced that Alexander Kerensky, Premier of Russia, had declared that the sending of Russian delegates to the Stockholm Conference was against the best interests of Russia. Arthur Henderson was strongly criticised for concealing this fact from the members of the Labor Conference, which had voted to send delegates to Stockholm largely because this was believed to be the desire of Russia. Arthur Henderson's resignation from the British War Cabinet was demanded.

On Aug. 13 Andrew Bonar Law, the Government spokesman in the House of Commons, announced that the Government had decided not to grant permission to the British delegates to go to the Stockholm Conference. He added that the same decision had been made by the United States, France, and Italy.

American Federation of Labor

Samuel Gompers, President of the American Federation of Labor, on Aug. 3 cabled as follows to W. A. Appleton, Secretary of the General Federation of Trade Unions, and M. Jouhaux, Secretary of the French Fédération Générale du

Travail, in answer to their inquiry as to whether American labor intended to be represented at the Stockholm Conference:

Jouhaux having asked my opinion upon a conference of labor representatives of all countries, I am replying as follows:

In responding to your request for my opinion of an invitation to a conference of labor organizations of all countries, without hesitation I answer that such a conference cannot at this time or in the near future be productive of good, and as far as the American Federation of Labor is concerned it will not send representatives. New and more favorable results must develop before a conference of labor of all countries can advantageously be held.

Mr. Gompers on Aug. 13 attacked the Workmen's Council, a branch of the People's Council of America, which declared it represented American labor in an effort to foster a peace movement. He wrote:

It has been the constant claim of the People's Council that it represented labor. Nothing could be further from the truth. It is true that there are some few local unions affiliated with the People's Council, but when it is considered that there are about 15,000 local unions in America it will be seen that even a half hundred that may be affiliated with the People's Council is an insignificant number.

The American labor movement as a body is loyal to America and steadfast in its determination to help secure victory for this country and the cause of democracy. In pursuing this course it must be recognized that it is necessary for the labor movement to take steps from time to time to preserve working standards. This, as a matter of fact, is necessary to the most effective conduct of the war. It has nothing to do with those anti-American, pro-Kaiserist activities of which the People's Council is the promoter, and is, in fact, exactly in opposition to them.

It is our purpose to try, by educational methods, to bring about a more American spirit in the labor movement, so that what is now the clear expression of the vast majority may become the conviction of all. Where we find ignorance, we shall educate; where we find something worse, we shall have to deal as the situation demands. But we are going to leave no stone unturned to put a stop to anti-American activities among workers.

The American Federation of Labor is the organized labor movement of America. There is no other. Its position is clear. It is loyal. It was so expressed in the manifesto issued at the Washington Conference of March 12, and there has been no change since. No other organization

can express the wishes of the American labor movement, and the pretenses of the so-called People's Council in that direction are nothing short of ridiculous.

The People's Council is an organization that is for the most part evidently alien in membership—so far as it has membership—led by men who have never been known as labor men, though some of them have made frantic claims to having been labor men for various reasons. Money evidently is plentiful, and the work of undoing America proceeds merrily. American labor must denounce any such movement, and any such foreign propaganda. I suggest that the methods of the organization are entirely German in character and that undoubtedly the Kaiser is greatly cheered by the reports he gets of the People's Council activities. We shall do our best to put an end to operations of that kind.

The French Socialists

The French Socialist Party decided on Aug. 12 to send delegates to Stockholm. Two days later it was announced that the French Government would refuse to issue passports to such delegates. The official declaration of the party, in announcing its action, was as follows:

The (Socialist) party does not go to Stockholm in search of a peace of compromise which would leave the fate of the peoples in suspense and at the mercy of fresh wars. It goes to declare that respect for the peoples' right, respect for treaties, and an engagement henceforth to submit every possible conflict to the justice of nations, can alone constitute an acceptable peace.

It goes to ask Socialists—all Socialists—whether they condemn the Governments responsible for violations committed at the outbreak of the war, and if, after pronouncing such condemnations, the Socialists—all Socialists—will take action against the Governments in order to shorten the war by saving the honor and lives of the people.

It goes to demand that the Governments which still refuse should be obliged by Socialist action to make known their war aims and whether they are prepared to make reparations in accordance with the rights of the peoples, and to declare publicly if they still intend using the war map as a means of reaching peace.

It goes to demand whether the Socialists who persist in giving moral and material aid to the guilty Governments can still remain members of the Internationale, and whether the Internationale will not recognize as its own only those who, by denouncing those responsible, show thereby that they are resolute to accomplish acts which will give life to the Internationale,

while at the same time they will conduct the peoples toward a beneficent peace.

The Stockholm Conference, which had been called for Aug. 15, could no longer

claim international representation when the leading Entente Governments refused passports to the delegates, and thenceforth ceased to occupy public attention.

Peace Program of Belgian Socialists

M. Vandervelde's Manifesto

The attempts of the International Socialists to hold a peace convention at Stockholm in the early Summer of 1917 proved abortive, though the movement at length received the sanction of the Petrograd Council of Workmen's and Soldiers' Delegates, which issued a call embodying the catch-phrase, "No indemnities, no annexations." The one noteworthy result of this action—up to the middle of August—is found in the striking document issued July 5 by the Belgian delegates, M. Vandervelde and M. de Brouckère, through the medium of the Dutch-Scandinavian Committee at Stockholm. It is a manifesto addressed primarily to the Russian leaders, and tells exactly what Belgian Socialists think on the subject of "No indemnities, no annexations." It is here placed on record in a condensed English translation as one of the historic utterances of the war.

THE war appears to us to be less a war between peoples than a struggle, probably decisive, between two political principles. It is in this sense that it has been justly called civil war within the society of nations. The Russian revolution and the entry of the United States have had the effect of ranging on one side all the free nations, that is to say, those who have already effected their democratic revolution, and, on the other hand—almost entirely isolated—the last three semi-feudal, semi-absolute powers—namely, the Empire of the German Emperor, that of the Sovereign of Austria-Hungary, and that of the Grand Turk.

In the deliberate execution of a long-cherished project, these powers have let loose war on the most villainous pretexts and for the most wretched of causes. Imperialism has been able to carry out its plan, thanks to a popular passivity which would have been inconceivable in any other country. Attack and invasion have placed upon us the burden of the most crushing of tyrannies—the German military tyranny, whose object, as defined by Bismarck, is to leave a people only their eyes with which to weep.

Belgian socialism has not for one moment believed that it ought to bow before external oppression when our villages were burned, our women insulted, and our dearly acquired liberties brutally oppressed. It has not admitted that it

was "a simple bourgeois quarrel, which ought to leave the proletariat indifferent." If it had abandoned the struggle under the pretense that the soldiers of William II. were too numerous and his guns too powerful, it would have been dishonored in its own eyes. It has never reckoned cowardice among revolutionary virtues.

Defense against aggressive imperialism implies for us something more than the mere repulse of the invader. The destruction of German imperialism might have been the business of the Germans alone, if their imperialism had stayed at home. But it crossed our frontiers, and we want to break the power of our tyrant. Our desire is as legitimate as that of the Russians, who have broken the power of their tyrant; and the fact that our tyrant is enthroned at Berlin is not sufficient reason for changing our opinion.

We cannot conceive any possible lasting peace if Hohenzollern and Hapsburg retain their powers. The greatest present danger is that of seeing free countries accept a precarious peace. We could not lend ourselves to this without betraying our deepest convictions as Socialists.

We adhere to the Petrograd formula of "no annexations and no indemnities." But refusal of "annexations" does not imply maintenance of the territorial status quo. If, in accordance with the wishes of the inhabitants, Alsace-Lor-

rairie were restored to France we should not consider it an "annexation," but a "disannexation." In the same way the unification of Poland and the completion of Italian and Serbian unity, as desired by the peoples concerned, would not be "annexations." Near Stavelot there are Walloon villages which appear to desire once more to become Belgian. The peace treaty might accept their aspirations. This, too, would apply to Luxemburg, with its 200,000 inhabitants, if it should consider that a return to Belgium, from whom it was separated in 1839, would be to its advantage.

While we repudiate the exaction of "indemnities" such as Bismarck in 1871 levied on France and such as Germany is continually imposing on occupied Belgium, we could not recognize a peace that sanctioned the exactions of the invader. For Belgium this question is vital.

The Germans have by menaces, compulsion, and violence exacted from our towns many millions of pounds in cash. Since the occupation they have levied monthly for the needs of the army a contribution of \$10,000,000, and for some time past have raised the sum to \$12,000,000. They have levied several hundred millions in foodstuffs, in kind, and in raw materials and machinery. In the interest of military operations they have done countless deeds of destruction, and, in many cases, simply in order to terrorize the population and to gain future economic advantage by suppressing an embarrassing competitor.

The Belgian Nation will have to indemnify the victims of these acts of violence, and this charge upon it must be added to all those we have just enumerated. Would it not be the height of iniquity to make the victim bear this burden at the risk of seeing him succumb under the weight of peace? Does not justice demand reparation from those guilty of outrage in so far as the outrage may be reparable?

On Aug. 4, 1914, the German Chancellor acknowledged in the Reichstag that Germany was violating the rights of Belgium and owed her reparation. We are firmly convinced that the Russian democracy will not be less solicitous than was

the representative of the Kaiser of the clear rights of an oppressed nation.

As for the "right of nations to dispose of their own destinies," it would be as tyrannous to keep by force in Austria-Hungary populations like those of Bohemia, Transylvania, or Bosnia, which aspire to other national destinies, as it would be to attach Belgium by force to the German Empire. Indeed, we could hardly describe Germany as free, in this sense, so long as the semi-absolutism of the Hohenzollerns endures. We consider that a democratic Constitution for Germany is not only a right to which the Germans are entitled, but that it is also a condition upon the fulfillment of which other nations are entitled to make their adhesion to a general peace depend. A treaty guaranteed only by an Emperor who is accustomed to hold his word cheap would be merely another scrap of paper.

We do not, of course, refuse to meet the Germans; but what we decline is to associate ourselves with German Socialist supporters of the imperialism of the Emperor William and of the Emperor Charles. We should not object to concerted action with those in the Central Empires who oppose a policy of aggression and of conquest, and who in effect pursue the same end as we ourselves. We should not decline to meet the German majority Socialists if they renounced the error of their present ways, and took an open and manly part against their Emperors. But, pending such action on their part, we should regard a meeting with them as not only useless but dangerous to the international democratic cause—dangerous, since it would tend to accredit the illusion that a just and lasting peace is possible before aggressive imperialism has been destroyed; and because the maintenance of false hopes of an impending equitable solution relaxes effort and strengthens the current that is carrying the weak-willed toward a peace at any price.

This is why, following the example of the French and British representatives, we urged that admission to the proposed conference should be conditional upon frank adhesion to an anti-imperialist program.

German Socialism and World War

By Richard Dobson

GERMAN Social Democracy began with Ferdinand Lassalle, who, in 1844, went to Paris, and there came under the influence of French socialism. In 1848 he worked on the staff of Karl Marx's *Neue Rheinische Zeitung*. He took an active part in revolutionary social agitation, and during the reactionary period devoted his time and tenacity to scientific social research.

German socialism in the middle of the nineteenth century was an academic theory, which appealed largely to college-bred, middle-class people, with quite a large sprinkling of workingmen. Lassalle converted this academic theory of socialism into practical social democracy. His brilliancy as an orator, coupled with his acumen and learning, enabled him to make a series of propagandic tours that proved to be personal as well as national triumphs.

Lassalle organized the *Allgemeiner Deutscher Arbeiterverein*, or General Labor Union of Germany, of which he was the first President. The aims of the union were to secure manhood suffrage for the election of members of the popular branch of the Federal Parliament. Seven years later Lassalle and Eisenacher, social warring factions, came to a common peace, and thus became the Social Democratic Party of Germany.

The Socialists of France, of Russia, of Italy, and of Great Britain ascribe to the Social Democracy of Germany much of the blame for the war that is now devastating Europe and paralyzing the world. They were astonished and bewildered at the action of Germany's great democratic party in that ominous month of August, 1914. Only eight days before the war broke out the German Socialists denounced Austria as a world disturber when she sent her impossible ultimatum to Serbia. And then this same German Socialist Party, after eight days had passed, voted unanimously in favor of the German war credit

through its 110 members in the Reichstag! The reason given by these Deputies was that they were supporting the defense of Germany against a conspiracy of the nations of Europe, instigated and abetted by Great Britain. There was not a word of complaint from the German Social Democracy when the Imperial Chancellor, at the same Reichstag sitting, announced that the German Army had already invaded Belgium, a somewhat singular beginning for a country on the defensive and fighting for its existence.

In a secret conference of the German Social Democrats held the day before the regular sitting of the Reichstag, fourteen members had voted against supporting the war credit. Herr Haase, one of the fourteen, had actually been chosen to be their spokesman before the assembled Reichstag. Later Herr Haase confessed that party discipline forced him to betray his conscience.

Split on War Credit

On Dec. 2, 1914, the Socialist members opposed to the second war credit had increased from fourteen to seventeen. On this occasion Dr. Liebknecht voted against the war credit. In March, 1915, thirty-two Socialist members of the Reichstag voted against the so-called War of Defense. In the *Neue Zeit*, Karl Kautzky was busy expounding the right of the minority to independent action. The following declaration was made by Herr Geyer in the Reichstag on Dec. 21, 1915:

For myself, and in behalf of nineteen colleagues, I have to declare that the military dictatorship which ruthlessly suppresses all endeavors for peace and seeks to sacrifice every free expression of opinion makes it impossible for us to discuss our attitude on the war credit outside of this House. Just as we oppose the conquest plans of other Governments, so we are determined to oppose the ominous scheme of our own annexation politicians, who are also a hindrance to the opening of peace negotiations. The Imperial Chancellor was requested by the Social Democratic Party to make a peace offer,

as the Central Powers were in a most favorable military situation and could have taken the first steps toward peace. The Chancellor, however, bluntly refused, and this horrible war goes on. Every day brings new and unutterable sorrow. A policy which does not exert all its powers to end this nameless misery, a policy which in its entire activity is utterly opposed to the interests of the masses, cannot command our support any longer. Our desire to give the evident longing for peace in all countries a mighty impulse, our own will for peace and our antagonism to all plans of conquest, do not permit us to vote for the war credit. We vote against it.

On the very day that Herr Geyer made this declaration of the Socialist minority, the Socialist Party as a whole condemned the separate action, and on Jan. 8, 1916, the party in a full council passed a vote of censure on the dissidents.

The Socialist press, comprising seventy-seven daily newspapers, besides a number of monthly and fortnightly publications, was divided into two camps. One supported the policy of the majority Socialists, and the other favored the minority, which demanded a return to the pre-war policy: "Diesem System Keinen Mann und Keinen Groschen"—"We will not vote a man or a farthing for this system." The Socialist majority, however, whose aims and ideas practically agreed with the German Government, enjoyed a considerable advantage over their minority brethren.

Radical Utterances

In the early months of 1916, anonymous pamphlets were circulated throughout the empire under such titles as "End the Winter Campaign," "Europe's Proletarians," "Annexation Madness," "The Policy of Dogs." A passage from the latter reads as follows:

David Landsberg and socialism have surpassed the public prosecutor and put the Police President to shame. Woe to us Socialists if these fellows had administered Bismarck's anti-Socialist law. They would have sent the Socialist members of the Reichstag and the editors of the newspapers to penal servitude. They would have hanged August Bebel and Liebknecht the elder on the public gallows.

He is a dog who licks the boots which have kicked him for several decades. He is a dog who wags his tail with the muzzle of military law over his face. He is a dog who abjures the entire past of his party and everything which has been sacred to it for a gener-

ation, and spits upon it all, at the order of the Government. Therefore, David Landsberg and their set are dogs, and when the day of reckoning comes, the German working classes will give them the kick they deserve.

On March 24, 1916, a crisis came in the history of Social Democracy in the Reichstag. A vote was asked for by the Imperial Chancellor to cover the Government war expenditures in April, May, and June. The vote was supported by the Socialist majority and negated by the minority. In special session the majority Socialists voted to exclude the minority from any further common action with the party. The resolution passed by a vote of 58 to 33.

Liebknecht's Daring Speech

Dr. Liebknecht's exclusion from the party was a separate matter. In fact, he and Herr Ruhle had acted as independents since December, 1914. On April 8, 1916, Dr. Liebknecht succeeded in getting the floor of the Reichstag, and this is the substance of what he said:

Gentlemen, the principal work of the State Secretary, whose salary we are asked to vote, was his activity for the war loan during the last year. I intend to devote a little criticism to these activities. The new loan has brought 1,400,000,000 marks less than the preceding one, but still a grand total of 10,000,000,000. What methods were employed to obtain this success? Gentlemen, last Autumn the Imperial Exchequer issued some propaganda pamphlets which placed the methods by which the English Government was financing the war in a very unfavorable light. Any one who read these pamphlets critically saw at once that the charges made against the English Government covered exactly the same methods employed by the German Government, a fact which, of course, was not allowed to be stated in public or in the press. [Excitement in the Reichstag.]

In regard to our loans, it has been said that our system is one of inbreeding—that the practice of obtaining loans on a former loan in order to invest the capital thus obtained in another new war loan is a sort of "perpetuum-mobile." In a certain sense the loans may be compared to a merry-go-round. To a large extent it means simply the centralization of public wealth in the Exchequer. [Great disturbance, followed by cries of "Treason!"]

I have the right to criticise. The truth must be spoken and you shall not hinder me. [Long continued uproar. The President of the Reichstag intervened, and Dr. Liebknecht continued:] Gentlemen, you represent capital. I am a Socialist-Democrat and repre-

sent International Proletarians. [Great uproar and pandemonium.]

During the uproar Dr. Müller of Meiningen went to the tribune and snatched Dr. Liebknecht's notes from his hands and threw them on the floor. Dr. Liebknecht undertook to pick up his notes, and when he returned to the tribune to continue his speech the President ruled him out of order because he had, according to German procedure, forfeited his rights to continue by leaving the tribune.

Shortly after this exciting affair Dr. Liebknecht was sentenced to prison for four years and one month on various charges, including high treason and resistance to authorities. Later Herr Konrad Hanische, in his work, "German Social Democracy In and After the World War," said: "It is utterly impossible to obtain a clear picture of the Social Democratic Party on account of the strangling influence of martial law, and, further, a large number of the members are with the colors." According to Herr Hanische, the Social Democratic minority faction finds its greatest support in Berlin, on the lower Rhine, in Northern Bavaria, Thuringia, and Saxony. The majority faction finds its chief strength in Hanover, Westphalia, and Hamburg.

Majority's War Creed

At a private session held in Berlin by the Social Democracy in September, 1916, the following resolutions were carried by a vote of 251 to 5, the Social Democratic minority not voting or taking any part in the procedure:

First—It is a duty to defend one's country. The present war is a war of defense.

Second—The Socialists are determined to continue the struggle till the enemy is prepared to make a peace which guarantees Germany's political independence, territorial integrity, and free economic development.

Third—We condemn unreservedly the action of those who say the war is one of German aggression. Such persons only strengthen the hands of the enemy.

Fourth—The ideal of a permanent world peace is still the guiding star of our policy.

Fifth—We shall work for the revival of the International Socialist League after the war.

Since that action nothing occurred to reconcile the two socialistic factions until

the beginning of 1917. Herr Scheidemann and Herr Ebert in December, 1916, visited the Dutch Socialists, and it was suspected by the minority faction of the German Social Democratic Party that they were in collusion with the Imperial Chancellor. The German peace proposition submitted to President Wilson, and through him to the Entente Allies, increased that suspicion.

The Pan German Deutsche Tageszeitung stated that Herr Scheidemann pleaded in a speech at Hamburg for a world peace based on the status quo ante, each nation paying its own costs. The German minority Socialists criticised Germany's peace note on the ground that no terms were stated, and another Socialist Party organ declared the whole German peace note proposition to be an unmitigated swindle. On Dec. 22, 1916, four mass meetings arranged by Social Democrats in Leipsic were suppressed by the police.

Herr Scheidemann's Defense

In defending the action of the majority faction and its support of the Government's war policy, Herr Scheidemann says:

The German Reichstag has not the constitutional right to vote for or against a war. The decision for peace or war is in the hands of the Kaiser. By refusing to vote the war credit we could not have undone the declaration of war or hindered the progress of military events. * * * The war is a struggle for the world's feeding grounds. Three of the leading factors in the war have been: First, the future of Constantinople and the Near East; second, England's despotism of the world's markets, and, third, the severance from European markets of Serbia by Austria. * * * We knew what a Russian victory would mean for the German people, and especially for the German workingmen's movement. It was our sacred duty to prevent it by all means in our power, and coming generations will appreciate these services to world history by the German Nation. If we could not prevent the war, then it was our duty to do everything to prevent defeat.

Dr. Lensch, referring to the Socialist Party declaration at the outbreak of the world war, says: "We have always said we would not leave the Fatherland in the lurch in the hour of danger. German Social Democrats will remember

that for forty years they have constantly voted against every credit for military purposes, excepting the special taxes imposed on the richer classes in 1913 for the increase of the German Army." Dr. Lensch admits that the German Social Democratic Party's action in supporting the war was illogical in view of its history, but morally right in all other respects.

August Bebel, a Socialist leader in the Reichstag, at the beginning of the war said:

The Social Democrats recognize that, under present conditions, the nation cannot be left helpless; therefore they demand that every man capable of bearing arms shall have the right to carry a weapon, and in case the Fatherland is attacked it shall be his duty to defend it. The party demands that all males from the age of ten shall receive military training. No Social Democrat doubts that the German, irrespective of rank, shall do his full duty in war.

The majority Socialists, in defense of their attitude to the war and military service, claim that their opposition to militarism before the war was mostly intended as a criticism of the existing system. They, the German Democratic Socialists, are in favor of every man being a soldier, but they oppose Germany's army system, the ill-treatment of the common soldier, and the methods of taxation by which the army expenditure is met.

The Minority's Attitude

The minority Socialists, on the other hand, consider the pre-war opposition to militarism as a genuine, whole-hearted rejection of war and everything connected with it. One of the minority Socialists says:

The German military State is to me nothing but a State which oppresses its subjects from the cradle to the grave. Our sons are sworn at and maltreated in the gay uniform, and on the slightest show of resentment condemned to imprisonment; in a word, slowly tortured to death. In fact, we often saw that our soldiers were unworthily treated, and that the iron discipline and the popinjay trappings of the army made militarism unpopular.

This all lies in the nature of the thing, and cannot be rooted out; but many soldiers learned in the army the discipline and orderliness which were missing from their home life.

Concerning international socialism and its relation to German socialism, Dr. Lensch thus queries: "What did the International Socialists in other lands do in 1914 to, prevent their own countries

from going to war with Germany?" Dr. Lensch charges the French Socialists with believing false reports of German atrocities, especially as perpetrated in Belgium, and as reported by Jules Guesde and Marcel Sembat. He is still more incensed against the English Socialists, of whom he says: "They are worse than the French, for they identified themselves with the ruling classes in England and took over to themselves their catch-phrases in order to hammer them into the heads of the masses; they carried on a regular agitation in favor of the war, conducting it with the intensity of an election campaign. * * * Any slander, any stupidity was good enough for the English Socialists with which to besmirch the German Government."

Nearly all the German socialistic writers of the minority or Liebknecht faction are in favor of an individual nationalism giving every other section of the human family the right to develop its own national idea. Dr. E. David, however, in "Social Democracy in the World War," says: "The existence of a nation cannot be regarded as an end in itself. There are aims beyond its limits which every nation must have and serve." Another member of the majority camp says: "In this war we have become conscious of the fact that the German 'State' idea has justified itself, from both the organizing and military point of view, in spite of its beauty spots and its political infirmities. We have become aware of the enormous forces embodied in the State. Because its activities often displease us we had become accustomed to look upon the State, together with the whole of its social institutions, as being inwardly decayed and rotten. The war has thoroughly cured us of the error."

Collectivism in Germany

Dr. Lensch, one of the leading apostles of German socialism, declares that Germany stands for collectivism, while England stands for individualism, adding:

All German Socialists plump their line by the former. While great leaders of armies have come to the front, no towering political leader has as yet appeared on either side. It is as if the spirit of history wished to make evident that this is the end of individualism.

At a time when armies are counted by millions, and whole nations wage war; when the battle is fought not only by the man in uniform, but by the wives and children at home, the importance of the individual diminishes before the totality and its organization.

It is along the lines of mass warfare that the German revolution is developing in the present world war, thus distinguishing itself from the French revolution and the great English rebellion. The fundamental idea of both of the latter movements was individualism, and it was no mere chance that striking individualities stood in the forefront, Napoleon in the one and Oliver Cromwell in the other. At the head of the German revolution stands Bethmann Hollweg, and it is only necessary to name these three names in a breath to realize the changed conditions. Yet, although Napoleon failed to shake England's world supremacy, Bethmann Hollweg has accomplished that end. Wherein lies the difference? The French Emperor was not in a position to fight England from the plane of a higher social system. France's system was at that time of the same type as England's, that is, based on individualism. Modern Germany, on the other hand, represents a higher and more progressive principle; that of social organization, and although the system is still in its infancy, it has proved itself so vastly superior to obsolete individualism that England's war power has been shaken to its foundations.

The importance of the individual is diminishing, in proportion as that of social organization increases. The individual principle attained its highest ideal in England and France, where, in fact, it broke up the community into so many atoms. Now, it is the historical task of the working classes to

change the trend of history in the opposite direction, for the atomized system threatens them with economic misery and political helplessness.

It is fitting, too, that this change should become most apparent in Germany, the misery of whose economic past had crippled the country, prohibiting the complete victory of individualism as in England. Our State was compelled by toil and trouble to make good the blessings which England enjoyed through the mere force of circumstances. But it was exactly that economic poverty which developed in Germany the principle which supplies it now with vitalizing powers capable of waging a world war against the greatest land and sea powers which our planet has ever seen—that is, the principle of organization. What was looked upon as a curse has become our greatest blessing. The social system based upon the individual stands today on its last legs. A new epoch, and with it a new social ideal, has dawned. Germany is the herald of the new day.

In the above is revealed the real force which has united all Germany in the present war, making patrician and plebeian as one. The super-German idea and the super-German temper, even among Socialists, have lent themselves to the Pan German leaders' scheme of conquest.

EDITORIAL NOTE.—At the time when the Reichstag granted the latest German war credit both wings of the Socialist Party voted against the bill, indicating growing dissatisfaction with the Government's war policy.

The Appalling Waste of the War

By Hall Caine

(Special Cable to THE NEW YORK TIMES)

Copyright, 1917, by THE NEW YORK TIMES COMPANY. Copyright in Canada

WHEN the war began, the great soldier who took the death of a sailor in the stormy waters of the northern seas was reported to have said it would last three years. It has already lasted so long, and is still going on. When will it end, and what is to come of it?

"If Adam," said Luther, "could have seen in a vision what horrible instruments his children were to invent to torture and to destroy each other he would have died of grief." Coming four centuries later, we may go further than that. If Adam could have foreseen what we are now seeing he would have prayed for death that he might never propagate his species.

Three years ago today (July 28) one of the oldest and feeblest of men, being crowned in the name of God and exercising the vicarship of Christ in his country, signed with his trembling hand the proclamation which plunged the world into this war. History will concern itself with the cause of his act, but the motive assigned for it was that a member of his family, a worthy but quite commonplace Austrian gentleman, as I have reason to know and say, had been foully done to death. For that crime millions have since died, millions been wounded, and millions on millions have been brought down to the depths. One wonders what mad game the world has been playing.

Bloodshed is indeed the staple of history, and history is the story of how often and with what merciless brutality the children of men have slain each other. But if we could detach ourselves from all thought of the impulses with which we are prosecuting this war, all questions of the righteousness of our cause, and conceive of God walking not in the garden but in the desert of this war-worn world to make a reckoning of

the good and bad in the doings of the last three years, what audit it would seem to be, what lesson such as history never before supplied for people who have been saying that war has a nobility and grandeur of its own, that it is productive of more than evil, and is a beneficial influence in the betterment of mankind!

The Loss to Civilization

Think first of the injury the war has inflicted on the ordinary conditions of civilized existence. During forty-odd years preceding Aug. 2, 1914, the chief activities of Europe in science, law, legislation, literature, art, and general industry were directed toward protecting and purifying human life, making it more clean and sweet and secure. There never has been a great war that has not lowered the standard of existence, but during the last three years, by the new necessities of modern warfare, from five to twenty-five millions of human creatures have been living a great part of their lives in holes in the ground, exposed to uncleanness and disease that belong to the condition of savage man.

Think next of the loss the war has inflicted on the world's wealth—not wealth that is represented by title deeds or pass books or gold and silver coins in the strong-rooms of banks, but only the wealth that is necessary to the well-being of the race, the natural wealth that comes from the soil at the call of the sun and rain and changing seasons and the plow in the hands of man. There has never been a great war that has not diminished the sum of this natural wealth, but the present war, by the very number of nations engaged in it, has probably come nearer than any previous one to starving a large part of the human family. Will the world recover from this three years' loss of its natural wealth? Nature works no overtime, the

thousand sunrises since August, 1914, can never come again.

Fruits of Labor Destroyed

Then think of the loss to the world in human labor. Every great war has, in some measure, paralyzed industrial enterprise, but the necessities of modern warfare have gone near to killing it by submerging nearly all industrial enterprise in one sole work of producing these munitions of war which have now to be supplied in illimitable quantities. The ordinary progress of civilization in Europe has for the last three years been brought well-nigh to a standstill. This, too, is a loss that is irretrievable. It has yet to be seen if the energies of the world can ever make up for it. But the waste of human labor is the least part of the world's injury.

If the output of all the munition factories in the world since August, 1914, had been sunk to the bottom of the sea that would have been waste enough; but think of the uses their products have been put to. As man does not live by bread alone, his first duty after the necessities of food and clothing have been satisfied is to surround himself with those things of beauty and sanctity which link his life with the past and carry it on to the future. But the business of war is to batter down and burn up all such sacred and historic monuments, and never before has it done its work so ruthlessly. Peace builds cities; war destroys them. The big guns and high explosives of modern warfare, thundering and pounding on the habitations of man, have left vast tracts of Europe more bare and barren than the fiery desert. Large parts of Belgium, Northern France, Serbia, and Galicia, lately so full of life and fruitfulness, now look as if the rake of hell had gone over them. Where there were homes and inns and churches in which people lived and loved and laughed from generation to generation, there is only a wilderness of empty space whereon no stone stands upon another. Nothing like this has happened before in all the mad history of war; neither earthquake nor eruption ever wrought such ruin. It is irreparable; no indemnity can restore what has

been wrecked. Northern Europe may be rebuilt, but then it will be another Europe. The past that was alive in it is dead.

The Misery of the War

Then think of the misery which scenes like these involve. Misery is the camp follower of all wars. There never has been a great war without its train of suffering. But the suffering of the last three years seems to have had no parallel in the human story. Whole nations have been plunged into it, and the greatest suffering has been that of the small and the powerless.

Man that is born of woman must needs feel the ties of blood and brotherhood. Hence he gathers his children together into groups that have the same faith and the same customs and speak the same dear tongue. That in the mysterious workings of Providence is the origin of national spirit and love of motherland. It is totally undisturbed by any thought of whether she is big or little, strong or weak. My country is my mother, and, therefore, I love her and think her the fairest spot the sun shines upon. But when war comes in the armor of great nations, it has usually no use for such emotions. Faith, custom, language, and kindred count for nothing against momentary military advantage or even the lust of a little earth. That was what happened three years ago when Austria marched over Serbia and Germany over Belgium, driving the native-born people with their women and little children from their smoking homes and scattering them over the world. For this, too, there can be no possible reparation. Misery cannot be paid for. Belgium will regain her sovereignty and material amends will be made to her, but when peace is proclaimed the Belgians will go back, not to a country, but to a cemetery. Every step of their homeward way will be, as the Prime Minister finely said, a station of the cross to the scene of Calvary, and if their resurrection is to come, as God grant it may, it will be peace, not war, that will bring it.

Then think of the injury the world has sustained during the last three years from loss of population. For the propa-

gation of the race and the happiness and general well-being of the human family nature wants her youngest, strongest, bravest, and most resourceful. But these are precisely what war demands for its work of bloodshed and destruction, despoiling the world of the flower of its manhood. It condemns some to enforced celibacy, some to lifelong injury, and many to death. Every great war has committed this mad crime against the world and its Creator, but surely no war before the present one has done it so deliberately, so self-consciously, so shamelessly, and on so great a scale. For this, too, no reparation is possible. Gold and silver cannot pay for the loss of flesh and blood; no accession of territory can atone to us for the lives of our dead that lie under their wooden crosses along the sea in Flanders. The everlasting surf of proud if scorching tears that washes that consecrated coast will not be stayed by indemnities and annexations. When peace comes after all this sacrifice of life she must bring more than the conquering sword in her hand, or the victory will be in vain.

Then think of the wrong this war has done to the moral sense of mankind. Every war, whatever its necessity or justification, is an outrage on humanity, but war in our time as never before in man's history is crime. In the past ages there has been much to excuse it. Differences of language, conflicts of faith and divisions of space, not to speak of more sinister evils, have been sufficient to create an atmosphere of mistrust and suspicion in which wars have been bred, but modern education, travel, commerce, literature, and, above all, science, with its mysterious and angelic power, as in the telegraph, of bringing people in a moment into the same place, ought to have broken down the barriers that separated the nations by showing them that they were members one of another, with the same joys and sorrows, the same weakness in the presence of man's relentless enemy, the elements, and the same dependence on the Merciful Father who is over all. They have not done so. War has come with its insensate brutalities and in a day all the barbed wire

fences of ignorance and prejudice have been set up afresh, charged with redoubled currents of hatred and malice and lust of blood.

Had one-tenth of all the lives destroyed by this three years' war been swallowed up by flood or earthquake, by another and more frightful Messina, Galveston, or San Francisco, what a wave of human brotherhood would have swept over the nations, making the whole world kin! But man, not nature, has been the author of this tragedy. So the people in Germany rejoice over the sinking of the Lusitania and illuminate the streets of Berlin after the slaughter of little children in London. What a moral catastrophe! Can humanity ever recover from it after the bitterness of the last three years? Is any reconciliation of peoples possible? If not, is real peace conceivable? When the end comes, will it only be a cessation of activities?

Shall we of the allied countries ever be able to take the hand of a German again? In looking to the future of the civilized nations must we always think and feel as if one hundred millions of our fellow-creatures did not exist? Some of us who are not visionaries used to dream of a day when humanity would step out of darkness and put on the armor of light. Is that to be another of our dead joys and buried hopes on the road of life?

A Glimpse at the Future

And then think finally of the wrong this three years' war has done to religion. For two thousand years faith has been working for the Christianization of the world. It has been a long and almost hopeless labor in the past with so many temporalities to contend against, so many pagan impulses to overcome. If there is one thing certain about Jesus Christ it is that chief among his purposes was that of bringing war to an end, of substituting for the force of arms the force of righteousness. Painfully through the ages has religion toiled after that great ideal, although again and again it has been compelled to see the vicars of Christ girding themselves with the sword in spite of the rebuke of Gethsemane.

But in these later days we were tell-

ing ourselves that in spite of all the machinations of military despotism the gospel of peace was sweeping through the world. We held conferences to celebrate its victorious advance, and great German theologians like Harnack came to England to preach the doctrine of universal pacification. Down to the first days of August, 1914, we were praying in our churches with a fervor and conviction never felt before that God would give us peace in our time, that He would grant to all nations a spirit of unity and concord, that He would save us from violent and untimely deaths, and above all that His Kingdom might come on earth, even as it is in heaven.

And then—what then? At the first blast of war the gospel of peace was gone, nations were hardening their hearts, clergy, under holy orders from the Prince of Peace, were shouldering rifles and going out to kill. The Harnacks of Germany, with a blasphemy never known before in written or spoken words, were calling on God to strengthen their arms that they might kill more and more Englishmen. And then there came three years of rapine, murder, slaughter,

rape, and every horror known to hell. What a shock if the dead were to awake after their long dream of heaven that was to right the wrongs and heal the wounds of their lives on earth to find there was no heaven and no healing. Could the shock be greater? Were our dreams a delusion? The law of love which proceeded from the Cross, was it inconsistent with the laws of life? Did it fail us at the last moment? Is the Christianization of the world further off than ever? Are there two Christianities—one for the individual man and the other for the State? Will God's Kingdom ever come? Is it useless and foolish to hope for the commonwealth of humanity, the League of Nations, for the protection of the world's peace?

Is peace impossible, and will the war last as long as man?

Thank God, there is reason to think that the darkest hour is the hour before dawn, and out of the very blackness of the present I see hope for the future, such a hope as the world has never known before. Man's days are as a span, yet I think some of us will live to see not only peace but the end of war.

Secretary Lansing on Our War Aims

The United States, for the Sake of Its Own Liberty,
Must Fight Until German Autocracy Is Broken

Robert Lansing, Secretary of State, delivered a noteworthy address to 1,600 candidates for commissions as reserve officers at Madison Barracks, Sacket Harbor, N. Y., on July 29, 1917. After a few introductory sentences, he plunged into his theme, saying:

WE are living in the most momentous time in all history, in a time when the lives and destinies of nations are in the balance, when the civilization which has taken centuries to build may crumble before the terrible storm which is sweeping over Europe. We are not only living in this critical period, but we, as a nation, have become a participant in the strug-

gle. Having cast our lot on the side of the powers allied against the Imperial German Government, we will put behind our decision the full power and the resources of the Republic. We intend to win in this mighty conflict, and we will win because our cause is the cause of justice and of right and of humanity.

I wonder how many of us comprehend what the outcome of this war means to mankind, or, to bring it nearer to each one of us, what it means to our country. I sometimes think that there prevail very erroneous impressions as to the reasons why we entered the war, not the immediate reasons, but the deep underlying reasons which affect the life and future

of the United States and of all other liberty-loving nations throughout the world.

Of course, the immediate cause of our war against Germany was the announced purpose of the German Government to break its promises as to indiscriminate submarine warfare and the subsequent renewal of that ruthless method of destruction with increased vigor and brutality.

While this cause was in itself sufficient to force us to enter the war if we would preserve our self-respect, the German Government's deliberate breach of faith and its utter disregard of right and life had a far deeper meaning, a meaning which had been growing more evident as the war had progressed and which needed but this act of perfidy to bring it home to all thinking Americans. The evil character of the German Government is laid bare before the world. We know now that that Government is inspired with ambitions which menace human liberty and that to gain its end it does not hesitate to break faith, to violate the most sacred rights, or to perpetrate intolerable acts of inhumanity.

Proof of German Perfidy

It needed but the words reported to have been uttered by the German Chancellor to complete the picture of the character of his Government when he announced that the only reason why the intensified submarine campaign was delayed until February last was that sufficient submarines could not be built before that time to make the attacks on commerce efficient. Do you realize that this means, if it means anything, that the promises to refrain from brutal submarine warfare which Germany had made to the United States were never intended to be kept, that they were only made in order to gain time in which to build more submarines, and that when the time came to act the German promises were unhesitatingly torn to pieces like other "scraps of paper"?

It is this disclosure of the character of the Imperial German Government which is the underlying cause of our entry into the war. We had doubted, or at least many Americans had doubted, the evil purposes of the rulers of Ger-

many. Doubt remained no longer. In the light of events we could read the past and see that for a quarter of a century the absorbing ambition of the military oligarchy, which was the master of the German Empire, was for world dominion. Every agency in the fields of commerce, industry, science, and diplomacy had been directed by the German Government to this supreme end. Philosophers and preachers taught that the destiny of Germany was to rule the world, thus preparing the mind of the German people for the time when the mighty engine which the German Government had constructed should crush all opposition and the German Emperor should rule supreme.

For nearly three years we have watched the conduct of the Imperial Government, and we have learned more and more of the character of that Government and of its aims. We came very slowly to a realizing sense that not only was the freedom of the European nations at stake but that liberty throughout the world was threatened by the powerful autocracy which was seeking to gratify its vast ambition.

Not impulsively, but with deliberation, the American people reached the only decision which was possible from the standpoint of their own national safety. Congress declared that a state of war existed between the United States and the Imperial Government of Germany, and this country united with the other liberal nations of the earth to crush the power which sought to erect on the ruins of democracy a world empire greater than that of Greece or Rome or the Caliphs.

Quotes President's Slogan

The President has said, with the wonderful ability which he has to express aptly a great thought in a single phrase, that "the world must be made safe for democracy." In that thought there is more than the establishment of liberty and self-government for all nations; there is in it the hope of an enduring peace.

I do not know in the annals of history an instance where a people, with truly

democratic institutions, have permitted their Government to wage a war of aggression, a war of conquest. Faithful to their treaties, sympathetic with others seeking self-development, real democracies, whether monarchical or republican in their forms of government, desire peace with their neighbors and with all mankind.

Were every people on earth able to express their will there would be no wars of aggression, and, if there were no wars of aggression, then there would be no wars, and lasting peace would come to this earth. The only way that a people can express their will is through democratic institutions. Therefore, when the world is made safe for democracy, when that great principle prevails, universal peace will be an accomplished fact.

No nation or people will benefit more than the United States when that time comes. But it has not yet come. A great people, ruled in thought and word as well as in deed by the most sinister Government of modern times, are straining every nerve to supplant democracy by the autocracy which they have been taught to worship.

When will the German people awaken to the truth? When will they arise in their might and cast off the yoke and become their own masters? I fear that it will not be until the physical might of the united democracies of the world has destroyed forever the evil ambitions of the military rulers of Germany and liberty triumphs over its arch enemy.

And yet, in spite of these truths which have been brought to light in these last three years, I wonder how many Americans feel that our democracy is in peril; that our liberty needs protection; that the United States is in real danger from the malignant forces which are seeking to impose their will upon the world, as they have upon Germany and her deceived allies.

Let us understand once for all that this is no war to establish an abstract principle of right. It is a war in which the future of the United States is at stake. If any one among you has the idea that we are fighting others' battles and not our own, the sooner he gets away

from that idea the better it will be for him, the better it will be for all of us.

Germany Menaces America

Imagine Germany victor in Europe because the United States remained neutral. Who, then, think you, would be the next victim of those who are seeking to be masters of the whole earth? Would not this country, with its enormous wealth, arouse the cupidity of an impoverished, though triumphant, Germany? Would not this democracy be the only obstacle between the autocratic rulers of Germany and their supreme ambition? Do you think that they would withhold their hand from so rich a prize?

Let me, then, ask you, would it be easier or wiser for this country single-handed to resist a German Empire flushed with victory and with great armies and navies at its command than to unite with the brave enemies of that empire in ending now and for all time this menace to our future?

Primarily, then, every man who crosses the ocean to fight on foreign soil against the armies of the German Emperor goes forth to fight for his country and for the preservation of those things for which our forefathers were willing to die. To those who thus offer themselves we owe the same debt that we owe to those men who in the past fought on American soil in the cause of liberty. No, not the same debt, but a greater one. It calls for more patriotism, more self-denial, and a truer vision to wage war on distant shores than to repel an invader or defend one's home.

I know that some among you may consider the idea that Germany would attack us if she won this war to be improbable; but let him who doubts remember that the improbable, yes, the impossible, has been happening in this war from the beginning. If you had been told prior to August, 1914, that the German Government would disregard its solemn treaties and send its armies into Belgium, would wantonly burn Louvain, would murder defenseless people, would extort ransoms from conquered cities, would carry away men and women into slavery,

would, like Vandals of old, destroy some of history's most cherished monuments, and would with malicious purpose lay waste the fairest fields of France and Belgium, you would have indignantly denied the possibility. You would have exclaimed that Germans, lovers of art and learning, would never permit such foul deeds. Today you know that the unbelievable has happened, that all these crimes have been committed, not under the impulse of passion, but under official orders.

Atrocities and Iron Crosses

Again, if you had been told before the war that German submarine commanders would sink peaceful vessels of commerce and send to sudden death men, women, and little children, you would have declared such scientific brutality to be impossible. Or, if you had been told that German aviators would fly over thickly populated cities scattering missiles of death and destruction, with no other purpose than to terrorize the innocent inhabitants, you would have denounced the very thought as unworthy of belief and as a calumny upon German honor. Yet, God help us, these things have come to pass, and Iron Crosses have rewarded the perpetrators.

But there is more, far more, which might be added to this record of unbelievable things which the German Government has done. I only need to mention the attempt of the Foreign Office at Berlin to bribe Mexico to make war upon us by promising her American territory. It was only one of many intrigues which the German Government was carrying on in many lands. Spies and conspirators were sent throughout the world. Civil discord was encouraged to weaken the potential strength of nations which might be obstacles to the lust of Germany's rulers for world mastery. Those of German blood who owed allegiance to other countries were appealed to to support the Fatherland, which beloved name masked the military clique at Berlin.

Some day I hope that the whole tale may be told. It will be an astounding tale, indeed. But enough has been told

so that there no longer remains the shadow of a doubt as to the character of Germany's rulers, of their amazing ambition for world empire and of their intense hatred for democracy.

The day has gone by when we can measure possibilities by past experiences or when we believe that any physical obstacle is so great or any moral influence is so potent as to cause the German autocracy to abandon its mad purpose of world conquest.

It was the policy of those who plotted and made ready for the time to accomplish the desire of the German rulers to lull into false security the great nations which they intended to subdue, so that when the storm broke they would be unprepared. How well they succeeded you know. But democracy no longer sleeps. It is fully awake to the menace which threatens it. The American people, trustful and friendly, were reluctant to believe that imperialism again threatened the peace and liberty of the world. Conviction came to them at last, and with it prompt action. The American Nation arrayed itself with the other great democracies of the earth against the genius of evil which broods over the destinies of Central Europe.

America's High Resolve

No thought of material gain and no thought of material loss impelled this action. Inspired by the highest motives, American manhood prepared to risk all for the right. I am proud of my country. I am proud of my countrymen. I am proud of our national character. With lofty purpose, with patriotic fervor, with intense earnestness, the American democracy has drawn the sword, which it will not sheathe until the baneful forces of absolutism go down defeated and broken.

Who can longer doubt—and there have been many who have doubted in these critical days—the power of that eternal spirit of freedom which lives in every true American heart?

My friends, I am firmly convinced that the independence of no nation is sure, that the liberty of no individual is sure, until the military despotism, which holds the German people in the hollow of its

KING GEORGE AND HIS FIGHTING ADMIRAL

hand, has been made impotent and harmless forever. Appeals to justice, to moral obligation, to honor, no longer avail with such a power. There is but one way to restore peace to the world, and that is by overcoming the physical might of German imperialism by force of arms.

For its own safety, as well as for the cause of human liberty, this great Republic is marshaling its armies and preparing with all its vigor to aid in ridding Germany, as well as the world, of the most ambitious and most unprincipled autocracy which has arisen to stay the wheels of progress and imperil Christian civilization.

It is to this great cause you, who are present here tonight, like thousands of other loyal Americans, have dedicated yourselves. Upon each one of you much depends. You are going forth into foreign lands, not only as guardians of the flag of your country and of the liberties of your countrymen, but as guardians of the national honor of the United States. American character will be judged by your conduct, American spirit by your deeds. As you maintain yourselves courageously and honorably, so will you bring glory to the flag which we all love as the emblem of our national unity and independence.

Reward of the Soldier

It is in the toil and danger of so great an adventure as you are soon to experience that a man's true character will become manifest. He will be brought face to face with the realities. The little things which once engrossed his thought and called forth his energies will be forgotten in the stern events of his new life. The sternness of it all will not deprive him of the satisfaction which comes from

doing his best. As he found gratification and joy in the peaceful pursuits of the old life, so will he find a deeper gratification and a greater joy in serving his country loyally and doing his part in molding the future.

And when your task is completed, when the grim days of battle are over, and you return once more to the quiet life of your profession or occupation, which you have so generously abandoned at your country's call, you will find in the gratitude of your countrymen an ample reward for the great sacrifice which you have made.

If enthusiasm and ardor can make success sure, then we, Americans, have no cause for anxiety, no reason to doubt the outcome of the conflict. But enthusiasm and ardor are not all; they must be founded on a profound conviction of the righteousness of your cause and on an implicit faith that the God of Battles will strengthen the arm of him who fights for the right.

In the time of stress and peril, when a man stands face to face with death in its most terrible forms, God will not desert him who puts his trust in Him. It is at such a time that the eternal verities will be disclosed. It is then, when you realize that existence is more than this life and that over our destinies watches an all-powerful and compassionate God, you will stand amidst the storm of battle unflinching and unafraid.

There is no higher praise that can be bestowed upon a soldier of the Republic than to say that he served his country faithfully and trusted in his God. Such I earnestly hope will be the praise to which each of you will be entitled when peace returns to this suffering earth and mankind rejoices that the world is made safe for democracy.

War for American Honor and Lives

Senator Borah on Our War Aims

Senator Borah of Idaho delivered a remarkable speech in the Senate on July 26, 1917, during the debate on river and harbor appropriations, in which he warned Congress and the nation against useless expenditures, at the same time stating just what were the issues for which Americans were about to offer their blood and treasure on the battlefields of Europe. All the essential parts of the speech are given below.

The debate having brought Mr. Borah to the point where he warned the Senate that the millions of waste in the River and Harbor bill might be a cause of disaster, he continued:

ENGLAND has up to the present time issued war bonds to the amount of \$18,740,000,000. France has issued \$10,532,000,000 of bonds, Germany has issued \$13,400,000,000 of bonds, Russia has issued \$7,896,000,000 of bonds, Italy has issued \$2,520,000,000 of bonds, Austria has issued \$3,659,000,000 of bonds, and the United States will add to it this year in the way of bonds in all probability to the amount of at least \$10,000,000,000. You have, Mr. President, the stupendous, almost incomprehensible burden of \$66,747,000,000 in the way of bonded indebtedness upon the countries named that are engaged in this war. Calculate the annual interest on this and you get some conception of this burden. * * *

In view of the fact that the countries with which we are now allied are raising apparently every dollar that they can, but must necessarily vote these large issues of bonds, and in view of the fact that we have already incurred obligations or provided for expenditures approaching \$17,000,000,000, as a matter of patriotism, in the simple discharge of the most simple duty which devolves upon us we ought to insist that every item of appropriations which passes through this body shall have stamped upon it "necessity"; that no item which cannot be said to be absolutely necessary to the successful carrying on of the war ought to pass, and that to pass it would be an act in disregard of the imminent urgency which confronts this country.

Mr. President, there never has been a time in this struggle, from the first day

of August, 1914, until this present hour, when the outlook was so serious and menacing to the Allies as it is at this time. There has never been an instant

WILLIAM E. BORAH
SENATOR FROM IDAHO

so calculated to call forth patriotic effort, to enlist the unselfish zeal of those who have to do with the guiding of their country's affairs as this present time. Russia has for all practical purposes at this hour, for the present at least, passed out of the conflict. Her internal difficulties have made it practically impossible for her to be of effect upon the fighting line. That vast body of people, upon whom all interested in this war upon the side of the Allies depended so

much and from whom they expected so much has by reason of the situation at home practically left the battle front.

New Crisis Due to Russia

What does that mean to the people of the United States? Could a more serious message come over the wires at any time, one involving more nearly the lives of millions of our boys, than the fact that Russia is breaking down? If there is efficacy in prayer in such things as these, the American people may well offer up a silent prayer at this hour for the guidance and the preservation and the success of Kerensky. If this gallant leader, standing now at the head of his disorganized forces, meets either the assassin's bullet or failure in other ways, it means a leaven which will disorganize and demoralize the situation beyond any power that language can portray. It means, Mr. President, that in all probability a million American boys in addition will find graves upon European soil.

No more serious situation, Sir, could confront warring nations than that which confronts the Allies at this hour. In the minds of some it may not be considered wise to say so, but the situation is here, and I am one of those who believe that we should speak truthfully and plainly to those who must pay our taxes and fight our battles. The hour of sacrifice has arrived, and, being here, will the Senate of the United States linger and parley, Sir, over money to go into Fish Creek, Tombigbee Creek, or some other inconsequential and worthless waterways? Will the American Senate delay for a single hour to cut away all unnecessary and idle things which impede progress or add unnecessary burdens and meet this situation as it is necessary for us to meet it in order to solve the problem? Shall we rise to the invitations of this solemn and awful hour or shall we still trifle with selfish and immaterial matters as the storm comes on?

But that is not all, Mr. President. Not only has Russia for the present time passed out of this war, but the submarine problem, which, it was hoped a few weeks ago, might by this time be well upon its way to a successful solution, instead of being favorable to the Allies is

distinctly favorable to the Teuton powers. I read in the reliable papers this morning that, instead of the amount of tonnage sunk decreasing, it is increasing day by day, and thus, while the Russian forces are breaking away from the fighting line, the submarines of the Teuton powers are spreading havoc upon the seas, and France is being fought almost to her knees, though displaying again and again courage and heroism such as have never been excelled in the history of the world.

[Here Mr. Borah reviewed the work of German submarines, estimating the sinkings at 9,000,000 tons a year, and continued]:

America's Peace Terms

This is not a propitious time, generally speaking, to discuss peace or to propose peace if we intend to have that peace which is permanent and which endures. With an enemy that is apparently marching on to victory, we shall hardly be listened to upon their part; we cannot discuss peace with them; * * * but I think this much ought to be said, lest I be misunderstood: I am not so sure but that the time has come when the American people should have presented to them more definitely and specifically the terms and conditions upon which we are fighting the war and the terms and conditions upon which we would cease to fight it. I believe that there ought to be laid before our people a more specific program as to what we propose to attain, as to what we propose to accomplish, and as to the terms and conditions upon which the war, so far as America is concerned, can end. I think we ought to say in as clear terms as possible just what America demands as a prerequisite of peace.

I say this, not, Sir, with the view of dealing with Germany or with the expectation that she would accept from us at this time any proposal which we might submit, but I say it in behalf of our own people and of permitting them to know definitely and specifically the things for which they are expected to fight and the things which shall constitute the end of their task. We cannot carry on this war,

in my judgment, without a thoroughly aroused and sustained public opinion in favor of the war, which does not at this time exist; and one of the reasons, in my opinion, why it does not exist is because of the nebulous and uncertain terms and conditions upon which we are supposed to be in the war, and the utter want of knowledge as to what conditions will take us out of the war. No one seems to know what will constitute the end. America ought to hold the reins of peace every hour and at all times.

The Real American Issue

Mr. President, Viviani, in that remarkable address bidding farewell to the American people, told us that the great mistake the German Government made was in not knowing the French and English people; that they sent their Ambassadors to France and England to study government and to practice the arts of diplomacy, but they misunderstood or did not read at all the noble qualities of the masses. Let us not as a Government make that same fatal mistake with reference to our own people. Let us keep in mind that the ways of Government and the paths of diplomacy overshadowed by no sacrifice are often far from the sad and dusty lanes down which the people march to war. Government and diplomacy may be interested in the future of Constantinople and the Bagdad Railway, but out yonder in the open, where every move toward war means sorrow and sacrifice, where families are to be separated and broken, where husband and brother and son are to be offered upon the altar, that altar must be our country—you must speak to them of things of home and of the flag, you must give them an American issue for which to die.

After we have declared war and taken the steps upon the part of the Government which necessarily follow, we come then to deal with another world entirely. We leave the field of form and formality and find ourselves in the world of the concrete, of the real, where hearts throb and grieve and men are preparing to suffer and die. From this forward you must deal with the man on the street, in the field, and in

the factory; the man of simple and fixed but noble national instincts; the man, bless God! in whose moral and intellectual fibre are ingrained the teachings and traditions and aspirations of a century of national life—a national life separate, distinct, exceptional, and sublime.

Fighting for Our Own Rights

You will not change these things over night. The American citizen must live his character; you cannot transplant in a few weeks the habits and ideas, the methods and ways, of other people. We have our allies, and with them a common purpose; but America is still America, with her own institutions, her individuality, the moral and intellectual conceptions of her own people; she is still a sun and not a satellite.

Sir, if our own institutions are not at stake, if the security of our own country is not involved, if we as a people and as a nation are not fighting for our own rights and the honor and lives of our own people, our declaration of war was a bold and impudent betrayal of a whole people, and its further continuance a conspiracy against every home in the land. * * *

A few weeks ago Russia made a declaration in favor of peace based upon no indemnities and no annexations. It found no response from any one of her allies. In my humble judgment, the United States could not have taken a more important and effective step than to have indorsed the proposition which Russia at that time put out to the world. Some noted exceptions, some of which, I have no doubt, Russia herself would have accepted, could have been noted, but the principle maintained. It is my opinion that if the United States had taken a bold stand at that time in favor of that principle Russia would be in 100 per cent. better condition as a fighting force today than she is. But the impression immediately obtained that certain influences prevented the United States from defining its position, waiting upon other powers which were directing the course of this war. And there is abroad in this land now the belief that we must fight

on and on until captured colonies and certain territory are adjusted. Sir, I warn you now, do not let that idea become fastened in the minds of our people.

Because Americans Were Murdered

Mr. President, I can only speak for myself and for myself alone. But speaking for myself, I did not vote for war out of sympathy for France, much as I sympathize with and greatly as I admire that brave and chivalrous people. I voted for war because our own rights had been trampled under foot, because our own people had been murdered, and because we were warned that the slaughter was to be renewed. I could see nothing under those conditions in the future but continued wrongs, dishonor, and complete national degradation. I did not vote for war that we might spread democracy over Europe, though, in common with all my countrymen, I presume, I would be glad to see every King and every Emperor and every Prince exiled from among men and the last vestige of dynastic power swept into the refuse of history.

I voted for war to preserve and make safe our own blessed Republic, to give honor and dignity and security to this democracy of ours, and to keep it if we

could as our fathers transmitted it, whole and triumphant. I felt that self-respect was the very breath of life of a democracy, that while other Governments might continue on in humiliation, and even in degradation, without self-respect a democracy could not long endure. I felt that a free Republic living alone and existing only in the affection and the devotion of the citizen could not long survive the day when that Republic should refuse to defend the rights and protect the lives of its citizens. So I voted for war because the most vital thing in our national life was and is involved, and for no other reason on earth would I have cast that vote and aided in plunging our nation into the midst of this world conflict.

As I view it, from that hour this was no longer a European war to settle and adjust European affairs, to rehabilitate European nations, but an American war, to be carried on, prolonged, or ended according to American interests, and to be adjusted upon American principles, and to settle, once and we hope for all time, that while slow to wrath we are swift to avenge those wrongs which challenge national honor and imperil the security of our own people.

"America Will Make No Difference"

Dr. Kahl, a Professor of Law at the University of Berlin, delivered a lecture in July on "The Turning Point of the World War." He was reported as saying:

The turning point of the war has arrived—that is to say, the climax is passed, and the scales are fixed in our favor. We can say deliberately that the German victory is waving to us. Our enemies are many. Our latest enemies have been forced to come in as economic satellites of our main enemies. It is only the old enemies that seriously count in calculations about the result and end of the campaign; among them is Wilson, who was always playing false. Such a nature as his is repulsive to the German character. At the turning point of the world war, however, the fact that we are at war with America will make no difference—not even if the much-trumpeted 200,000 men come over the sea. With just conviction and hope we can cry to the peace hypocrite on the warpath, "Too late!"

The Battle of the Chancelleries

British Premier's Attack on New German Chancellor's First Speech Opens a Many-Sided Debate

PREMIER LLOYD GEORGE, speaking at a patriotic demonstration in Queen's Hall, London, on Belgium's Independence Day, July 21, 1917, characterized the recent speech of the German Chancellor, Dr. Michaelis, as a sham, facing both ways, and declared that he did not wish the Germans to "harbor any delusions that they are going to put Great Britain out of this fight until liberty has been re-established throughout the world." The German speech in question was delivered in the Reichstag on July 19, and its essential portions will be found in the August issue of this magazine. Toward the end of his speech Mr. Lloyd George said that the Germans were making the same mistake in underestimating America's efforts in the war as they had made about Great Britain in the beginning:

They said that we wouldn't fight, and if we would we couldn't. We had no army and we couldn't raise one, and they needn't worry about Britain. I think they have discovered their mistake about us, and now they are just going through the same process with America.

I want to put this to them: If Great Britain, not a very large country, while she is maintaining and equipping and even building up equipment for an army of millions afield and in reserve in full fighting array, while she is maintaining the largest navy in the world, can organize in the third year of an exhausting war to turn out millions of tons of new shipping, is America, with twice the population of this country, with endless natural resources, going to be beaten merely because she puts forth no effort? The man who talks like that knows not America; otherwise he would not say it.

Brighter Days for Belgium

The other essential portions of Mr. Lloyd George's speech are as follows:

Three years—even of agony—are not long in the life of a nation, and the deliverance of Belgium is assuredly coming, and when it comes that deliverance must be complete. France owes it, Britain owes it, Europe owes it, the civilization of the

world owes it to Belgium that her deliverance shall be complete.

What have we got in the way? There is a new Chancellor. The Junker has thrown the old Chancellor into the waste-paper basket with his scrap of paper and they are lying there side by side. You will not have to wait long before Junkerdom will follow. What hope is there in his speech of peace—I mean an honorable peace, which is the only possible peace? It is a dexterous speech. A facing-all-ways speech. There are phrases for those who earnestly desire peace—many. But they are phrases which the military powers of Germany will understand—phrases about making the frontier of Germany secure. That is the phrase which annexed Alsace-Lorraine; that is the phrase which has drenched Europe with blood from 1914; that is the phrase which, if they dare, will annex Belgium; and that is the phrase which will once more precipitate Europe into a welter of blood within a generation unless that phrase is wiped out of the statesmanship of Europe.

Herr Michaelis's Phrases

There are phrases for men of democratic mind in that speech—many. He was calling men from the Reichstag to co-operate with the Government; they were even to get office, men of all parties and men of democratic sentiment. But there were phrases to satisfy the Junkers—to other men nothing. There was to be no parting with imperialistic rights. Ah! They will call men from the Reichstag to office, but they will be not Ministers, but clerks. It is the speech of a man waiting on the military situation, and let the Allies—Russia, Britain, France, Italy, all of them—bear that in mind. It is a speech that can be made better by improving the military situation. If the Germans win in the west, if they destroy the Russian Army in the east, if their friends the Turks drive Britain out of Mesopotamia, if the U-boats sink more merchant ships, then that speech, believe me, means annexation all round and military autocracy more firmly established than ever. But, on the other hand, should the German Army be driven back in the west, be beaten in the east, and should their friends the Turks fail in Bagdad, and the submarines be a failure on the high seas, that speech is all right. We must all help to make that a good speech. There are possibilities in it of excellence. Let us help Dr. Michaelis;

let us give our assistance to the new Chancellor to make his first speech a real success. But for the moment it means that the military party has won.

Guarantees of Peace

I want to repeat in another form a statement which I made before. What manner of Government they choose to rule over them is entirely the business of the German people themselves; but what manner of Government we can trust to make peace with is our business. Democracy is in itself a guarantee of peace, and if you cannot get it in Germany then we must secure other guarantees as a substitute. The German Chancellor's speech shows, in my judgment, that those who are in charge of affairs in Germany have for the moment elected for war.

There is no hope for Belgium in that speech. It is not even mentioned. The phraseology is full of menace to Belgium. All that about making their frontiers secure—which took Metz and Strasburg away, and will take Liège and the control over Antwerp again—that is not a phrase of good omen for Belgium. All that about the necessity of seeing that the economic interests of Germany are secure means that, even if they restore Belgium, their restoration will be a sham. The determination of the Allies is this, that Belgium must be restored as a free and an independent people. Belgium must be a people and not a protectorate. We must not have a Belgian scabbard for the Prussian sword. The sceptre must be Belgian, the sword must be Belgian, the scabbard must be Belgian, the soul must be Belgian.

I read that speech, as it was my duty to read it once, twice, thrice, to seek anything in it which would give hope for an end of this bloodshed, and I see a sham independence for Belgium, a sham democracy for Germany, a sham peace for Europe; and I say Europe has not sacrificed millions of her gallant sons to set up on soil consecrated by their blood a mere sanctuary for shams.

Vanishing German Illusions

The German Chancellor tries to stimulate the courage of his people by doping them with illusions. Germany will find that her new hopes are just such illusions as the others that have been dispelled. Paris in six weeks—that is gone. The circumvention of our blockade by opening up the route to Bagdad and to the reserves of the East—that is gone. The Zeppelin raids—where are they? And now it is the Turks and the U-boats, both equally barbarous and good company, the one for the other. The U-boats are to put England out of business. Owing to the submarine attacks, according to the German Chancellor, we cannot last much longer. I am sorry to disillusion him at the outset of his career. But truth compels me to do it.

Gradually, but surely, we are increasing our production and decreasing our losses in ships.

We are a slow people; we are not very quick at the outset, but we are difficult to beat when we begin; and certainly I think Germany has underrated our intelligence, our industry, and our determination. * * *

There has been a change, a more significant change than that of the substitution of Dr. Michaelis for Bethmann Hollweg, and that is the change which has been announced just a few hours ago. That brilliant young Russian statesman, the outstanding figure of the Russian revolution, the man whose inspiration has regenerated and revived Russian military forces, has succeeded to the leadership of the Russian democracy. In the great coming struggle in the east and in the west, every German soldier must know in his heart that if he falls he will be dying for military autocracy in fighting against the federation of free peoples. On the other hand every Belgian soldier, every French soldier, every Russian soldier knows that he is risking his life for the freedom and independence of his native land. Every British, every American, every Portuguese soldier knows that he will be fighting side by side with the others for international right and justice throughout the world, and it is that growing conviction more even than the knowledge of vast unexhausted resources which gives them all heart—it gives us heart—to go on fighting to the end, knowing full well that the future of mankind is our trust to maintain and to defend.

Commons Rejects Resolution

The attitude of the British House of Commons toward a peace move initiated by Germany was shown July 26, when by a vote of 148 to 19 it defeated the following resolution, moved by James Ramsay MacDonald, Socialist and Labor Member for Leicester:

That, in view of the resolution passed by the representatives of the German people assembled in the Reichstag, to the effect that, putting aside the thought of acquisition of territory by force, the Reichstag is striving for a peace of understanding and lasting reconciliation of nations; that with such a peace, political, economic, and financial usurpation are incompatible, also that the Reichstag repudiates all plans which aim at the economic isolation and tying down of nations after the war, this House declares that this statement expresses the principles for which this country has stood throughout, and calls upon the Government, in conjunction with the Allies, to restate their peace terms accordingly; and, further, it declares that the Allies should accept the Russian

proposal that the forthcoming allied conference on war aims shall comprise representatives of the peoples and not solely spokesmen of the Governments.

Former Premier Asquith, in discussing the resolution, welcomed the news that a conference would be held early in the Autumn on the invitation of the Russian Government. Nothing but good could come of a plain restatement of the Allies' aims in a good cause. Two new facts of the present year, first, that Russia had ceased forever to be autocratic, and, second, the appearance, with all her moral and material forces, of the United States in the struggle, had a direct and practical bearing upon the opinion of the world as to the sincerity of the Allies' aims. He continued:

Earnestly as we desire peace, no peace is worth having which would restore, under some thin disguise, the precarious status quo ante bellum and would leave countries like Belgium, Serbia, and Greece at the mercy of dynastic intrigue or under the menace of military coercion. It would be premature and futile to grapple in detail with the geographical problems eventually to be solved.

The principle clearly agreed to by every one of the Allies is that in any rearrangement made the governing principle ought to be the interests and the wishes of the populations affected. But is that principle acceptable to the Central Powers? Is Germany prepared not only to evacuate Belgium but to make reparation for the colossal mischief and damage which accompanied her devastating occupation and the practical enslavement of a large portion of the Belgian people? Is she prepared not only to do that but to restore to Belgium not a pretense of but absolute independence?

Other Official Replies

The speech of Bonar Law dealt largely with the Russian crisis. He said that all the nations engaged were staggering under the blow, but that the resources of the Allies were sufficient to make it absolutely certain that, unless their hearts failed them, they must secure the results for which they had entered the war. The struggle had reached a point where it was a question of staying power, and in this matter he had absolute confidence in the Allies.

Another official reply to Chancellor Michaelis is contained in the latter part

of a summary of war events prepared for The Associated Press by Sir Edward Carson, British Minister without portfolio, under date of July 29. After declaring that the Russian revolution and the entry of the United States into the war were the two great events of the year, he said:

The immediate effect of the Russian revolution, from a military point of view, gives cause for great anxiety and has, up to the present, proved disastrous. But it must be borne in mind that the Government of the late Russian Emperor was hatching positive treachery to the alliance and would have caused much greater disaster to us by concluding separate peace with Germany.

The revolution, even from a military point of view, has been far better than the régime which it displaced. And, from a political and social point of view, we in England welcome it without reserve. We are confident that the inevitable disturbance which accompanies every revolution when the seat of existing authority is overturned will settle into constitutional order based on free democratic institutions and that as soon as this is brought about the ingrained patriotism of the Russian people, combined with their splendid military qualities, proved on a thousand battlefields, once more will bring that great country into line in effective co-operation with her allies in striking at the common enemy of all.

The Russian revolution, moreover, has drawn a clear-cut line between the contending nations, ranging them as the defenders of democracy on one side and as its assailants on the other. This aspect of the struggle, of course, has been most strongly emphasized by the action of America in joining the alliance against the Central Empires and Turkey.

America's Momentous Decision

The momentous decision of the United States that no alternative remained to her but to take up arms against Germany is one of the greatest events in the history of the world. Previous to taking it she had proved by a long course of patient statesmanship how deeply seated was her abhorrence of war and her idealism in the conduct of international affairs. Nothing but persistent and openly avowed adoption by Germany of a policy of public crime and flagrant violation of neutral rights would have driven America into the war.

The utterances of President Wilson have nobly vindicated the moral basis of the alliance against Germany, and we have full confidence that America's moral support will, in good time, be backed by ma-

terial aid of overwhelming power which will make an end of all doubts as to the completeness of the victory attainable by the Allies.

We feel sure that the American people realize as clearly as we do ourselves that no peace can be lasting which is not the fruit of a complete and unquestionable military victory. The new German Chancellor has shown that neither the German Government nor the German people is yet prepared for any such peace. They still hope to make civilization and democracy surrender to the black flag.

Reply of Dr. Michaelis to Lloyd George

Dr. Georg Michaelis, the German Imperial Chancellor, summoned a large number of newspaper men to his office in Berlin on July 29 and made the following declaration and countercharges:

The speech of David Lloyd George, the British Premier, at Queen's Hall, London, and the recent debate in the British House of Commons again have proved with indisputable clearness that Great Britain does not desire peace by agreement and understanding, but only a conclusion of the war which means the enslavement of Germany to the arbitrary violence of our enemies.

Proof of this may be seen in the fact that Sir Edward Carson recently declared in Dublin that negotiations with Germany could begin only after the retirement of German troops beyond the Rhine. In response to a question put by Commoner Joseph King, A. Bonar Law, the spokesman of the British Government in the House of Commons, modified this declaration by fixing the standpoint of the British Government as being that if Germany wanted peace she first of all must declare herself willing to evacuate the occupied territories.

We possess clear proofs that the enemy gives assent to a declaration going even further than that impudently made by Sir Edward Carson. You all know that detailed information regarding the French plans of conquest, approved by Great Britain and Russia, has been circulated for weeks past in the neutral press and that it has not been denied up to the present.

Says French Seek Conquest

It would be of the greatest importance for the enlightenment of the whole world regarding the true reasons for the continuation of the sanguinary massacre of nations for it to be known that written proofs of our enemies' greed for conquest have since fallen into our hands. I refer to reports of the secret debate on June 2 in the French Chamber of Deputies.

It would be foolish to deny that the submarine menace is an exceedingly grave one; but it will be defeated as every other German expedition has been defeated in the three years of war we now have passed through.

We enter on the fourth year in a spirit of confident determination to see this thing through until we have attained the aims we proclaimed at the beginning, which could not be better summarized than in President Wilson's pregnant phrase to "make the world safe for democracy."

I ask the French Government this question: Does it deny that ex-Premier Briand and Premier Ribot, in the course of that secret sitting, at which were present Deputies Moutet and Cochon, who had just returned from Petrograd, were forced to admit that France, shortly before the Russian revolution, had come to an agreement having in view vain plans of conquest with a Government which Premier Lloyd George described in his last speech as a "corrupt and narrow autocracy"?

I ask if it is true that the French Ambassador at Petrograd, in response to a request sent by him to Paris, received instructions to sign a treaty prepared in advance by M. Doumergue (ex-Premier and Foreign Minister) after negotiations with the Russian Emperor?

Is it true or not that the French President at the instance of General Berthelot, head of the French military mission to Rumania, formally intrusted him with a mandate, and that M. Briand afterward sanctioned this step?

This treaty assured to France her frontiers, but amended on lines of previous wars the conquest of 1870 to include, besides Alsace-Lorraine, Saarbrücken and vast territorial modifications on the left bank of the Rhine.

As desired by France when M. Terestchenko (the Russian Foreign Minister) took office, the Russian Government protested against the French aims of conquest, which also included that of Syria, and declared that new Russia no longer would be willing to take part in the struggle if it learned of these French war aims.

Professes to Quote Briand

Wasn't it the principal object of Albert Thomas (member of the French War Council) on his journey to Russia to overcome this remorse of M. Terestchenko? The French Government will not be able to deny all this, and it will be obliged to confess, although it may do so only tacitly, that M. Briand was the ob-

ject of stormy attacks during the secret session; that Premier Ribot was obliged to produce the secret treaty in response to the demand of M. Renaudel, (leader of the majority Socialists in the French Chamber,) and also that M. Briand, in the course of the excited debate which ensued, declared that revolutionary Russia was obliged to carry out what imperial Russia had promised and that it did not matter to France what was said by the lowest classes in Russia.

It is characteristic that Deputy Moutet, according to his own statement, replied in Russia to the question whether Alsace-Lorraine was the only obstacle to peace by saying he could not answer the question in that form and that Russia ought to take into consideration the fact that the Russian revolution had been purchased by French blood.

The admission of Deputies Cochin and Moutet that the Russian representatives had declared in the course of the negotiation that they attached no importance to Constantinople throws clear light on Russian sentiment. The delegates from the Russian armies also are in agreement with this.

Regardless of this manifest proof of the revulsion of the Russian people against a policy of aggrandizement, Premier Ribot refused in the secret session of the French Chamber to undertake any revision of the French war aims and announced the fact that Italy also had received guarantees of great territorial aggrandizements.

In order to divest their ambitions on the left bank of the Rhine of a character of greed and conquest, he announced the necessity of a buffer State, but the Opposition speakers cried out amid a din of contradictions: "It is disgraceful!"

I would like also to mention that Premier Ribot, after a pacifist speech by Deputy Augagneur, replied that the Russian Generals had declared that the Russian armies never were in better condition or better equipped than then. Here appears in perfect clearness the desire to let the Russian people go on shedding their blood in behalf of the unjust ambitions of France.

This desire has been fulfilled, but not as Premier Ribot anticipated, for we can hardly presume he had such an absolute lack of humanity as that; though foreseeing the failure of the Russian offensive, he yet insisted upon it, thinking it would give another hour's respite pending the entry of America into the war.

The enemy press endeavors to force upon my inaugural speech the interpretation that I only consented to the majority resolution with an ill-concealed reservation of Germany's desires for conquest. I am obliged to deny the imputation as to an object of which there can be no

doubt. Besides, the resolution implies—which is quite clear—that the enemy must also renounce any ideas of conquest.

Dr. Michaelis added that it was manifest Germany's enemies were not in the least considering such renunciation and that the French meeting held in secret was fresh proof that her enemies were responsible for the prolongation of the war and were "actuated by lust of conquest."

"The conspicuousness of the justice of our defensive war," the Chancellor concluded, "will steel our strength and determination in the future."

Supported by Count Czernin

Count Ottokar Czernin von Chudenitz, the Austro-Hungarian Foreign Minister, gave out a similar statement at Vienna on the same day, declaring that the Dual Monarchy would fight to the last extremity if the Entente Powers refused to accept the suggestion of Dr. Michaelis and enter into negotiations on the basis of a peace by understanding. He also replied to Mr. Lloyd George's speech of July 21 and said that the British Premier was mistaken when he called the Reichstag resolution a "peace bluff." He said:

I must reply to Premier Lloyd George with the question: What are we finally to expect from the Entente? What we desire is quite evident from the well-known declarations made in Vienna and from the demonstrations by the German people showing that a complete agreement exists to the very last detail between Vienna and Berlin.

What the Chancellor and the Reichstag declared is what I described months ago as an honorable peace, which the Vienna Government is ready to accept and whereby it seeks a lasting reconciliation of the nations. But there also exists the complete agreement that we never shall accept a peace which is not honorable for us.

If the Entente does not wish to enter negotiations on the basis which we have clearly indicated, we shall continue the war and fight to the last extremity.

I don't care whether this admission is regarded as a sign of weakness or of strength. To me it seems only a sign of common sense and morality, which revolt against the idea of prolonging the war. I am absolutely convinced the Entente will never succeed in crushing us; and, since in our position of defense we have no intention of crushing the enemy, the war will end sooner or later in a peace by understanding. But, to my way of

thinking, the natural conclusion is that the further sacrifices and suffering imposed on all humanity are useless, and that it is necessary, in the interests of humanity, to reach a peace by understanding as soon as possible.

As we have fought in conjunction with our faithful allies, so we shall make peace in conjunction with them, now or later, and we shall fight in conjunction with them to the last extremity unless the enemy shows a willingness to understand our viewpoint.

I shall not put the question who was responsible for the war, because it is useless to discuss the past in this connection. But I shall speak of the future, and I wish to express the desire that the world may succeed after the conclusion of peace in finding adequate means and expedients to prevent forever the recurrence of such a frightful war.

The democratization of Constitutions is the great demand of the time. Both in Austria and in Hungary the Governments are putting their hands to this great work, but they are against intervention from the outside. We do not intervene in the internal affairs of other States, and we demand complete reciprocity in this matter.

Balfour's Guarded Statement

The following day, July 30, Arthur J. Balfour, British Foreign Minister, took part in a discussion in the House of Commons regarding Lord Robert Cecil's recent statement that "the dismemberment of Austria was not one of Great Britain's war aims." Mr. Balfour said it would not be wise for the Government to declare the details of its policy at this juncture. With respect to the Yugoslav and Austrian question it was impossible to foretell the position in which the world would find itself when that issue came to be decided. "As everybody 'knows,' he said, 'we first entered the 'war to defend Belgium and prevent 'France from being crushed before our 'eyes.' If France now asked for Alsace-Lorraine, he saw no reason why Great Britain should not assist her until she got back into the position which existed before the attack engineered against her

by Bismarck in 1871, namely, that she "obtain restoration of that of which she "was violently robbed more than forty "years ago." He added: "As long as "France fights for Alsace-Lorraine we "shall support her."

As for the democratization of Germany, Mr. Balfour continued, nobody was foolish enough to suppose that it would be possible to impose upon Germany a Constitution made outside of Germany. He added:

Germany must work out her salvation. You do not mend matters by imposing a Constitution, even if you have the power. Nations must make their scheme of liberty for themselves, according to their own ideas, and based on their history, character, and hopes.

But if it is true that the great power of German imperialism is still depending upon the belief—the belief driven into the German Nation by the wars of 1806 and 1870—that only under the imperial system can Germany be great, powerful, and rich, then if experience shows that the imperialistic system can produce not merely a triumph one time but inevitably lead to corresponding disaster at another, it may well be that those views which found German teachers for more than a generation before the Bismarckian domination will revive with new lustre and new strength, and that Germany, with all her powers of organization and all her inherited cultivation, will be added to those nations which before the war could hardly conceive how a universal war of this sort could be deliberately provoked in order to further the commercial or political interests of any single community.

When Germany has come to the level of the United States and Great Britain in that respect we may hope that one of the great disturbers of the peace will forever be eliminated. I do not know who will venture to say for a moment that, looking at the internal condition of Germany as far as we are allowed to see it at the present time, the ideas of which I have been speaking will really grow in such fashion as to raise legitimate hopes that in our lifetime we shall see that established. But I am sure that if it is not established the security of Europe will not be established either.

The "Potsdam Plot" and Countercharges

The London Times on July 28 published an article from a "well-informed correspondent" tending to show that the die

had been cast for war at a secret meeting in Potsdam on July 5, 1914. The Leipziger Volkszeitung had published

eight days earlier a report of Hugo Haase's speech in the Reichstag containing a reference to "the meeting of July 5, 1914," as one of the matters which would have to be explained before the origin of the war could be fully understood. The correspondent of *The Times* wrote:

This is the first public reference to a date which probably will become the most famous of the fateful month of July, 1914. I have it on authority which it is difficult if not impossible to doubt that the meeting referred to was a meeting held at Potsdam on the date named. There were present the Kaiser, Dr. von Bethmann Hollweg, Admiral von Tirpitz, General von Falkenhayn, Dr. William von Stumm, Under Secretary for Foreign Affairs; Archduke Frederick of Austria, Count von Berchtold, Austrian Foreign Minister; Count Tisza, Premier of Hungary, and General Conrad von Hoeszendorf. It appears that von Jagow and Count Moltke were not present.

The meeting discussed and decided on all the principal points in the Austrian ultimatum which was to be dispatched to Serbia. Eighteen days later it was recognized that Russia would probably refuse to submit to such a direct humiliation, and that war would result. That consequence the meeting definitely decided to accept. It is probable but not certain that the date of mobilization was fixed at the same time.

The Kaiser, as is well known, then left for Norway with the object of throwing dust in the eyes of the French and Russian Governments. Three weeks later, when it became known that England would not remain neutral, Bethmann Hollweg wished to withdraw, but it was too late. The decision of July 5 was irrevocable.

The peculiar way, or rather ways, in which the facts have become known cannot as yet be told, but it is certain that most of Haase's hearers were fully aware of the meaning of his reference to July 5, for the subject appears to have been discussed more fully at a session of the Budget Committee of the Reichstag eight weeks ago, when a Socialist Deputy, Herr Cohn, challenged a certain Minister to deny the facts. To the astonishment of other Deputies, the Minister did not deny the facts, but declined to make any statement. The incident created an immense sensation in the Reichstag.

The Berlin Government, through its semi-official news agency, denied this charge in the following dispatch dated Aug. 1:

The Wolff Bureau is authorized to declare the statements, with all their details, pure inventions. Neither on the day named nor on any other day in July did such a joint conference occur, either with or without the participation of the Emperor. Moreover, we again declare that the German Government abstained from any intervention in drafting the Austrian ultimatum to Serbia and that the German Government was completely ignorant of the contents of the ultimatum before its dispatch. The *Times* supports its false allegations on statements made by Deputy Cohn in the main committee of the Reichstag. The statement of the Deputy was immediately refuted in committee by the Government as incorrect.

Ribot Answers Countercharge

Dr. Michaelis, as has been seen, came back with the countercharge that France and Russia had made a secret treaty aiming at conquest. Premier Ribot replied to the latter on July 30, in the French Chamber of Deputies, saying:

I wish to reply to the singular speech which Dr. Michaelis thought fit to invite the Berlin journalists to hear. The German Chancellor publicly commanded the French Government to declare whether in a secret sitting June 1 the French Government had not made known to the Chamber of Deputies the terms of a secret treaty made before the Russian revolution whereby the [Russian] Emperor bound himself to support French pretensions to German territory on the left bank of the Rhine.

The Chancellor's version contains gross inaccuracies and absolute lies, notably regarding the rôle he attributes to the President of the Republic in giving an order to sign a treaty unknown to Premier Briand. The Chambers know how things passed. M. Doumergue, (former Premier and Foreign Minister,) after a conversation with the Emperor, demanded and obtained M. Briand's authorization to take note of the Emperor's promise to support our claim to Alsace-Lorraine and to leave us free to seek guarantees against fresh aggression, not by annexing territories on the left bank of the Rhine, but by making an autonomous State of these territories, which would protect us and also Belgium against invasion.

We have never thought to do what Bismarck did in 1871. We are, therefore, entitled to deny the allegation of the Chancellor, who evidently knows of the letters exchanged in February, 1917, at Petrograd, and falsified since as his most illustrious predecessor falsified the Ems dispatch. Whenever the Russian Govern-

ment is willing to publish these letters we have no objection.

The Chancellor refrained from speaking about my declaration March 21, wherein I repudiated in France's name any policy of conquest and annexation by force. He has willfully forgotten my language May 22 in the Chamber, saying we were ready to enter into conversations with Russia as to the object of the war; and if the German people, whose right to live and develop peacefully we do not contest, understood that we wished peace founded on the right of the people, the conclusion of peace would thereby be singularly facilitated.

Finally the Chancellor passed over in silence the resolution unanimously voted after the June secret session. * * * What is the Chancellor seeking? He is trying to hide the embarrassment which he feels in defining Germany's objects of war and conditions whereon she would make peace. He is trying especially to turn aside attention from the terrible responsibility weighing on the conscience of the Kaiser and his councillors.

It is on the morrow of the publication of decisions made July 5, 1914, at a council held at Potsdam, at which all consequences of the ultimatum to be sent to Serbia were discussed, and from which war was bound to spring, that the Chancellor is trying this diversion. There is something shameless, when one has such responsibilities, in demanding our intentions.

Assuredly it is not to Germany that we address ourselves, but to all who are witnesses or actors in the struggle which we have been maintaining for the last three years and who know that there is in the depth of the French people's soul a deep attachment to the principles of justice, respect for people's rights, and, I may add at the risk of not being understood by our enemies, true generosity.

The Russian Foreign Minister, M. Terestchenko, also denied absolutely the declarations attributed to him by Dr. Michaelis. He issued a statement on Aug. 1, saying:

The Russian Foreign Minister drew up no protest nor made any special declarations to the French Government beyond a general declaration by the Provisional Government respecting war aims, which was generally made known May 18. This declaration, which was sympathetically received, will be thoroughly examined by the inter-allied conference to be held shortly.

Cambon on Potsdam Council

Jules Cambon, who was the French Ambassador to Germany when the war broke out, and who is now General Sec-

retary of the French Foreign Office, confirmed M. Ribot's statements. To an Associated Press representative on Aug. 2 he said, in reference to the revelations regarding the Potsdam Crown Council of July 5, 1914:

I have reason to believe that these revelations, which place at this date the responsibility and initiative of the war, conform to the truth, and I am not surprised that the German Government attempts to divert the discussion by accusing us of seeking annexations which are absolutely contrary to the feelings of all reasonable Frenchmen.

The purpose of Herr Michaelis was to mislead the anti-annexationist elements of Russia and the United States in attributing to France a desire to annex what had never belonged to her. No Frenchman, myself among them, who keeps the memory of the sad wound of 1870 would have dreamed of precipitating Europe into a war to avenge this injury; but, since war has been imposed upon us, it is natural and just that we should profit by it to retake what had been unjustly torn from us.

In the region of the Sarre, to which allusion has been made, are towns which have been French for centuries and which the treaty of 1814 recognized as ours. Sarre Louis, for example, is the birthplace of Marshal Ney, who in 1814 refused before a court-martial to avail himself of the argument of his lawyer, who would have made him innocent of the crime of treason by the fact that his birthplace was no longer in France. Ney preferred to be shot rather than to renounce his French citizenship by judicial subtlety.

Washington dispatches on Aug. 2 stated, apparently with authority, that the United States Government had for sometime been in possession of proof that the German Emperor and his advisers had a copy of the Serbian ultimatum in their hands fourteen hours before it was sent to Serbia. This charge, which fits in with the story of the meeting of July 5, 1914, has been denied by the German Government, but is said to have been admitted by Dr. Zimmermann under pressure in the Reichstag. Dr. Zimmermann was Under Secretary of Foreign Affairs at the date in question.

Kaiser Disclaims Conquest

Emperor William on Aug. 1 took a hand in the war aims debate of the Chancelleries by issuing a proclamation to the German people, as follows:

To the German People: Three years of hard fighting are behind us. With grief we remember our dead, with pride our soldiers now fighting, with confidence all our workers, and with a heavy heart those who are languishing in captivity; but, above all, our thoughts stand resolute in the determination to prosecute this righteous war of defense to a successful termination.

The enemy is stretching out his hands toward German territory, but he shall never have it. New nations continue to enter the war against us, but that does not frighten us. We know our strength, and we are determined to make use of it. They wish to see us weak and powerless at their feet, but they shall not prevail.

They received disdainfully our words of peace; they did not know how Germany could fight. Throughout the world they have slandered the German name, but they cannot extinguish the glory of German deeds.

Thus we stand erect at the close of this year, immovable, victorious, and intrepid. Trials may still await us, but we shall meet them with a grave mien and full of faith. Throughout the three years' achievement the mighty German people has become firm in its resistance against all that the power of the enemy can conceive. If the enemy wishes to prolong the sufferings of war, they will weigh more heavily upon him than upon us.

For that which has been accomplished on the front let us at home show our gratitude by tireless toil. We must continue to fight and to furnish arms for it. But our people may rest assured that German blood and German zeal are not being gambled with for an empty shadow of ambition or schemes of conquest and subjugation, but in defense of a strong, free empire in which our children may live in security.

Let all our actions and all our thoughts be devoted to this fight. Let this be our solemn promise of this day, Aug. 1, 1917.

WILLIAM, I. R.

On the same day the Kaiser issued the following proclamation to the German Army and Navy and to the German colonial forces:

The third year of the war has come to an end. The number of our adversaries has increased, but their prospects of victory have not improved. You crushed Rumania last year. The Russian Empire once more trembles under your strokes. Both countries sacrificed themselves for the interests of others and are now bleeding to death. In Macedonia you forcibly withstood the enemy's assaults. In mighty battles on the western front you remain the masters of the situation. Your lines are firm, protecting your

beloved homes against the terrors and devastations of war.

The navy has achieved good results. It has threatened the enemy's command of the sea and his very existence. Far from home, a little German group is defending a German colony against forces many times superior.

Victory in the coming year will again be on our side and on that of our allies. Ours will be the final victory.

With a deeply moved heart I thank you in my own name and in that of the Fatherland for what you have achieved, in this last year of the war. With veneration we remember the fallen who gave up their lives for the greatness and safety of the Fatherland.

The war goes on. It is still being forced upon us. We shall fight for our existence in the future with firm resolution and unflinching courage. As our problems multiply, so does our strength increase. We are invincible. We shall be victorious. The Lord God will be with us.

WILLIAM, I. R.

In the Field, Aug. 1.

British Sovereign's Message

King George V., on the occasion of the third anniversary of the war, Aug. 4, sent identical telegrams to the Presidents and sovereigns of the United States, France, Portugal, Italy, Japan, Serbia, and Rumania, expressing "the unwavering determination of the British Empire to pursue the contest until our joint efforts are crowned with success and our common aims attained."

His Majesty also expressed confidence in the unwavering will of the allied peoples and the heroism of their forces in achieving a final victory, obtaining the possibility of peaceful progress for humanity. Similar telegrams were sent to the Kings of Belgium and Siam and the President of Cuba.

In his message to King Albert of Belgium King George expressed his unshakable confidence in the ultimate restoration of Belgium to her rightful position among the free countries of Europe, adding: "The unflinching spirit of her people under the grievous suffering inflicted upon them by their enemies will continue to inspire the joint efforts of the allied countries against the nation which has trampled them underfoot."

The London newspapers commemorated the conclusion of three years of war by long reviews and statements by members

of the Government and other leaders proclaiming the determination to fight to the end. Some of these statements were epigrammatic. Lord Robert Cecil said: "The path to freedom lies through the

"German lines." Sir Edward Carson, Minister without portfolio, said: "The Germans unsheathed the sword; they 'must not be allowed to put it back unbroken.'"

The Kaiser's Message to President Wilson

A Historic Cable Sent Aug. 10, 1914

A hitherto unpublished letter cabled by the German Emperor to President Wilson on Aug. 10, 1914, giving the Kaiser's own version of how the world war began, was made public on Aug. 5, 1917, as part of the first installment of former Ambassador Gerard's book, "My Four Years in Germany," which was published serially in The Philadelphia Public Ledger. The original, in the Kaiser's own handwriting, was reproduced. By official request in Berlin, Ambassador Gerard had suppressed the message, which the Kaiser had given him for publication. It is now made public with President Wilson's permission.

The document is one which historians will study word by word for its light on the hidden motives back of Germany's action in the diplomatic crisis at the outbreak of the war. The Kaiser's plain admission that Belgian neutrality "had to be violated by Germany on strategical grounds," his apparent belief of the false assertion that France was preparing to invade Belgium, and his statement that King George gave promises which Sir Edward Grey refused to fulfill—these are a few of the many points of interest in it. Here is the text of the letter:

*For the President of the
United States Personally:*

10/VIII 14.

1. H. R. H. Prince Henry was received by his Majesty King George V. in London, who empowered him to transmit it to me verbally that England would remain neutral if war broke out on the Continent involving Germany and France, Austria and Russia. This message was telegraphed to me by my brother from London after his conversation with H. M. the King, and repeated verbally on the 29th of July.

2. My Ambassador in London transmitted a message from Sir E. Grey to Berlin saying that only in case France was likely to be crushed England would interfere.

3. On the 30th my Ambassador in London reported that Sir Edward Grey in course

of a "private" conversation told him that if the conflict remained localized between Russia—not Serbia—and Austria, England would not move, but if we "mixed" in the fray she would take quick decisions and grave measures; i. e., if I left my ally Austria in the lurch to fight alone England would not touch me.

4. This communication being directly counter to the King's message to me, I telegraphed to H. M. on the 29th or 30th, thanking him for kind messages through my brother and begging him to use all his power to keep France and Russia—his allies—from making any warlike preparations calculated to disturb my work of mediation, stating that I was in constant communication with H. M. the Czar. In the evening the King kindly answered that he had ordered his Government to use every possible influence with his allies to refrain from taking any provocative military measures. At the same time H. M. asked me if I would transmit to Vienna the British proposal that Austria was to take Belgrade and a few other Serbian towns and a strip of country as a "mainmise," to make sure that the Serbian promises on paper should be fulfilled in reality. This proposal was in the same moment telegraphed to me from Vienna for London, quite in conjunction with the British proposal; besides, I had telegraphed to H. M. the Czar the same as an idea of mine, before I received the two communications from Vienna and London, as both were of the same opinion.

5. I immediately transmitted the telegrams vice versa to Vienna and London. I felt that I was able to tide the question over and was happy at the peaceful outlook.

6. While I was preparing a note to H. M. the Czar the next morning, to inform him that Vienna, London, and Berlin were agreed about the treatment of affairs, I received the telegrams from H. E. the Chancellor, that in the night before the Czar had given the order to mobilize the whole of the Russian Army, which was, of course, also meant against Germany; whereas up till then the southern armies had been mobilized against Austria.

7. In a telegram from London my Ambassador informed me he understood the British Government would guarantee neutrality of France and wished to know whether Germany would refrain from attack. I telegraphed to H. M. the King

personally that mobilization, being already carried out, could not be stopped, but if H. M. could guarantee with his armed forces the neutrality of France I would refrain from attacking her, leaving her alone, and employ my troops elsewhere. H. M. answered that he thought my offer was based on a misunderstanding; and, as far as I can make out, Sir E. Grey never took my offer into serious consideration. He never answered it. Instead, he declared England had to defend Belgian neutrality, which had to be violated by Germany on strategic grounds, news having been received that France was already preparing to enter Belgium, and the King of the Belgians having refused my petition for a free passage under guarantee of his country's freedom.

I am most grateful for the President's message.

WILLIAM, I. R.

The existence of such a letter was promptly denied by the German Government. The semi-official *Norddeutsche Allgemeine Zeitung* printed an article on Aug. 13 saying: "We are in a position to declare that no such telegram from the Emperor exists." The United States Government responded by publishing, without comment, the text of the cable letter as received in Washington three years ago. It differed in no essential from the version printed above.

Kaiser's Excuse Contradicted

The Kaiser's assertion that Belgian neutrality was violated because "France was already preparing to enter Belgium" has been contradicted by one of Ger-

many's leading military historians, Lieut. Gen. Baron von Freytag-Loringhoven, head of the Supplementary General Staff of the German Army. In an article published by official sanction in the German press early in August, 1917, the Baron stated that France was caught unawares by the invading armies, greatly to the German advantage. His narrative of events in August, 1914, contains this passage:

The French main concentration was originally accomplished between Belfort and the Belgian frontier, and the first indication that we contemplated a German advance through Belgium resulted in a shift to the left. * * *. The Entente Allies recognized only on Aug. 17 that strong German forces also were advancing in a wide enveloping movement on the left bank of the River Meuse, where previously they had assumed that only an army of cavalry, strengthened by some infantry, was present.

In consequence of the original erroneous concentration directed toward the east, the French Fifth Army did not succeed in advancing beyond the line of Dinant-Charleroi by Aug. 22, and was forced to content itself with holding the passages of the Rivers Sambre and Meuse.

General von Freytag-Loringhoven declares that the Germans retreated from the Marne because they were too weak to break through the French lines. But he argues that, although final success was missed there, Germany, by seizing the opportunity of a daring advance through Belgium, avoided war on her own territory.

The Kaiser Contradicts Himself

Stephen Lauzanne, editor of the Paris Matin and a member of the French Mission to the United States, wrote the following comment on the Kaiser's letter when it was made public:

In the letter written by Kaiser Wilhelm to President Wilson on Aug. 10, 1914, we find the following passage:

While I was preparing a note to H. M. the Czar next morning (July 31) to inform him that Vienna, London, and Berlin were agreed about the treatment of affairs I received the telephone messages from H. E. the Chancellor that, in the night before, the Czar had given the order to mobilize the whole of the Russian Army, which was, of course, also made against Germany; whereas, up till then

the southern armies had been mobilized against Austria.

It is not the first time that a similar assertion is made by the German rulers. In an official document issued from Berlin last year we read the following lines:

History's verdict will not pass over the complete mobilization of Russian forces, which meant war against Germany.

And in his maiden speech at the Reichstag Dr. Michaelis, the new Imperial Chancellor, declared that "the Russian mobilization was the real cause of the war," because that mobilization obliged Germany, for her safety, to take military precautions.

Unfortunately, all these assertions—

letter of the Kaiser, official communiqués, speech of the Chancellor—are entirely untrue, and constitute one of the most audacious and impudent lies. The Germans, who are masters in the art of falsification, may falsify history and geography; but they will find it more difficult to falsify chronology and to prove that a fact which takes place at 10 o'clock in the morning is posterior to a fact which took place at 6 in the evening.

The truth, the undeniable truth which all historians will be obliged to admit, is that the German mobilization took place before the Russian mobilization, and this is undeniably proved by German documents.

On July 31, 1914, at noon, took place in Germany what is called the "Kriegsgefahrzustand"—that is, the official proclamation of danger of war. It is the first preliminary measure to the complete mobilization of the German forces. It took place at noon; it was placarded at noon all over Berlin, announced by special editions of the papers, and telegraphed through the empire. A few hours later, at 4 P. M., the German Kaiser telegraphed to King George of England, (the telegram has been published in the German White Book,) and this is what he says:

Many thanks for your kind communication. * * * I have *just* heard from the Chancellor that intelligence has *just* reached him that Nicholas, *this evening*, has ordered the mobilization of his entire army and fleet. He has not even awaited the result of the mediation in which I am engaged, and he has left me completely without information. WILLIAM.

Now this is extremely clear. At noon the Kaiser proclaims the "Kriegsgefahrzustand" and at 4 P. M. he *just* hears that the Chancellor has *just* learned that the Czar has; *in the evening*, ordered the mobilization of the Russian Army. The "Kriegsgefahrzustand" is therefore undoubtedly anterior to the Russian mobilization, and undoubtedly the Kaiser lies when in his letter to President Wilson he writes:

While I was preparing a note *in the morning* I received the telephone messages from the Chancellor that in the night before the Czar had given the order to mobilize the whole of the Russian Army.

He lies, because he has himself avowed in his telegram to King George that it was not in the morning, but in the evening, that the news had reached him through the Chancellor that Nicholas had just ordered the mobilization of his army. The Kaiser has indeed telegraphed too much in those tragic hours of 1914, and he has forgotten what he telegraphed, or he has not taken the trouble of comparing his telegrams. To King George he wires that the Russian mobilization has taken place in the evening of July 31. To President Wilson he writes that the Russian mobilization has taken place in the evening of July 30. Historians may compare and choose. But what is the value of the assertions of a man who says one thing in a telegram and another thing in another telegram?

But there is something more. In his telegram to King George the Kaiser complains that the Czar had left him "without information." This is another lie, because before mobilizing his army the ex-Czar sent four telegrams to the Kaiser of Germany. The last one was couched in the following terms:

Tsarskoe Selo, July 29, 1914.

To H. M. the Kaiser of Germany:

Thanks for your telegram, which is conciliatory and friendly, whereas the official message presented today by your Ambassador to my Minister was conveyed in a very different tone. I beg you to explain this divergency. It would be right to give over the Austro-Serbian problem to The Hague Tribunal. I trust in your wisdom and friendship.

NICHOLAS.

Not only did the Kaiser not answer that telegram, but he suppressed it. And in the official German White Book, giving all the documents about the war, the last telegram of the Czar has disappeared. The reason given by the German officials for suppressing the telegram is the following: They say that it was not interesting!

History will decide if the proposal of the Czar to give over the whole Austro-Serbian problem to The Hague Tribunal was or was not interesting. But it is not necessary to wait for history to decide what degree of confidence must be placed in assertions of the German Kaiser.

Russia Renews Pledge to Her Allies

Foreign Minister Terestchenko on Aug. 2 sent the following telegram to Russian diplomatists accredited to the allied powers:

At a moment when new and grave misfortunes are threatening Russia we consider it our duty to give to our allies who have shared with us the burden of trials in the past a firm and definite explanation of our point of view regarding the conduct of the war. The greatness of the task of the Russian revolution corresponds to the magnitude of the change which it caused in the life of the State. Reorganization in the face of the enemy of the entire Governmental system could not be effected without serious disorders. Nevertheless, Russia, convinced there is no other means of safety, has continued in accord with the Allies' common action on the front.

Fully conscious of the difficulties of the task, Russia has taken up the burden of conducting active military operations during reconstitution of the army and the Government. The offensive of our armies, which was necessitated by a strategical situation, encountered insurmountable obstacles on both fronts and in the interior of the country. The criminal propaganda of irresponsible elements was used by enemy agents and provoked a revolution in Petrograd. At the same time part of the troops on the front were seduced by the

same propaganda, forgot their duty to the country, and facilitated the enemy's attempt to pierce our front.

The Russian people have been stirred by these events. Through the Government created by the revolution and an unshakable will the revolt was crushed and its originators were brought to justice. All necessary steps have been taken at the front for restoring the combative strength of the armies.

The Government intends bringing to a successful end the task of establishing an administration capable of meeting all dangers and guiding the country in the path of revolutionary regeneration. Russia will not suffer herself to be deterred by any difficulty in carrying out the irrevocable decision to continue the war to a final triumph of the principles proclaimed by the Russian revolution.

In the presence of an enemy menace the country and the army will continue with renewed courage the great work of restoration as well as the preparation on the threshold of the fourth year of the war for the coming campaign. We firmly believe that Russian citizens will combine all efforts to fulfill the sacred task of defending their beloved country and that the enthusiasm which lighted in their breasts a flame of faith in the triumph of liberty will direct the whole invincible force of revolution against the enemy who threatens the country.

Italy's Position Defined by Baron Sonnino

Baron Sonnino, Italian Minister of Foreign Affairs, delivered an important address at the reopening of Parliament on June 20, defining Italy's position on the Balkan issues and other war questions. He began with a tribute to America's entry into the war, saying: "The justice of our cause could not have received a more solemn, a more manifest, sanction than this given by a nation which, within the limits of national dignity, tried everything to avoid war." Concerning the problems and aims directly affecting Italy he said:

Last March the Italian Government, together with the other Allies, formally recognized the Provisional Russian Government. The Italian Nation and the Parliament follow with intense interest the course of events of their great ally in its new life of liberty. We must trust that the noble Russian people will find in

the principles of democracy the strength necessary to overcome all the difficulties inherent in its racial and constitutional transformation, and that the sure instinct of the people will be on its guard against all enemy tricks which aim not only to make their own political and military interests prevail but also to undo the free organization of Russia. Russia, however, will find her best protection in a vigorous prosecution of the war and in her complete accord with her allies. The sad case of Rumania had a profound echo among us, who have with her common ideals and aspirations. Rumania, however, not unmindful of her traditions and conscious of the justice of her cause, will find the power necessary to overcome the difficulties of her present situation.

No peace will be agreeable to us which does not assure the restoration of three unhappy nations that have seen their territory invaded and devastated, but who live with full confidence in the future—Belgium, Serbia, and Montenegro. Also

the restoration of the independence of Poland is an essential clause of our peace terms. The rights of nationality must be protected. It is in moments of danger that the bonds between nations become stronger.

The recent proclamation of the independence of Albania has publicly confirmed the special concern of the Italian Government toward that country, the interests of which, in connection with our direct and safe possession of Valona, are intimately bound to the general problem of the settlement of the Adriatic—a vital question for Italy. We want the independence of Albania in agreement with the general principles on which our alliances are based and which have been recently repeated so eloquently by the United States and by the new Russian Government. Italy, in regard to Albania, has no other aim than that of preventing a possible interference of a third power. Italy guarantees the absolute autonomy of Albania and will protect her interests and aspirations in the conferences of the nations. It will be the province of the peace conference to determine the exact boundaries of Albania. While the war is on it is necessary that the General Staff of the Italian Army have the direction of all affairs, always, however, with due regard to the existing usages and interests of the Albanian people. After the war Albania will decide for herself.

Military necessity has forced the three protecting powers to take in regard to Greece such measures as have resulted in the abdication of King Constantine and the assumption of the throne by his second son, Alexander. Italy, not being in the number of the protecting powers, had no part in all this, although—it is well to say it—the Italian Government in this circumstance, as well as in the general direction of the war, has been in full agreement with its allies. It is to be hoped that Greece has now reached such a condition in its internal affairs as not to endanger any longer the military position of the allied armies in Macedonia. We wish well to the new King, fully convinced that Italy and Greece must proceed together in the development of their political and economic activities toward those glorious ends to which their historical traditions and their ancient civilization call them.

Against Turkey England has recently undertaken a new vigorous military action in Palestine, in which the bravery of the British Army has already been demonstrated. The Italian flag is represented in that expedition—a fact which responds to a high international political and moral interest. The constant care of this Government and of our allies is this—to

strengthen our unity of action and harmonize our respective interests.

The Mediterranean interests of Italy are essentially based on the principle of equilibrium and equality among the powers. We have the greatest guarantees that these interests will be equally protected and safeguarded.

Lately many efforts from many sides (from the enemy also) have been made to have all the elements of the future peace inclosed in a short formula. It is worth while to remember the wise words which the President of the United States addressed to Russia a few days ago: "All wrongs must be redressed and their recurrence made impossible." One cannot do this with highly sounding words or pleasing phrases. The general situation is very complicated, because it includes problems of difference of race, civilization, geographical position, traditions, aspirations. A short formula cannot cover the whole ground of so many cases. Complicated problems exclude a priori the simplicism of a formula that covers everything. Thus the formula of "no annexations and no indemnities" is purely negative if it is separated from the positive principles of liberty and independence of all nations. The negative policy of no indemnities and no annexations without a guarantee that peace and international justice will be maintained would amount to the same as to admit that all the iniquities and violences of the past are to be continued forever.

Italy's War Aims Explained

A prominent Admiral of the Italian Navy recently gave to Whitney Warren in Paris the following succinct and illuminating statement of Italy's war aims on both sides of the Adriatic:

In centuries of servitude we learned to suffer, but not to submit. We are fighting to complete our union, and rather than forego it we prefer to die. The Trentino and Trieste are doors to our home whereof the foreigner has taken possession, which prevents us from closing them against robbers. If New York and San Francisco were occupied by the Germans, would Americans have acted differently from the Italians? And what is represented by the Trentino and Trieste on land is represented by the Adriatic on the sea, for the sea frontiers of Italy are greater than her frontiers on land. By sea Italy breathes and lives. The Tyrrhenian and the Adriatic are her two lungs. If you take a lung from a man he may not die immediately, but he will be short of breath. If you take the Adriatic from Italy she will die of suffocation.

It is only necessary to glance at the map to see that without Dalmatia and

the chain of islands along the coast Italy can never be secure on the Adriatic. Dalmatia and those islands belonged to Venice. By their possession she assured herself and Europe against the Turkish pirates in the sea. When Venice fell, and Austria ravished the heritage of Saint Mark, Italy was not yet freed from her long bondage. This heritage in the hands of the usurpers formed an integral and indivisible part of the great Italian motherland too feeble to break the bonds asunder.

Everywhere Austria found traces of Italian culture on the coasts and among the islands. Ancient monuments and modern houses, churches of old and churches of today, language, customs, civilization—all is Latin, all part of the Italian motherland. But little by little Austria by persecution and confiscation replaced the Italians of these regions by Germans or Croatsians from the interior. Our houses, our altars, our monuments are now occupied in great measure by foreigners of another tongue and another civilization, who do not realize what they have torn from us, who understand neither the language of our country nor its ruins. They only know they are there because there is the key to the sovereignty of the Adriatic. The Italians left in Dalmatia struggle still to save what remains of their country and invoke her aid, but their voices become more feeble as their numbers decrease. We must strike now, for soon it will be too late, our thousand-year-old Latin civilization will be abolished by these spoilers.

To these reasons must be added another of military order. Our dreadnoughts are shut up in Tarento because we do not possess a harbor large or deep enough on the Adriatic to hold a large squadron, whereas Austria dominates the whole upper Adriatic from Pola, the middle Adriatic from Setenico and Spalato, the lower Adriatic down to Corfu from Cattaro, and every channel, every isle affords excellent shelter for a large and powerful fleet. Thus Austria can overcome the inferiority of her fleet to those of Italy, France, and England. At any moment she can bring out her vessels from any point of the magnificent coast she has stolen from us, and we have no port at all to harbor our big ships.

I have spent all my life on the sea and now I have the honor to command all the mobilized naval forces of my country. I can therefore speak with full knowledge

of the subject, as I base my arguments not on theory, but on experience. Whereas the Italian coast from Venice to Otranto is entirely low-lying, without ports, without anchorages, and wholly exposed to the north wind, the Curzolari Islands and Dalmatia offer vast and numerous points of refuge both from the enemy and from bad weather. No matter where the Austrian ship is in the Adriatic, she can always find shelter by steaming a few miles and reaching one of the numerous channels to the interior. But our vessels can only take refuge at Venice or Brindisi, our only natural naval ports. Brindisi and Venice are 800 miles apart and impracticable for great modern warships. So that the enemy can use the islands as a bridge between Dalmatia and Italy and cross it to attack us just as he can choose his own moment and withdraw before we can pursue him, because Brindisi and Venice are too distant for us to arrive in time. Besides, each lofty peak of the Curzolari Island mountains is an excellent signaling station to sweep the whole surrounding ocean. On the Italian side the reverse is the case; our view extends but a few miles.

For these reasons the words Dalmatia and Adriatic evoke the following thought in all Italians today: We cannot use the sea which bathes half of our country because all advantages are on the opposite coast. Austria was for many centuries without the Adriatic, yet she was powerful and prosperous because she was not a seafaring but essentially a continental nation. We, on the contrary, by our geographical situation, are exclusively a maritime nation. We never have been able to live without the Adriatic, and now that we are threatened to be deprived of it forever we will fight for it to the death.

Italy does not demand territorial conquests; she wants simply to get back what belongs to her, what is necessary for her existence. If we had nourished the idea of conquest would we not have joined our former allies to profit by the advantages they held out? A vast colonial empire, the riches of Corsica, Nice, and Savoy—was not that a tempting bait for our ambition? And remember that at the time Italy entered the war everything pointed to a victory for the Central Powers. But to these promises Italy preferred the Carso, the Trentino, and the Curzolari Islands. We're not waging a war of conquest, but struggling to turn out the intruder in our home, to deliver our own sons, to save Latin civilization.

Germany's Attitude Toward Restoration

Premier Lloyd George spoke on Aug. 4, 1917, at a great patriotic meeting held in Queen's Hall, London, to mark the third anniversary of the war. He asserted that the German ambition for world conquest had been checked, and that before Great Britain entered a peace conference the Germans must learn the full meaning of the word "restoration." Denouncing the peace talk of the German Emperor and of Chancellor Michaelis as a subterfuge for German war lords to gain time, he shouted:

There must be no next time. Don't let us repeat this horror. Let us be a generation that manfully, courageously, and resolutely eliminated war from among the tragedies of human life. Let us make victory, at any rate, so complete that national liberty, whether for great nations or for small nations, can never be challenged.

The nations of the world have been climbing painfully up the steps that lead to national independence and self-respect, and now comes a great power with brute force to thrust the nations back crushed and bleeding into the chasm of servitude. That is what we have been fighting.

They talk glibly of peace, but stammer and stutter when they come to the word "restoration." It has not yet crossed their lips in its entirety. We have challenged them. They cannot say it.

Pointing to the soldiers in the audience, the Premier said they were "gradually curing the Kaiser of his stuttering." He went on:

So far he has not learned the alphabet of peace, not the first letter of that alphabet. "Restoration"—that's the first letter. Then we will talk.

What do they mean? Do they mean peace when they talk it? The truth is, the Prussian war lords have not yet abandoned their ambitions. They are not discussing that. They are only discussing the postponement of those ambitions. * * *

The allied powers at the first moment felt instinctively that a great menace to human liberty had appeared on the horizon, and they accepted the challenge. America saw it and joined us. That is what the Germans have been striving against for three years, and not without success.

War is a ghastly business, but it is not as grim as a bad peace. There is an end to a horrible war, but a bad peace will go on and on, staggering from one war to another.

On all the roads ever confronted there are ups and downs, and no doubt the Russian collapse is rather a deep glen, and I am not sure that we have reached its darkest level, but across the valley I can see the ascent.

The Germans claim to be satisfied with the last battle. All I can say is that Field Marshal Haig has secured all his objectives. We had enough guns to smash lines upon which for three years the Germans had expended willing and forced labor, and if the Germans are pleased with the battle, we will let it continue thus, to our mutual satisfaction.

The course the advance is taking is the British method of saving life, and it is the duty of the nation to stand behind the army, patient, strong, and united. In this way we will win. The nation that turns back or falters before it reaches its purpose can never become a great people.

Angry Retorts from Germany

An extraordinary outburst of anger in the German press followed Mr. Lloyd George's "restoration" speech. The *Hamburger Fremdenblatt* called the address rubbish, an agitator's speech of the lowest sort, almost hysterical, and full of reckless calumnies and misstatements. The *Kölnische Volkszeitung*, after calling the British Prime Minister a war fanatic and an agitator, declared that the curses of the whole world would soon "follow "to Hades this man of demoniacal energy "and humdrum, narrow outlook." The *Frankfurter Zeitung*, usually moderate in its tone, called Lloyd George a circus clown and added that Germany would not have the word restoration dictated to her. "We can reach the exact meaning of that word," it continued, "only "by assuming that restoration, at England's command means destruction for "us. Nothing in the speech shows the "way to peace. Lloyd George talks of "victory with the Russian defeat and the "failure in Flanders staring him in the "face." The *Lokal-Anzeiger* of Berlin called him a senseless dictator and said: "We are victors in the East and in the "West. Germany is not concerned about "restoration and is not afraid to continue the war."

Count zu Reventlow, commenting in the *Deutsche Tageszeitung*, wrote that

Lloyd George was trying to distract England's attention from the Entente failure in Flanders, adding:

He uses strong words in speaking of weakened German nerves. He wants to teach the Kaiser the pronunciation of the word restitution, of course, in the English sense, which is synonymous with the restitution of English domination over Belgium. The conquest of Belgium by English arms has failed, and that is why the Premier now tries to reconquer it with his mouth. He prefers that as the safer method. But we need not bother about this. We have but one aim—the security of our frontiers—which can only be achieved by victory.

At a reception in the Reichstag building on Aug. 4, the anniversary of the signing of Aug. 4, 1914, addresses were made by Parliamentary and military leaders, after which Dr. Michaelis, the Imperial Chancellor, said in part:

We all know what we want. We will hand our patrimony intact to the future generations. We will guarantee our children and grandchildren against the misfortune of a war like this. We will preserve our country by a strong and wise peace, in order that the German race may retain sure ground for its healthy and vigorous development. The gentlemen who preceded me showed that our strength is not paralyzed; that our will is as strong as it was in 1914. The heaviest sacrifices deserve the highest reward. Let us swear fidelity to the Emperor and the empire. Long live the Fatherland, the Emperor, and the empire!

A telegram to the Chancellor by Field Marshal von Hindenburg on that occasion said:

Firmly consolidated in the interior and unshaken on all the fronts, Germany braves the exasperating thrusts of her ancient and her new enemies. The German Army is fighting far in the enemies' country and is marching with unbroken strength to new successes. It enters the fourth year of the war supported by confidence as firm as a rock that our home spirit and united perseverance will remain alive, which is a guarantee of victory and of an honorable peace to our nation.

Boasts of Occupied Area

A review of the third year of the war printed in the Berliner Tageblatt called attention to what the writer regarded as Entente weakness and sought proof of German success in figures regarding conquered territory:

The past year has been fruitful of many

instructive results. Above all it may be asserted that the Entente no longer has the disposal of unlimited production and supplies of ammunition as was the case during the Somme battle. This cessation of munition reinforcement has had a noticeable effect on the western front. And whereas the material resources of our opponents have not increased and the strength of France has become visibly diminished we still are unimpaired in our strength and more strongly fortified than ever before.

He who is willing to be guided solely by the facts and will not permit himself to be deceived by illusions must admit that the ambition of our foes to crush us is today less justified than at any other period, and because this is so we may be permitted to express the hope that common sense and a sincere desire for peace may finally assert themselves in the ranks of our opponents.

The German people, through its accredited representatives, has plainly announced to the world at large its readiness for peace. We hope this expression will be appreciated in its full importance on the other side.

The following offers an approximate picture of the area of occupied territory which now is held by the military forces of the Central Powers measured in square kilometers.

Belgium, 28,980; France, 19,220; Russia, 280,490; Rumania, 100,000; Serbia, 85,867; Montenegro, 14,180; Albania, 20,000. Total, 548,737.

This total is opposed by 900 square kilometers of land held by the French and the Austro-Hungarian territory in Russian possession, measuring 29,500 square kilometers. The latter figure no longer holds good. It has been diminished by fully 60 per cent., and is likely to fall away entirely in the near future.

Attitude of Socialists

Vorwärts, the organ of the majority Socialists, on the third anniversary of the war, published an article replying to Socialists in other lands who were calling upon the German members to withdraw their support from the Kaiser and his military machine. The paper said in part:

How could they expect us to hail the invasion of a hostile army in our own country and joyously greet our own armies' defeat just to satisfy a real or imaginary sense of justice? It is miserable hypocrisy to ask us to recognize the czarism of the past and the clamor for Alsace-Lorraine and the Saar district at present as the embodiment of ideal justice. Must not foreign conquest be as

repulsive to us as to our enemies? Are we expected to recognize evil only at home and not to see the crimes of others?

If the attitude of the German social democracy is so badly misunderstood in hostile countries it is only a sign of the fearful devastation which this war has

caused within the province of the most natural and human sense of justice. No man who has preserved that sense, on whatever side he stands, will ask another people to sacrifice itself. Even their own self-esteem ought to prevent our opponents from asking anything of the sort.

Fighting Forces of France

Statement of André Tardieu

André Tardieu, French High Commissioner to the United States, made public on July 30, through a letter to the Secretary of War, many important facts regarding the present strength of France as a fighting unit. After three years of war, he said, France had 3,000,000 men in the battle zone, a million more than at the beginning. She also had one heavy gun for every twenty-six meters of front—that is one for every eighty-five feet on the average. The increase in munitions output is on a similar scale, as revealed in detail in M. Tardieu's letter to Mr. Baker, which follows:

July 30, 1917.

DEAR MR. BAKER: I brought to your knowledge in a recent talk the surprise I felt in reading so often in American newspapers some utterly inaccurate information regarding the military conditions prevailing in Europe, and especially in the French Army. In connection with our conversation, I believe it would be of interest to present to you some figures which, better than any comments, will expose to you the reality; these figures will show you France as she is, vigorous and powerful, in spite of three years of suffering without precedent in history.

I.—STRENGTH IN MEN

The strength in men, now present in the zone of the armies alone, shows the maximum figure reached during the war. This figure, which amounts to a little less than three millions of men, exceeds by over a million the number of men actually in the said zone at the beginning, and one must add to that figure the men in the zone of the interior and in the colonies. We are certain, with the re-

sources of our metropolitan and colonial depots, to be able to maintain that number up to its present level for a long time to come.

Our strength in men, by reason of a better command and of better methods of instruction, has shown since the beginning of the war constantly decreasing definitive casualties, (killed, missing, and those taken prisoner.)

The following figures substantiate this:

Casualties.

P. C.

Battles of Charleroi and of the Marne.	*5.41
First six months of 1915.....	*2.39
Second six months of 1915.....	*1.68
First six months of 1916.....	*1.47
Second six months of 1916.....	*1.28

*In proportion to the total mobilized strength.

II.—FRONT HELD

For measuring the offensive and defensive quality of the troops whose numerical strength I have indicated above, I can do nothing better than to quote some more figures. The western front has an extension of 739 kilometers:

27 kilometers are held by the Belgians.
138 kilometers are held by the English.
574 kilometers are held by the French.

The French Army holds accordingly more than two-thirds of the western front, that is to say, of the front where the enemy has always directed its chief exertion.

The German divisions in line on the western front were, moreover, in June, 1917, distributed as follows:

42 opposite to the English.
81 opposite to the French.

A German division holds an average front of 4 kilometers 700 meters; a French division an average front of 5

kilometers 500 meters—that is to say, one-sixth more.

III.—ARTILLERY

We were amply furnished with "75s" since the beginning of the war. The number of these guns was constantly increased; it is adequate to our needs. As for the heavy artillery, we had in August, 1914, 300 guns grouped in regiments. In June, 1917, we had 6,000 of them, mostly modern. During our present offensive we have, on the average, one heavy gun for 26 meters. If we sum up all the trench, field, and heavy artillery, we have one gun for eight meters in the sector of attack.

Our output in munitions was arranged in August, 1914, for 13,000 shots of "75s" a day. It is now arranged for 250,000 shots of "75s" and 100,000 shots of heavy guns.

To be equal to this enormous production, invaded France did not hesitate, in the midst of war, to create new industries and to bestow on military industries the best of its productive strength.

If you consider, on another side, the weight of the projectiles shot on the German trenches during one of the last offensives, you will find the following figures for one lineal meter:

	Kilos.
Field artillery	407
Trench artillery	203
Heavy artillery	704
High-power artillery	123
Total	1,442

Here below, lastly, come figures on the monthly expenditure in ammunition for the "75s":

July, 1916	6,400,000
September, 1916	7,000,000
October, 1916	5,500,000

During the last offensive the expenditure was 12,000,000 shots in all calibres.

I might also add that we completely re-equipped and re-armed the Belgian, Serbian, and Greek Armies.

I recall, likewise, that the number of heavy guns given by us to the Allies exceeds 800.

IV.—FINANCIAL EFFORT

The financial effort cannot be separated from the military effort. Here, below, are some more figures. France has expended since the beginning of the war the following sums:

	Franks.
1914	8,040,000,000
1915	22,800,000,000
1916	32,640,000,000
1917	19,167,000,000

Total 82,647,000,000

She received from foreign countries from the first of August, 1914, to the first of January, 1917, 6,000,000,000 francs. During the same period she loaned to several allied Governments 4,000,000,000 francs.

If France alone, which has only 38,000,000 inhabitants, and whose richest and most populated provinces are invaded, was by herself capable of such a financial effort, it is because of the strict discipline which she forced upon the employment of her resources; this discipline also is proof of strength.

Such is the situation. Severe was the ordeal; stronger is the national energy. Now it is a question of striking the last blow to the adversary. You will help us. But, at the moment when the American soldiers arrive in France, it is proper to let them know that they will find to receive them a country which, today as well as during the last three years, bears the principal exertion of our dreadful foe; a country which maintains to the maximum of her power, without hesitation and without weakness, her strength, her means, and her will.

Believe me, dear Mr. Secretary, very sincerely yours, ANDRE TARDIEU,
Hon. N. D. Baker, Secretary of War,
Washington.

Results of Three Years of War

A Brief Review by Major Gen. Maurice

Major Gen. Frederick B. Maurice, Chief Director of Military Operations at the British War Office, summarized the results of three years of war on July 28, 1917, as follows:

THE first year of the war, broadly speaking, was an attempt by Germany to put into effect elaborate plans which her military strategists had been preparing over the space of many long years. The first phase was a concentrated attack on France and Belgium during a certain allotted period of time, in which the Germans estimated it would be impossible for Russia to disturb them in the east. The attack on France was checked, first on the Marne, later on the Yser and at Ypres, although France and Belgium suffered severely in the process.

Germany then, according to her plan, took the defensive on the western front and turned her offensive effort eastward in an effort to knock out Russia. Here again she failed, although her attack enormously weakened Russia's offensive power.

In the Autumn of 1915 Germany definitely abandoned her old pre-war strategic scheme and started in on a new plan developed since the war began, namely, an effort to upbuild "Mittel-Europa" as a great block composed of four so-called Central Powers which would command the road to the East. The Autumn campaign of 1915 consisted, in essence, of the furtherance of this scheme by conquering Serbia, bringing in Bulgaria, and halting our Dardanelles effort by rushing munitions, supplies, and soldiers to the assistance of the Turks.

By the Winter of 1915 Germany had gone a long way toward realization of her own ambition, and this point represents to my mind the grand climacteric of Germany's offensive power. All this time Great Britain had been building up armies, and with the beginning of 1916 we, for the first time, had a real army in the field.

With the Spring of 1916 Germany had come to realize that the conquest of Russia was impossible—Russia was too massive to kill or crush. So the German staff again turned on France, and the Verdun attack was the result.

With the defeat of Germany at Verdun came a turning of the tide, of which further manifestation was seen in a successful British offensive. Previous British military efforts had been, comparatively speaking, minor operations, or operations undertaken in support of the French. At the Somme we started our new work, and really great, important work it was, although a great deal of the contemporary effect of the Verdun defeat and of the Somme victory was neutralized by Germany's push into Rumania. The Rumanian push, however, viewed in true historical perspective, was merely a flash in the pan. The German military power already was on the decline, and her offensive strength was nothing like what it had been the year before.

The end of 1916 found the situation between the two great groups of contestants about equally balanced, but with the scales leaning slightly in favor of the Entente.

The year 1917 has presented a still rosier picture. During the whole third year of the war Germany and her allies have attempted nothing on land. They everywhere have been on the defensive. The Turks lost Bagdad and the Sinai Peninsula. On Germany's eastern frontier, although the Russian revolution enormously weakened Russia's military power, Germany was incapable of taking advantage of the situation. On the Austrian front the Italians got in powerful blows. In the west the British and French struck repeatedly, and the Germans have been powerless to answer back.

This is the pitiful state to which we have reduced the great power whose whole military gospel was summed up in the phrase, "vigorous offensive." Ger-

many's military helplessness, owing to the long strain on her man power, material, and resources, is such that today she barely is able to hang on, and her only hope is that she may find some way of similarly wearing us down and forcing us out of the war before we get up momentum to drive her back.

At present Germany is banking on the

U-boat. She hopes against hope that the U-boat will reduce the people of the Entente Powers to the same state of want, privation, and suffering which she has been enduring for months and years past. She hopes to make the Entente people cry enough and start peace parleys while she still has got the big pawns with which to bargain at a peace conference.

General Robertson on the Situation

General Sir William Robertson, Chief of the British Imperial General Staff, on Aug. 4, 1917, reviewed the past three years of war, and made the following statement of the situation to a London correspondent of THE NEW YORK TIMES:

SUPPOSE we must conclude that no army of millions can be broken and crushed. Is the same thing to be supposed of the nation behind the army? Surely we see in this tremendous contest much more than a struggle of armed forces. It is a sifting of nations, a trial of character, a test of racial quality. The workmen and workwomen of each nation are engaged in the conflict, and the forces in the field are only the hands of a vast body in which every muscle is being strained and tried.

Suppose you cannot roll up the flanks of your enemy's army. Cannot you break his heart? Suppose you can only drive him yard by yard, hammering him back to his frontiers month by month? Suppose that is all you can do. Cannot you destroy his civilian confidence and break his political will? If that is the effect of your strategy the decision is a military decision. You have broken his will; you have imposed your will upon him; you have conquered his resistance.

But it is too early yet to say you cannot destroy his defensive in the field while his civilian will is still stubborn; we on our side, at any rate, do not say that.

Why should our people forget the difference between 1914 and 1917? They forget that Germany was ready three years ago. We had our backs to the Germans; we were within a few miles of Paris. The French Government had

removed to Bordeaux. We were retreating—the French and English together—with the loss of a few guns and with many casualties.

What is the position today? We are far north and facing north. We no longer have our backs to the Germans, and we are millions where before we were thousands. We have driven them before us; we have taken positions that they regarded as matters of life and death, and our guns are hammering them now as they have never been hammered before.

It is too early to say that the defensive in modern warfare is impregnable. Military writers in Germany may say so, but our men in France are not laying down law on that subject. I would say it is too early yet for such dogmatism.

Let us wait a few weeks. The guns are speaking now; let them go on speaking, and let us remember while we wait that, whether or not vast armies can be conquered in the field as they were conquered years ago, the will of nations can be broken by hopelessness and despair. If the army does not crack, the nation behind it may crack.

Some one has got to give way in this conflict on one side or the other. There must be submission; and when you stop to consider the numbers and resources of each side, you may fairly conclude that if the nations of the Allies are steadfast, if the civilian heart is sound, submission must come sooner or later from the Central Powers. The material odds are on our side at last, but quality is going to win this war. Character will decide it.

America brings the hope of an earlier end to all the frightful agony and loss of

this war. Without her we and our allies should go on fighting to the end. We are forced to do so. Our life depends upon it. Europe would not be fit to live in if we submitted it to the war lords of Prussia. That would be the death of international good-will.

But America should hasten the end. That is the crowning mercy of her appearance on the battlefield. She has begun splendidly. She is solemnly earnest, and when she strikes her hardest it will be with the supreme object of saving the world for democracy and Europe from further death. We may be pretty confident that her blows will strike despair into the hearts of the Prussian war lords, troubled now lest their own people should find them out.

Do not let us underrate the Germans, because their cause is bad, because they are guilty of provoking the war, and because their material resources are less than ours. The whole German Nation is as disciplined as an army. It is the army. Germans have discipline in their blood, discipline finely drawn to thinness. Docility is a bad thing in peace, making for slavishness, but it provides a people with certain advantages in war.

Germany is strong because she is un-

democratic, and she is undemocratic because she has been drilled in iron discipline. All those millions of people have been forced to take the sword from the hand of a King. Terrible as this discipline is and formidable as it is, there is a discipline more formidable still. I mean the self-imposed, self-accepted discipline of a free people.

What could be more magnificent than the spectacle which America now presents to mankind? She has liberty in her blood. She loathes despotism. She could no more bend her knee to the yoke of autocracy than she could turn her broad rivers into puddles and her great lakes into ponds. But look at her now, submitting herself to the discipline of war freely of her own will for the sake of a moral issue.

It is not for me to prophesy. It is not for me even to pronounce an opinion on America's preparations, but I should say that throughout the world freedom breathes more freely and democracy is more confident for the mere spectacle of that vast nation imposing upon itself the restraints and rigors of discipline. It means now as much to the spirit of this struggle as later its effects will mean in the final grip.

Serbia Plundered by Conquerors

THE American Ambassador in Paris received the following communication on July 24, 1917, from the Serbian Legation there:

Mr. Ambassador: I am instructed by my Government to inclose herewith to your Excellency a memorandum relating to the economic exploitation of the Serbian provinces occupied by the Austro-Hungarian and Bulgarian authorities.

The economic exploitation which they are practicing by means of the illegal imposition of taxes, by the depreciation of Serbian money, the abolition of the moratorium, the sale of Serbian monopolies, the introduction of fresh monopolies by the violation of the rights of private property, and by forced subscription to the war loan, has but one object in view: the economic ruin of occupied Serbia.

Taking as their justification Articles 23, 43, 44, 46, 48, 52, 53, and 56 of The Hague

Regulations, the Royal Government of Serbia protests strongly against these arbitrary measures on the part of the Austrian and Bulgarian authorities, constituting, as they do, flagrant violations of the public international law.

I should be obliged if your Excellency would be so good as to communicate this protest to your Government.

I remain, &c.,

VESNITCK.

The memorandum transmitted with the note gives notice that Serbia reserves the right of claiming at the time of peace negotiations an indemnity corresponding to the damage inflicted, both on the Serbian State and its subjects, by these flagrant violations of international law. It is charged that more than 100,000,000 crowns have been illegally extorted, as well as 6,000,000 crowns in the form of

forced subscriptions to Austrian war loans and the Austrian and Bulgarian Red Cross. Extracts from the memorandum are:

Our law of the 29th July, 1914, with regard to the moratorium, was abolished by decree of the Military Government of the 19th January, 1917. In virtue of this decree, Austrian and German creditors can legally and without hindrance claim payment of all their debts plus 6 per cent. interest, in quick installments, and in either Austrian or Serbian money, (which is accepted at only half its nominal value.) The decree was passed at the instigation of Austrian and German creditors. It has ruined Serbian trade.

The Austrians have pillaged all the houses in Belgrade and in other towns where the owners were absent. According to reports received, such houses have been completely ransacked. Private property has never been so little respected in any war. The royal palace has been plundered.

The Ethnographical Museum and the National Museum have been pillaged, and all valuable objects taken away, contrary to Article 56 of The Hague Regulations, according to which museums are as inviolate as private property.

The Bulgarians, like the Austrians, have

plundered all the houses abandoned by their owners. At Monastir, for instance, it was proved upon the entry of our troops that the personal property of all our officials had been carried away to Bulgaria. The Bulgarians designate all lands, factories, buildings, furniture, and other property belonging to those who had emigrated from the occupied provinces as unowned property, putting up such property for sale or letting it on lease for the benefit of their treasury.

The National Library, the University Library of Nish, and the Library of the School of Theology at Prizren were taken by the Bulgarians as war booty. The books and manuscripts of all these libraries were carried away to Bulgaria.

The Serbian Legation at Sofia was pillaged, and also the private belongings of the Minister and his secretaries.

It must be especially remarked that the Bulgarians have plundered to an extent and with an effrontery unexampled in modern warfare. They have sold as booty silk, calico, linen, glass, furniture, kitchen utensils, agricultural implements, and even tombstones.

The Austrians and Bulgarians, without having formally annexed the occupied provinces, behave as veritable sovereigns. Their economic administration has an evident tendency to ruin the population.

The Marching Stars

By AUGUSTE VILLEROY

[Contributed to the Paris Figaro in honor of the first arrivals of United States troops in France.]

Sous la voûte d'un grand arc-en-ciel qui s'éploie,
Dans l'adieu du dernier brouillard qui se dissout,
Belle de certitude et chantante de joie,
L'Amérique là-bas tout entière est debout.

C'est fait! La Liberté sainte, dont la statue
Triomphale brandit un astre en son poing clos,
Comme Jésus, de gloire éclatante vêtue,
S'avance vers l'Europe en marchant sur les flots.

Et nous voyons, du fond de l'espace enfin libre,
Fidèles au tragique et sacré rendez-vous,
Sur l'azur des drapeaux, où leur lumière vibre,
Des constellations qui s'en viennent vers nous!

A German Version of the Marne

Reviewed by a French Historian

JOSEPH REINACH IN LA REVUE DE PARIS

[Translated for CURRENT HISTORY MAGAZINE]

One of the great decisive battles of the world's history was fought three years ago this month. The salvation of France and of democracy throughout the world hung upon the outcome of a great series of engagements in which French and English soldiers, wearied by the long retreat from Mons and Charleroi, stood and fought to the death with the pursuing German armies in the neighborhood of Paris. The action was on so vast a scale and extended through so many days that only when it was all over could its full meaning be grasped as a great French victory—the battle of the Marne. The world could not understand at first why the German armies had swerved to the south and left Paris unharmed, and the details of the cause are only now coming gradually to the light. Even the fact that the battle was a decisive German defeat was denied or carefully concealed at first in Germany. The book discussed by M. Reinach in the following article was the first to admit the truth—indirectly. The narrative of this German eyewitness, with M. Reinach's lucid French comments, and with General Clergerie's supplementary account of how General Gallieni's taxicab army issued out of Paris and surprised and defeated von Kluck, constitutes one of the most valuable chapters yet written on the subject.

THESE appeared at Berlin in the year 1916 a book, "The Battles of the Marne," which made a great stir in Germany. Extracts from it had already been known through the American newspapers. I have been informed that the volume has been since withdrawn by order from circulation. In any case, it is almost impossible to find a copy in neutral countries, even though Germany has deluged them with a war literature as voluminous as it is insipid. The Belgian Minister of War has succeeded in getting a copy, which he has had translated. He has asked me to write a preface for it. M. Hanotaux, on his part, intends to publish a critical edition of it. The *Revue Militaire Suisse* consecrated a short but substantial article to it in August.

The book is anonymous. The author is manifestly an authority and an eyewitness. Necessarily, he claims to write ad narrandum. In reality, it is to prove that the battle of the Marne "was interrupted for purely strategical motives"; consequently, that it was not "an immense victory" for the armies of France; that General von Moltke's plan is one of the greatest of all time, and that the

commander of the First German Army is above all reproach. In all probability, he is an officer of the staff of von Moltke or of von Kluck. I am inclined to believe that he was attached to the latter, because of the very special attention which he pays to the actions of the First Army, and the eulogies which he lavishes on the commander who was beaten at the Ourcq. At times, one would say he writes at von Kluck's dictation. But he is equally attached to General von Moltke, who was at the head of the Grand General Staff from August, 1906, and who was to be forced into retirement before the end of the first year of the war. It is thus easy to understand how the book should be first authorized and then withdrawn. * * *

He explains the plan of the German General Staff with great lucidity; a strict defensive from the Swiss frontier to the Donon; a defensive-offensive, according to Marshal von Moltke's formula, between the Donon and Verdun, where the chief mission of the Fifth Army will be to retain the enemy forces opposed to it; a vigorous offensive of the first four armies which, starting from the base Thionville-Aix-la-Chapelle, are

to penetrate France through Luxemburg and Belgium "in order to endeavor later to extend the right wing more and more toward the sea."

This movement of conversion "full of genius" authorized the greatest hopes. "In the great curve which, through Brussels, Valenciennes, Compiègne, Meaux, passed to the east of Paris, we should throw the French armies back beyond the Aisne, the Marne, and, perhaps, beyond the Seine, in order eventually to outflank them to the south of Fontainebleau, and thus to roll up the whole French battle line." Meanwhile, reserve and Landwehr corps would prevent later debarkation of English troops between Calais and Dunkirk.

"So far as human foresight could tell, this plan could have been carried out at the end of September, 1914." Many army corps would have been liberated, and could have been hurled against Russia. * * *

It will have been observed that our author indicates, as having formed a part of the German plan, the passage "to the east of Paris" after the first successes. So that the German Staff did not hesitate, we are told, on the morrow of the battles of Mons and Charleroi, between pushing straight on to Paris and seeking the French army on the Marne or on the Seine. * * * It can be seen at once what a brilliant exculpation of von Kluck and von Moltke is contained in this affirmation. All Germany was convinced, in August, and, with it, almost the whole world, that her victorious armies had Paris as their objective. "Nach Paris!" shouted all her soldiers, when entering Belgium, and, later, all along our roads, deafening and frightening all those who saw them rushing forward at the rate of forty kilometers a day. But the General Staff and the Emperor himself were already resolved not to attack Paris before having destroyed the French armies "to the south of Fontainebleau."

Is this the truth? I think so. Or is it an invention, after the disillusion, after the failure of the "plan of genius," and the defeat? Evidently, this will not be known for certain until the German archives disclose to us the original plan

of the General Staff, as it was before the war or during its first days. * * *

However great is the admiration of the German author for the German plan, he finds one fault with it: "The tasks imposed upon the armies of the centre and, even more, those of the right wing were really excessive." In fact, "not only

GENERAL VON KLUCK

were they to break the resistance of the Belgians and their forts, but they were also, through the stifling heat of August, to execute an altogether extraordinary march, before they could come to grips with the French, who held good positions chosen by themselves, and who had to reckon with no supply problem." * * * There are, as we know, other causes for the German defeat on the Marne—and our author himself will indicate them; but these causes are manifestly accurate. To march, in the hottest part of the Summer, at the rate of forty kilometers a day, and even though inspired by victory and sure of an early triumphal entry into the enemy's capital, would have undermined the offensive vigor of armies of steel and iron and sapped their power of resistance. This was the case of the soldiers of von Kluck and von Bülow, when they arrived at the Ourcq and the Marne. They were weary. Without doubt, our troops and the English had also endured heavy fatigues; but they had not had to pass through all Belgium fighting. Thus the violation of

Belgian neutrality, decided on for reasons of strategy, weighed heavily at this point also on the German armies. Finally, it cannot be denied that the German supply service became more difficult as the invading armies got further from their base. We, on the contrary, were fighting near ours. It was an appreciable advantage.

Wine a Cause of Defeat

Must we add that the German armies drank more as they ate less? The German author is silent as to this, but there are certain and numerous evidences of it. These beer drinkers were not used to our wines. Weary and sweating, they rushed into our cellars. The wine of France had its part in our victory.

The confession of this is found in the notebook of an officer on von Kluck's staff, a prisoner today. On Sept. 2 he notes:

Our soldiers are worn out. For four days they have been marching forty kilometers a day. The ground is difficult, the roads are torn up, trees felled, the fields pitted by shells' like strainers. The soldiers stagger at every step, their faces are plastered with dust, their uniforms are in rags; one might call them living rag-bags. They march with closed eyes, and sing in chorus to keep from falling asleep as they march. The certainty of victory close at hand and of their triumphal entry into Paris sustains them and whips up their enthusiasm. Without this certainty of victory they would fall exhausted. They would lie down where they are, to sleep at last, no matter where, no matter how. Only the delirium of victory keeps our men going. And, to give their bodies a drunkenness like that of their souls, they drink enormously. But this drunkenness also helps to keep them up. Today, after an inspection, the General was furiously angry. He wanted to put a stop to this collective debauch. We have just persuaded him not to give severe orders. It is better not to be too strict, otherwise the army could not go on at all. For this abnormal weariness abnormal stimulants are needed. In Paris we shall remedy all this. We shall forbid the drinking of alcohol there. When our troops are at last able to rest on their laurels, order will be restored.

"They drink enormously." It is a German officer who writes it, before the battle. They kept it up during the battle, on the evenings of the battle, in our villages of the Ile-de-France and Champagne, drinking enormously in our well-

filled cellars. One of the cavalry officers who led the pursuit has told me that he found the main street of a village so strewn with wine bottles and broken glasses that he had to make his way through the fields. * * *

German Praise of Joffre

Our author underlines the importance of the nomination of Gallieni, (as Military Governor of Paris:) "One of the best Generals of Republican France, who was absolutely the right man in the right place." * * * But his admiration goes especially to Joffre, the reasoned admiration of a soldier who does not feel the need of diminishing his enemy, thus diminishing himself by a back stroke. It is natural that he calls the victories of the Sambre and the Meuse "prodigious." We do not deny that they were great, and that they filled the world with astonishment and anxiety. Let us quote textually:

During the last third of August, 1914, the defeats of the French and English, especially on their left wing, had been so prodigious that only a general of very high gifts could have stopped the march of the Germans or obliged the adversary to evacuate a part of the territory occupied. The man who attempted this was General Joffre. Gathering all available reserves, a General with less decision would, perhaps, have tried to stop the enemy at several points. But a partial success gained in this way would have had no influence on the final result. Joffre immediately saw that it would not do to stop at half measures, and he found both the means and the efficient secondary commanders to carry out his ideas.

To begin with, Joffre did not allow himself to be disturbed "by the messages of misfortune which succeeded each other without interruption," during the closing days of August. He immediately recognized "at the first glance" that, on the one hand, "the strongly occupied line between Belfort and Verdun could hold at least for several days or weeks" and "contain the German attack"; and that, on the other hand, the danger to be guarded against was that of the immense enveloping movement—pursued "with a rapidity that had never been reached by armies of that size"—by the moving right wing of the enemy. Sure of his own right, Joffre therefore ordered the

splendid strategic retreat—according to the expression of Marshal French—which was to end in the victory of the Marne. * * *

Difficulties of Germans

An uneasiness begins to show through the following pages, in which the German Army is seen growing weaker as Joffre compels it to follow him still further. We may suppose that the understanding of the famous manoeuvre was reached by the German Staff only after their defeat, and that the homage rendered to Joffre is part of the special pleading for von Moltke and von Kluck. But this supposition is not essential, and we may well believe that such able soldiers perceived the growing peril which they could not avoid. In either case, we can indorse almost all the views of the German narrative.

The further the Germans advanced, and the longer the French and English were able to escape without engaging in a decisive action, the more did the initial advantage of the Germans pass into the hands of their adversaries. The Germans got further and further from their base, and grew more and more exhausted by their forced marches. They were using up their munitions and their food supplies with alarming rapidity, and the least dislocation of the supply service might become fatal to armies so vast as those which the Germans launched, in the month of August, against Belgium and the north of France.

But Joffre, who, it must not be forgotten, was fighting on interior lines, was coming closer and closer to his supply bases. Every day new, fresh troops were arriving behind his lines of battle; day by day the first lines could be provided with food supplies and munitions, and, finally, the French Staff found itself in the agreeable situation of bringing into battle far fewer wornout troops than its adversary, who, for a month, had been marching almost day and night. In addition to this, it was a piece of good fortune for the French that their front, however thin it might be at certain points, had not yet been pierced.

When Joffre had taken the resolution only to accept battle under particularly favorable circumstances, he gave the order to his subordinate commanders to withdraw before the enemy and to march further and further south. If his preparations had not been completed in time, he would eventually have accepted battle to the south of the Seine, and have abandoned Paris. He then took measures to reinforce his threatened left wing and centre, and, before all, to prevent the army

which was marching on the (German) extreme right wing from outflanking his battle line.

We are familiar with these measures; it is not doubtful that the German intelligence department was acquainted with them at the time when they were taken, or very soon afterward. They were "the creation of two new armies: the Sixth Army, which, under the command of General Maunoury," should have been formed, according to the initial plan, in the neighborhood of Amiens, and which "because of the rapid German advance, was actually formed to the northeast of Paris and in its vicinity"; the Ninth Army, "which was slipped in between the Fourth and Fifth Armies, and intrusted to General Foch, a very able commander."

These armies were made up of divisions, very accurately enumerated, some of them brought by rail from Alsace and Lorraine, "drawn from Castelnau's large Second Army," from the First Army, commanded by General Dubail, and from the Second Army, under General Sarraill; others were drawn from the Paris garrison and the Moroccan contingents. Another part of these measures was "the submission to Joffre's orders of the troops of the intrenched camp of Paris which were commanded by General Gallieni," the Sixth Army being at the same time "put at the disposition of the Governor of Paris, that is, indirectly intrusted to the Commander in Chief," and this, "because, at all times, unity of command has been one of the principal factors of success." Finally, "in order that nothing might be neglected which could contribute to the success of the great plan, Joffre, who had already replaced Ruffey by Sarraill, put the Fifth Army under the orders of Franchet d'Espérey.

Swerving Aside From Paris

While Joffre's armies withdrew step by step on the Marne, where they were to halt on Sept. 5 and be joined by the English army, "the German armies of the right wing were marching forward into France without a halt. It seemed as though a wall of iron were ceaselessly moving forward. A single thought ani-

mated this colossal gray mass; the annihilation of the French field army, in order to end at a stroke the war on the western front. It was everywhere believed that Paris was the goal of the German Generals, and every day the newspapers announced the diminution of the distance which separated the German advance guard from the French capital. And then suddenly—it was on Sept. 4—the German First Army, leaving Paris on its right, swerved toward the south!”

The exclamation mark stands in the German text, but, without doubt, only to mark the final point. “The point is all.” The narrator has explained, as we have seen, at the beginning of his narrative, that “the passage to the east of Paris” had been written beforehand in the plan “full of genius” of Moltke, and not the march upon Paris. This affirmation must suffice as an answer to all the criticisms which have been raised in the sequel against the abandonment, assuredly only for a very brief period, in the thought of the German Staff, but which in fact became final, of the direct attack against the capital. Magister dixit. Thus the younger Moltke had decided. Thus the elder Moltke had prescribed in his famous note of 1859: “Even though the fate of Paris decides everything, as in 1814,” it would be right to “turn away from Paris” in case a French army should be gathered in the neighborhood of Rheims. It would then be necessary to attack the French behind the Aisne, to throw them back across the Marne, the Seine, the Yonne, and, finally, the Loire. After that, we could march on Paris.

I have said that this explanation appears to me genuine. It is, none the less, singular that the author of this narrative, so complete in other respects, should make no allusion at all to the tempest of recriminations which was raised in Germany, after the defeat of the Marne, against the movement “to the east of Paris.” It is comprehensible that he should keep silent concerning the intervention of the Emperor, who wished, as I believe to be the case, that the German army should march direct on Paris,

and concerning the opposition of Moltke, who must have spoken of it to von Kluck, to the imperial proposal. All the same, he might try to justify the manoeuvre, and to prove to German opinion that the attack on Paris, far from leading to certain victory, might have led to disaster, and that, therefore, the strategic rule must be followed. Why does he not attempt this demonstration, which I believe to be sound?

His mere sketching it has sufficed to bring about the suppression of his book, or the prohibition of a second edition by the higher authorities.

German Officer's Memorandum

In contrast with this, here is what may be read in the notebook of the German officer already mentioned, under date of Sept. 3. The bulk of the army had taken up its quarters in the forest of Ermenonville. The columns were advancing toward Betz:

We are leaving Paris on our right, and we shall concentrate toward the southeast, opposite the remnants of the Franco-English army, which is trying, it is true, to reassemble its broken fragments in the plain of the Marne. Our soldiers have no suspicion that we are temporarily leaving the road to Paris. They are counting so completely on finding themselves at the gates of Paris tomorrow, or the day after, that it would be cruel to tell them the truth. They would lose all their spring. Our soldiers believe that the epoch of battles is ended, that the decimated French Army is hiding, and that we are going to enter Paris singing and drinking.

Paris is not only the great triumph; it is rest and peace:

One of our battalions was marching wearily forward. All at once, while passing a crossroad, they discovered a signpost, on which they read: Paris, thirty-seven kilometers, (twenty-three miles.) It was the first signpost that had not been erased. On seeing it, the battalion was as though shaken up by an electric current. The word Paris, which they have just read, drives them crazy. Some of them embrace the wretched signpost, others dance round it. Cries, yells of enthusiasm, accompany these mad actions. This signpost is their evidence that we are near Paris, that, without doubt, we shall soon be really there. This notice board has had a miraculous effect. Faces light up, weariness seems to disappear, the march is resumed, alert, cadenced, in spite of the abominable ground in this forest. Songs burst forth louder, and no longer the traditional songs, but Parisian ditties, stupid enough in all conscience. ...

Then on the next day, (Sept. 4,) General von Kluck himself comes to make a visit of inspection to Lizy-on-Ourcq. The officer of the notebook talks with a Major in his escort. Is von Kluck only the well-disciplined interpreter of the decisions of Moltke, the supreme chief? In any case, "he feels certain that the Germans will soon crush the crumbs of the French Army. The reports of spies who have watched the retreat of the enemy army are very encouraging. They are a dejected horde, discontented, without any spring. There is no chance of their regaining a biting edge. The General fears nothing from the direction of Paris. We shall come back to Paris, after having annihilated what is left of the Franco-British army. The Fourth Corps of reserves will be intrusted with the triumphal entry into the great capital. * * *"

On Sept. 5, the eve of the general attack, the officer of the notebook records that the high German command foresees a flank attack, "although our reconnoissances have not brought any certain information on this point." Orders are given to dig trenches, to hasten defensive works. "These orders are very badly executed." Von Kluck makes a tour of inspection; "he is evidently very displeased." The soldiers work badly, or not at all. They are "worn out by forced marches, or drunk." But there is something more: "Persuaded that they have already attained complete success, they are full of disillusionment when they learn that they will have to dig defensive trenches. Our soldiers have been too much accustomed to singing hymns of victory and triumph."

New Spirit of the French

This is very good military psychology. Here is a German who can read more than is in his books. Note the phrase that follows: "If the French were not so profoundly demoralized, they might become very dangerous, for our First Army is very far from possessing the energy and discipline which were its strength in Belgium and on the northern frontier of France." Also, on Sept. 7, (battles of Marcilly, Barcy, and Chambry,) and

Sept. 8, (capture of Chambry,) what surprise: "The French troops appear to be full of ardor. * * * Our men hold the heights, but the French have become demons, they charge in the face of machine-gun fire, joyfully let themselves get killed. * * * The valor of the French is superhuman. * * * Like spontaneous generation, troops appear from all sides. * * *"

On Sept. 8 the officer of the notebook writes:

Col. Gen. von Kluck has inspected the posts. I saw him. His eyes, usually so brilliant, are dull. He, so energetic in his whole attitude, speaks in a faint voice. He is quite cast down. I question the Major who accompanies him. Our reconnoissances have just unmasked considerable French formations. Today's battles have been terrible for us. And all our armies, from the Marne to Alsace, are bearing an unendurable burden. We must parry this danger at any cost, even by retreat.

It was, writes the German historian of the Marne, "to escape the danger of being outflanked that the French Commander in Chief had created a new army on the extreme French left. This new army the Sixth, and the German Fifth Army, against which Joffre created it, were only fighting on the Ourcq, for four days now, in order to try to outflank each other. Neither succeeded. However, von Kluck was only able to stop Maunoury's turning movement by drawing strong reinforcements from Bülow, whose Second Army was thereby greatly weakened; the English, and the French Fifth Army, under Franchet d'Espèrey, concentrated all their efforts on the point of least resistance in front of them; the English recrossed the Marne; the French Fifth Army pushed north; thus the German forces facing our Sixth Army on the Ourcq were taken in the flank. * * * Here is the German account:

Sept. 9 was a very critical day for Maunoury. The Germans had been marching unceasingly for five weeks, they had fought numerous battles, and lacked munitions and even more, food. Yet, in irresistible assaults, they had the force to throw the French back at all points. Instead of yielding, they compelled the French to yield; instead of being outflanked, they outflanked the French, and even captured Nanteuil-le-Haudouin. But the finest energy must grow weak when it is not supported and refreshed. Reduced to

corps, weakened and melted away by fighting and fatigue, even these valiant warriors lost their power.

The French, on the contrary, who were only a few kilometers from Paris, not only received continual reinforcements, but were further supplied with all kinds of munitions. General Gallieni ceaselessly watched with vigilant eye over the movements of the Sixth Army, and made every imaginable effort to furnish it, as rapidly as possible, with every kind of support. He requisitioned thousands of automobiles in Paris, and, during the night, sent them to Maunoury with reinforcements, which were brought to him by rail from the interior and other parts of the front. One of the most remarkable of these transports was that of the Sixty-second Division (Zouaves) toward Creil and Senlis, carried out in the night of Sept. 8-9, with a view to hindering at all costs the outflanking of the French left wing.

Finally, on the same day, Maunoury asked that the division which he had lent to the Marshal should be returned to him, because the danger of being beaten by the cavalry corps of General von Marwitz no longer existed for the three English corps. This Eighth Division was sent, by rail, from Paris toward Maunoury's extreme left wing.

On the evening of Sept. 9, in spite of all the reinforcements they had received, the situation of the French Sixth Army was anything but brilliant. But it had to hold its ground at all costs, and could not withdraw even an inch further, no matter what it might cost.

But on the German side the offensive power was equally paralyzed. After all their efforts, and all the prodigious battles of the last days, the iron legions of von Kluck's army had arrived at the extreme limit of what they could give. On Sept. 9, toward noon, General von Marwitz had to announce, with an unwilling heart, to his chief that it was no longer possible for him to resist the whole English Army and the French Eighteenth Corps. To spare the blood of the English, Marshal French had in fact asked his neighbor on the right, the commander of the Fifth Army, for a whole corps, the Eighteenth.

In accord with the Chief of the General Staff, von Kluck was forced, unwillingly, to give the order to cease fighting, because the superiority of the enemy left wing grew continually. During the night of Sept. 9-10 the German armies withdrew toward the north in complete order. When, on the next morning, the French wished to continue the battle, von Kluck and his army had disappeared. Strong rearguards alone covered his retreat and for a long time occupied Nanteuil-le-Haudouin. * * *

Thus reads this early German admission of military defeat at the Marne.

A retreat in good order. * * * The officer of the notebook writes: "At Lizy the retreat is organized. * * * If that helter-skelter can be called organization."

The anonymous narrator, as was to be expected, remains faithful to his ill-starred chief: "The skill with which the Germans succeeded in withdrawing from their adversary is evidenced by the fact that von Kluck only abandoned a small number of guns and almost no prisoners." He also praises him for having retired toward Compiègne and Soissons, and not toward Rheims, for if he had bent toward the east, "the Germans, when Antwerp fell, would not have been in a position to extend and carry their front as far as the coast." This is accurate.

Necessarily, as von Kluck, with his army of the extreme right wing, "served in a certain way as guide for the other armies," his retreat compelled that of Bülow's army, which, in its turn, involved that of von Hausen's Saxon Army and of the Guard, in the centre of the German front. Duke Albert of Württemberg and the Crown Prince, not wishing to lose contact, withdrew in their turn.

Foch the Storm Centre

Of all the battles in progress, that of Sept. 9 before General Foch's army was much the hardest and bloodiest. Von Hausen's furious offensive was the ultima ratio of Moltke, requiring of an action of the centre a decision which he no longer hoped to be able to win on his wings. And Foch immediately proclaimed his faith in the famous Order of the Day, like a challenge, which destiny did not accept: "The situation is excellent; I order that the offensive shall be renewed. The key of the day will be to debouch by Fère-Champenoise." The very name of Fère, like that of Mondement and Marais, fails to appear in the narrative. Our centre might not have broken on Sept. 10; Dubois, Humbert, Grossetti, and all the others, firm in their reconquered positions, were masters of the hour.

The marshes of Saint-Gond in their turn witnessed a flanking manoeuvre which had a decisive share in the victory. The narrative admits, however, that Langle de Cary's attack, on Foch's right, against the Nineteenth German Corps—the retaking of Sermaize and of the crest west of Vassincourt—"had a certain influence on the course of the battle," and "to a certain degree hastened the retreat

of the (German) centre." He also admits that the energetic resistance offered by our Third Army "to the Crown Prince's violent and able attacks," stopped them on the heights of the Meuse and between Verdun and Saint-Mihiel. "The ring of iron around Verdun and the forts of the Meuse was also slackened—for a time."

Everything is linked together in the manoeuvre of battle, but on condition that no link bends or breaks. It would have availed Maunoury nothing to hold like a rock if Foch had yielded, nor Foch to have pierced the German centre if Maunoury had been enveloped on his left. And everything would have smashed if Franchet d'Espérey and French had not pierced their hole between the First and Second German armies, or if Langle de Cary had been pushed back or Sarrail had been repulsed on the extreme right wing.

Finally, the German writer, while he still refuses to utter the word defeat, marks in clear enough lines the failure of Moltke's plan, which was "to smash the French Army at the first shock, to cut it into pieces and dislocate it." But, he says, "Joffre succeeded still less in turning the Germans, in rolling up their battle line and in throwing them out of France, across the Rhine."

In other words, we lost the battle of the frontiers; the Germans lost the battle of the Marne. * * *

Significance of the Marne

These are the facts as they appear to a German officer, who is not a Jomini, but who understands what he sees and whose mind is well balanced. The moral significance of the Marne escapes him; that of Valmy, as we know today, was only revealed years later to Goethe. "Moltke withdrew the front of the German battle line about a day's march to the north." That is all he sees. It was "a battle interrupted for tactical reasons."

And Moltke had five motives. Two have already been discussed, the exhaustion of the armies of the right wing and the centre, which were "quite worn out," and the defective supply of food and munitions. In the third and the fourth

place, the Germans had discounted a more rapid fall of the fortresses of Liège, Namur and Maubeuge, and "the energetic sortie of the Antwerp army," coinciding with the battle of the Marne, held army corps whose mere presence would have been enough to make German victory certain and "break the French line." Finally, it was necessary, beginning with the end of August, "before the deploying of the German armies was completed," to transport to the eastern frontier several army corps from the western front and from the interior of the empire, because the Austrians had not been able to stand up against the formidable thrust of the Russians into Galicia and the Russians had invaded East Prussia.

These three Russian and the Belgian reasons are perfectly accurate.

The Russian mobilization was ordered on the night of July 30-31, a partial mobilization of the four southern districts—Kieff, Moscow, Kazan, Odessa—as a reply to the mobilization of seven Austrian army corps on July 27; the general mobilization was ordered on July 31, toward midday, in reply to the general mobilization of Austria decided on in the morning. The German Chancellor delivered an important speech (on Nov. 9, 1916) to establish the assertion that the partial mobilization of Russia rendered war inevitable. An impudent lie, but let it pass, and suppose that Russia had waited for the completion of her concentration before taking the offensive against Prussia. This would have made Germany safe on her eastern frontier. Consequently, two or three army corps which Hindenburg summoned would have been on the Marne, on Sept. 9, or on the Ourcq; and the wheel might have turned.

How the Belgians Helped

The same reasoning applies to the Third and Ninth German Reserve Corps, which remained on the banks of the Dyle and the Scheldt, where the Belgian Army of the intrenched camp of Antwerp "was working to draw them against itself and to keep them far from the French battlefield." There were two fine combats at Impde and Hofstade, on the canal from Louvain to Malines, on Aug. 24 and 25,

during the battles of Mons and of the Sambre. At the sound of the firing, the Hanoverians set fire to Louvain, its Collegiate church and Halle aux Draps, with the famous library. On Sept. 4, on the eve of the battle of the Marne, there was an engagement at Capelle-aux-Bois, a bloody check of the Germans, who took vengeance for it by burning the village.

Moltke summoned from Belgium three reserve divisions, replaced by a division of Landwehr and a naval division. "The moment for a contribution by the Belgian Army to the operations of the allied armies became from that time opportune." It was the offensive against the German position, strongly organized, and extending from the left bank of the Dyle (from the village of Haecht) to the left bank of the Senne and the town of Walverthem, which is ten kilometers distant, to the southeast of Termonde. The battles of Sept. 9, 10, and 11 were so clearly favorable to the Belgians that the Germans sent for reserves taken from the interior garrisons and the Sixth Reserve Division, already on the march toward France. They then counterattacked on Sept. 12, and gained the advantage at the cost of heavy losses.

When, on Sept. 13, the Belgian Army withdrew on the intrenched camp, "the aim which it had had in view was attained"; the battle of the Marne had been won.

Finally, it is clearly proved that the

German plan of a sudden attack had begun to fail with the refusal of Belgium to open its territories to the armies which were rushing to attack us, and to the heroic resistance of this noble people. The German plan was strictly a horarium. Every minute in it was determined. From the German frontier, opposite Aix-la-Chapelle, to the gap of the Oise, on the French frontier—the source of the Oise is in the Belgian province of Namur—there are six days' march. But the passage of the Germans across Belgium in arms—halted before Liège and before Namur, halted on the line of the Gette, beaten on Aug. 12 on the edge of the forest of Haelen, victorious on Aug. 18 and 19 at Aerschot—had lasted *sixteen days*, (Aug. 4-20.) The splendid effort of the Belgians had therefore made ten full days late the arrival of the German armies on the French frontier, from which only eight marches separated them from the advanced forts of Paris.

Thus the Russians and the Belgians, not less than the English, conquered with us on the Marne. The German author is not mistaken about this. It still remains for him to see that a battle which ends in a retreat is a defeat, that the violation of Belgian neutrality was at once a political crime and a military blunder, and that the war was premeditated and intended by the German Emperor.

How Paris Was Saved

General Clergerie's Story of a Great Sally, the Battle of the Ourcq, and von Kluck's Defeat

GENERAL CLERGERIE, former Chief of Staff in the Military Government of Paris and a close associate with General Gallieni in the tragic hours of August and September, 1914, officiated at the distribution of prizes to the boys of the Lycée of Périgueux, July 14, 1917. In an informal address he told how the army of the intrenched camp of Paris was led to attack the right wing of the German Army at

the moment when the latter, in the region of the Ourcq, was preparing to envelop the left wing of the French Army.

Here is a summary of that page of history, the story of an eyewitness:

From Aug. 26, 1914, the German armies had been descending upon Paris by forced marches. On Sept. 1 they were only three days' march from the advanced line of the intrenched camp, which the garrison were laboring desperately to

put into condition for defense. It was necessary to cover with trenches a circuit of 110 miles, install siege guns, assure the coming of supplies for them over narrow-gauge railways, assemble the food and provisions of all kinds necessary for a city of 4,000,000 inhabitants.

But on Sept. 3 the intelligence service, which was working perfectly, stated, about the middle of the day, that the German columns, after heading straight for Paris, were swerving toward the south-east and seemed to wish to avoid the fortified camp.

"General Gallieni and I," continued the speaker, "then had one of those long conferences which denoted grave events: they usually lasted from two to five minutes at most. The fact is that the military Government of Paris did little talking—it acted. The conference reached this conclusion: 'If they do not come to us, we will go to them with all the force we can muster.' Nothing remained but to make the necessary preparations. The first thing to do was not to give the alarm to the enemy. General Maunoury's army immediately received orders to lie low and avoid any engagement that was not absolutely necessary." Then care was taken to reinforce it by every means. All was ready at the designated time.

In the night of Sept. 3, knowing that the enemy would have to leave only a rear guard on one bank of the Ourcq, General Gallieni and General Clergerie decided to march against that rear guard, to drive it back with all the weight of the Maunoury army, to cut the enemy's communications, and take full advantage of his hazardous situation. Immediately the following order was addressed to General Maunoury:

Because of the movement of the German armies, which seem to be slipping in before our front to the southeast, I intend to send your army to attack them in the flank, that is to say, in an easterly direction. I will indicate your line of march as soon as I learn that of the British Army. But make your arrangements now so that your troops shall be ready to march this afternoon and to begin a general movement east of the intrenched camp tomorrow.

At 10 in the morning a consultation was held by Generals Gallieni, Clergerie, and Maunoury, and the details of the plan of operations were immediately decided. In the afternoon an understanding with the English was reached at Melun. General Joffre gave permission to attack and announced that he would himself take the offensive on the 6th. On the 5th, at noon, the army from Paris fired the first shot; the battle of the Ourcq, a preface to the Marne, had begun.

General Clergerie then told what a precious purveyor of information he had found in General von der Marwitz, cavalry commander of the German First Army, who made intemperate use of the wireless telegraph and did not even take the trouble to put into cipher his dispatches, of which the Eiffel Tower made a careful collection. "In the evening of Sept. 9," he said, "an officer of the intelligence corps brought me a dispatch from this same Marwitz couched in something like these terms: 'Tell me exactly where you are and what you are doing. Hurry up, because XXX * * *' The officer was greatly embarrassed to interpret those three Xs. Adopting the language of the poilu, I said to him: 'Translate it, 'I am going to bolt.' True enough, next day we found on the site of the German batteries, which had been precipitately evacuated, stacks of munitions; while by the roadside we came upon motors abandoned for the slightest breakdown, and near Betz almost the entire outfit of a field bakery, with a great store of flour and dough half-kneaded. Paris and France were saved.

Von Kluck could not get over his astonishment. He has tried to explain it by saying he was unlucky, for out of a hundred Governors not one would have acted as Gallieni did, throwing his whole available force nearly forty miles from his stronghold. It was downright imprudence. Of course, it was Gallieni who was in the wrong!"

General Clergerie pointed the moral for his youthful audience in these words: "If you want France to be great, there's only one way: Act."

A German Sailor's Account of the Jutland Battle

P. KRUG, one of the survivors of the German flagship *Lützow*, which was sunk in the battle of Jutland in June, 1916, published in July, 1917, a pamphlet giving his view of the naval engagement. His pamphlet, which appeared at The Hague, is the first published account of the battle by a German sailor.

Torpedoed by a British warship early in the engagement, the *Lützow*, which was the flagship of Admiral Hipper, was hammered unmercifully by the big guns of the British vessels, and soon became a complete wreck, a "ship of the dead," as Krug describes her.

According to his story, twenty-seven German sailors were trapped in the Diesel dynamo room before the battle had been long in progress, and remained there when the *Lützow*, a disabled hulk, was abandoned and sent to the bottom by a torpedo from a German destroyer. Two of these imprisoned men had been driven insane and were kept tied by their shipmates.

After describing the first part of the battle and telling how the arrival of British battleships turned the tables on the Germans, Krug writes:

Suddenly the entire ship is roughly shaken. The colossus heaves far over, and everything that is not fixed is upset. The first direct hit! The torpedo pierces the fore part of the ship. Its effects are terrible. Iron, wood, metal, parts of bodies, and smashed ships' implements are all intermixed, and the electric light, by chance spared, continues to shine upon this sight.

Two decks lower, in the Diesel dynamo room, there is still life. That compartment has not been hit, and twenty-seven men, in the prime of life, have been spared, but the chamber is shut off from all others, for the water is rushing into all sections. They are doomed to death. Several 38-centimeter shells squarely hit their mark, working terrible havoc. The first hit the wireless department. Of the twelve living men who a moment ago were seated before the apparatus, there is nothing more to be seen. Nothing is left but a smoking

heap of ruins. The second shot again pierced the fore part of the ship. The entire forepart of the vessel, as far as the Diesel motor room, was past saving.

Another broadside meant for the *Lützow* fell short, but a torpedo boat close by disappeared, leaving only a few odd pieces of wood and a smashed lifeboat drifting around. It is now half-past 7, and the hostile circle grows ever smaller. The *Lützow* and the *Seydlitz* lie with their bows deep in the water; both are badly mauled. The forepart of the *Lützow* was in flames. Shells burst against the ship's side in rapid succession. A terrible sight is presented on board the *Lützow*, and it needs iron nerves to look upon it coolly. Hundreds have lost their lives, while many have lain for hours in torture, and the fight is not yet over. The bow is now crushed in and is entirely submerged. The four screws are already sticking half out of the water, so that the *Lützow* can only make eight to ten knots an hour, as against the normal thirty-two.

The Admiral decides to transfer to the *Moltke*. He gives orders to turn and get away from the scene of the fight, but the *Lützow* has not gone a mile before she receives a broadside of 38-centimeter shells. The entire ship was filled with the poisonous fumes of the shells, and any one who failed to affix his gas mask was doomed to be suffocated.

It was three-quarters of an hour before the lighting installation was restored. Then for the first time could the extent of the damage wrought by the salvo be seen. One of the shells had landed in the sick bay. Here there were only three doctors and fifteen attendants, besides 160 to 180 wounded. Of all those, only four remained alive. These four were hurled into the next compartment by the air pressure; there they lay unconscious.

The *Lützow* was now a complete wreck. Corpses drifted past. From the bows up to the first 30-centimeter gun turret the ship lay submerged. The other gun turrets were completely disabled, with the guns sticking out in all directions. On deck lay the bodies of the sailors in their torn uniforms, in the midst of the empty shell cases. From the masts fluttered torn flags, twisted signal lines, and pieces of wire of the wireless installation. Had not the lookout man and the three officers on the commander's bridge given signs of life, the *Lützow* would have truly resembled a ship of the dead. Below, on

the battery deck and in the coal bunkers, there still lay innumerable wounded, but there was no longer a doctor to attend to them.

Night came on and hope was entertained of getting away without a further encounter. But at 3 o'clock, in the night news of the approach of two British cruisers and five destroyers was received and just at that critical time the fore and middle bulkheads gave way.

Orders were given to quickly carry the wounded to the stern. Then the order rings out: "All hands muster in division order abaft." A tumult arises on the lower deck, for everybody is now bent on saving his life. It is impossible in that short space of time to bring up all the wounded, for they are scattered everywhere. Eighteen men had the good fortune to be carried up, but all the rest who could not walk or crawl had to be left behind.

The twenty-seven men shut up in the Diesel dynamo chamber had heard the order through the speaking tube, for many, mad with anguish, screamed

through the tube for help, and it was learned that two of their number lay bound because they had become insane. Inspired by their sense of duty, these sealed-up men had continued to carry on their work in order to provide the ship with light.

The torpedo boats now quickly took off the crew of the *Lützow*, and those left behind were doomed to death. It was resolved that no piece of the vessel should fall into the enemy's hands. An order was given and a torpedo cleft the waters. Just then seven men were to be seen running like madmen round the rear deck. Overfatigued as they were, they had apparently dropped off to sleep and only just awakened. As the torpedo exploded, the *Lützow's* bow quickly dipped, and the stern rose until she stood on end. Then she heeled over and sank, forming a great whirlpool that carried everything within it into the depths.

When the roll was called it appeared that there were 1,003 survivors of the *Lützow*; 597 men had perished in the battle.

Heartrending Scenes in Belgium

A CITIZEN of Liège who succeeded in escaping from Belgium draws a terrible picture, says Reuter's Agency, of the sufferings of the repatriated deportees and of the brutality with which the unfortunate people are still treated by the Germans. This escaped Belgian was engaged from March to July, 1917, at an infirmary outside Liège station and witnessed the arrival of train after train of repatriated deportees. Describing what he had seen, he said:

Never shall I forget the terrible scenes I have witnessed. The trains contained sometimes 500 to 900 men, who had been for three days practically without food. A great many of them had their feet and legs frostbitten or frozen off, and had to be carried on stretchers. They had been obliged to walk for hours in their stocking feet in the snow. Often gangrene had set in and the men died within a few days.

We had an average of two deaths every day in our small infirmary. Some of them were so famished that they could not take any food, and had to be fed with a spoon; others ate ravenously anything

that they could snatch from your hand. Eighty per cent. are stricken with tuberculosis, and will never recover. Such is the result of a few months spent in the German prison camps and kommandos.

The first time we saw them alight from the train we could not believe that these ragged ghosts, with haggard faces and feet wrapped in muddy sackcloth, could be the same men who had passed through Liège, singing patriotic songs, on their way to Germany. According to their reports many have died over there; many also died on the way home, every train bringing a load of three or four dead as well as the dying. Many more have died at home later after horrible sufferings from the incurable diseases which they have contracted.

But these physical tortures are nothing beside the moral trials to which they have been subjected. Some of the men have gone quite mad and do not realize that they have come back. One of the men I attended, in his delirium repeated unceasingly the same cry, while making a movement as if pushing something away. "I will not sign, I will not sign!" He did not, and he died for it in my arms. As an old woman said to me who was waiting for her son to be returned, "Is it not enough to make the stones weep?"

Military Operations of the War

By Major Edwin W. Dayton

Inspector General, National Guard, State of New York; Secretary, New York Army and Navy Club

VII.—Battle of Loos and Champagne Offensive

A FRENCH writer observing the new British divisions which began to march to the western battle front late in May, 1915, said, "This is an army of athletes which England has trained." The splendid regular army which had fought so bravely in the Summer and Autumn of the first year of the war was resting mostly in thick-sown graves between the Seine and the sea. But the best soldier material of Britain had flocked to the colors in the early Winter and was thoroughly trained and equipped by this time. These were Kitchener's men and were to continue the task of hammering at the German lines as they were left after the fighting at Souchez, Festubert, Aubers Ridge, and Neuve Chapelle in the Spring of 1915. The new troops found hard fighting awaiting them at Hooge.

The salient at Ypres was still a storm centre, and the Germans since May had held the high ground about the Château of Hooge, two miles east of Ypres on the road to Menin, which was the point of their nearest approach to the town after the terrific battles and the gas attacks in May. In June and July there was continued close fighting for every out-building or fortified rubbish heap on this low ridge, where positions were taken and lost over and over again. By July the advantage was considerably on the German side, especially in the region of Bellewaarde Lake, a pond north of the château.

Here the British had lost ground until they were pressed back to a little lane connecting the Menin road with the highway to Zonnebeke, a full half mile nearer Ypres than the position at Hooge. This made a dangerous-looking dent in the British line, but along the Menin road they still clung to trenches close up to

the château. A huge depression called "The Crater" resulted from the explosion of a British mine at this point and was the scene of a powerful German attack before dawn on July 30.

First Use of Liquid Fire

In this assault liquid fire was employed for the first time, and after a heavy bombardment by trench mortars (minenwerfern) the infantry stormed the British trenches, using a great number of grenades. The troops in the trenches attacked were practically annihilated, and the British line gave way about a quarter of a mile to the edge of the high ground at the corner of Zouave Wood. The Germans were about to thrust their lines south of the Menin road forward to a point abreast of their furthest positions westward along the lane north of that road. Second Lieut. Woodroffe, a boy under twenty, was the first soldier of the new army to win the Victoria Cross, which was awarded for a splendid effort to lead his men back in a counter-attack in which he was killed. Major Gen. Keir, commanding the Sixth Corps, ordered a counterattack in midafternoon which resulted in the useless slaughter of the Seventh and Eighth Rifle Battalions, which were torn to pieces in the death trap called Zouave Wood and the fields beyond, where 2,000 men fell, including sixty officers.

No further suicidal attempts were made to storm the German lines by daylight, and for ten days the British heavy artillery poured a flood of 8-inch and 9.2-inch shells over them. The British superiority in heavy guns began at that time to be in evidence and has continued to grow ever since.

On Aug. 9 two brigades renewed the counterattack just before dawn and, charging across a "no-man's land" 500

yards wide and heaped with the unburied victims of the previous effort, these gallant troops recaptured the crater and trenches close to the château. Two hundred Germans who held the dugouts in the crater were killed to the last man. That night the Germans shelled the new British positions, part of which it proved impossible to hold. In this day's fighting the two brigades lost over 2,000 men, but nearly all the ground was held until a fresh brigade arrived and gave the much-needed reinforcement required to retain the position.

Western Front, September, 1915

In the early Autumn of 1915 it was estimated that the Germans were defending their western front of 570 miles with a total force of nearly 2,000,000 men. They were outnumbered by the Allies, for Sir John French commanded a million British soldiers in France, while the French had 2,000,000 men on this front with strong forces of recruits in training camps in the rear. There were about 6,000 guns of varied calibre on each side.

By this time the British production of artillery munitions had been very greatly increased over the capacity of the early Spring. The German system of field fortification had, however, been developed to the utmost. Back of every front-line system lay another complete and even stronger line of trenches, completely prepared with wire entanglements, very deep dugouts, &c. The second line was usually about 700 yards behind the first, and a third and stronger position was prepared usually about a mile to the rear. There were frequent *fortins* or low redoubts of great strength so situated as to enfilade trench systems which might be lost. Against this elaborate fortification the operations took on increasingly the character of sieges rather than field manoeuvres intended to break through or outflank an enemy in the field; but in September the Allies launched two great attacks which it was hoped might win from the enemy some of his vantage ground. The time seemed propitious, for von Hindenburg's great campaign in Russia, while widely victorious, still required every man that could be spared from other fields.

The German lines in France formed a great right angle, whose upper line faced west from the sea to the Aisne, where it bent and ran toward the southeast to the Swiss frontier. The Allies planned to strike two great blows back of the head of this vast salient—one in the north toward Lens, and the other in Champagne about Souain.

The Battle of Loos

On the northern sector a terrific bombardment was maintained from Sept. 23 until the early morning of the 25th, when the British attack upon Loos started. On the French front, facing Vimy Heights, the bombardment continued until early afternoon, when the infantry assaults began and made excellent progress before night. The next day D'Urbal's soldiers fought their way to the lower slopes of the heights north of Thelus, crossed the Souchez stream and gained part of Givenchy Wood. By the 29th the western slopes of Vimy Heights and much of Givenchy Wood had been taken from the Germans, and it became necessary for the French commander to send reinforcements to the British on his left flank, where a deep salient was being held east of Loos by a dangerously inadequate force.

While the French were winning their footing on Vimy Heights the British had fought a series of separate battles both north and south of the Vimy sector. It will be well to realize in connection with this whole series of actions that they were timed to coincide with the great French attack far to the south in Champagne, and intended to so thoroughly engage the Germans in the north as to prevent the dispatch of reserves from that region to the south, where the Allies hoped to be able to break through the invader's fortified lines and reach the railway communications in the rear. The northern attacks were planned to be at least "holding" battles, but the numbers of both men and guns employed were so great as to lead to the hope that at some vulnerable spot the German lines might be broken and the railways from Lille southward be reached.

On Sept. 25 the British, after a final bombardment, exploded a mine and then

once more attacked Hooge, the blood-drenched point of the Ypres sector. Two infantry divisions stormed German trenches in some places to a depth of as much as 600 yards, but nearly all the ground gained was so completely commanded by the heavy German artillery that it had once more to be yielded by the end of the day.

Another British attack developed soon

GENERAL DE CASTELNAU

after 4 A. M. in front of Armentières. Here the forces on the flanks made good progress, but the centre failed to gain, so that in the end both flanks were compelled to fall back to re-establish the alignment. The only result here was that the German troops were kept occupied on their own front.

An Unsuccessful Phase

A third battle meanwhile was fought by the British Indian Corps, commanded by General Anderson, above Neuve Chapelle, and this effort was the least successful of all. The faults seem to have been divided between imperfect staff arrangements and unsatisfactory qualities displayed by some of the native troops. Two Indian brigades which rushed over German first-line trenches failed to either clear out or hold the positions, which

were presently reoccupied in dangerous force by the Germans. A reserve brigade of Indians, which should have followed closely the advancing units, stopped in the old British front-line trenches and viewed with dismay a front which, to their astonishment, bristled with resistance, although two whole brigades had swept over it and disappeared beyond. At the opening of this battle one of the Indian divisions (the Meerut) attempted to send a cloud of poison gas over the German lines, but in a drizzling mist with almost no wind the gas lay still, so that when they advanced they were compelled to charge through the gas themselves. As the day wore on, German counterattacks drove back the lines of the Twentieth Division of the Third Corps, which exposed the flank of the Meerut Division, to which the main attack toward Aubers Ridge had been committed.

Gradually whatever plans had existed dissolved and the action degenerated into an utterly confused mêlée, out of which the remnants of the leading brigades finally fought their way back to the old lines. The reports laid great emphasis upon the sturdy courage of the British regular battalions serving with the native brigades. Once more the Neuve Chapelle sector proved a deadly area impregnable to British efforts, and this battle of September in this fatal sector was a failure like the preceding ones of December and May.

Fighting Near Givenchy

Still another attack was made by the British troops near Givenchy, the strongly defended outpost on the west front of La Bassée. Some gains were made, but the lack of reserves made it impossible to hold such of the first-line positions as were entered.

The great British attack on this day of many battles was meanwhile launched against the fortified ridge and quarries west of the La Bassée-Lens road. Here General Haig had Rawlinson's (Fourth) and Gough's (First) Corps for deployment on a front of about eight miles between Givenchy and Grenay. This important phase of the great battle of Sept. 25 opened soon after 6 A. M. with an at-

tack on the German positions just below the La Bassée Canal, but, although some progress resulted after desperate fighting, the brigade engaged here was compelled before night to fall back.

Just below this sector another Scotch brigade in a glorious attack won the Hohenzollern Redoubt and a fortified position called Fosse 8. On their right the Seventh Division drove their attack through to the German second line in the Cité St. Elie and the village of Haisnes, both places well in the rear of the Hohenzollern Redoubt and directly on the La Bassée-Lens highway. The lack of sufficient reserves made it impossible to hold the more advanced positions won, and by midday part of the gains had to be relinquished.

The Capture of Loos

Further south Rawlinson's men fought brilliantly, and in an advance of nearly two miles reached the outer edge of Hulluch and captured Loos close to the Lens-Bethune road. In this splendid success there was a notable improvement over the methods which on the same day scored such a failure at Neuve Chapelle. Loos was taken by divisions made up of London regiments which had spent a number of days before the battle in studying a big model of this sector, with the result that when one battalion (the Nineteenth London) lost every officer, the men went on and accomplished their part without hesitation.

Success in this war is reserved for those adequately prepared to win it. However, even successes so won cannot be maintained unless supported by large reserves equally well prepared. The brave Scotch battalions, having taken Loos, pressed on with mad courage into the very heart of a fortified zone beyond. In less than three hours Gordons, Camerons, Seaforths, and Black Watch had driven nearly four miles through the German trenches. An English writer commenting upon the heroic fighting of the Scotch brigades in this battle justly remarked that while what they did was magnificent it was not war, for it was an attack unprovided with reserves. About 10 o'clock word was sent up to the advanced units that they must fall

back; but, almost encircled by the enemy as they were, the task was well-nigh impossible. Only a few men fought their way back to the lines, which were finally held.

* In summing up the results of these great efforts, which involved something like five separate but co-ordinated battles on the British front, we must admit that

MAP OF REGION WHERE BATTLE OF LOOS WAS FOUGHT

little more resulted than the prevention of reinforcements being sent by the enemy from the northern positions to his hard-pressed lines in Champagne. There seems to have been a time when the prompt use of adequate reserves in the sector north of Lens might have rescued the whole region between Lille and Douai from the invader. Sir John French was in supreme command, and he had in reserve and immediately under his control the Eleventh Corps, consisting of the Guards Division and the new Twenty-first and Twenty-fourth Divisions. At the critical moment when the great Scotch charge reached Cité St. Auguste the Guards Division was about twenty

miles away from the Loos sector. General French gave Sir Douglas Haig the Twenty-first and Twenty-fourth Divisions before 10 A. M., but even these troops were eight miles away.

On Sunday, the 26th, the Germans made heavy counterattacks and severely defeated the inexperienced troops of the Twenty-fourth Division, so that a good deal of ground was lost. On Monday the Guards Division, consisting of three brigades of England's finest troops, was sent in to redeem the situation. The Guards fought well. The Third Brigade, consisting of the First Grenadiers, Fourth Grenadiers, Second Scots, and First Welsh, attacked the strongly fortified Hill 70, just north of Lens, and were deployed in columns of half platoons, with 100 yards intervals between the sections and 250 yards distance between the lines. They reached the crest of Hill 70, but could not hold it against the converging machine-gun fire, and, falling back, dug themselves in about a hundred yards to the west. On the 28th the First Coldstreams succeeded in reaching a fortified chalk pit north of Hill 70, but that place, too, was too hot to hold.

Through the remaining days of September and the early part of October, under heavy bombardment, the British consolidated the positions and straightened the lines. They had taken 3,000 German prisoners, with 26 field guns and 40 machine guns. Lord Kitchener in England and Field Marshal French at the front gave unstinted praise to the gallantry of the troops, but there was a distinct disappointment in England, where it was felt that the errors of Neuve Chapelle in the Spring had been repeated and that the possibility of a great victory had been lost because of imperfect plans. Probably the fairest of the many criticisms leveled at the British staff was that which admitted their lack of training in the handling of great armies. Had the splendid British armies possessed a thoroughly efficient and competent General Staff they would have won in the early Autumn of 1915 what they have fought for through two long and bloody years since.

The British losses at Loos and there-

about were 45,000, including 3 Major Generals and 28 battalion commanders.*

French Attack in Champagne

While the British were fighting the series of battles which culminated at Loos and d'Urbal's Tenth French Army was fighting for Vimy Ridge all France awaited breathlessly the great effort which it was hoped would smash a way through the German fortifications on the chalk ridges of Champagne. Here the really great effort was planned to deal such a blow as would cut through the invader's railway communications, which so perfectly assisted his Generals to shift men and guns quickly wherever required.

The sector selected for attack was that above Suippes, between Auberive and Ville-sur-Iourbe, and de Castelnau's army was chosen for the grand effort. All through September both French and British airmen flew straight at any German aircraft which attempted to reconnoitre back of their lines. They were most successful in masking the great concentrations of troops back of the sectors selected for attack. Early in the morning of Sept. 25 de Castelnau's men began to crowd forward through the communication trenches under a volcanic discharge of shells hurled over their heads against the German trenches of both first and second lines. Every platoon had been carefully taught just what its own objective was to be, and General Joffre's famous order read: "Soldiers of the Republic: After months of waiting the hour has come to attack and to conquer." Every soldier had an extra ration of wine on the night of the 24th, and trench knives were added to the regular equipment for the close fighting anticipated in trenches and dugouts.

At 9:15 on the morning of Sept. 25 the bugles sounded, the officers cried out "To Win or Die!" and on a front of fifteen miles a splendid French Army charged. Both field batteries ("seventy-

*It is interesting to compare the losses in the month of May, 1917, when the casualties amounted to 114,000 as the price of another offensive on nearly the same ground but in which positions won were held and 3,412 Germans were captured.

fives") and cavalry were used during the day, for on that long front the French lines had by night advanced an average of two and a half miles. Four great redoubts had been stormed and thousands of prisoners taken, together with hundreds of guns. On Sunday, the 26th, further progress was made, and on the 27th the French repulsed an attempted diversion by the Crown Prince at La Fille Morte, in the Argonne.

By Wednesday, Sept. 29, the French had sufficiently reorganized their forces to resume the attack, which was directed particularly along the west side of the Souain-Somme-Py road, where the Navarin Farm, on the east side of the highway, and Hill 185, on the west, marked a line about midway between the two towns. The German lines proved too strong to be forced, and, although there was a gap opened near the great Lubbeck trench, a concentrated German fire poured through the opening forbade any further advance. In fact, the scientific arrangement of the German fortifications was such that any position captured immediately was subjected to an enfilading lateral fire from neighboring positions, as well as a deluge of shellfire, both direct and indirect. Above the farm called Maisons de Champagne a defensive work called the "Ouvrage de la Defaite" was won and lost over and over again before the brave French soldiers would admit their inability to hold it. All that de Castelnau's men could do was to dig themselves in where they were and fight hard to hold what had cost them so much.

The French losses in Champagne, and including those in Artois at Vimy Ridge, amounted to 120,000 men. The Germans were pushed back nearly three miles on a front of about fifteen miles, but they remained secure in a stronger position than the first, and their railway communications were undisturbed.

Net Results Disappointing

The great allied offensive in the west in the Autumn of 1915 resulted in tremendous battles which won considerable local success, but nowhere succeeded in seriously disturbing the invaders' grip upon France. Nothing was achieved which could be reckoned an offset to

what the enemy had accomplished in Russia through the Summer, and only part of Joffre's optimistic prophecy was realized. The splendid élan of the French soldier did carry him at a bound up to the batteries of the adversary, but the hope that he would charge on past and beyond the fortified lines was doomed to disappointment. Despite superiority in numbers of troops, guns, and shells, the Allies were compelled to realize that the bravest of attempts could not hope to pierce those fortifications. The slow processes of siege operations must be resorted to, and years consumed in a task which it had been fondly hoped might be accomplished in a series of smashing attacks.

It was after the Marne that the Germans dug themselves in so thoroughly on the chalky hills of Champagne, and as the months have lengthened into years they have created a series of defensive works secure from flank attacks and capable of a deadly defense against frontal assaults. The French staff knew the difficulties of their task, and were provided with exact information as to every trench, alley of communication, and clump of trees. Letters or numbers were assigned to each of such objects on the detailed maps furnished to the troops in every sector of the attack. It was found that the wire entanglements between the German trenches attained a width of from 15 to 60 meters. The French official report on the battle in Champagne said that a line showing the different stages of the French advance would assume a curiously winding outline, revealing on the one hand the defensive power of an adversary resolved to stick to the ground at all costs, and on the other the victorious continuity of the efforts of the French soldiers in this hand-to-hand struggle. At the two extremities of the attacking front the offensive could make no progress because of the converging fire of the enemy and his powerful counterattacks.

In an order dated Oct. 5 General Joffre announced the results in Champagne, where 25,000 prisoners and 150 guns were captured and made visible evidence of the splendid success of the opening phase of the battle. That the outcome of the great effort was a bitter disap-

pointment to the French was never evident in the slightest weakening of their determination to fight on at all costs until somewhere and somehow the final defeat of the enemy shall be accomplished.

German Counteroffensive

The Germans had maintained in the east their favorite conception of war, that only the offensive can win. On the west front through all this long series of battles in 1915 they were compelled to assume the to them repugnant rôle of the defensive. But to the German military mind it was perfectly clear that the only successful defensive must be that of the active and aggressive kind known as the offensive-defense.

When the allied effort of late September died down the Germans began a campaign of counterstrokes serious enough to shake the Allies out of some of the vantage points recently gained, and all sufficiently threatening to compel both British and French to hold heavy mobile reserves distributed back of the battle lines ready for instant dispatch to any point where serious disaster might threaten. The German commanders knew that a fatal deterioration in the best troops in the world is certain to result if they are permitted entirely to lose the initiative. Their announced plan was to hold rather lightly the first-line positions to minimize the losses from bombardments, yet in sufficient strength to inflict severe losses upon the assaulting infantry; then, when an exhausted fraction of the original force had gained the second-line positions, to hurl upon them powerful fresh reserves competent to destroy survivors of the original attack and recover much, if not all, of the lost ground.

This plan was perfectly sound and failed of great results only because the Germans no longer possessed the superiority in numbers which it demanded. Nearly their whole force was required to resist the allied attacks, and when these stopped exhausted the Germans had nowhere immediately available fresh units strong enough to be hurled in for an instant counterstroke. The counterstrokes were made, but only after the

lapse of days or weeks in which the Allies had repaired their losses in men and improved the defensive arrangements in the new positions. Late in September several divisions arrived in France from Russia, and it is probable that this reinforcement numbered somewhere near 125,000 men.

On Oct. 3 the British front was attacked between La Bassée Canal and the town of Loos, which had been captured the week before. In the salient near Cité St. Elie the defense held well, but further north at the Hohenzollern redoubt the British were forced out of most of the works. On Oct. 8 the Germans after a five-hour bombardment with explosive shells launched strong infantry attacks in four waves, which were torn to pieces by the French and British guns. Only small and temporary advantages were gained, and nearly 9,000 dead were left in front of the British trenches, against which the finest German infantry had been marched shoulder to shoulder. Unquestionably the German commanders blundered badly here, for in result this battle amounted to no more than a demonstration, but the price paid was far too high for such a purpose. The artillery preparation had been entirely inadequate, notwithstanding that on all sides the war had taught the lesson that without most thorough artillery preparation no frontal attack on a prepared position can be expected to win.

The Germans seem to have learned this lesson more slowly than the Allies. Over and over again they have acted as though no economy were worth while in the use of their magnificently trained infantry. They appear often to overestimate the effect of a bombardment of a few hours which has really only begun to pave the way for a frontal attack.

Fierce Fighting Around Hulluch

On Oct. 13 the British sent a great cloud of poison gas (white on top, mottled red and green below) over the German front between the Hohenzollern redoubt and Hulluch. Then when the heavy guns had pounded the front the infantry attacked. Southwest of Hulluch German trenches on a front of 1,000 yards were taken, but as the German artiller-

ists had the range to a foot the positions could not be held. Between the redoubt and Cité St. Elie parts of a heavily fortified quarry were captured. At the great redoubt the main British attacks were directed, and in the face of a terrific cross-fire a division of Territorial troops fought their way into the two great communicating trenches known as the Big Willie and the Little Willie, where for three days close hand-to-hand fighting largely with bombs followed. Here Captain C. G. Vickers (of the Sherwood Foresters) won the Victoria Cross by most exceptional bravery. When only two of his men were left to hand him bombs he held a barrier for hours and ordered a new barrier completed behind him to insure the holding of the trench against attacks pressing in on three sides. Even such gallantry and enormous losses sufficed only to win part of the great redoubt, which was found to be a marvel of intricate defensive fortification in the hands of defenders of the greatest courage and resolution.

On Oct. 19 the Germans repeated their attacks between the Quarries and Hulloch as well as in the Hohenzollern redoubt. Only heavy losses resulted. The British losses on the western front from Sept. 25 to Oct. 18 were 59,666, of whom 11,000 were killed, including 773 officers.

In Champagne on Oct. 6 the French made a great attack upon one of the key positions, that at the Butte de Tahure, just north of the ruined village of the same name. It is noticeable that in this area the German engineers had most skillfully located the wire entanglements and other defenses just under the hill-crests on the reverse or northern sides, where the French gunners could get no direct observations. After a heavy bombardment by massed guns the Picardy Division captured the top of the Butte, and so gained the rear of the village, where the Germans still occupied strong positions among the rubbish heaps. This day's success marked the culmination of French progress in the campaign in Champagne in the Autumn of 1915.

On the same day the French Moroccan infantry made a little progress north of the Navarin Farm, but was checked by a storm of machine-gun fire. German

counterattacks on Oct. 8 at both Navarin Farm and Tahure failed, but on the 19th General von Heeringen made a very threatening attack further to the west in the Rheims sector. After shelling and gassing the French positions for many hours, four lines of German infantry advanced, with intervals of 300 yards. Only the fourth line survived to reach the French trenches, from which French reinforcements expelled them later in the day. On the 20th renewed attacks further west, near the village of Prunay, were all defeated. At one point in front of the wire entanglements 1,600 German dead were counted, all from one regiment.

On Oct. 24 the French captured La Courtine, a typical German field fort near Le Mesnil, and held it against numerous counterattacks. On Oct. 30, having been strongly reinforced from the Russian front, the Germans again counterattacked on a front of four miles. They failed to recapture La Courtine, but stormed the Butte de Tahure. In the north, in Artois, d'Urbal's Tenth Army fought daily on Vimy Ridge, but no great single actions occurred. The Médaille Militaire was won by a feat of extraordinary courage by two Breton soldiers, Privates Manduit and Cadoret, who were blown up in a sap by a countermine; after three days of molelike burrowing they got back to the French lines.

Bulgaria Joins the Germans

While German armies were winning Western Russia in the Summer of 1915, and while the allied attacks in France were going on in the early Autumn, German diplomats were secretly scoring a notable victory in the Balkans. Bulgaria, the most warlike of the three small kingdoms—Serbia, Bulgaria, and Rumania—which separated the Teutons from Turkey, was won to the side of the Central Powers, and about Sept. 20 a treaty was signed between Bulgaria and Turkey. About the same day Field Marshal von Mackensen, Germany's ablest soldier, appeared at the head of a new German army—which included at least one Austrian corps—opposite Belgrade, the Serbian capital, on the Danube. The Bulgarian, Serb, and Greek armies were

CHINA'S NEW PRESIDENT

VAJIRAVUDH, KING OF SIAM

The young monarch, who is 36 years of age, has brought his country into the war on the side of the Allies. About 19,000 tons of German and Austrian shipping in Siamese ports have been seized

(Photo-Underwood & Underwood)

all mobilized, and the Serbs were anxious to attack Bulgaria without waiting for a declaration of war. England persuaded them to wait, still believing that Bulgaria could be kept neutral, if not won to the allied side. This cost Serbia whatever advantage might have been gained by the initiative. On Oct. 4 diplomatic relations with Russia were severed in consequence of an ultimatum which demanded that Bulgaria should definitely break with the Central Powers. The next day every village in Bulgaria was circularized with a Government pamphlet stating the case against the Allies as follows: Russia was in the war to get Constantinople and the Dardanelles; France for Alsace-Lorraine; England to ruin Germany; Italy, Serbia,

and Montenegro for plunder. Also the Allies had offered too little for Bulgarian help on their side. Inferentially the German price was much higher.

Early in October, disregarding a Greek protest, French and British divisions were landed at Saloniki for the purpose of helping Serbia to resist the threatened invasion and to prevent any possible lapse of the Greeks toward the Teuton side. On Oct. 7 von Mackensen forced the river frontiers of Northern Serbia, and on the 9th captured Belgrade. Two Bulgarian armies were on the eastern frontier, and Turkish troops were moving up from the southeast. On Oct. 11 Bulgaria declared war on Serbia, and four days later England declared war on Bulgaria.

Barrage Fire in Modern Warfare

A barrage fire, such as that used by the British with wonderful precision and effectiveness in the recent offensive in Flanders, is one of the most remarkable developments of the great war. Dictionaries of a few years ago say a barrage is a dam or barrier, and that is just what it is in battle tactics. In general terms, barrage fire is the systematic advance, in front of charging infantry, of a curtain of exploding shells fired from guns to the rear of the line. Although modifications of the system were used even by Napoleon, it never has been possible to develop it to scientific exactness until the present conflict.

Barrage fire does not start until the so-called artillery preparation is complete. In the preparation guns of practically every size take part. For the barrage a certain uniformity of calibre is essential. A series of batteries, say of eight-inch howitzers, is arranged upon a more or less straight line, usually close behind the division or army corps that is to go forward. The gunners never see their targets, their fire being directed entirely by telephone, telegraph, or airplane.

At the time designated for the charge these guns are elevated. They must drop a steady line of shells just far enough ahead of the charging troops to prevent any effective counterthrust on the part of the enemy. Usually the shells fall only a few hundred feet ahead of the charging line. When this is the case the fire is known as "creeping barrage." Constant correction of the range is necessary, as shells too close may endanger their own men and too far away may allow play for the machine guns, which creep out of their dugouts at short notice, wreak havoc, and then crawl back underground before field artillery can be brought to play upon them. Only precision of observation, perfect ammunition supply, and absolute sympathy between the movements of the attacking line and the heavy guns can render the creeping barrage effective. But when these are attained it is the dominating and irresistible feature of a modern battle.

Berlin After Three Years of War

Observations of a University Professor

[This article was written in June, 1917, for The London Times by F. Sefton Delmer, for thirteen years English Lecturer at Berlin University. The introductory portion appeared in the August issue of CURRENT HISTORY MAGAZINE, Pages 324-327.]

THE traffic in the London streets, too, is a surprise to me. I find them pulsing with life compared with corresponding thoroughfares in Berlin. The Leipziger and Friedrich Strassen are still, it is true, fairly animated, but in the rest of the city a baby could wander about at no great risk to life and limb. Private carriages and motor cars have long since disappeared from the streets, and the riding tracks through the alleys of the Tiergarten are untrampled. Here there seems to be no lack either of taxicabs or chauffeurs.

In Berlin it is practically impossible to get such a vehicle. I have known men leave their comfortable flats in the Tiergarten quarter to live in hotels in the city in order to be close to their work, as an auto or droshky is never to be had. The fine military cars one occasionally sees in Berlin are said to have been part of the cargo of the captured Yarrowdale. Berlin is, too, almost without horses. All available horses were called in long ago for military and, where they can be spared, for agricultural purposes. The horses now seen in public vehicles, droshkies, omnibuses, &c., excite one's pity. They are mere bags of bone, and I have seen them greedily eat potato peelings from the hand of some kind-hearted child or woman in the streets. One hears, too, of special horse diseases brought about by lack of proper fodder.

This lack of horses leads to all sorts of difficulties of transport and makes itself felt in a thousand ways.

Landlords provide tenants each week with ration tickets.

The method of distribution of these tickets is very simple. The landlord or the caretaker (Portierfrau) of each house makes out on a printed form provided for the purpose a list of the families in the various flats, stating the number of persons in each. This list is handed in

to the Brotkommission—District Bread Ticket Distribution Committee—which has its office in a classroom of one of the big municipal schools. There are many such officers spread over Greater Berlin, so that no one has to go far to reach one. This committee then gives the exact number of tickets required to the Portierfrau, who distributes them to the various families in the house and gets a printed receipt for them. One gets quite a sheaf of such tickets, of all colors and sizes, handed in at the door once a month.

For each of the following commodities there is a separate card: Bread, ($3\frac{1}{2}$ pounds a week;) meat, (1 pound a week;) butter, ($1\frac{1}{4}$ ounces,) and margarine, (1 ounce a week;) eggs, (during the Winter one a fortnight, now three a fortnight;) potatoes, (5 pounds a week;) sugar, ($\frac{1}{2}$ pound a fortnight;) milk, varies according to age, but is only allowed to children up to the age of six years and to invalids in cases where a committee of doctors decides that it is absolutely necessary.

There is an extra ticket called the Lebensmittelkarte, which enables the holder to buy certain quantities of oatmeal, barley, semolina, jam, canned vegetables, herrings, soup tablets, &c. Readers must not suppose, however, that all these good things on the grocery ticket are handed out at once. Each week a proclamation is posted up on the advertisement pillars at the street corners making known that, say, $3\frac{1}{2}$ ounces or sometimes even 7 ounces of barley, or 7 ounces of oatmeal, or $3\frac{1}{2}$ ounces of semolina, or, perhaps, if it is a good week, 7 ounces of barley and $3\frac{1}{2}$ ounces of semolina will be distributed as his weekly portion to each person applying in time. Every week brings one at least of these extras with it, and on rare occasions—three times during the

whole Winter—there was 1 pound of so-called jam allotted to each person.

The chief ingredients of this jam were mangolds and beetroot, sweetened with saccharin. It was not altogether a tasty concoction, and the German soldiers at the front, who get practically nothing but this eternal "marmelade," as the Germans call jam, to put on their bread, are said to make it the butt of the doggerel in which they are so fond of indulging. Of canned vegetables there was only one distribution during the past Winter—it was in March, and they gave us 2 pounds each. The number of herrings distributed during the last six months was one to each person on three separate occasions, and they cost about 6 pence each. Fresh vegetables—when they are to be had—can be bought without cards. Brussels sprouts and spinach were obtainable during part of the Winter, but cost as much as 3 shillings a pound.

We could sometimes get a head of coarse white cabbage from some hiding place under the counter in the green-grocer's shop; such a cabbage cost 2 shillings. Horse carrots were greatly in demand at 8 pence a pound. Mangold-wurzels, obtainable on the potato card, cost only $\frac{3}{4}$ penny a pound. For my part, I never want to see another mangold-wurzel as long as I live, much less to have to make my dinner off one, as my family and I not seldom had to do. In spite of the unappetizing quality of this "vegetable," I have seen long queues of people standing for an hour at a time at the Wittenburg Platz market when a lorry happened to draw up laden with these roots, often in a half-frozen state. No one knew beforehand when or at what shops wares were expected to arrive, so it was a matter of luck if you happened to get to the right shop at the right time, and it was amusing to notice the interest with which people peered into one another's baskets in the streets in order to get hints as to where there was something to be had.

In the days when potatoes were so rare, about Christmas time, trailing groups of people armed with potato nets could be seen running as fast as their legs would

carry them from one shop to another. After they had been standing, perhaps, for an hour at one place, the ominous placard with "Kartoffeln ausverkauft" ("Potatoes sold out") would appear in the shop window. The door would be locked, and off the whole band would scour to the next shop that rumor credited with potatoes. At the present time, however, these queues have in most cases been rendered superfluous by the introduction of customers' lists. One can, for instance, only obtain meat at that particular butcher's shop where one has had one's ticket stamped and one's ticket number registered. The meat tickets are, of course, good for the same amount of meat at a restaurant, too. There is in Berlin no such possibility as there is in London, where a greedy and unpatriotic individual, having consumed his one-and-threepence worth of luncheon at one restaurant, may go next door and have another one-and-threepence worth.

The prices of the rationed articles have been fixed fairly low. The loaf of rye bread for the week costs, for instance, 7½ pence; the wheaten loaf, 8 pence; butter is a little over 3 shillings a pound; margarine, 2 shillings a pound; sugar costs 4½ pence a pound; eggs are now 4 pence each. The price of meat—and such meat!—varies according to the cut from 2 shillings to 2 shillings 9 pence a pound. Ham, bacon, and sausage of the better kinds are no longer to be seen in any of the shops, but occasionally an enterprising tradesman will manage to get a small quantity of bacon or butter through from Holland or Poland, and he sells it secretly, independently of the ration tickets. He gets as much as 12 shillings a pound for the bacon and 8 shillings a pound for butter. Swiss cheese is the only cheese that has been seen in the Berlin shops since September last.

The Public Kitchens

Several of the big market halls that had been put out of action by the war have been refitted by the municipalities to serve as soup kitchens; it has involved an expenditure of something like 2,000,000 marks, (£100,000 at pre-war rates,) if I can trust my memory. In these immense central kitchens the food is cooked

in huge boilers, made for the purpose, the vegetables being washed and peeled by machinery. From here lorries bring the thousands of gallons of suppe (hot-pot) in airtight caldrons to the distributing centres. These centres are generally located in the gymnastic halls (turnhallen) of the big Government schools.

The heavy work of transport is done for the most part by convicts serving sentences of hard labor, the driver alone being a Government official. The soup is then dealt out by women who volunteer for the work. A characteristic labor-saving detail is that the ladles these women use are especially made to contain one litre, (almost a quart,) this being the maximum portion allowed to each person.

The public kitchens are run by the various Town Councils of Greater Berlin, which have the best opportunities of obtaining the necessary raw materials from the supplies already requisitioned by the State with the minimum of intervention by the profiteering middleman.

During the Winter there were times when my family and I found it practically impossible to get along without having recourse to the public kitchens—I mean at periods when there were absolutely no fish, no eggs, no potatoes, and no vegetables to be had, and only half a pound of meat per person per week. The middle and professional classes rather hung back at first, and it was amusing to see how people we knew followed suit once they found us “proud English” unblushingly lining up with our enamel pot in a tea basket.

Mangold-Wurzel Mixture

The one-course bill of fare of the mid-day meal is chalked up in its daily variations on a blackboard in a prominent place at the entrance to the kitchen. The meal provided consists of a kind of thick soup that we should call hot-pot. This hot-pot would one day contain nudeln, a German variation of macaroni. It would have been very good if it had not generally been musty; it was always welcomed with delight on account of its filling properties. Next day there would be mangold-wurzels, cut into small cubes

and boiled in water thickened with barley or oatmeal. This dish was generally greeted with satirical remarks.

Another day there would be stockfish, the most unappetizing dried salt fish imaginable, boiled to shreds and thickened with potatoes. I have often seen this fish in the back streets of Genoa, but never thought that I should eat it. It excited no enthusiasm among the hungry Berliners. But when on another day sauerkraut (shredded cabbage that has been allowed to ferment in brine) appeared on the notice board their faces were wreathed in smiles. On Sundays there is generally two inches of sausage in addition to the quart of hot-pot allowed to each person. On New Year's Day, 1917, we were even treated to rice and prunes.

During the time of strike unrest the menu grew perceptibly better, and pea soup once more appeared, but soon afterward mangold-wurzels (woe to me!) came into their own again. We paid fivepence a quart, which was a fair average price. This hot-pot was sometimes fairly good, and it was always infinitely better than the food provided at Ruhleben while I was there; but, as a rule, had we not been really hungry, we could not have eaten it at all.

No food can be got from such kitchens unless a person has registered as a customer at latest by the Thursday for the coming week, and he must register for a whole week at a time. This involves the sacrifice of three pounds out of the five pounds of his potato ticket for the week and seven-tenths of his meat ticket, (the whole ticket throughout the Winter being only for one-half pound.) Through this method of registration the purveyors are enabled to estimate almost to a ladleful the amount of food required at each centre.

Middle-class families always sent a servant girl to fetch the food and consumed it at home, as did the poorer people also for the most part, but young people in situations who preferred to eat their dinners at the public kitchen could do so at tables provided for that purpose. The table appointments were of the plainest, but clean.

Were the people satisfied with this arrangement? There is no doubt that it would have been a great deal more popular had the people not been obliged to give up such a large proportion of their meat and potato tickets. They were, on the whole, very chary of criticism, being apparently afraid to find fault too openly with food provided by such an official body as the Berliner Magistrat, which corresponds to the London County Council.

To keep these public kitchens up to even a moderate standard of efficiency the municipalities have had to encroach upon the food supplies reserved for the army. The military commissariat has even been forced by the stern protests of the municipalities—who feared that the patience of the people at home was being tried to the breaking point—to give up quantities, not large it is true, of rice, peas, and beans that had been long since requisitioned for the officers and soldiers. The officers are said to have particularly good fare, and they certainly always look well fed. If any one is starving the women and children of Germany it is the German Army.

Oils of all sorts are practically unobtainable. I heard of a Berlin lady only a few weeks ago who gave 200 marks (£10) for ten pounds of ordinary salad oil, and thought herself lucky to get it. Paraffin may not be sold in the shops between April 1 and Sept. 30. Methylated spirits can be obtained only by people in special trades who have a permit. Ammonia, boracic acid, vaseline, and glycerine have disappeared from the shops, and one has almost forgotten that such a thing as benzine ever existed. Turpentine came to an end long ago. How the painters still contrive to paint the houses is beyond me, but somehow they manage it.

Misleading Tone of Reports

Every afternoon, day after day, I went across the street to the police station, where on a notice board was hung out the day's military report from headquarters. It was posted up punctually at 3:30 every day. Month after month I watched the reports to see the progress our men were making, and I had to learn to read between the lines and to force myself to disbelieve, not the details of the report, but its misleading tone. Little groups of passersby would gather around the notice board and after a while again dissolve. The impression, I could tell, left on their minds was a negative but hopeful one—Germany at bay and her foes uselessly battering themselves to pieces in hopeless onslaughts.

All their hopes of going forward into France have long since vanished. "This time we intend to destruct France," a German officer said to his English wife in my hearing at the beginning of the war. The word still rings in my ears. "We intend to destruct France!" And now! So modest have these Germans grown that merely to hold out against attacks is greeted as victory. In silence they read the report and in silence they turn and walk away.

Now and again an individual will point to some telling sentence tucked away in the middle of the report—a village, a trench left to the enemy because it was no longer of any value—and his face will betray an almost imperceptible note of distrust, but he will say nothing. The womenfolk in the queues are more outspoken, and one used often to hear them say, "Wir siegen fortwährend, doch kommen wir immer weiter zurück"—"We have nothing but victories, and yet we always get further back."

Life in Denmark's Lost Province

By Gudrun Randrup Toksvig

[Translated from the Danish for CURRENT HISTORY MAGAZINE by the author]

SCHLESWIG-HOLSTEIN, the Danish province captured by Germany and Austria in the war with Denmark in 1870, is the Alsace-Lorraine of Denmark. Sønderjylland or South Jutland is the Danish name for this province. Officially, there is no South Jutland, of course. A story is told of a Danish girl who, from habit, addressed a letter going to the province of Schleswig-Holstein as going to South Jutland. Her letter was returned to her with the following inscription: "Sønderjylland unbekannt in Deutschland." (South Jutland unknown in Germany.)

The people are still pathetically loyal to Denmark in spite of Germany's efforts to Germanize the province by forbidding the teaching of the Danish language in the schools, and frowning upon the official use of that tongue in general. Nevertheless, Danish is secretly taught to the children in the homes. There is hardly a South Jutland youth who cannot speak his old mother tongue. South Jutland Danes may be said to be more Danish than the Danes themselves. It must be said that this only holds true in North Schleswig-Holstein, since the southern part of the province is completely Germanized, and, in fact, this section has never been Danish in custom or language.

The lost province is so dear to the Danish people that news from there is published as an inseparable part of the newspapers in Denmark. The death and casualty lists of South Jutlanders pressed into German military service are faithfully published even in Danish-American papers. Den Danske Pioneer is one of the leading Danish newspapers published in the United States. The Pioneer has a special department entitled, "Fra hinsides Graensen," (across the border there,) which is devoted to news from the former Danish province of Schleswig-Holstein. It is from

this department that the following items and stories have been selected and translated:

An Officer's Daring Escape

A Russian officer recently fled across the border into Denmark at a point south of Vamdrup, (a small Danish town very near the German frontier.) His escape from a German military prison camp sounds very Baron Munchausenian. He had been taken prisoner by the Germans in one of the big battles on the eastern front. After some time he was put to work as a sort of postmaster in a camp of Russian war prisoners in East Prussia. His excellent knowledge of German and Russian made him valuable in this capacity. One fine day the Lieutenant got hold of a German passport. Luck was with the stout-hearted, for the "postmaster" saw his chance to steal a German uniform. Thus equipped, he went by train through East Prussia and clear through Germany until he reached one of the nearest border stations, where he got out of the train. Under cover of the friendly night he crossed the border safely. The next morning he reached the Danish city of Kolding, (a city of 14,000 inhabitants about nine miles from the frontier.) He went up to the City Hall and reported the details of his escape with the request to be sent back to Russia.

New German Delicacies

A South Jutland newspaper mentions two new German war dishes said to be rare delicacies: boiled nettle leaves and tea brewed from cowslip blossoms.

Burial Shrouds of Paper

The Kieler Zeitung says: "The custom of burying the dead in their valuable clothes is the means of great loss of much good cloth. The loss of such cloth is now irreparable because of the war. For the public good, before which the individual must bow, it is necessary

"to break this old custom. It should be taken under consideration that the dead should be clothed in burial shrouds made of paper, and should be covered with a sheet of similar material. Pillowslips could likewise be made of paper. In view of existing conditions, it seems unsuitable to clothe the dead with shoes and stockings."

Fines for Thistles

The population in the district of Hadersleben (about ten miles from the border) have been ordered to destroy thistles in the pastures, by the roadsides, in the garden, in the woods, and in the cultivated fields, either by cutting them or knocking them down. Neglect of this order will bring on a maximum fine of 150 marks, or about \$35.

Fate of Historic Bells

The German military authorities in South Jutland have seized a goodly number of the country's old church bells. The metal is to be used for military purposes. These church bells often have peculiar old inscriptions. For this reason Nis Nissen, a member of the Landsting or Danish Upper House, appeals to the readers of a South Jutland newspaper to copy accurately the words and numerals engraved on the venerable bells, so that at least something may be preserved of these historic relics.

Nis Nissen mentions among others the oldest bell in Norburg, a city on the island of Alsen, thirty-five miles north of Kiel. It hangs in Tundtoft Church and bears the following Latin inscription, translated into Danish: "When Christian the Fourth was King, Statholder, (Imperial Chancellor,) Jacob Ulfeld church director, Johannes Mikkelsen church patron, Pastor Johannes Monrad dean, and M. Johannes Monrad rector in Tundtoft, in the year of our Lord 1620, Melchior Lucas made (cast) me."

The youngest and also the largest bell in Norburg, now become a sacrifice to the war, has the following Danish inscription

at the top: "Johan David Kriesche cast this bell." On one side: "Cast at Eckernforde (about fifteen miles north of Kiel) Anno Domini 1777, when Counselor of Justice Johan Christian Anders was church inspector and Holger Fangel rector." On the opposite side: "Psalms, 95, 6: 'O, come, let us worship and bow down: Let us kneel before the Lord, our Maker.'"

A foreign firm has made an offer to the board of church directors to take the big bell down intact for the sum of 100 marks, or about \$23. This offer has not been accepted by the German authorities. The bell will be broken to pieces in the tower and brought down in small sections.

It is with a sorrowful heart that every Dane must see this sacrifice laid on the altar of war. The venerable bells of South Jutland that have rung in so many centuries are not only historical antiquities, they are witnesses also—stones that speak.

Prayers for German Harvest

The official organ of the Kiel Consistory says:

"Since harvest prayer services have been held in all churches throughout the land for the past two years of the war at the instigation of Die Deutsche Evangelische Kirche Ausschuss, (the German Evangelical Church Committee,) this year we also appeal to the honored clergy to call upon God's blessing for a bountiful harvest in these hard times of war. The experiences of the last years of the war have constantly brought home to us what significance a good harvest has for a successful and victorious termination of the war. We therefore ordain that our national church shall touch upon the great national importance which this year's harvest will have for our people. At the same time, we request the ministers to pray for a rich harvest in the church prayer every Sunday until harvest time."

\$640,000,000 for American Aviation Corps

PRESIDENT WILSON on July 24 signed the war aircraft bill appropriating \$640,000,000, a sum greatly in excess of the combined army and naval expenditures of previous years and larger than any sum for a single project ever voted by any Congress. With these funds it is hoped that the United States will be able to fill the air along the western front in Europe with thousands of aviators and military airplanes. The aviation corps is ultimately to consist of about 100,000 men with about 22,000 airplanes.

As soon as the bill was signed Howard Coffin, Chairman of the Aircraft Production Board, stated that the board was prepared to go ahead at once, but results should not be expected too soon. He added:

Under ordinary conditions at least a year would be required for the industrial preparation which this program demands. Yet we have no such length of time in which to perform the task now.

In every other country there is a shortage of materials for aircraft construction. In every other country there is a shortage of the type of men required for the air service. In spite of our previous inexperience in quantity production of fighting planes, we must have thousands of them for next year's use to make the contribution which the Allies expect of us.

The design and construction of jigs, tools, and gauges will require weeks, and even months, no matter how rapidly we work. It must be remembered, therefore, that a few months will necessarily elapse before the outward results of our industrial effort will show in the shape of quantities of finished fighting machines.

Most gratifying progress on the preliminary organization has been made during the last few weeks. If it progresses in the future at the stride that has been developed there need be no fear as to America's position in the aircraft field by next Summer.

The difficulties which apply to the production of high-powered machines for fighting and bombing purposes fortunately do not apply with equal force to the training program. Within a comparatively short time we shall have enough of the type required for training the thousands of men who will con-

stitute a contribution to the winning of the war equal in importance to the production of machines.

America is the last great reservoir of material for war pilots as well as for airplanes. Already three of the twenty-four big new training fields are completed and instruction on them has begun. Others are being rushed to completion. Orders for training machines were placed weeks ago, and shipments of the first output already have been made. The output of this most necessary type will continue to increase rapidly, as we already have plants experienced in their manufacture.

In considering the size of the appropriation it must be borne in mind that less than half this amount is to be expended in the purchase of airplanes alone. Personnel, training, equipment, overseas maintenance, spare parts, flying stations, armament, and scientific apparatus, all are to be provided for, and are equally as important as the manufacture of the machines. One hundred and ten thousand officers and enlisted men—an army of the air greater than our standing army of a few months ago—will be needed.

Some idea of the magnitude of the task before the Aircraft Production Board may be gathered from the statement on British progress in manufacturing warplanes made on July 12 by Dr. Christopher Addison, who was then Minister of Munitions and who has since been appointed Minister in charge of reconstruction. Since January, 1917, when the Munitions Ministry became responsible to the British Flying Services for supply, the program had been steadily and largely increased; and it was still expanding. Dr. Addison added:

No fewer than 1,000 factories are engaged on some process or other connected with the construction and equipment of the flying machine. If for the purposes of comparison you put the number of airplanes produced in May, 1916, at 100, then in May of this year the number rose to rather more than 300. Even this rate of increase is being accelerated. The output in December will be twice what it was in April, and the December total will be far surpassed in succeeding months. The number of airplane engines turned out monthly has been more than doubled this year already and this total will be doubled again before the close of the year.

What these figures involve in organization will perhaps be appreciated when it is stated that a single cylinder of the rotary engine involves forty-eight different operations in its manufacture. As for spare parts, an enormous number has to be manufactured, as, owing to the fragility of the machine, its parts require frequent renewal and "spares" must be ready to hand whenever and wherever wanted.

A growing number of workers is employed in the airplane factories, the increase in the last five months being 25 per cent. on the previous total. Along with this the replacement of skilled workers by women has gone on, the dilution having risen from 19 per cent. to 37 per cent. To meet the demand for labor special schools have been started all over the country, where a training of about two months qualifies a pupil to carry out some simple process in airplane manufacture. About 100 qualified workers are supplied each week under this system.

Yet the demand is not satisfied. More and more women are wanted, both in London and in the provinces; and women of good education and good physique can render the nation no better service at the present time than by undergoing the training which is offered in these schools.

The Ministry of Munitions has had special difficulties to overcome to reach the present degree of output and efficiency. The technical development of the airplane has presented peculiar problems. New types are continually being evolved. Those responsible for the manufacture of our flying machines have always had to allow for a new invention coming along and revolutionizing all their projects. Speed, climbing power, armament, have continually increased and improved since the outbreak of the war. An engine that can develop up to 350 horse power, for example, and a single-seater scout able to travel at

150 miles per hour are built on very different lines from their prototypes of August, 1914. Where there is no finality there is a limit to standardization, except in small details, and the problem of supervising the manufacture of our airplanes is correspondingly complicated.

The variety of materials used in airplane construction, again, has been a great source of anxiety to the Ministry. Linen, timber, chemicals for tightening the fabric of wings, alloy steel, light alloys, thin tubes are among the essential requirements of the industry. Even if these were wanted in normal quantities, there would be difficulty in getting enough in view of other necessities. But the needs of the airplane program are enormous, almost passing belief.

For our present program of construction more spruce is wanted than the present annual output of the United States, more mahogany than Honduras can supply—and Honduras is accustomed to supply the requirements of the world. Besides this, all the linen of the type required made in Ireland, the home of the linen industry, and the whole of the alloyed steel that England can produce can be used. As for flax, to meet the needs of the air service the Government has actually to provide the seed from which to grow the plant essential for its purposes. Still, despite the magnitude of the demands, all the needs of airplane manufacture will be met. The program before the Ministry of Munitions is that of a maximum production.

In Germany the Zeppelin has been practically discarded and all energies are being directed to an enormously increased production of airplanes, with the object of taking up the Allies' challenge for the supremacy of the air.

Some Historic Airplane Raids

Recent Attacks on London and Paris, and the Advent of Giant Machines in Aerial Warfare

AIR raids on a large scale were made in July and August by German, British, French, and Italian aviators. Harwich, a seaport town on the east coast of England, was visited on July 4, 1917, by twelve or more German air raiders who dropped bombs, killing eleven persons and injuring thirty-six others. It was a misty morning, and the machines could be distinguished only at intervals when they appeared from behind cloud banks. Bombs were dropped in rapid succession. British airmen intercepted the Germans and broke up their formation, causing them to return toward the sea. Their retreat was marked by a series of duels with British aviators. Two of the enemy machines were brought down ablaze and a third was damaged.

Greatest Raid on London

The greatest air raid on London up to the present writing was made by twenty-two German airplanes on the morning of July 7, 1917. The total number of persons killed in the metropolitan area and the Isle of Thanet was 43; injured, 197. The raiding machines were of the new Gotha type, which is about three times the size of the single-seated machine. Three of the airplanes which took part in the attack were brought down at sea on the return trip. British airmen at Dunkirk prepared to intercept them, but they took a more northerly route. The Dunkirk fliers, in the course of their patrol, brought down seven machines of another German squadron.

The battle in the air was an engrossing spectacle. Despite official appeals to the population to take cover in case of another raid, millions saw some part of it and hundreds of thousands watched it in all its phases. The raiders were plainly visible during most of the time. Their arrival was favored by a thick Summer haze, which assisted them in

their manoeuvres over the metropolis. Their plan of action had evidently been worked out to the smallest details and their formation was maintained throughout. They crossed London from northwest to southeast. Shrapnel was bursting all around them, but they flew, as one spectator put it, like a school of crows following a leader. The simile was inaccurate in respect to color, for the raiders were shimmering white in the sun. A little later their course might have been compared to the flight of swallows, for anti-aircraft guns seemed to get their range as the northern districts of the capital were reached. The machines dived and swerved just as swallows do. At times one or another machine would drop, and many spectators, unversed in the tricks of flying, jumped to the conclusion that one or more planes had been brought down. Experienced airmen understood these "falls" to be what has now, with the advance in flying, become a common device to change the altitude when one position becomes too hot.

London again showed a spirit of phlegmatic endurance. Curiosity to see what was going on was much less general than it had been on the occasion of the June 13 raid. While the earlier phases of the raid attracted crowds to roofs and windows, and even into the streets, a marked disposition to take to cover made itself evident as the firing continued. When the raid reached its height certain usually crowded streets were left empty. The fact that a larger proportion of people took cover than was the case in June was held to explain the smaller casualty list.

Details of Damage Done

Subsequent uncensored reports stated that bombs were dropped in Whitechapel and killed a number of persons. A bomb was dropped in Aldgate near where hay wagons were standing, but it did not explode. From Aldgate the raiders flew

over Fenchurch Street and Mincing Lane, where the tea, coffee, indigo, and spice merchants have their offices. Several persons were injured by bombs there. By this time British aircraft were coming from all directions to repel the invaders, and the anti-aircraft guns on the tall buildings near the Bank of England were also in action. Apparently the raiders were trying to hit the bank, as they had attempted on previous raids, but did not succeed. One of the bombs struck the Swiss Bank, which was full of men and boys, and several were injured.

Five or six of the bombs that fell in Cheapside as the German machines continued their flight toward St. Paul's did not explode. One struck the General Post Office and set part of the building on fire. Another bomb fell into St. Paul's churchyard and destroyed the iron railings on the north side and broke several of the stone monuments. One was dropped on the west side of the cathedral in front of the main entrance, but did not explode. From there the air raiders flew down Ludgate Hill and over Fleet Street, and then made a swing to the northwest as far as Oxford Circus, where more bombs were dropped, without doing much harm. Then they changed their course and turned back to the southeast over St. Giles-in-the-Fields, down to Marconi House, in the Strand, and over Somerset House and the River Thames toward the Kentish coast, flying at great speed and followed by squadrons of British aircraft.

A Defender's Heroic Charge

One of the heroic episodes of the raid was the charge by Second Lieutenant I. E. R. Young, an officer of the Royal Flying Corps. His feat is described in a letter from his Major to his father:

Your son, as you know, had only been in my squadron for a short time, but quite long enough for me to realize what a very efficient and gallant officer he was. He had absolutely the heart of a lion and was a very good pilot. Your son had been up on every raid of late, and had always managed to get in contact with the enemy machines. The last raid, which unfortunately resulted in his death, shows what a very gallant officer we have lost.

Almost single-handed he flew straight

into the middle of the twenty-two machines, and both himself and his observer at once opened fire. All the enemy machines opened fire also, so he was horribly outnumbered. The volume of fire to which he was subjected was too awful for words. To give you a rough idea: There were twenty-two machines, each machine had four guns, and each gun was firing about 400 rounds per minute. Your son never hesitated in the slightest. He flew straight on until, as I should imagine, he must have been riddled with bullets. The machine then put its nose right up in the air and fell over, and went spinning down into the sea from 14,000 feet.

I, unfortunately, had to witness the whole ghastly affair. The machine sank so quickly that it was, I regret, impossible to save your son's body, he was so badly entangled in the wires, &c. H. M. S. — rushed to the spot as soon as possible, but only arrived in time to pick up your son's observer, who, I regret to state, is also dead. He was wounded six times, and had a double fracture in the skull.

The same afternoon Premier Lloyd George called a special meeting of military and aerial defense experts at Downing Street in connection with the raid. A group of Members of Parliament interested in air questions also held a meeting and decided to press the Government for a definite statement of policy in the matter of reprisals on German towns. Lord Derby, Minister of War, had on June 26, in the House of Lords, stated that the Government had no intention of imitating German brutality, but would confine aerial operations to exclusively military purposes. But the new raid immediately evoked a fresh demand for reprisals on German towns.

Another daylight raid over England was made on the morning of July 22. This time the east coast was visited by about twenty German airplanes, which dropped bombs on Felixstowe and Harwich, killing eleven persons and injuring twenty-six. The property loss was insignificant. An alarm was sounded in London, but before the Germans could reach any point near the city they were attacked heavily by defending squadrons of aircraft, which caused them to retreat. "A patrol of the Royal Flying Corps," said an official statement, "encountered some hostile machines return-

ing to Belgium and brought down one at sea near the coast."

Since the outbreak of the war 366 persons had been killed and 1,092 injured by air raids in the London metropolitan area, according to a statement made by Sir George Cave, the Home Secretary, in the House of Commons on July 30. In the same period, he added, 2,412 persons had been killed and 7,863 injured in ordinary street accidents in the same area.

Two Raids on Paris

Paris was attacked by German airmen on the two successive evenings of July 27 and 28. These were the first raids on the French capital since January, 1916. A few minutes before 11 P. M. watchers of the French Aviation Service in Paris heard the noise of a motor and then an explosion, followed after a brief interval by another. The Prefecture of Police was accordingly instructed to give the alarm throughout the city. Soon after the warning the sky over the city was alive with defense airplanes, twinkling like stars, from which they hardly could be distinguished. Firemen dashed through the streets sounding alarms on powerful sirens, and one by one the street lamps flickered out. Bombs were dropped on three different suburban sections. In the first the bombardment caused no damage; in the other two localities five or six bombs were dropped, causing the slight injury of two women. One of the women was struck while in bed and was removed to a hospital; the other was injured by flying glass. At 1:10 A. M. the firemen gave the signal that all danger was over.

The second attack proved wholly futile, the German airmen being dispersed by French sky fighters before they even reached the outskirts of the capital. Somewhere on the front, however, one German flier dropped four bombs on a Red Cross hospital, killing two doctors, a chemist, and a male nurse and injuring several others, including patients. The raider was flying low and the distinguishing marks of the hospital were plainly apparent.

French Raid in Reprisal

In retaliation for German attacks on

open French towns eighty-four French airplanes made a series of raids far into Germany on the evening of July 6. The text of the official statement read:

On the night of July 6 eighty-four machines took to the air in reprisal for bombardments against our open towns. Several of these raids had as their objectives towns situated very far in the interior of the enemy territory.

Eleven of our airplanes flew over Trèves, on which they showered 2,650 kilos of shells. Seven fires broke out, one of great violence in the central station. Six other machines bombarded Ludwigs-hafen doing considerable damage. Among other buildings, the important Badische aniline factory was devoured by flames.

Another of our airplanes, piloted by Sergeant Gallois, pushed as far as Essen and dropped projectiles on the buildings of the Krupp factory.

Military installations in the environs of Coblenz, the Hirson station, the railroad west of Pfalzburg, and the Thionville station were likewise bombarded.

Another series of operations over the enemy lines gave excellent results. A fire broke out in the station at Dun-sur-Meuse, a munitions depot exploded at Bantheville, the railroad station at Machault, and establishments at Cauroy were burned.

In all 30,455 kilos (about 67,000 pounds) of projectiles were used. Two of our airplanes have not returned.

Bombing the Krupp Works

The exploit of Sergeant Maxime Gallois, who flew 446 miles to bomb the Krupp Works, was told by himself in these words:

Four of us—Lieutenant Ardisson de Perdiguier, Sergeant Durand, another comrade, and myself—left our base at nightfall Friday, (July 6,) with the intention of reaching Essen. Soon afterward we ran into foggy weather and lost sight of each other. I flew at an altitude of 1,200 meters, and passed over Metz and Thionville, following the course of the River Moselle, which, however, rapidly disappeared in the mist.

The batteries fired at me crossing the Rhine, and as I passed over Metz searchlights played about the sky. At Thionville I heard another airplane near by, but made it out to be Ardisson's. Afterward I was compelled to travel by the aid of the compass, the stars, and the moon.

At Trèves I saw a heavy bombardment, which I calculated was directed at my comrade. Therefore I knew I was traveling in the right direction. I did not see Coblenz. I saw the reflection of the moon

on the Rhine and found Bonn. From there to Düsseldorf there was a regular sea of electricity, which increased as I got further north.

Cologne was a blaze of luminosity, and at Düsseldorf there were all kinds of lights—blue, red, and white. All the time the anti-aircraft guns fired as I passed, and around Cologne the gunners were very accurate in the range.

Leaving there, I saw, like cliffs on the horizon, a brilliant illumination which seemed kilometers in length stretching to the left of Essen, while southward was another long line of lights coming from the factories. Arriving over Essen, I rose to about 2,000 meters. I circled around, searching for a place where the lights from the workshops appeared densest. Then I threw the first bomb. After counting ten I dropped the second, and then the remainder of the ten I carried at similar intervals. I could not tell whether the bombs exploded, but they probably did. It was impossible to distinguish their effect, owing to the flaming furnace chimneys.

My duty done, I turned homeward, not having seen my comrades again. The motor worked with wonderful regularity all the time. I came back exactly the same as I went, and was fired at many times.

I was thoroughly exhausted and was suffering from my eyes, which were affected by the strain and wind, as I had lost both pairs of goggles at the start, and was often obliged to put my head outside in order to see the director. When nearing the base, owing to the darkness I could not tell exactly where I was. I thought possibly I was still over the German lines and decided to continue westward as long as the petrol lasted. I had a few litres left and was driving onward, when suddenly I recognized a prearranged signal and managed to land just at dawn at the same place from which I had departed. The distance covered was 750 kilometers, (about 466½ miles.)

The whole flight lasted seven hours. When Gallois landed on his return he was unable to get out of his machine owing to fatigue and semi-blindness, but after a day's rest he was fully recovered and ready to undertake further expeditions. Thirty-eight years of age, he was serving in the dragoons when the war broke out. He passed a short time in the squadron and was then sent to the hospital where sick horses were cared for. He tried to exchange to the auto-cannon battery, but was told he was too old. He applied four times for the Avia-

tion Corps unsuccessfully, but was accepted on the fifth application.

The German official report stated that only two bomb holes were found at the Krupp Works, and that six other bombs smashed windows in a village twenty-five miles from Essen. Bombs also were dropped in the villages of Speecher, Ehrang, and Oberemmel, where a child was killed, and on Neunkirchen, where a man was killed; on a suburb of Diedenhofen, where a family of three were killed, and on Trèves, where the Franciscan Monastery was set on fire. One airman who attacked Trèves was brought down near the Saar, it was announced, while another airplane was destroyed and its pilot made prisoner. The report concluded: "For what reason the open and militarily unimportant town of Trèves was bombed is incomprehensible."

British naval airplanes carried out a raid on the night of July 7 on the Ghisteltes aerodrome in Belgium. Although heavily attacked by an enemy formation, bombs were successfully dropped on objectives, and all the British machines returned safely.

List of Air Raids

The more important of the organized raids carried out by the Allies and the Germans since May 1 are set out in the following list:

	Allies.	German.
May 1.	Sissonnes Aviation Camp
May 2.	Sissonnes Aviation Camp
May 2.	Béthenville
May 7.	London
May 12.	Zeebrugge
May 23.	Réthel
May 24.	*East Anglia
May 25.	Folkestone
June 1.	Zeebrugge, Ostend, Bruges
June 2.	Dunkirk
June 3.	Zeebrugge, Bruges, and St. Denis Westrem Aerodrome
June 3.	Trèves
June 4.	Bruges
June 4.	Colmar Aerodrome
June 5.	Thames Estuary
June 6.	Nieuwmunster Aerodrome
June 9.	St. Denis Westrem.
June 13.	London
June 15.	St. Denis Westrem.
June 17.	*Kent & E. Anglia

	Allies.	German.
June 26..	Nancy	
July 2..	Bruges Docks and Lichtervelde Muni- tion Depots
July 3..	Ghistelles and Ost- tend Aerodromes..
July 4..	Harwich
July 6..	Trèves, Ludwigs- hafen, Essen, and Coblenz
July 6..	Epernay & Nancy
July 7..	London
*Raids by Zeppelins.		

In the series of raids during June and July on Zeebrugge, Ostend, Bruges, St. Denis Westrem, and other places the British machines all returned safely on every occasion, although heavily bombarded by German anti-aircraft guns.

420 Airplanes Lost in July

The following table shows the losses in machines officially reported on the western front from the beginning of May to July 8:

	German.		British.
	Destroyed.	Driven Down Out of Control.	Missing.
May	133	116	90
June	104	90	74
July	14	11	3
Total	251	217	167

Within a period of one week, during June, British official communiqués reported the following German losses: Two Zeppelins destroyed, two seaplanes destroyed, twenty-two airplanes brought down, and twenty-one airplanes driven down out of control. On the other hand, the British losses in the same period amounted to only six airplanes missing. French official reports do not give the number of machines lost, but merely record the damage inflicted on the enemy. How substantial the German losses have been at the hands of the French is proved by the following figures for a recent month:

Machines destroyed	102
Machines seriously damaged.....	109

According to a British official statement, 420 airplanes were lost on the western front in July. This figure is approximate only, owing to variations in the French and German methods of announcing air losses. The month's losses are the third highest of the war and com-

pare with 392 for June, 713 for May, and 717 for April. The July losses were divided among the belligerents as follows: German machines, 291; Allies, 129, of which 89 were British, although this figure probably is incomplete. The British brought down 247 German machines, the French 35, and the Belgians 9.

Italian Raids on Pola.

Early in August the Italians began a series of raids with giant Caproni airplanes against the Austrian naval base at Pola. These were meant to be both reprisals for Austrian raids and military assaults upon the nest of aircraft and warships with which Austria seals the entry to the Gulf of Trieste. Each Caproni airplane carried a crew of four or five men, with an extraordinary cargo of bombs. An eyewitness thus describes the departure:

The first raid was carried out by thirty-six machines, including fast fighting machines, which escorted the great Caproni bomb-droppers. It was like watching a flotilla of destroyers go to sea as the great machines moved off at four-minute intervals, taking up a perfect alignment against the sky. Motor boats were out to guide them to the Austrian coast, for there was a fog over the sea. Before midnight the squadron was over Pola, manoeuvring amid a tangle of searchlight beams and a hurricane of shots from panic-stricken gunners in the city's defenses. Bombs ranging from 70 to 200 pounds were raining down on the arsenal, dockyard, and anchored ships.

Three waves of airplanes went over, and the first two saw a huge explosion in the arsenal and a great fire start up, either in the arsenal or in the submarine depot. Six and a half tons of bombs were dropped in all, and there would have been more but that the third wave of attackers failed to find purely military targets.

The following night they again returned to the attack. This time a light fog favored the aviators, and eight tons of explosives were deposited where they were likely to do the most damage. The results are described as entirely satisfactory.

The 600 horse power Caproni is a triplane with two fuselages or bodies, and driven by three Fiat or Isotta-Fraschini motors, any one of which has sufficient power to keep the craft aloft even were the others to be disabled. The machine is of both the tractor and pusher type,

for two propellers are mounted in front and one in the rear. The plane carries a so-called useful load of 4,408 pounds, which assures fuel for six hours, together with a crew of three men, three guns, and 2,750 pounds of bombs. It has a speed of close to eighty-five miles an hour and is capable of climbing 3,250 feet in thirteen minutes, 6,500 feet in twenty-seven minutes, and 10,000 feet in fifty-seven minutes.

This seems slow in comparison to the Spads, which climb 10,000 feet in five minutes or less; but a Spad is simply a flying motor, with sustaining strength barely sufficient to support the aviator and a gun. The Caproni is as big as a trolley car. Its wing span is more than 100 feet. It stands twenty-one feet in the air and it is nearly fifty feet long.

The only aircraft which compares with it in size is the British Handy-Page machine, which, with two 280 horse power Rolls-Royce motors, carried twenty-seven passengers, and has a wing spread of 98 feet, and the Curtiss and Gallaudet monsters made in this country.

Earlier Raids of Note

Long-distance airplane raids have been made at intervals since the first year of the war, but hitherto they have had to be executed with machines that are dwarfed by the newer constructions. One of the first raids of historic importance was that against Carlsruhe on June 15, 1915. It was conducted by twenty-three twin-motored Caudron machines, in charge of Captain de Kerillis, and dropped close to fifty large bombs on Carlsruhe. Three of the machines did not return—they had to land and were captured, but the damage to Carlsruhe was serious.

In the very first bombardment of Sofia on April 21, 1916, a single aviator started from Saloniki, flew to Sofia, dropped four bombs and proclamations announcing the capture of Trebizond, and returned to Saloniki. This exploit was repeated by single aviators from time to time; then on Sept. 15, 1916, it was repeated by four aviators who left Saloniki at 6:20 and arrived over Sofia at 8:40. They dropped their bombs, many of which were effective, and returned. They had crossed the Balkan Mountains at 6,000 feet without trouble, and had accomplished what an army could not have done. The only limitation was that the airplanes were too few in number to win a decisive victory. In every raid in the Balkans only four or five airplanes participated.

Among the most remarkable long-distance bombing expeditions were the raids on Essen and Munich by Captain de Beauchamp and Lieutenant Dancourt on Sept. 24 and Nov. 18, 1916, which have been repeated since by other aviators. The raid on Ludwigshafen, accomplished on May 27, 1915, in which eighteen airplanes took part, also involved a flight of about 400 miles. It was conducted successfully, and only one airplane was forced to land and submit to capture. Another classic was the bombing raid on the Mauser Works at Oberndorf on Oct. 12, 1916, in which a French bombing squadron and a British bombing squadron participated, escorted by Lafayette Flying Corps fighters. In all these raids the aviators had to fly from five to seven hours continuously under most trying conditions, having to protect themselves with insufficient arms. A night raid in large, well-armed warplanes would be easy in comparison—and much safer.

A German Airman's Story of a Raid on London

Under the signature of "A Participant" the commander of one of the German airplanes which took part in a recent raid on London described his experiences:

THE morning sky is bluer than ever at 9 o'clock, the sun seeming to be laughing at the world. We are getting ready. Our commander addresses a few last words to us, ending with "God

bless you, lads." At 10 o'clock punctually our leader's machine, heavily burdened, rises and heads for London. Our huge birds swarm after him.

Soon the Belgian coast comes in view. To the left we clearly make out the German front lines. Next we are at Nieuport with a wide territory all around undated. Ostend and Zeebrugge follow. We leave Holland to the right at the mouth of the Scheldt and Vlissingen is just visible. The commander is still flying somewhat ahead, the squadron, in close formation, behind. We can recognize the men in the machine flying nearest us, and signals and greetings are exchanged. A feeling of absolute security and indomitable confidence in our success are our predominant emotions.

Now our leader turns to the left. We are above the sea, the coast lines disappearing gradually. Barographs indicate higher altitudes. The motors are thundering their monotonous song of human power. Now and then the sharp tack-tack of practicing machine guns penetrates even the clamor of winds and the humming motors. In front, but far below us, appears a cloud bank.

Still more distant in a hazy atmosphere is the English coast. We notice our comrades in other machines pointing to the coastline. They nod at each other and seem highly enthusiastic. We pass the cloud bank and in long lines see English sentinel boats stretched behind. Then, in a hazy veil, the mouth of the Thames appears. We approach Sheerness at the left, which town ought to know us.

In a straight line we make for London, and now the first British shots reach our altitude, but that does not matter much. Onward we fly. Soon the bombardment dies away and the squadron closes in, moving higher. We follow the windings of the Thames on the map, and find we are speedily approaching our goal.

But another cloud bank appears. "Damn it all, shall our game be spoiled this time?" I exclaim. I write my fears on a piece of paper and hand it to my pilot, and I see his fist coming down broadside with an oath.

Five minutes pass in anxious suspense, and I look around after the comrade air-

ships. They are still following in close formation. Then we pass that cloud bank, and London's sea of houses stretches in vast expanse far below us.

We now discover the first of the English chasing fliers, but for the present they do not concern us. Suddenly there stand, as if by magic here and there in our course, little clouds of cotton, the greetings of enemy guns. They multiply with astonishing rapidity. We fly through them and leave the suburbs behind us. It is the heart of London that must be hit.

We see the bridges, the Tower of London, Liverpool Station, the Bank of England, the Admiralty's palace—everything sharply outlined in the glaring sunlight. There are ships on the Thames that look like toys. With my glasses in one hand I signal with the other to my pilot. Slowly long rows of streets pass through the small orbit of the glasses.
